1. Introduction

This Abandonment and Restoration Plan (ARP) applies to mineral exploration activities conducted by, or on behalf of, Commander Resources Ltd. ("Commander"), Aston Bay Holdings Ltd. ("Aston Bay") and/ or APEX Geoscience Ltd. ("APEX") at the Aston Bay Property (previously the Storm Property), Somerset Island, Nunavut.

The Aston Bay Property ("the Property") is a joint venture between Commander Resources Ltd. ("Commander") and Aston Bay, where Commander is the primary tenure holder and Aston Bay is the operator. APEX has been retained by Aston Bay and Commander as a consultant and is authorized to act on behalf of Aston Bay and Commander with regard to the Aston Bay Property. This ARP will come into effect June 2015, pending approval. Copies and updates to this plan may be obtained via APEX, Commander or Aston Bay.

1.1 Contact Details

Commander Resources Ltd. 11th Floor, 1111 Melville St. Vancouver, BC V6E 3V6

Tel: (604) 685-5254 Fax: (604) 685-2814

www.commanderresources.com

Aston Bay Holdings Ltd. 222 – 400 E. Evergreen Blvd. Vancouver, WA 98660 Tel: (360) 262-6969

www.astonbayholdings.com

APEX Geoscience Ltd. 200 – 9797 45th Ave. Edmonton, AB T6E 5V8 Tel: (780) 439-5380

Fax: (780) 433-1336 www.apexgeoscience.com

1.2 Purpose and Scope

The purpose of the Aston Bay Property ARP is to provide guidelines to follow during seasonal shutdown and final abandonment of the Property, in order to return exploration sites to as near as possible to natural conditions. This ARP is effective from June 1, 2015, pending approval. The ARP will be replaced, upon approval, if any there are significant changes to the activities outlined in the existing permits which warrant changes to the ARP. Minor changes will be submitted as an addendum to the ARP and submitted to the distribution list as required.

1.3 Other Plans

The ARP should be considered as a part of the property wide management system. Other management plans in place at the Aston Bay Property include:

- Emergency Response Plan (ERP)
- Environmental Management Plan (EMP)

- Fuel Management Plan (FMP)
- Spill Prevention and Response Plan (SPRP)
- Waste Management Plan (WMP)

1.4 Project and Camp Description

The Aston Bay Property is located east of Aston Bay on Somerset Island, Nunavut, covering an area roughly 63 kilometres (km) long by 42 km wide (Figure 1). It is approximately 112 km south of the community of Resolute Bay and about 1,500 km northwest of Iqaluit within the 1:250,000 scale NTS map sheet 058C. The Property includes the zinc-silver Seal Prospect and multiple copper showings, collectively known as the Storm Prospect.

Access to the Property is typically restricted to privately chartered helicopter or fixed wing aircraft from Resolute Bay, or the Arctic Watch Lodge, a wilderness adventure resort, located approximately 50 km north of the Property, on Cunningham Inlet.

Activities at the Aston Bay Property are anticipated to include regional soil and rock sampling, geological mapping, and ground geophysical surveys as well as diamond drilling at the Storm and Seal Prospects (Figure 1). Typically, mineral exploration work in the region is seasonal, and can start as early as June and continue until as late as September. All exploration activities at the Aston Bay Property will be helicopter supported.

Commander is currently permitted, licensed and authorized to establish a small camp and conduct the diamond drilling at the Aston Bay Property (formerly Storm Property) in accordance with the Aboriginal Affairs and Northern Development Canada (AANDC) Land Use Permit N2010C0003, Nunavut Water Board (NWB) License 2BE-STO1015 and Nunavut Impact Review Board (NIRB) file number 10EN013. The AANDC permit is set to expire May 16, 2015. A new land use application is currently being applied for in Aston Bay's name, as they are the operator of the project. A water licence amendment and renewal is currently under application in the name of Commander. The water licence amendment will include a relocation of the camp and an increase to the quantity of water. The water licence will ultimately be converted into Aston Bay's name.

A 10 to 12 person seasonal tent camp is proposed to support exploration activities at the Aston Bay Property. A small temporary camp was constructed in the summer of 2014, at the site of an abandoned Cominco Ltd. ("Cominco") exploration camp, located at approximately 73°42′30" N latitude and 94°43′15" W longitude (Figures 1 and 2). The abandoned camp site included a small air strip and is the storage site for the historic Cominco drill core. It is adjacent to a river,

from which camp water was drawn. Upon completion of the 2014 program, the camp was removed, with the exception of the Cominco drill core, 10 drums of aviation fuel, 17 drums of diesel fuel, 2 propane tanks, one wooden emergency structure and an outhouse, all of which are intended to be used in future programs. In addition, 90 empty drums are stored at the camp site and a fuel cache near Aston Bay. The empty drums will be removed during the 2015 field program. All wastes were separated into combustible, recyclable or hazardous (petroleum products, batteries, etc.) and subsequently removed from site to be properly disposed in an authorized facility in Resolute Bay.

During the 2014 program, a new camp location was scouted due to the limitations of the airstrip located at the current camp. A suitable new camp location was located at approximately 73°39′20″ N latitude and 94°27′34″ W longitude (Figure 2). While the new camp is being constructed, the old camp will be used as an emergency backup and then subsequently removed and the site remediated. The proposed camp location is along the Aston River, from which camp water can be drawn (Figure 2). Structures for the proposed camp may include 6 sleeper tents, medical tent, kitchen, dry, office, shop, core shack, generator housing, incinerator, and 2 outhouses. The majority of the structures will be insulated Weatherhaven tents, or similar, with plywood floors. Figure 3 shows a possible layout for the proposed camp.

A drill program of 5,000 to 10,000 m is proposed for the 2015 season, utilizing one to two diamond drills. The average hole depth is expected to be approximately 200 m, up to a maximum proposed depth of 700 m. Similar programs are anticipated for 3 to 4 subsequent years. The areas for the proposed diamond drilling at the Storm and Seal Prospects are defined in figures 1 and 2.

2. Schedule

Equipment and supplies, including camp construction materials, will be mobilized to the proposed camp location in June 2015. It is expected that camp construction will take approximately 1 week. Drilling will start at the beginning of July, and is anticipated to continue until late August. Other fieldwork, including mapping, geochemical sampling, and ground geophysical surveys are expected to run through July and August. A seasonal shutdown of the camp will commence in early September, and is anticipated to take 3 to 4 days. Similar exploration programs are anticipated for 3 to 4 subsequent years.

Final abandonment and restoration will commence as soon as possible after it has been determined that the project does not warrant further exploration or following commercial production. The duration of the final abandonment and restoration is dependent on the scale

of infrastructure on site and on environmental parameters (physical, biological, and socio economic). All abandonment and restoration work will be completed prior to the date of expiry of any existing or future applicable land use permits and water licenses.

3. Detailed Infrastructure

3.1 Proposed Camp

The following is a list which details the structures, equipment and vehicles that may be constructed or stored at the proposed new camp.

3.1.1 Structures

- 7 12'x16' insulated Weatherhaven tents (or similar) on plywood flooring to serve as sleeper tents and a medical tent
- 1 14'x16' insulated Weatherhaven tent (or similar) on plywood flooring to serve as an office
- 4 16'x20' insulated Weatherhaven tents (or similar) on plywood flooring to serve as a kitchen, dry, core shack and shop. Dry will contain 1 sink, 2 showers and a washer /dryer set.
- 2 14'x16' Weatherhaven tent (or similar) on plywood flooring to serve as housing for a 50kW diesel generator plus backup generator and batch feed dual-chamber controlled air incinerator.
- 2 5'x5' wooden outhouse structures

3.1.2 Other Camp Infrastructure

- 2 Water tanks (1 for kitchen and 1 for dry)
- 2 Water pumps with fish screens and hose line
- 2 Diamond bladed core cutting saws (to be located in core shack)
- Small camp fuel cache, with Insta-Berm (or similar) secondary containment (larger fuel cache to be stored outside of braided river system).
- 1 600' airstrip and helicopter landing area

3.1.3 Vehicles

- 1 All-Terrain vehicles (quads) with trailers
- 1 Helicopter (A-Star, Bell 407, or similar)
- 1 Twin Otter (on site periodically)

3.1.4 Drilling Equipment

- Zinex A5 (or similar) diamond drill complete with motor, gear box, drill head, tower, overshot, skids, and housing
- 4 Supply pump with shack
- 2 Mix tank with pressure pump
- 6 Coil heater
- 6 Fuel tank
- 6 Fly basket for drill equipment, spares, supplies, etc.
- 400 3 metre NQ drill rods
- 50 NQ casing (various sizes)
- 150 100' hose line

4. Seasonal Shutdowns

4.1 Inspection and Documentation

Prior to seasonal shutdown, a complete inspection of all areas will be conducted. Photographs will be taken to document the conditions prior to leaving the site for winter, and will be archived along with photos taken at the beginning of each season. Copies of these photos will be included as part of the Aston Bay Property Annual Report. A copy of the Seasonal Camp Inspection Record is attached in Appendix B.

4.2 Buildings, Content, and Fuel

A full inventory of all structures, equipment, fuel, and other supplies will be taken at the beginning and end of each exploration season. An example of the Camp Inventory Record is attached in Appendix C.

All food, wastes, empty fuel drums, and valuable or sensitive equipment will be removed from site. All structures to be left on site will be winterized, closed off, and secured. One tent will be designated to house any chemicals or other hazardous materials that are not suited to outdoor storage. All water tanks and pipes will be drained at the end of each season. Pumps and hoses will be drained and stored inside a secured tent. All mechanical equipment, including vehicles, drill equipment, and generators will be winterized and stored in berms for secondary containment. When possible, the equipment and berms will be fully covered.

The remaining fuel cache will be secured and covered to prevent an influx of snow and water. Fuel drums will be stored on their sides in organized rows with the bungs in the three o'clock and nine o'clock positions. All fuels and other hazardous materials will be stored within "Arctic Insta-Berms", or similar products, for secondary containment. "RainDrain" or similar hydrocarbon filtration systems will be used to safely remove any water collected inside the berms, and as a safeguard against any potential overflows of contaminated water.

4.3 Waste

All wastes will separated into combustible, recyclable or hazardous.

<u>Combustible Waste:</u> All combustible waste will be incinerated in accordance with the Nunavut Environmental Guideline for the Burning and Incineration of Solid Waste. Any residual waste (ash) will be placed in sealed containers and backhauled to Resolute Bay for proper disposal.

<u>Non-Combustible</u>, <u>Recyclable and Hazardous Waste</u>: All non-combustible, recyclable and hazardous wastes will be sealed in appropriate containers and backhauled to Resolute Bay for proper disposal.

<u>Grey Water:</u> Camp greywater will be stored and treated in an excavated sump, which will allow for slow infiltration into the soil and will be located at least 31 m away from a water body. If available, coarse gravel will be placed in the bottom of the sump to provide filtration, and supports will be built on the sides to prevent slumping. Filters will be installed on kitchen drains to ensure solid food wastes do not enter the sumps and have the potential to attract wildlife. When full, greywater sumps will be covered with enough material to allow for future ground settlement.

<u>Sewage:</u> Privy pits (outhouses) will be located at least 31 m away from a water body. To control sewage pathogens, outhouses will be periodically treated with lime. When full, the pits will be covered with at least 30 cm of compacted soil.

<u>Contaminated soils/snow:</u> All contaminated soil will be stored in empty 205 liter drums, and will be transported to Resolute Bay for proper disposal.

<u>Empty barrels/ fuel drums:</u> Empty drums will be collected and transported to Resolute Bay either for disposal at an approved site or for refilling.

For more information on waste generation and management see the Aston Bay Property "Waste Management Plan."

4.4 Seasonal Restoration

Any contaminated areas around the camp or drill sites will be treated in accordance with the Aston Bay Property "Spill Prevention and Response Plan." Any washed out areas will be filled and re-contoured to natural levels. Any areas of disturbed vegetation, including camp, fuel caches or drill sites will be photographed and managed as per recommendation of the AANDC inspector. Remediation procedures might include fertilization to encourage re-growth.

5. Final Abandonment and Restoration

5.1 Inspection and Documentation

Prior to final abandonment, a thorough inspection of all areas will be conducted. Any contaminated areas around the camp or drill sites that have gone unnoticed will be treated as per the "Spill Prevention and Response Plan." Photographs will be taken to include in the final reports submitted to the AANDC Inspector and as part of the Annual Report submitted to the AANDC, NWB and NIRB. All relevant regulatory agencies will be notified upon final abandonment of the Property.

5.2 Buildings, Content, and Fuel

Prior to land use permit, claim or lease termination, all structures, equipment, supplies, and fuel will be removed from the Property with the exception of the drill core stacks, which will be permanently secured on site.

Tent floors will be burned in accordance with the Nunavut Environmental Guideline for the Burning and Incineration of Solid Waste, and tent sites may be fertilized, as per recommendation by the Inspector, to encourage re-vegetation.

Any materials of value on site will be salvaged. Local businesses and residents will have the opportunity to salvage any remaining materials that will otherwise be disposed of.

Drills and drilling equipment will be dismantled, packaged, secured, and shipped as per the drill contract. All drill casing will be removed from the ground or cut down to ground level if removal is not possible.

All remaining fuel and empty drums will be removed from site. The soil under and surrounding any area where fuel was stored will be thoroughly inspected for any contamination and photographs will be taken.

5.3 Waste

All wastes will be disposed of in accordance with the Aston Bay Property "Waste Management Plan" and any contamination will be treated as per the "Spill Prevention and Response Plan". Sumps will be inspected to ensure there is no leaching or run-off. Back filling and leveling will be employed as necessary.

5.4 Restoration

Tent sites, drill sites, and any other areas disturbed by activities related to exploration at the Aston Bay Project will be fertilized as recommended by the AANDC Inspector to encourage revegetation. Eroded or washed out areas related to exploration activities will be filled and recontoured to natural levels. Any contaminated areas around the camp or drill sites that have gone unnoticed will be treated as per the "Spill Prevention and Response Plan."

6. Post Closure Site Monitoring

After reclamation is complete, annual monitoring will take place. The monitoring will consist of soil and water testing, measuring and documenting plan re-growth, examining potential run-off and erosion problems, and checking the stability and condition of the core boxes. Reports, including photographs, will be submitted to the appropriate regulatory bodies.
