Letter of Amendment to Water Licence 2BE-TUK1015 (Type "B")

Ms. Beaulieu / Mr. Joseph,

Advanced Explorations Inc. is requesting, by this letter, an amendment to their Water Licence for the Tuktu exploration camp on the Melville Peninsula. This amendment is to redistribute the water use currently permitted, but not to increase the overall water use. The current licence is for 3 m³/day of water use for camp, and 180 m³/day of water use for drilling – the amendment is to redistribute the water use to 10 m³/day for camp and 173 m³/day for drilling purposes. The total water use allowed under the licence will remain 183 m³/day.

This increase will allow the exploration program to be conducted in a shorter time frame by allowing for more people in camp during the current field program, with no planned increase in the overall level of activity expected at Tuktu.

The Company would request that this amendment be reviewed as quickly as possible so as to expedite our field program. Any additional information requested will be supplied immediately by the Company.

Sincerely

John Gingerich
President and CEO
