Effective Date: June 2024

Waste Management Plan

3.3 Inert Combustible Solid Wastes

Combustible waste will be incinerated in a batch feed smart-ash controlled air incinerator, in accordance with the Environmental Guideline for the Burning and Incineration of Solid Waste by the Nunavut Department of Environment and the Canada-Wide Standards (CWS) for Dioxins and Furans by the Canadian Council of Ministers of the Environment. All attempts will be made to reduce the moisture content of waste to be incinerated, which will decrease the amount of smoke produced and increase the completeness of combustion. All waste will be covered and stored inside sheds or other secure buildings to keep rain and snow out of the waste and reduce the attraction for wildlife. If wet waste must be burned, such as organic (food) waste, the wet waste will be mixed with dry waste to reduce the overall moisture content of the batch.

All inert materials that cannot be incinerated will be placed in appropriate sealed containers and removed from site for reuse, recycling, or proper disposal at an accredited facility.

Privy pits (outhouses) and/or pacto facilities will be located at least 31 m away from any water body. To control sewage pathogens, outhouses will be periodically treated with lime. When full, the pits will be covered with at least 30 cm of compacted soil. Pacto waste will be incinerated with incinerator specifically designed for that waste type. Ashes from incineration will be removed and taken to approved disposal site.
