1. Introduction

This Abandonment and Restoration Plan (ARP) applies to mineral exploration activities conducted by, or on behalf of, Commander Resources Ltd. (“Commander”), Aston Bay Holdings Ltd. (“Aston Bay”) and/ or APEX Geoscience Ltd. (“APEX”) at the Aston Bay Property (previously the Storm Property), Somerset Island, Nunavut.

The Aston Bay Property (“the Property”) is a joint venture between Commander Resources Ltd. (“Commander”) and Aston Bay, where Commander is the primary tenure holder and Aston Bay is the operator. APEX has been retained by Aston Bay and Commander as a consultant and is authorized to act on behalf of Aston Bay and Commander with regard to the Aston Bay Property. This ARP will come into effect June 2015, pending approval. Copies and updates to this plan may be obtained via APEX, Commander or Aston Bay.

1.1 Contact Details

Commander Resources Ltd.
11th Floor, 1111 Melville St.
Vancouver, BC V6E 3V6
Tel: (604) 685-5254
Fax: (604) 685-2814
www.commanderresources.com

Aston Bay Holdings Ltd.
222 – 400 E. Evergreen Blvd.
Vancouver, WA 98660
Tel: (360) 262-6969
www.astonbayholdings.com

APEX Geoscience Ltd.
200 – 9797 45th Ave.
Edmonton, AB T6E 5V8
Tel: (780) 439-5380
Fax: (780) 433-1336
www.apexgeoscience.com

1.2 Purpose and Scope

The purpose of the Aston Bay Property ARP is to provide guidelines to follow during seasonal shutdown and final abandonment of the Property, in order to return exploration sites to as near as possible to natural conditions. This ARP is effective from June 1, 2015, pending approval. The ARP will be replaced, upon approval, if any there are significant changes to the activities outlined in the existing permits which warrant changes to the ARP. Minor changes will be submitted as an addendum to the ARP and submitted to the distribution list as required.

1.3 Other Plans

The ARP should be considered as a part of the property wide management system. Other management plans in place at the Aston Bay Property include:

- Emergency Response Plan (ERP)
- Environmental Management Plan (EMP)

- Fuel Management Plan (FMP)
- Spill Prevention and Response Plan (SPRP)
- Waste Management Plan (WMP)

1.4 Project and Camp Description

The Aston Bay Property is located east of Aston Bay on Somerset Island, Nunavut, covering an area roughly 63 kilometres (km) long by 42 km wide (Figure 1). It is approximately 112 km south of the community of Resolute Bay and about 1,500 km northwest of Iqaluit within the 1:250,000 scale NTS map sheet 058C. The Property includes the zinc-silver Seal Prospect and multiple copper showings, collectively known as the Storm Prospect.

Access to the Property is typically restricted to privately chartered helicopter or fixed wing aircraft from Resolute Bay, or the Arctic Watch Lodge, a wilderness adventure resort, located approximately 50 km north of the Property, on Cunningham Inlet.

Activities at the Aston Bay Property are anticipated to include regional soil and rock sampling, geological mapping, and ground geophysical surveys as well as diamond drilling at the Storm and Seal Prospects (Figure 1). Typically, mineral exploration work in the region is seasonal, and can start as early as June and continue until as late as September. All exploration activities at the Aston Bay Property will be helicopter supported.

Commander is currently permitted, licensed and authorized to establish a small camp and conduct the diamond drilling at the Aston Bay Property (formerly Storm Property) in accordance with the Aboriginal Affairs and Northern Development Canada (AANDC) Land Use Permit N2010C0003, Nunavut Water Board (NWB) License 2BE-STO1015 and Nunavut Impact Review Board (NIRB) file number 10EN013. The AANDC permit is set to expire May 16, 2015. A new land use application is currently being applied for in Aston Bay's name, as they are the operator of the project. A water licence amendment and renewal is currently under application in the name of Commander. The water licence amendment will include a relocation of the camp and an increase to the quantity of water. The water licence will ultimately be converted into Aston Bay's name.

A 10 to 12 person seasonal tent camp is proposed to support exploration activities at the Aston Bay Property. A small temporary camp was constructed in the summer of 2014, at the site of an abandoned Cominco Ltd. ("Cominco") exploration camp, located at approximately 73°42'30" N latitude and 94°43'15" W longitude (Figures 1 and 2). The abandoned camp site included a small air strip and is the storage site for the historic Cominco drill core. It is adjacent to a river,

from which camp water was drawn. Upon completion of the 2014 program, the camp was removed, with the exception of the Cominco drill core, 10 drums of aviation fuel, 17 drums of diesel fuel, 2 propane tanks, one wooden emergency structure and an outhouse, all of which are intended to be used in future programs. In addition, 90 empty drums are stored at the camp site and a fuel cache near Aston Bay. The empty drums will be removed during the 2015 field program. All wastes were separated into combustible, recyclable or hazardous (petroleum products, batteries, etc.) and subsequently removed from site to be properly disposed in an authorized facility in Resolute Bay.

During the 2014 program, a new camp location was scouted due to the limitations of the airstrip located at the current camp. A suitable new camp location was located at approximately 73°39'20" N latitude and 94°27'34" W longitude (Figure 2). While the new camp is being constructed, the old camp will be used as an emergency backup and then subsequently removed and the site remediated. The proposed camp location is along the Aston River, from which camp water can be drawn (Figure 2). Structures for the proposed camp may include 6 sleeper tents, medical tent, kitchen, dry, office, shop, core shack, generator housing, incinerator, and 2 outhouses. The majority of the structures will be insulated Weatherhaven tents, or similar, with plywood floors. Figure 3 shows a possible layout for the proposed camp.

A drill program of 5,000 to 10,000 m is proposed for the 2015 season, utilizing one to two diamond drills. The average hole depth is expected to be approximately 200 m, up to a maximum proposed depth of 700 m. Similar programs are anticipated for 3 to 4 subsequent years. The areas for the proposed diamond drilling at the Storm and Seal Prospects are defined in figures 1 and 2.

2. Schedule

Equipment and supplies, including camp construction materials, will be mobilized to the proposed camp location in June 2015. It is expected that camp construction will take approximately 1 week. Drilling will start at the beginning of July, and is anticipated to continue until late August. Other fieldwork, including mapping, geochemical sampling, and ground geophysical surveys are expected to run through July and August. A seasonal shutdown of the camp will commence in early September, and is anticipated to take 3 to 4 days. Similar exploration programs are anticipated for 3 to 4 subsequent years.

Final abandonment and restoration will commence as soon as possible after it has been determined that the project does not warrant further exploration or following commercial production. The duration of the final abandonment and restoration is dependent on the scale

of infrastructure on site and on environmental parameters (physical, biological, and socio economic). All abandonment and restoration work will be completed prior to the date of expiry of any existing or future applicable land use permits and water licenses.

3. Detailed Infrastructure

3.1 Proposed Camp

The following is a list which details the structures, equipment and vehicles that may be constructed or stored at the proposed new camp.

3.1.1 Structures

- 7 12'x16' insulated Weatherhaven tents (or similar) on plywood flooring to serve as sleeper tents and a medical tent
- 1 14'x16' insulated Weatherhaven tent (or similar) on plywood flooring to serve as an office
- 4 16'x20' insulated Weatherhaven tents (or similar) on plywood flooring to serve as a kitchen, dry, core shack and shop. Dry will contain 1 sink, 2 showers and a washer /dryer set.
- 2 14'x16' Weatherhaven tent (or similar) on plywood flooring to serve as housing for a 50kW diesel generator plus backup generator and batch feed dual-chamber controlled air incinerator.
- 2 5'x5' wooden outhouse structures

3.1.2 Other Camp Infrastructure

- 2 Water tanks (1 for kitchen and 1 for dry)
- 2 Water pumps with fish screens and hose line
- 2 Diamond bladed core cutting saws (to be located in core shack)
- 1 Small camp fuel cache, with Insta-Berm (or similar) secondary containment (larger fuel cache to be stored outside of braided river system).
- 1 600' airstrip and helicopter landing area

3.1.3 Vehicles

- 1 All-Terrain vehicles (quads) with trailers
- 1 Helicopter (A-Star, Bell 407, or similar)
- 1 Twin Otter (on site periodically)

3.1.4 Drilling Equipment

2	Zinex A5 (or similar) diamond drill complete with motor, gear box, drill head, tower, overshot, skids, and housing
4	Supply pump with shack
2	Mix tank with pressure pump
6	Coil heater
6	Fuel tank
6	Fly basket for drill equipment, spares, supplies, etc.
400	3 metre NQ drill rods
50	NQ casing (various sizes)
150	100' hose line

4. Seasonal Shutdowns

4.1 Inspection and Documentation

Prior to seasonal shutdown, a complete inspection of all areas will be conducted. Photographs will be taken to document the conditions prior to leaving the site for winter, and will be archived along with photos taken at the beginning of each season. Copies of these photos will be included as part of the Aston Bay Property Annual Report. A copy of the Seasonal Camp Inspection Record is attached in Appendix B.

4.2 Buildings, Content, and Fuel

A full inventory of all structures, equipment, fuel, and other supplies will be taken at the beginning and end of each exploration season. An example of the Camp Inventory Record is attached in Appendix C.

All food, wastes, empty fuel drums, and valuable or sensitive equipment will be removed from site. All structures to be left on site will be winterized, closed off, and secured. One tent will be designated to house any chemicals or other hazardous materials that are not suited to outdoor storage. All water tanks and pipes will be drained at the end of each season. Pumps and hoses will be drained and stored inside a secured tent. All mechanical equipment, including vehicles, drill equipment, and generators will be winterized and stored in berms for secondary containment. When possible, the equipment and berms will be fully covered.

The remaining fuel cache will be secured and covered to prevent an influx of snow and water. Fuel drums will be stored on their sides in organized rows with the bungs in the three o'clock and nine o'clock positions. All fuels and other hazardous materials will be stored within "Arctic Insta-Berms", or similar products, for secondary containment. "RainDrain" or similar hydrocarbon filtration systems will be used to safely remove any water collected inside the berms, and as a safeguard against any potential overflows of contaminated water.

4.3 Waste

All wastes will be separated into combustible, recyclable or hazardous.

Combustible Waste: All combustible waste will be incinerated in accordance with the Nunavut Environmental Guideline for the Burning and Incineration of Solid Waste. Any residual waste (ash) will be placed in sealed containers and backhauled to Resolute Bay for proper disposal.

Non-Combustible, Recyclable and Hazardous Waste: All non-combustible, recyclable and hazardous wastes will be sealed in appropriate containers and backhauled to Resolute Bay for proper disposal.

Grey Water: Camp greywater will be stored and treated in an excavated sump, which will allow for slow infiltration into the soil and will be located at least 31 m away from a water body. If available, coarse gravel will be placed in the bottom of the sump to provide filtration, and supports will be built on the sides to prevent slumping. Filters will be installed on kitchen drains to ensure solid food wastes do not enter the sumps and have the potential to attract wildlife. When full, greywater sumps will be covered with enough material to allow for future ground settlement.

Sewage: Privy pits (outhouses) will be located at least 31 m away from a water body. To control sewage pathogens, outhouses will be periodically treated with lime. When full, the pits will be covered with at least 30 cm of compacted soil.

Contaminated soils/snow: All contaminated soil will be stored in empty 205 liter drums, and will be transported to Resolute Bay for proper disposal.

Empty barrels/ fuel drums: Empty drums will be collected and transported to Resolute Bay either for disposal at an approved site or for refilling.

For more information on waste generation and management see the Aston Bay Property “Waste Management Plan.”

4.4 Seasonal Restoration

Any contaminated areas around the camp or drill sites will be treated in accordance with the Aston Bay Property “Spill Prevention and Response Plan.” Any washed out areas will be filled and re-contoured to natural levels. Any areas of disturbed vegetation, including camp, fuel caches or drill sites will be photographed and managed as per recommendation of the AANDC inspector. Remediation procedures might include fertilization to encourage re-growth.

5. Final Abandonment and Restoration

5.1 Inspection and Documentation

Prior to final abandonment, a thorough inspection of all areas will be conducted. Any contaminated areas around the camp or drill sites that have gone unnoticed will be treated as per the “Spill Prevention and Response Plan.” Photographs will be taken to include in the final reports submitted to the AANDC Inspector and as part of the Annual Report submitted to the AANDC, NWB and NIRB. All relevant regulatory agencies will be notified upon final abandonment of the Property.

5.2 Buildings, Content, and Fuel

Prior to land use permit, claim or lease termination, all structures, equipment, supplies, and fuel will be removed from the Property with the exception of the drill core stacks, which will be permanently secured on site.

Tent floors will be burned in accordance with the Nunavut Environmental Guideline for the Burning and Incineration of Solid Waste, and tent sites may be fertilized, as per recommendation by the Inspector, to encourage re-vegetation.

Any materials of value on site will be salvaged. Local businesses and residents will have the opportunity to salvage any remaining materials that will otherwise be disposed of.

Drills and drilling equipment will be dismantled, packaged, secured, and shipped as per the drill contract. All drill casing will be removed from the ground or cut down to ground level if removal is not possible.

All remaining fuel and empty drums will be removed from site. The soil under and surrounding any area where fuel was stored will be thoroughly inspected for any contamination and photographs will be taken.

5.3 Waste

All wastes will be disposed of in accordance with the Aston Bay Property “Waste Management Plan” and any contamination will be treated as per the “Spill Prevention and Response Plan”. Sumps will be inspected to ensure there is no leaching or run-off. Back filling and leveling will be employed as necessary.

5.4 Restoration

Tent sites, drill sites, and any other areas disturbed by activities related to exploration at the Aston Bay Project will be fertilized as recommended by the AANDC Inspector to encourage re-vegetation. Eroded or washed out areas related to exploration activities will be filled and re-contoured to natural levels. Any contaminated areas around the camp or drill sites that have gone unnoticed will be treated as per the “Spill Prevention and Response Plan.”

6. Post Closure Site Monitoring

After reclamation is complete, annual monitoring will take place. The monitoring will consist of soil and water testing, measuring and documenting plant re-growth, examining potential run-off and erosion problems, and checking the stability and condition of the core boxes. Reports, including photographs, will be submitted to the appropriate regulatory bodies.

Figure 2

Figure 3

Appendix B: Seasonal Camp Shutdown Inspection Record

Seasonal Camp Shutdown Inspection Record			
Area	Complete	Comment	Inspector
General Camp area			
General camp area inspected for any waste, spills or contamination			
General camp area secure for winter			
All combustible and non-recyclable waste incinerated			
All non-combustible waste prepared for removal			
Any unnecessary or excessive vegetation damage			
Buildings and Content			
All tents and building complexes secured for the winter and cleared of any debris			
All office equipment, furniture, kitchen equipment, recreational equipment and other mobile heavy equipment will be winterised and secured			
Any equipment not capable of withstanding the harsh winter conditions will be removed			
Area inspected for petroleum, spills or contamination.			
Water Supply System			
Water pumps, filtering systems, water lines and any other equipment associated with the water supply system drained and winterised			
Water pump shed will be secured.			
Area inspected for petroleum, spills or contamination.			
Sewage System			
Greywater system drained (ie. no greywater remaining in the discharge pipe).			
Greywater sumps treated if required, filled and recontoured			
Privy Pits treated with lye and winterized			
Privy Pits secure and cleared of any debris			
Area inspected for petroleum, spills or contamination.			
Waste Incinerator			
Incinerator fuel supply shut off using all valves			
Incinerator fuel in appropriate and functional secondary containment adjacent to the incinerator			
Area inspected for petroleum, spills or contamination.			
Incinerator area cleared of any debris			
Electrical System			
Generator shack and surrounding area inspected for signs of spills and remaining wastes such as oil and grease.			
Generator shed is lined with enviromat in the event any external spills go unnoticed			
Generator drained of fuel and winterized			
Generator shack secured for winter			
All electrical wires, plugs and sockets which remain in their installed locations are safe and secure			
All electrical cords temporarily connected to a buildings or machinery unplugged, rolled and stored			
Camp Heating Systems			
Each 205 L fuel barrel attached to respective tent or building secured and within secondary containment			
Any remaining fuel in lines will be burned out.			
Empty propane cylinders ready for transport for refilling or recycling.			
Any sleeping quarters converted to electric heat are secured			
Petroleum Products and Storage Facilities			
All fuel stored in appropriate and functional secondary containment			
All fuel storage areas clearly marked in the event snow clearing activities are required during spring camp opening			
All fuel storage areas GPS location recorded			
All fuel labelled properly			
Area inspected for spills or contamination.			
Fuel storage area cleared of any debris.			
Chemicals and Hazardous Waste			
All chemicals stored in appropriate building or on within appropriate functional secondary containment			
All household cleaners properly secured and stored in kitchen and dry.			
All empty bags/containers removed for proper disposal			
Any remaining waste fuel, oil and grease stored in approved and labelled containers for reuse during summer operations			
Any hazardous waste that cannot be reused properly stored, sealed, labels, and prepared for removal			
Area inspected for spills or contamination.			
Area cleared of any debris.			
Spill Response Kits			
Spill kit inventory performed			
Spill kits not needed over winter relocated to secured building			
Spill kits needed over winter (ie. for the remaining petroleum areas) properly stocked and secure			
Emergency Response			
Fire extinguishers in working order and secure in all necessary locations			
Smoke/CO2 detectors in working order and secure in all necessary locations			
Fire extinguishers used prepared for removal for refilling			
Transportation			
Transport areas including airstrips, helipads, ATV trails, docks and footpaths inspected for spills or contamination.			
Vehicles remaining onsite moved into secure buildings			
Vehicles remaining onsite winterized			
Drill Sites			
Diamond drills dismantled and ready for demobilization or secure in designated storage area			
Diamond drills remaining on site winterized			
Any drill casing unable to be removed flush cut so as to not pose a hazard			
Drill sites restored and inspected for any waste, spills or contamination			
Drill sites photographed before drilling and after restoration			
Documentation			
Proper documentation and approvals for all Inert and Hazardous waste transport and receiving			
Notification to all required authorities of pending seasonal shut down			
Baseline samples (ie. water, soil, air quality) collected and all data recorded			
Inspections recorded, dated and signed			
Photos taken of camp, drill sites, fuel caches and any other important locations/items			
Photos of drill lay down storage area			
GPS coordinates recorded for camp, fuel storage areas, drill sites, wildlife or habitat sightings, Archeological/paleontological sites or any area/items of interest			
Descriptions recorded for all wildlife or habitat sightings, Archeological/paleontological sites or any area/item of interest			
Year-end inventory of all equipment and buildings left on site			
List of all equipment, items and repairs required for next operating season			

Appendix C: Example Camp Inventory Record

Seasonal Camp Shut Down Inventory

<u>Kitchen Tent</u>					
<u>Container</u>	<u>Item</u>	<u>Quantity</u>	<u>Container</u>	<u>Item</u>	<u>Quantity</u>
Kitchen Box 1 -	Dishes, Cutlery, Cooking Utensils		Kitchen Box 4 -	Large Kitchen Items	
	Dinner plates, dessert plates, bowls			Stand up fridge	
	Coffee cups			Propane stoves	
	Juice cups			Overhead fans	
	Forks, spoons, butter knives			Grease traps for under sinks	
	Steak knives			Water cooler	
	Pearing Knives			Chest freezers	
	Cutting knives			Barbeque	
	Cutlery trays			Metal brush for BBQ grill	
	Serving spoons			Folding tables	
	Slotted serving spoons			Folding chairs	
	Wooden spoons			Plastic bins for holding vegetables	
	plastic spatulas			microwave	
	Whisks			Floor mats	
	Can openers				
	Cutting boards				
	Tongs				
	Disposable drinking cups				
	Tupperware storage containers				
Kitchen Box 2 -	Cookware, Bakeware		Kitchen Box 5 -	Cleaning	
	Square cake pans			Teatowels	
	Round cake pans			Dishtowels	
	Pie pans			Rags	
	Cookie sheets			Dish racks	
	cake cooling rack			Scrub brushes	
	Bread loaf tins			Rubber gloves	
	non stick fry pan			Liquid handsoap	
	Large metal bowls			Smoke/CO2 Detectors	
	Small metal bowls			Brooms	
	Soup pots with lids			Dust Pans	
	Large pots with lids			Garbage Bins	
	Small pots with lids			Wooden Bods	
	5 gallon galvanized pot			Foamies	
	2 gallon galvanized pot				
	1 gallon galvanized pot				
	Sauce pan with lid				
	Omelet pan with lid				
	Roasting pans with lids				
Kitchen Box 3 -	Small Appliances & Cleaning		Needed For Next Season		
	Metal sieves				
	Plastic sieves				
	Quisenar with grating and slicing blade				
	Kitchen aide mixer				
	Coffee Makers				
	Electric kettle				
	Toaster				
	Pump style coffee thermos				
	Clothes pins				
	Hand pump for large water bottles				

Seasonal Camp Shut Down Inventory

Office Tent

<u>Container</u>	<u>Item</u>	<u>Quantity</u>
Office Box 1 - Safety Gear	Safety glasses	
	Ear plugs	
	Hard hat ear defenders	
	Safety goggles	
	Dust masks	
	Respirator masks	
	Respirator filters	
	Bug repellent	
	Bear spray	
	Plastic rain suits	
	Mosquito coils	
	Air horns	
	Safety vest	
	Orange gloves	
	Leather gloves	
	Rubber gloves	
	Cloth gloves	

Office Box 2 - Field Gear

	Flagging	
	Packing tape	
	Nylon rope	
	Field books	
	Rock sample cards	
	Till sample cards	
	Core sample cards	
	Personal FA kits	
	Sample tags
