J	FACTORS AFFECTING SPILL OR RECOVERY run-off from snow melt		DESCRIBE ANY ASSISTANCE REQUIRED none		HAZARDS TO PERSONS, PROPERTY OR EQUIPMENT none
K	ADDITIONAL INFORMATION, COMMENTS, ACTIONS PROPOSED OR TAKEN TO CONTAIN, RECOVER OR DISPOSE OF SPILLED PRODUCT AND CONTAMINATED MATERIALS On October 02, 2011 it was noticed that Manhole #09 was starting to run over. Two vacuum sewage trucks from the City of Iqaluit were immediately called to pump out the manhole. Once the manhole was pumped out the trucks stayed on site to monitor while the City Utilidor crew could blast the sewage main from the down stream manhole #08. It was noted that the main was partially clogged with rags and pieces of wood. The sewage that spilled over manhole #9 ran down the ditch area, and was confined to the ditch area which then drained directly into the top of manhole #08 down stream which contained an open sewage main. There was continual flow of runoff taking this same path from the melting snow. The affected ditch was scraped with a loader provided by the city, and fresh sand was used to cover the inside of the ditch also supplied by the City of Iqaluit. The affected material (approximately 10 m3) was hauled to the lagoon for disposal. The cause was contributed by extremely high flow due to snow melt run-off, normal high volumes on Sundays, and a partial blockage of the main by rags and wood which was removed.
