## ***Extreme Stop***

### **Lost Circulation Material**

#### ***Description***

Extreme Stop is a specially developed polymer which will absorb up to 500 times its own weight of water. Comes in the form of white free flowing granules.

#### ***Principle Use***

Extreme Stop granules expand when in contact with water. The resulting product resembles large, clear, jelly cubes which are ideal for sealing cracks, fractures and voids. Extreme Stop is a very effective lost circulation material due to its' ability to reform and reshape, fitting into all sizes and shapes of the loss zone. High swelling capability means economy due to less product required to stop loss. A little goes a long way. Can be used with all types of drilling fluids and other lost circulation material. Does not bind rods in the hole like other fibrous products. Can be poured down the outside of drill rods on dry holes to reduce vibration.

#### ***Application***

Place 5 liters of granules in 10 liters of water and allow to expand by soaking up the water. The expanded granules resemble tapioca sized jelly. Place 1 or 2 liters of this partially expanded jelly directly down the drill rods when the core tube is out. Flush down hole. Replace core tube and drill. Repeat as necessary to stop loss.

#### ***Packaging***

Extreme Stop comes packaged in a 5 gallon, high impact plastic pail with a snap-on lid. 24 pails per pallet.
