

Turner Lake Project, Nunavut Canada

Jam 1-4 claims

Rockgate Capital Corporation, supported by Kingaunmiut Ltd of Bathurst Inlet Nunavut, is currently planning a diamond drill program to commence in the spring/early summer of 2008. The Turner Lake Gold Property consists of the HA 1-4 mineral claims that overlie an area of approximately 29.0 sq km (2900 ha) of Inuit Owned Land (IOL) located approximately 55 km northwest of the small community of Bathurst Inlet and 270 km south southwest of Cambridge Bay, Nunavut.

Rockgate and Kingaunmiut Ltd. are proposing to initiate a helicopter assisted diamond drill program on or about June 15, 2008 and terminate on approximately August 31, 2008. The program will consist of nine drill pads and several holes/pad totaling approximately of 4000 metres of drilling in 2008. A 2009 program will be determined after an assessment of the 2008 drill results.

A team of seven persons that will include a drill crew and helpers, a project supervisor and safety staff will support the drill program. Utilizing the resources and logistical services of Kingaunmiut Ltd., project staff will be accommodated remotely from the project site within the community of Bathurst Inlet. A project office will also be established within the community that will support a full communications network.

One temporary structure will be erected in the vicinity of the drill sites. A “tent-frame” structure, consisting of a 12’x16’ wood floor, wood frame and canvas cover, will be used as a core logging building and serve as an emergency shelter. The shelter will be stocked with medical and emergency survival supplies and equipment including satellite phone(s).

At the project drill site(s)/claim one fuel cache area will be designated to provide storage for a maximum of eight fuel drums at any one time. An emergency fuel spill kit will be maintained at this site at all times.
