

## 3AM-GRA1631 Rankin Inlet Annual Report 2022

15 August, 2023

The responses for the following queries are answered below:

### Response to ECCC

QA/QC Samples
<p>The QA/QC sample summary in Appendix A has been taken from the Certificate of Analysis (COA) shown in Appendix C.</p> <p>As per Section 4.2 of the Environmental Monitoring Program and Quality Assurance/Quality Control Plan, please refer to the COA that identifies the duplicated parameters.</p>

Summary of Monitoring Results
<p>Noted that labelling in the COA is incorrect. This should be labelled GRA-3 and will be in future to save confusion.</p>

Summary of Monitoring Results
<p>Appendix A is the summary table for GRA-3. Due to a bottle shortage at the lab, sampling events in 2022 were unable to take place. This has been added to the report to reflect this.</p> <p>Report has been resubmitted with the Appendices corrected.</p>

### Response to CIRNAC

Quantity of water used
<p>Error has been rectified and the daily logs have been included in the appendices.</p>

Water Quality Reporting
<p>No sampling was done in 2021 due to COVID apart from GRA-3 and in 2022 there was a bottle shortage at the lab. Correspondence of this shortage has been attached to the report.</p>

Station ID GRA-3 observed flow
<p>It is assumed the recommendation is referring to the single missed sampling event. As above there was a bottle shortage and therefore the fourth sampling event could not take place.</p>
