Agency	Comment	Recommendation	Licensee Response
CIRNAC	01	(IR-01) CIRNAC request that the Applicant confirm if this amendment request is exclusively for the removal of the parameter for fecal coliform at monitoring station ARV-4 or for all stations found under test group for effluent.	GN-CGS confirms that this amendment application is exclusively for the removal of fecal coliforms at monitoring station ARV-4.
CIRNAC	02	(IR-02) CIRNAC requests that the Applicant provide a copy of the annual report for 2021. Monitoring information included in the annual reports play a critical role in determining impacts on the environment and compliance with the conditions of the licence.	A copy of the 2021 Annual Report has been included with this response.
CIRNAC	03	(IR-03) CIRNAC provided a thorough technical review of the 2022 annual report for the Licensee's current water licence after many years of operating with an expired licence. The purpose of a technical review is to provide clarification on conditions of the licence that may not be clearly understood or to understand details included in the annual report. The Licensee's response to a review is important in determining the impact on the environment and the over all performance of the licence. CIRNAC recommends that the applicant provide a response to the concerns raised in the technical review of the annual report for 2022 as this will support interveners during the amendment process.	GN-CGS has provided a response to the 2022 Annual Report technical review with this submission.
