Re: Your Correspondence with David Hauuli September 6, 2001.

FSC is currently working in Igloodik to review the sewage treatment facility. I am writing to advise you that the documentation you require for a licence amendment is part of FSC's scope of work.

FSC staff are in the community now collecting necessary information. An amendment application will be submitted once the needed documentation has been processed.

It is our understanding at this time that sufficient capacity exists in the present system that the new lagoon will not be required for several months. As of reports today, only the approved lagoons are being used.

I will keep you advised as the documentation is developed.

Regards
