June 8, 2017

### Executive Summary

The proposed project would include a 2 to 4 person geological and geophysical exploration crew over the next 2 years, and/or a 5 person drilling team (3 drill crew and 2 geologists).

Activities included are prospecting, mapping, sampling, geophysical surveys and diamond drilling with a handheld "backpack" diamond drill. The crew would mobilize to the various areas via Twin Otter on floats/skis or helicopter. Once at site the crew would establish a small, 2-3 tent camp and operate at a location. Any and all materials brought to site would be removed upon demobilization. Small quantities of gasoline would be used to run the generator for power in camp, and to supply power to the drill. Propane would be used for cooking on a small camp stove.

Sewage and grey water would be buried onsite while all other waste would be removed from site. Wastewater from the drill will be disposed of by using a local depression as a natural sump. No additives will be used in the drilling process and the waste will be only composed of rock fines and water.

The bulk of the program is expected to run between June 15 and October 15 of each year with some short term work in between February 1 and Apr 30 as well.

If you have any questions or concerns please contact me at any time,
