RE: December 1st 2012 NOTICE OF CHANGE IN OPERATION OF RANKIN INLET SEWAGE TREATMENT PLANT

The plant operators had no choice but to direct the raw sewage to the outflow force main for discharge into the Hudson's Bay due to this problem.

Repair parts have been ordered and are being sent by air freight to Rankin Inlet. Regardless it is expected the complete repair of all the effected components will take 5 weeks . Community and Government Services expects the sewage plant will return to the normal treatment process on January 10th 2013 . Community and Government Services will advise AANDC (NWB) when all repairs are completed and normal sewage treatment resumes.

Kindly contact the undersigned or Mr Anil Gupta 867645 8182 if there are any specific questions that have to be answered regarding this break down.
