Request for Closure
Nunavut Water Board License NWB2TMP0509 – Type B
Term: September 9, 2005 to August 1, 2009
Thirty Mile Project, Kivalliq, Nunavut
June 4, 2007

A license for water use and waste disposal was granted from the Nunavut Water Board (Permit #NWB2TMP0509) effective September 9, 2005. As we have completed our operations on the project, Kennecott wishes to apply to the NWB for closure of the water license in advance of the August 2009 expiry.

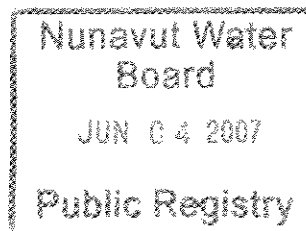

To date, no water has been used on the project. An exploration camp was never established. No core drilling was completed, and hence no water used for drilling. Crews lodged in Baker Lake for the March 2006 geophysical program and used helicopter for daily access to the property. Snow machines were also used on some of the geophysical grids.

There were no spills on the property. No sumps were created and there were no waste disposal activities.

We now request that **NWB2TMP0509** be given final clearance.

Respectfully yours
