Building Mechanical Operation & Maintenance Manual

for the Iqaluit Wastewater Treatment Plant

Iqaluit, Nunavut

Expected Year of Completion: 2020

Original Scope: Design and upgrade existing Wastewater Treatment Plant to meet current and future demands.

This manual has been updated to include:

Date	Description of Change
2019-Mar-01	First Draft – Primary Treatment
2019-Dec 6	Second Draft – Primary Treatment, Secondary Treatment and Solids Handling.
2020-Apr-24	Final Compiled Manual

1. INTRODUCTION

1.1 USE OF THE MANUAL

This manual has been prepared to provide operation and maintenance personnel with a clear and concise understanding of how the Wastewater Treatment Facility operates and the steps which must be followed to keep the facility running safely and efficiently.

The primary goal of this manual and of all personnel operating in and around the Wastewater Treatment Facility is the prevention of personnel injury, fire losses and property damage. To meet this goal, the operation and maintenance program includes:

- Emergency procedures to be followed in the event of spills or accidents.
- Specific operating instructions to be learned and followed at all times to promote safe and efficient operation.
- Routine maintenance of all the facility's systems and structures.
- Detailed inspections of all equipment, facilities, system and structures as well as reporting and correcting any deficiencies.
- Proper record keeping.
- Maintaining a supply of parts, material and equipment necessary to keep the facility running safely and efficiently.

This manual has been divided into 9 chapters.

CHAPTER 1 includes a brief description of the contents of the manual, and a discussion of its proper use.

CHAPTER 2 is an index of the complete contents of the manual.

CHAPTER 3 provides the background and design data of the facility.

CHAPTER 4 provides functional data and schematic information on the systems for the Facility and Treatment System.

CHAPTER 5 compiles component details

CHAPTER 6 describes procedures to be completed during the operation of the facility.

CHAPTER 7 contains a detailed maintenance manual for the products supplied and installed at the facility.

CHAPTER 8 contains a compilation of all inspection and testing certificates for all products supplied and installed at the facility.

CHAPTER 9 contains manufacture data and service information.

APPENDICES contain construction documents (record drawings, specifications, shop drawings, warranties, equipment operation and maintenance manuals).

Personnel must review and be familiar with all chapters of the manual to ensure that they have a thorough working knowledge of the Wastewater Treatment Facility. This will enable them to turn directly to the correct chapter should a reference be required.

1.2 PROJECT TEAM

Project Owner:	**City of Iqaluit** Building 901, PO Box 460, Iqaluit, NU X0A 0H0 Matthew Hamp Project Manager

CHAPTER 3

3. BACKGROUND AND DESIGN DATA

3.1 BACKGROUND

3.1.1 Prior Facilities

Wastewater management in Iqaluit dates back to 1964 when a sanitary sewer outfall, made of five pipes, discharged raw sewage directly onto the beaches of the community of Frobisher Bay, as it was called back then. Shoreline discharge of raw sewage lasted for 12 years when the construction of several lift stations provided the means to pump sewage to a macerator system at the head of Koojesse Inlet. At the same time, a holding pond was built on the tidal plain at the head of the inlet. This facility operated successfully for several decades. However, several overflow and breaching events demanded improvements in the earth structures, and the perimeter drainage of the facility.

The lagoon performed well with the improvements in the earth structures and the perimeter drainage of the facility. The lagoon performed well as a primary treatment facility, with a continuous discharge. Effluent quality from the lagoon systems varied significantly over the course of the year because the only process at work in the winter months was sedimentation.

In the early 90's, regulatory expectations prompted the City to complete an engineering feasibility study on improving the treatment system. The first attempt to implement a secondary treatment for Iqaluit was a design-build contract that was awarded in 1998 to a contractor that selected a membrane bioreactor (MBR) process. Unfortunately, the inexperience of the design builder in northern wastewater treatment became evident by mid-1999.

An evaluation of the incomplete sewage treatment plant was performed in 2002 towards conducting remedial work. Phase 1 of the remedial work involved building the primary treatment system in an addition to the original building, and this work was completed in 2006. This process work consisted of an auger screen, and a primary screen (Salsnes Filter or Leap Primary). Phase 2 of the project was to include design and construction of a secondary clarifier to match the hydraulic capacity of the aeration basins. Unfortunately, funding for the project was only sufficient for Phase 1.

An evaluation of the incomplete sewage treatment plant was performed in 2002 towards conducting remedial work. Phase 1 of the remedial work involved building the primary treatment system in an addition to the original building, and this work was completed in 2006. The mechanical systems implemented at that time included a hydronic (glycol) heating system, ventilation systems, plumbing systems and fuel oil system. The original systems and subsequent upgrades are described in the following paragraphs.

The original heating system consisted of two fuel oil (diesel) fired boilers, two primary pumps and two secondary pumps, servicing a hydronic system utilizing a glycol/water solution as

the circulating heating fluid. Heating for the plant areas was accomplished by distribution of glycol through a direct piping system to terminal heating equipment. The heating system was upgraded in 2006 to provide hot glycol to existing and new unit heaters, new wall fin radiation, existing effluent water heat exchanger and new Headworks air handling unit reheat coil.

The original ventilation systems included one air handling unit, one small exhaust fan and a modulating damper system. The air handling unit provides tempered air to the First Floor Blower Room and the Second Floor. The small exhaust fan services the Washroom and discharges into the Bioreactor Room. Generator Room ventilation was provided by openings in the exterior wall and Blower Room wall utilizing motorized dampers based on local thermostat setting. The ventilation was upgraded in 2006 to include removal of existing exhaust fan and associated ductwork to accommodate the Headworks Building addition and new explosion proof heat recovery air handling unit to service the Headworks Building. Supply and exhaust ducting and louvers were added to the Emergency Generator Room to serve the Emergency Generator

The original plumbing systems consisted of one Washroom containing a water closet, lavatory and shower. Floor drains are located throughout the building. The plumbing system was upgraded in 2006 to include a new sump c/w pumps to service the Headworks Building addition, rerouting of the existing plumbing fixtures and Cake Bin Room sump drainage piping to the Headworks Building new raw water pump vault.

The original domestic water system consisted of a water storage tank c/w pressure system (jet pump and expansion tank) and electric domestic hot water heater. Domestic water is distributed by copper piping to Washroom fixtures, hand sink and Laboratory sink.

Process system upgrades conducted in 2006 included three new filtered effluent water booster pumps and one new effluent pressure tank for cleaning of the process screens and filters. A heating system was added to supply hot Filtered Effluent Water (FEW) to the Headworks building.

The original fuel oil system consists of one double walled outdoor 9,600 liter storage tank, one 450 liter indoor day tank and a fuel oil transfer system that provides fuel for the heating boilers. In 2006, a new double walled fuel day tank was installed in the Emergency generator room, as well as an automated filling system from the new 10,000 Liter storage tank.

3.2 FACILITY MECHANICAL SYSTEM ADDITION AND UPGRADES

The scope of the project is to upgrade the HVAC systems for the WWTP to meet or exceed requirements of the Government of Nunavut "Good Building Practice Guidelines, 2nd edition, December 2005, (referred herein as "Good Building Practice (GBP)"), applicable ASHRAE standards and guidelines, normal industry practice for similar facilities, and other applicable codes and standards.

3.2.1 Heating

The upgrades to the heating systems include the following:

- Removal of all heating piping and equipment including the heating plant except for:
    - Unit heaters and heating water pipe in the upper and lower headworks (classified area);
    - Select unit heaters in the unclassified areas of the building where location and condition of heater were suitable for re-use.
- Installation of a new primary/secondary heating system piped in a reverse-return setup to terminal heating devices and other heating equipment.
    - The system sizing and heating outputs are based on a 30°F supply/return temperature differential and the use of 50% propylene glycol as the heating water media.
- Installation of two (2) high-efficient oil-fired cast iron sectional boilers in in the repurposed mechanical room located on the main floor.
    - Each boiler sized at 100% of the peak heating load which includes space heating, ventilation heating, water service recirculation heating, and process hot non-potable water temperature boosting.
    - Each boiler has a modulating burner.
    - Each boiler has a dedicated primary pump sized for the rated boiler output and its maximum firing rate for the given temperature differential.
    - Boiler boilers are complete with packaged controllers for their operation and are monitored and enabled by the building automation system (BAS).
- Installation of duplex secondary heating water pumps equipped with variable flow drives (VFD's) on circulation pumps to reduce energy consumption. The pumps operate as lead/standby with each pump sized for 100% of the heating load.
- Installation of a small packaged automatic heating water media makeup system with pump, tank and pressure reducing valve.
- Installation of a chemical pot feeder and heating water media side stream filter.
- Terminal heating is provided by a combination of new and existing devices as follows:
    - Classified areas (headworks):
        - Explosion proof hydronic unit heaters provide heating for the upper and lower level headworks.

        - Hydronic baseboard radiation provides heating for the stairwell and vestibule on the north end of the building.

    - Unclassified areas (remainder of building):

        - Hydronic unit heaters provide heating for unclassified areas including the MBBR and upper DAF tank area, upper level mezzanine, Belt Filter Press area, polymer mixing area, process blower area, lower DAF tank area, and the sludge trailer room.

        - A hydronic cabinet unit heater provides heating for the new stairwell and vestibule on the south end of the building.

        - Hydronic baseboard radiation provides heating for the water service entry room, old electric room, and lab.

        - Electric baseboard radiation provides heating for the office and the washroom.

    - Each terminal heating unit has its own thermostatic control to provide individual space temperature control.

3.2.2 Ventilation

The upgrades to the ventilation system include the following:

- Removal of all existing ventilation systems except for:
    - AHU-3 and system serving the headworks area.
- Installation of AHU-2 system serving the unclassified areas of the building:
    - AHU-2 is custom built 100% outdoor air unit complete with two (2) VFD type fans, an air-to-air fixed plate heat exchanger, face and bypass dampers, preheat and reheat hydronic heating coils and exhaust and outdoor air dampers. The unit is installed in above the MBBR cells and provides fresh air to the unclassified areas including the MBBR and upper DAF tank area, upper level mezzanine, Belt Filter Press area, polymer mixing area, process blower area, lower DAF tank area, and the sludge trailer room
    - The air system provides 3 to 6 air changes per hour.
- Re-use of existing AHU-3 serving the classified areas of the building:
    - AHU-3 is an existing custom built 100% outdoor air unit complete with two (2) two-speed fans, an air-to-air fixed plate heat exchanger, defrost bypass dampers, a reheat hydronic heating coil and exhaust and outdoor air dampers. The unit is installed on the main floor of the existing headworks building and services the existing headworks room.

  - To allow the unit to be re-used, the existing controls were migrated from the previous PLC system to the new BAS system. New control sensors were provided for all existing. Several new sensors were also provided as required by current codes for operation.

  - The air system provides 6 to 12 air changes per hour.

  - The system and its equipment meet the electrical requirements for Class 1 Div. 2 operation.

- Installation of HRV-1 system serving the office/lab area:

  - HRV-1 is a light commercial packaged heat recovery ventilator and pre-heat and re-heat coils PHC-1 and RHC-1 installed on the mezzanine above the office/washroom. The unit provides fresh tempered air to the old electrical room, lab, washroom, and office to pressurize the spaces relative to the adjacent plant areas to minimize unpleasant odors.

- Installation of CF-1 system providing cooling for the mechanical room:

  - Cooling is accomplished via economizer cooling using a supply fan and interlocked modulating return/outdoor air dampers. Relief air for the space is provided via the boiler combustion air duct.

- Installation of CF-2 system providing cooling for the electrical room:

  - Cooling is accomplished via economizer cooling using a supply fan and interlocked modulating return/outdoor air dampers. Relief air for the space is provided via a modulating exhaust air damper.

- Installation of tempered supply air system for process blowers:

  - A ducted hydronic unit heater complete with modulating 2-way valve temperature controller and 2-position outdoor air damper provide make-up air tempered to a minimum of -15°C to the area adjacent the process blowers serving the primary filters and process aeration.

  - The system also provides cooling for the area surrounding the process blowers.

- Installation of new cooling air and combustion air system for the existing generator:

  - Due to the removal of the south wall to allow the DAF tank installation, the existing generator ventilation system had to be removed. A new system was provided.

  - Cooling is accomplished via economizer cooling using the generator radiator fan and interlocked modulating return/exhaust air dampers with the exhaust discharging through the exterior wall via a wall hood and the return directly to the space from the damper. Cooling (make-up) air and generator combustion air are provided by outdoor air dampers mounted directly to wall hood.

3.2.3 Plumbing

The upgrades to the plumbing systems includes the following

- Decommissioning and removal of all existing sanitary, domestic water, and non-potable water systems identified as not suitable for re use or not required.
- Installation of a new insulated, recirculated, and heated water service from a new access vault (connected to the City of Iqaluit water system) installed on the southeast corner of the building.
    - Duplex lead/standby pumps in the water service entry room provide recirculation to/from the access vault and recirculation of the new extension of the City of Iqaluit water service line installed for this upgrade.
    - Heat injection for the recirculated system is provided by duplex lead/standby pumps and a double walled heat exchanger downstream of the water service recirculation pumps before the recirculation line leaves the building.
- Installation of a new potable water system (hot and cold) through the building. The hot water system includes a recirculation loop and pump due to the long runs required.
    - The existing washroom and lab domestic water piping was retained for re-use and has been connected to the new potable water system.
- Installation of a new oil-fired domestic hot water heater in the mechanical room for building domestic hot water.
- Installation of a new non-potable cold-water system to provide water to the various process systems. The system is supplied with water by the building water service through a reduced pressure backflow preventer.
- Installation of a non-potable hot water system including a temperature boosting heat exchanger. Pre-heated hot water is supplied to the system by the building domestic hot water system through a reduced pressure backflow preventer.
- Installation of new duplex lead/lag sump pumps and control panels.
    - The existing sump pumps and control panels were removed and replaced by new pumps and control panels.
    - One new sump was added between the two DAF tanks.
- Modifications to the existing sanitary drainage system to support the new floors drains, sump pit, and to avoid conflicts with new process piping and equipment.

3.2.3.1 Fuel System

The upgrades to the fuel system for the building include the following:

- Decommissioning and removal of all existing fuel oil equipment and piping. Several select lines below the existing concrete lower level floor slab were abandoned in place after being cleaned and sealed.
- Installation of a new double walled (100% containment) above ground fuel oil storage tank on the southeast corner of the building to provide storage for No. 2 fuel oil (ultra-low Sulphur Arctic Grade diesel fuel) for use by the heating boilers, domestic hot water heater, and emergency generator.
    - The tank was sized to provide two weeks of operation at peak building heating demand (included water service re-circ heat injection).
    - In addition, the tank has sufficient capacity to provide for 3 days of continuous operation of the existing standby generator at full load. This is an allowance for power outages during blizzard conditions.
    - A float switch in the tank will provide an alarm at 25% of the tank volume. The alarm is monitored by the BAS.
    - A hydrocarbon detector in the tank interstitial space will provide an alarm in case of a leak in the primary tank. The alarm is monitored by the BAS.
    - Anti-siphon protection is provided by a normally closed solenoid valve at the tank that opens only during filling of the interior day tanks.
- Installation of a duplex fuel oil pump transfer package and control panel. The pumps operate in lead/lag and fill the building interior auxiliary tanks when required.
- Installation of two (2) double walled (100% containment) auxiliary day tanks for the heating boilers / domestic hot water heater and for the emergency generator.
    - Both day tanks are complete with level switches to provide low/high level alarms and to start/stop the fuel oil transfer pumps and mechanical leaks gauges in case of a leak in the primary tank.
    - Both tanks allow of an immediate usable volume of fuel oil and allow the fuel oil to be warmed prior to use by the equipment.
    - The boiler and domestic hot water heat day tanks is sized to provide 4 hours of operation at the peak heating demand.
    - The boiler and domestic hot water heat day tank is sized to provide 4 hours of operation at the peak heating demand.
    - The generator day tank is sized to provide 4 hours of operation at the generators maximum standby power generation rating.

3.2.4 Fire Protection

The building is not sprinklered. In lieu, passive and active fire protection systems have been provided.

Passive mechanical protection systems include rated fire stopping, fire dampers and the use of low flame and smoke spread rated material. To provide the highest level of passive protection the facility is of non-combustible construction throughout.

Fire extinguishers are installed to the requirements of NFPA 10 and the Authority having jurisdiction. Multi-purpose use dry chemical extinguishers (Type ABC) have been provided for general service. Fire extinguishers are hanger mounted.

END OF CHAPTER 3

CHAPTER 4

4. SCHEMATICS AND FUNCTIONAL DATA

4.1 GENERAL

The following tables describe where the components to the various systems are located and the function that each performs. For each table, there are drawings that can be referenced, to better understand the flow of that part of the Water Treatment Plant.

4.2 HEATING SYSTEMS

4.2.1 Heating Plant

(Refer to Drawing M301, M302, M500, M601, and M602 in Appendix A)

The following table identifies the components related to the Hydronic Heating System.

No.	Component	Location	Function Performed	Remarks
1	Thermometers (general)	Various locations throughout piping system	Visual indication of temperature in piping at installed location	Used to verify operation of equipment, valves, and controls
2	Pressure Gauges (general)	Various locations throughout piping system	Visual indication of pressure in piping at installed location	Used to verify operation of equipment, valves, and controls
3	Isolation Valves (general)	Various locations throughout piping system	Valves used for isolation equipment and fixtures	Typically, Normally Open
4	Manual Air Vent (general)	At local high points in piping system	Allows for venting/removal of trapped air from heating system	Normally Closed
5	Boiler B-1	Mechanical Room	Provides heating of heating water	Boiler provides 100 % heating capacity for system.
6	AAV – Automatic Air Vent & Isolation Valve	Boiler B-1	Allows for venting/removal of trapped air from Boiler B-1	Vents air automatically
7	Boiler safety devices	Boiler B-1	Provides safety limits and controls for operation of boiler	Low water cut-off, high temp cutoff, pressure/temperatur e relief valve

No.	Component	Location	Function Performed	Remarks
8	Temperature Sensor (TT)	Boiler B-1 return piping	Return water temperature to boiler	
9	Temperature Sensor (TT)	Boiler B-1 supply piping	Supply water temperature from boiler	
10	Balancing Valve	Boiler B-1 return piping	Used for balancing of flow rate to boiler	Set by TAB agent to required flow rate
11	Isolation Valve	Boiler B-1 return piping immediately upstream of boiler	Used to isolate boiler	Normally Open
12	Isolation Valve	Pump P-1.1 Suction Piping	Used to isolate pump	Normally Open
13	Strainer	Pump P-1.1 Suction Piping	Provides for removal of particulates from water before passing through pump	Strainer to be cleaned if plugged
14	Boiler Circulation Pump (P-1.1)	Mechanical Room	Circulates heating water through boiler from primary header	
15	Check Valve	Pump P-1.1 Discharge Piping	Prevents backflow through pump when not operating	
16	Isolation Valve	Pump P-1.1 Discharge Piping	Valves used for isolation of pumps	Normally Open
17	Boiler B-2	Mechanical Room	Provides heating of heating water	Boiler provides 100 % heating capacity for system.
18	AAV – Automatic Air Vent & Isolation Valve	Boiler B-2	Allows for venting/removal of trapped air from Boiler B-1	Vents air automatically
19	Boiler safety devices	Boiler B-2	Provides safety limits and controls for operation of boiler	Low water cut-off, high temp cutoff, pressure/temperatur e relief valve
20	Temperature Sensor (TT)	Boiler B-2 return piping	Return water temperature to boiler	
21	Temperature Sensor (TT)	Boiler B-2 supply piping	Supply water temperature from boiler	
22	Balancing Valve	Boiler B-2 return piping	Used for balancing of flow rate to boiler	Set by TAB agent to required flow rate
23	Isolation Valve	Boiler B-2 return piping immediately upstream of boiler	Used to isolate boiler	Normally Open

No.	Component	Location	Function Performed	Remarks
24	Isolation Valve	Pump P-1.2 Suction Piping	Used to isolate pump	Normally Open
25	Strainer	Pump P-1.2 Suction Piping	Provides for removal of particulates from water before passing through pump	Strainer to be cleaned if plugged
26	Boiler Circulation Pump (P-1.2)	Mechanical Room	Circulates heating water through boiler from primary header	
27	Check Valve	Pump P-1.2 Discharge Piping	Prevents backflow through pump when not operating	
28	Isolation Valve	Pump P-1.2 Discharge Piping	Valves used for isolation of pumps	Normally Open
29	Air Separator & Automatic Air Vent (AAV)	Upper Level near office	Automatic separation of trapped air from heating water system	Vortex type separator
30	Expansion Tank TK-1.1 & TK-1.2	Mechanical Room	Maintains heating system operating pressure and allows for expansion of heat water fluid	
31	Pressure Sensor (PS)	Expansion tank TK-1.1/1.2 piping	Pressure of heating water system	
32	Glycol Fill System P-1.5	Mechanical Room	Transfers mixed glycol from fill tank to heating system	Heating system operation to be monitored during filling of system
33	Check Valve	Pump P-1.5 Discharge Piping	Prevents backflow of glycol	
34	Isolation Valve	Pump P-1.5 Discharge Piping	Valve used for isolation of glycol fill system	Normally Open
35	Isolation Valves	Pump P-1.3 & 1.4 Suction Piping	Valves used for isolation of pumps	Normally Open
36	Strainers	Pump P-1.3 & 1.4 Suction Piping	Provides for removal of particulates from water before passing through pump	Strainer to be cleaned if plugged
37	Heating Water Circulation Pumps (P-1.3 & P-1.4)	Mechanical Room	Circulates heating water through building to heating equipment	Lead/standby operation, VFD driven motors
38	Check Valves	Pump P-1.3 & 1.4 Discharge Piping	Prevents backflow through pump when not operating	

No.	Component	Location	Function Performed	Remarks
39	Isolation Valves	Pump P-1.3 & 1.4 Discharge Piping	Valves used for isolation of pumps	Normally Open
40	Chemical Pot Feeder	Between Pump P-1.3 & 1.4 Supply and Discharge Piping	Allows feeding of chemicals into heating water system for treatment	Normally isolated from system, requires caution when being used as system under pressure
41	Sidestream Filter Assembly	Between Pump P-1.3 & 1.4 Supply and Discharge Piping	Provides continuous filtration of heating water system and visual indication of flow and heating water appearance	
42	Temperature Sensor (TT)	Heating water return piping upstream of Air Separator	Return water temperature from building	
43	Temperature Sensor (TT)	Heating water supply piping downstream of P-1.3/1.4	Supply water temperature to building	

4.2.2 Heating Systems – Terminal Heating

(Refer to Drawing M301, M302, M601, and 2/M602 in Appendix A)

The following table identifies the components related to terminal heating devices.

No.	Component	Location	Function Performed	Remarks
1	Isolation Valves (general)	Various locations throughout piping system	Valves used for isolation equipment and fixtures	Typically, Normally Open
2	Manual Air Vent (general)	Equipment Return Piping	Allows for venting/removal of trapped air from heating equipment	Normally Closed
3	Drain Valve (general)	Equipment Supply Piping	Allows for draining of heating water from heating equipment	Normally Closed & Capped
4	Balancing Valve (general)	Equipment Return Piping	Valve used for balancing of flow rate to heating equipment	Set by TAB agent to required flow rate
5	Space Thermostat (T)	In vicinity of unit heaters, cabinet unit heaters, and baseboards	Temperature control for heating devices	Room temperature to be maintained at set point.

No.	Component	Location	Function Performed	Remarks
6	Hydronic Unit Heater	Located throughout the building	Provide heating for the building	Controlled by thermostat near unit / in same space
7	Hydronic Cabinet Unit Heater	New stairwell, lower level	Provide heating for the new stairwell	Controlled by thermostat near unit / in same space
8	Hydronic Baseboard Radiation	Unit heaters located throughout Waste Water Treatment Plant	Provide heating for the building	Controlled by thermostat near unit / in same space

4.2.3 Heating Systems – Air Handling Units & Heat Exchangers

(Refer to Drawing M301, M302, M601, and 2/M602 in Appendix A)

The following table identifies the components related to heating portions of the Air Handling Units and Heat Exchangers.

No.	Component	Location	Function Performed	Remarks
1	Thermometers (general)	Various locations throughout piping system	Visual indication of temperature in piping at installed location	Used to verify operation of equipment, valves, and controls
2	Isolation Valves (general)	Various locations throughout piping system	Valves used for isolation equipment and fixtures	Typically, Normally Open
3	Manual Air Vent (general)	Equipment Return Piping	Allows for venting/removal of trapped air from heating equipment	Normally Closed
4	Drain Valve (general)	Equipment Supply Piping	Allows for draining of heating water from heating equipment	Normally Closed & Capped
5	Balancing Valve (general)	Equipment Return Piping	Valve used for balancing of flow rate to heating equipment	Set by TAB agent to required flow rate
6	Pre-heat coil control valve (HRV-1)	Adjacent HRV-1	Modulates heating water supply flow rate to HRV coil to control coil discharge air temperature	Two-way modulating control valve

No.	Component	Location	Function Performed	Remarks
7	Re-heat coil control valve (HRV-1)	Adjacent HRV-1	Modulates heating water supply flow rate to HRV coil to control coil discharge air temperature	Two-way modulating control valve
8	Pre-heat coil pump (P-1.6 for AHU-2)	Adjacent AHU-2	Circulates heating water through AHU-2 PHC to prevent freeze-up of coil	
9	Pre-heat coil control valve (AHU-2)	Adjacent AHU-2	Modulates heating water supply flow rate to AHU coil to control coil discharge air temperature	Two-way modulating control valve
10	Re-heat coil control valve (AHU-2)	Adjacent AHU-2	Modulates heating water supply flow rate to AHU coil to control coil discharge air temperature	Two-way modulating control valve
11	Heating coil control valve (AHU-3)	Adjacent AHU-3	Modulates heating water supply flow rate to AHU coil to control coil discharge air temperature	Three-way modulating diverting valve
12	Heat Exchanger control valve (HEX-3.1)	Adjacent HEX-3.1	Modulates heating water supply flow rate to water service heat injection HEX to control outlet temperature	Two-way modulating control valve
13	Heat Exchanger control valve (HEX-3.2)	Adjacent HEX-3.2	Modulates heating water supply flow rate to hot NPW booster HEX to control outlet temperature	Two-way modulating control valve

4.3 VENTILATION SYSTEMS

4.3.1 Ventilation System - AHU-2 (Non-Classified Areas)

(Refer to Drawing M401, M402, M601, and 2/M602 in Appendix A)

The following table identifies the components related to the AHU-2 System

No.	Component	Location	Function Performed	Remarks
1	Outside air damper (CD-1)	At exterior wall penetration	Allows unit outdoor air duct to be closed when unit is not operating	Open when unit is running
2	Exhaust air damper (CD-2)	At exterior wall penetration	Allows unit exhaust air duct to be closed when unit is not operating	Open when unit is running
3	***Outdoor Air / Supply Air side of Unit (in order)***	***Platform above MBBR cells on upper level***		
4	Outside air temperature sensor	In air handling unit	Measures outdoor air temperature entering unit	
5	Pre-Filters	In air handling unit	Filters air entering unit	
6	Pre-filter differential pressure sensor	In air handling unit	Measures pressure drop across filters	Provides indication when filters need replacing
7	Pre-heat Coil	In air handling unit	Pre-heats outdoor air entering unit	Heat to temperature that prevents heat recovery core from requiring defrost cycles
8	Pre-heat coil temperature sensor	In air handling unit	Measures air temperature leaving coil	
9	Face and Bypass Dampers	In air handling unit	Allows bypass of heat recovery core	When heat recovery is not required / free cooling is needed
10	Heat Recovery Core (supply side)	In air handling unit	Exchanges heat between exhaust air stream and supply air stream	Fixed plate heat recovery core

No.	Component	Location	Function Performed	Remarks
11	Heat recovery supply air temperature sensor	In air handling unit	Measures air temperature leaving heat recovery core	
12	Final Filters	In air handling unit	Additional filtration of supply air	
13	Final filter differential pressure sensor	In air handling unit	Measures pressure drop across filters	Provides indication when filters need replacing
14	Re-heat Coil	In air handling unit	Heats supply air after heat recovery	Heats to required supply setpoint
15	Supply Fan	In air handling unit	Provides outdoor air / supply air flow through unit	VFD driven motor
16	Supply air temperature sensor	In air handling unit	Measures air temperature leaving unit	
17	Supply air freeze-stat	In air handling unit	Signals alarm and shuts down unit if supply air is below setpoint	
18	Supply air flow rate sensor	In air handling unit	Measures supply air flow rate	Minimum airflow volumes are required to allow de-rating of space per NFPA 820
19	***Return Air / Exhaust Air side of Unit (in order)***			
20	Return air filter	In air handling unit	Filters air entering unit	Prevents dust build-up on heat recovery coil
21	Return filter differential pressure sensor	In air handling unit	Measures pressure drop across filters	Provides indication when filters need replacing
22	Return air temperature sensor	In air handling unit	Measures return air temperature entering unit	
23	Heat Recovery Core (exhaust side)	In air handling unit	Exchanges heat between exhaust air	Fixed plate heat

No.	Component	Location	Function Performed	Remarks
			stream and supply air stream	recovery core
24	Heat recovery exhaust air temperature sensor	In air handling unit	Measures air temperature leaving heat recovery core	
25	Exhaust fan	In air handling unit	Provides return air / exhaust air flow through unit	VFD driven motor
26	Exhaust air flow rate sensor	In air handling unit	Measures supply air flow rate	Minimum airflow volumes are required to allow de-rating of space per NFPA 820

4.3.2 Ventilation System - AHU-3 (Headworks)

(Refer to Drawing M401, M402, M601, and 2/M602 in Appendix A)

The following table identifies the components related to the AHU-3 System

No.	Component	Location	Function Performed	Remarks
1	Outside air damper	At exterior wall penetration	Allows unit outdoor air duct to be closed when unit is not operating	Open when unit is running
2	Exhaust air damper	At exterior wall penetration	Allows unit exhaust air duct to be closed when unit is not operating	Open when unit is running
3	***Outdoor Air / Supply Air side of Unit (in order)***	***Lower Level headworks***		
4	Pre-Filters	In air handling unit	Filters air entering unit	
5	Pre-filter differential pressure sensor	In air handling unit	Measures pressure drop across filters	Provides indication when filters need replacing
6	Outside air temperature sensor	In air handling unit	Measures outdoor air temperature entering unit	
7	Face and Bypass Dampers	In air handling unit	Allows bypass of heat recovery core	When heat recovery is not required / free cooling

				is needed / heat recovery core requires defrosting
8	Heat Recovery Core (supply side)	In air handling unit	Exchanges heat between exhaust air stream and supply air stream	Fixed plate heat recovery core
9	Heat recovery supply air temperature sensor	In air handling unit	Measures air temperature leaving heat recovery core	
10	Heating Coil	In air handling unit	Heats supply air after heat recovery	Heats to required supply setpoint
11	Supply Fan	In air handling unit	Provides outdoor air / supply air flow through unit	Two speed motor
12	Supply air temperature sensor	In air handling unit	Measures air temperature leaving unit	
13	Supply air freeze-stat	In air handling unit	Signals alarm and shuts down unit if supply air is below setpoint	
14	Supply air flow rate sensor	In air handling unit	Measures supply air flow rate	Minimum airflow volumes are required to allow de-rating of space per NFPA 820
15	***Return Air / Exhaust Air side of Unit (in order)***			
16	Return air temperature sensor	In air handling unit	Measures return air temperature entering unit	
17	Return air filter	In air handling unit	Filters air entering unit	Prevents dust build-up on heat recovery coil
18	Return filter differential pressure sensor	In air handling unit	Measures pressure drop across filters	Provides indication when filters need replacing

19	Heat Recovery Core (exhaust side)	In air handling unit	Exchanges heat between exhaust air stream and supply air stream	Fixed plate heat recovery core
20	Heat recovery exhaust air temperature sensor	In air handling unit	Measures air temperature leaving heat recovery core	
21	Exhaust fan	In air handling unit	Provides return air / exhaust air flow through unit	Two speed motor
22	Exhaust air flow rate sensor	In air handling unit	Measures supply air flow rate	Minimum airflow volumes are required to allow de-rating of space per NFPA 820

4.3.3 Ventilation System - HRV-1 (Office, Lab, and Washroom)

(Refer to Drawing M401, M402, M601, and 2/M602 in Appendix A)

The following table identifies the components related to the HRV-1 System

No.	Component	Location	Function Performed	Remarks
1	Outside air damper (CD-8)	At exterior wall penetration	Allows unit outdoor air duct to be closed when unit is not operating	Open when unit is running
2	Pre-Filters	In air handling unit	Filters air entering unit	
3	Pre-heat Coil (PHC-1)	In air handling unit	Pre-heats outdoor air entering unit	Heat to temperature that prevents HRV from requiring defrost cycles
4	Pre-heat coil temperature sensor	In air handling unit	Measures air temperature leaving coil	
5	Heat Recovery Ventilator (HRV-1)	On mezzanine above washroom/office	Packaged heat recovery ventilator unit	
6	Final Filters	Immediately downstream of HRV-1	Additional filtration of supply air	
7	Re-heat Coil (RHC-1)	Immediately downstream of HRV-1	Heats supply air after heat recovery	Heats to required

No.	Component	Location	Function Performed	Remarks
				supply setpoint
8	Supply air temperature sensor	Immediately downstream of HRV-1	Measures air temperature leaving unit	
9	Exhaust air backdraft damper	At exterior wall penetration	Allows exhaust air from HRV-1 to be discharged outside	Gravity backdraft damper

4.3.4 Ventilation System - Cooling Systems

(Refer to Drawing M401, M402, M601, and 2/M602 in Appendix A)

The following table identifies the components related to the Cooling Ventilation Systems

No.	Component	Location	Function Performed	Remarks
	Ventilation System - Cooling Systems			
1	Cooling Fan (CF-1)	Mechanical Room	Provides cooling air flow	
2	Space Thermostat for CF-1 (T)	Mechanical Room	Temperature sensor for cooling fan system	Starts fans when space above setpoint and modulates economizer dampers
3	Outside air damper (CD-3)	Mechanical Room	Provides outdoor (cooling) air for CF-1 economizer	Normally Closed, exhaust air via combustion air duct
4	Return air damper (CD-4)	Mechanical Room	Provides return (room air) for CF-1 economizer	Normally Open
5	Pre-Filter (CF-1)	Downstream of CD-3 and upstream of CF-1	Filters outdoor air entering cooling fan	
6	Pre-filter differential pressure sensor (CF-1)	On CF-1 filter	Measures pressure drop across filters	Provides indication when filters need replacing
7	Supply air temperature sensor (CF-1)	In CF-1 supply air discharge duct	Measures air temperature leaving unit	

No.	Component	Location	Function Performed	Remarks
8	Supply air freeze-stat (CF-1)	In CF-1 supply air discharge duct	Signals alarm and shuts down unit if supply air is below setpoint	
9	Cooling Fan (CF-2)	Electrical Room	Provides cooling air flow	
10	Space Thermostat for CF-2 (T)	Electrical Room	Temperature sensor for cooling fan system	Starts fans when space above setpoint and modulates economizer dampers
11	Outside air damper (CD-5)	Electrical Room	Provides outdoor (cooling) air for CF-2 economizer	Normally Closed
12	Return air damper (CD-6)	Electrical Room	Provides return (room air) for CF-2 economizer	Normally Open
13	Exhaust air damper (CD-7)	Electrical Room	Provides exhaust air for CF-2 economizer	Normally Closed
14	Pre-Filter (CF-2)	Downstream of CD-5 and upstream of CF-2	Filters outdoor air entering cooling fan	
15	Pre-filter differential pressure sensor (CF-2)	On CF-2 filter	Measures pressure drop across filters	Provides indication when filters need replacing
16	Supply air temperature sensor (CF-2)	In CF-2 supply air discharge duct	Measures air temperature leaving unit	
17	Supply air freeze-stat (CF-2)	In CF-2 supply air discharge duct	Signals alarm and shuts down unit if supply air is below setpoint	
18	Temperature Controller and space temperature sensor	Generator room	Modulates generator cooling economizer dampers to maintain room setpoint	
19	Outside air damper (CD-11)	Generator room	Provides combustion air for generator when it is running	Normally Closed, interlocked with generator to open on generator start-up
20	Outside air damper (CD-12)	Generator room	Provides outdoor (cooling) air for generator economizer	Normally Closed

No.	Component	Location	Function Performed	Remarks
21	Return air damper (CD-13)	Generator room	Provides return (room air) for generator economizer	Normally Open
22	Exhaust air damper (CD-14)	Generator room	Provides exhaust air for generator economizer	Normally Closed

4.4 DOMESTIC WATER SYSTEMS

(Refer to Drawings 1/M603, M201, and M202 in Appendix A)

The following table identifies the components related to the Domestic Water System.

No.	Component	Location	Function Performed	Remarks
1	Thermometers (general)	Various locations throughout piping system	Visual indication of temperature in piping at installed location	Used to verify operation of equipment, valves, and controls
2	Pressure Gauges (general)	Various locations throughout piping system	Visual indication of pressure in piping at installed location	Used to verify operation of equipment, valves, and controls
3	Isolation Valves (general)	Various locations throughout piping system	Valves used for isolation equipment and fixtures	Typically, Normally Open
4	Water Service Entry Isolation Valve	Water Service Entry Room	Valve for isolation of building from municipal system	Used to isolate municipal water service within building
5	Water Service Recirc Isolation Valve	Water Service Entry Room	Valve for isolation of building from municipal system	Used to isolate municipal water service recirculation within building
6	Temperature Sensor (TT)	Water service entry, immediately downstream of isolation valve	Temperature sensor for water	Temperature of water service to building

No.	Component	Location	Function Performed	Remarks
7	Temperature Sensor (TT)	Water service recirc, immediately upstream of isolation valve	Temperature sensor for water	Temperature of water service recirculation from building after heat injection
8	Water Service Recirc Pumps (P-3.1 & P-3.2)	Water Service Entry Room	Provides recirculation of the water service to the building	Lead/standby operation
9	Isolation Valves	Pump P-3.1 & P-3.2 Suction Piping	Valves used for isolation of pumps	Normally Open
10	Strainers	Pump P-3.1 & P-3.2 Suction Piping	Provides for removal of particulates from water before passing through pump	Strainer to be cleaned if plugged
11	Check Valves	Pump P-3.1 & P-3.2 Discharge Piping	Prevents backflow through pump when not operating	
12	Isolation Valves	Pump P-3.1 & P-3.2 Discharge Piping	Valves used for isolation of pumps	Normally Open
13	Water Service Heat Injection Pumps (P-3.4 & P-3.5)	Water Service Entry Room	Provides recirculation of the water service to the building	Lead/standby operation
14	Isolation Valves	Pump P-3.4 & P-3.5 Suction Piping	Valves used for isolation of pumps	Normally Open
15	Check Valves	Pump P-3.4 & P-3.5 Discharge Piping	Prevents backflow through pump when not operating	
16	Isolation Valves	Pump P-3.4 & P-3.5 Discharge Piping	Valves used for isolation of pumps	Normally Open

No.	Component	Location	Function Performed	Remarks
17	Water Service Heat Injection Heat Exchanger (HEX-3.1)	Water Service Entry Room	Adds heat to the water service recirculation line leaving the building for additional freeze protection of the municipal water mains	Double walled brazed plate heat exchanger with vented interstitial space, wall mounted
18	Pressure/Temperature Relief Valve	Discharge side of HEX-3.1	Automatic relief of heat injection HEX pressure if valve preset limit is exceeded	Normally Closed
19	Water meter	Water Service Entry Room	Monitors building water flow rate and usage	Supplied under Process Scope of Work for Project
20	Isolation Valves	Upstream/downstream of water meter	Valves used for isolation of the water meter	Normally Open
21	Bypass Valve	At water meter	Valve to allow water meter to be bypassed	Normally Closed and locked
22	Reduced pressure backflow preventer (RPBF-1)	Water Service Entry Room	Backflow and back-siphonage prevention from building to municipal water service	For building domestic cold water system
23	Reduced pressure backflow preventer (RPBF-2)	Water Service Entry Room	Backflow and back-siphonage prevention from	For building non-potable water system

No.	Component	Location	Function Performed	Remarks
			building to municipal water service	
24	Reduced pressure backflow preventer (RPBF-3)	Upper level near stairs into upper level headworks (gridline C:2)	Backflow and back-siphonage prevention from non potable water to potable water system	For process non-potable hot water system supply from domestic hot water system
25	Pressure reducing valve	Immediately downstream of RPBF-1	Reduces municipal water pressure above setpoint for building use	
26	Pressure reducing valve	Immediately downstream of RPBF-2	Reduces municipal water pressure above setpoint for building use	
27	Isolation Valves	Upstream/downstream of water pressure reducing valve	Valves used for isolation of the water meter	Normally Open
28	Bypass Valve	At water pressure reducing valve	Valve to allow water pressure reducing valve to be bypassed	Normally Closed
29	Domestic Water Heater (DHWH-1)	Mechanical Room	Provides domestic hot water for WWTP	
30	Isolation Valves	DHWT-1 inlet and outlet	Used to isolate DHWH	Normally Open

No.	Component	Location	Function Performed	Remarks
31	Check Valves	DHWT-1 DCW inlet, upstream of DHWR piping tie-in	Prevents backflow to domestic cold water piping due to domestic hot water recirculation pump	
32	Domestic Hot Water Expansion Tank (TK-3.1)	Mechanical Room	Allows for expansion of domestic water due to heating by DHWT-1	
33	Domestic Hot Water Recirc Pump (P-3.3)	Water Service Entry Room	Provides recirculation of the water service to the building	
34	Isolation Valve	Pump P-3.3 Suction Piping	Valve used for isolation of pump	Normally Open
35	Strainer	Pump P-3.3 Suction Piping	Provides for removal of particulates from water before passing through pump	Strainer to be cleaned if plugged
36	Check Valve	Pump P-3.3 Discharge Piping	Prevents backflow through pump when not operating	
37	Isolation Valve	Pump P-3.3 Discharge Piping	Valve used for isolation of pump	Normally Open
38	Temperature Sensor (TT)	Domestic hot water piping immediately downstream of DHWT-1	Temperature sensor for water	Temperature of DHW supply to building from DHWT-1
39	Temperature Sensor (TT)	Domestic hot water piping immediately upstream of P-3.3	Temperature sensor for water	Temperature of DHW recirc from building from DHWT-1

4.5 NON-POTABLE WATER (NPW) FOR PROCESS USES

(Refer to Drawing 1/M603, M201, and M202 in Appendix A)

The following table identifies the components Non-Potable Water System for Process Use.

No.	Component	Location	Function Performed	Remarks
1	Thermometers (general)	Various locations throughout piping system	Visual indication of temperature in piping at installed location	Used to verify operation of equipment, valves, and controls
2	Pressure Gauges (general)	Various locations throughout piping system	Visual indication of pressure in piping at installed location	Used to verify operation of equipment, valves, and controls
3	Isolation Valves (general)	Various locations throughout piping system	Valves used for isolation equipment and fixtures	Typically, Normally Open
4	Hot NPW Booster Heat Exchanger (HEX-3.2)	Upper level near stairs into upper level headworks (gridline C:2)	Boosts the temperature of the hot NPW water supply to the Primary Filters (for filter cleaning)	Brazed plate heat exchanger, wall mounted
5	Pressure/Temperature Relief Valve	Discharge side of HEX-3.2	Automatic relief of booster HEX pressure if valve preset limit is exceeded	Normally Closed
6	Isolation Valves	Upstream/downstream of HEX-3.2	Valves used for isolation of the hot NPW booster HEX	Normally Open
7	Hot NPW Expansion Tank (TK-3.2)	Upper level near stairs into upper level headworks (gridline C:2)	Allows for expansion of hot NPW due to	

No.	Component	Location	Function Performed	Remarks
			heating by HEX-3.2	
8	Temperature Sensor (TT)	Hot NPW piping immediately downstream of HEX-3.2	Temperature sensor for water	Temperature of hot NPW supply
9	Flow Switch (FS)	Hot NPW piping immediately downstream of HEX-3.2	Flow indication for hot NPW usage	Indicates need for HEX-3.2 operation to boost hot NPW temperature

4.6 SANITARY SYSTEMS

(Refer to Drawing 1/M603, M201, and M202 in Appendix A)

The following table identifies the components in the building Sanitary systems.

No.	Component	Location	Function Performed	Remarks
1	Duplex sump pumps (P-2.1 & P-2.2)	Lower level headworks sump pit	Sump pit discharge to building sanitary system	Complete with duplex lead/lag control panel and float switches, explosion proof motors
2	Check Valves	Pump P-2.1 & P-2.2 Discharge Piping	Prevents backflow through pump when not operating	
3	Isolation Valves	Pump P-2.1 & P-2.2 Discharge Piping	Valves used for isolation of pumps	Normally Open
4	Duplex sump pumps (P-2.3 & P-2.4)	Sludge trailer room sump pit	Sump pit discharge to building sanitary system	Complete with duplex lead/lag control panel and float switches
5	Check Valves	Pump P-2.3 & P-2.4 Discharge Piping	Prevents backflow through pump when not operating	
6	Isolation Valves	Pump P-2.3 & P-2.4 Discharge Piping	Valves used for isolation of pumps	Normally Open

No.	Component	Location	Function Performed	Remarks
7	Duplex sump pumps (P-2.5 & P-2.6)	DAF tank room sump pit	Sump pit discharge to building sanitary system	Complete with duplex lead/lag control panel and float switches
8	Check Valves	Pump P-2.5 & P-2.6 Discharge Piping	Prevents backflow through pump when not operating	
9	Isolation Valves	Pump P-2.5 & P-2.6 Discharge Piping	Valves used for isolation of pumps	Normally Open

4.7 PLUMBING FIXTURES

(Refer to Drawing M201 and M202 in Appendix A)

The following table identifies the components related to the plumbing fixtures.

No.	Component	Location	Function Performed	Remarks
1	Gravity flow portable eyewash station (EW-1)	"Lower level: Headworks & Sludge Trailer Room	Emergency eyewash station	Wall mounted unit
2	Wash-down hose bibb station & hose (HB-2)	Upper level: Headworks, outside Lab, Polymer Mixing Area"	Wash/spray down station in case of spills or for general cleaning of floors/equipment	Station complete with isolation valve, vacuum breaker, 10m of heavy duty 5/8" hose, and spray nozzle. Water supply is from the building non-potable water system.
3	Washroom fixtures (LV-1, WC-1, SH-1)	"Lower level: Headworks, Sludge Trailer Room, DAF Tank room	Toilet, lavatory, and shower	N/A

4.8 FIRE PROTECTION

(Refer to Drawing M201 and M202 in Appendix A)

The following table identifies the components related to the Fire protection System.

No.	Component	Location	Function Performed	Remarks
1	Fire Extinguisher (DCE-1)	Various locations throughout building, typically adjacent door to exit path	Hand held dry chemical fire extinguisher in case of fire in building	Wall mounted on hanging hook
2	Fire Extinguisher (DCE-2)	Mechanical room and Generator room adjacent doors	Hand held dry chemical fire extinguisher in case of fire in building	Wall mounted on hanging hook

4.9 FUEL OIL SYSTEM

(Refer to Drawing M301 and M604 in Appendix A)

The following table identifies the components related to the Fuel System.

No.	Component	Location	Function Performed	Remarks
1	Isolation Valves (general)	Various locations throughout piping system	Valves used for isolation equipment and fixtures	Typically, Normally Open
2	Exterior Fuel Oil Storage Tank (TK-4.1)	Exterior, gridline A-B:5-6	Storage tank for building fuel oil	Sized for 2 week peak heating load and a 3 day allowance for continuous generator operation
3	2-way Siphon Protection Valve	Exterior FO tank TK-4.1	Anti-siphon protection in case of break in fuel	

			oil piping between exterior tank and fuel oil transfer pumps	
4	Pressure relief valve	At 2-way siphon protection valve	Valve to allow pressure relief from downstream side of siphon valve	Normally Closed
5	Bypass Valve	At 2-way siphon protection valve	Valve to allow 2-way siphon protection valve to be bypassed	Normally Closed
6	Level switch (LC)	In TK-4.1	Low tank level switch	
7	Leak detector (HCD)	TK-4.1 interstitial space	Vacuum switch to indicate to building control system loss of tank interstitial space vacuum and possible leak	
8	Wall mounted Levelometer	Sludge Trailer Room near Fuel Oil Transfer Pumps	Remote level sensing of exterior fuel oil storage tank from inside building	
9	Fuel oil Pre-Filter	Immediately upstream of Fuel Oil Transfer Pumps	Filters fuel oil from exterior storage tank before passing through transfer pumps and	Complete with upstream strainer, fusible link valve, and upstream/downstream isolation valves

			into interior day tanks	
10	Duplex Fuel Oil Transfer Pump Package (P-4.1 & P-4.2)	Sludge Trailer Room on gridline 5 wall	Transfers fuel oil from exterior storage tank (TK-4.1) to interior day tanks (TK-4.2 & TK-4.3)	Lead/Lag operation, controlled by Fuel Oil Transfer Pump Control Panel
11	Fuel Oil Transfer Pump Control Panel	Sludge Trailer Room on gridline 5 wall	Controls filling operation of interior day tanks from exterior tank and operation of fuel oil transfer pumps	Start stop signals from day tank level switches
12	Interior Fuel Oil Day Tank for Boilers & DHWT (TK-4.2)	Mechanical room	Stores fuel oil for use by the heating boilers and domestic hot water tank.	Also allows for warming of fuel oil before use by burners
13	Level switch column (LC)	In TK-4.2	Day tank level switches for tank filling operation.	Level switches for low level alarm, low level (fill start), high level (fill stop), and high level alarm (pump/fill solenoid lockout)
14	Day tank fill solenoid valve (TK-4.2 CV)	On fuel oil supply pipe to TK-4.2 from transfer pumps	Allows fuel oil to flow into tank when opened by fuel oil transfer pump control panel	Normally Closed
15	Pressure relief valve	At TK-4.2 fill solenoid valve	Valve to allow pressure relief from upstream	Normally Closed

			side of tank fill solenoid valve to fuel oil return line to exterior storage tank	
16	Bypass Valve	At TK-4.2 fill solenoid valve	Valve to allow fill solenoid valve to be bypassed	Normally Closed
17	Anti-siphon valve	On fuel oil supply pipe to burners, at day tank TK-4.2	Anti-siphon protection in case of break in fuel oil piping between tank and burners	Normally Closed
18	Interior Fuel Oil Day Tank for Generator (TK-4.3)	Generator Room	Stores fuel oil for use by the generator	Also allows for warming of fuel oil before use
19	Level switch column (LC)	In TK-4.3	Day tank level switches for tank filling operation.	Level switches for low level alarm, low level (fill start), high level (fill stop), and high level alarm (pump/fill solenoid lockout)
20	Day tank fill solenoid valve (TK-4.3 CV)	On fuel oil supply pipe to TK-4.3 from transfer pumps	Allows fuel oil to flow into tank when opened by fuel oil transfer pump control panel	Normally Closed
21	Pressure relief valve	At TK-4.3 fill solenoid valve	Valve to allow pressure relief from upstream side of tank fill solenoid valve to fuel oil return line	Normally Closed

			to exterior storage tank	
22	Bypass Valve	At TK-4.3 fill solenoid valve	Valve to allow fill solenoid valve to be bypassed	Normally Closed
23	Anti-siphon valve	On fuel oil supply pipe to burners, at day tank TK-4.3	Anti-siphon protection in case of break in fuel oil piping between tank and burners	Normally Closed
24	Oil filters	Upstream of each individual burner or engineer	Filters fuel oil from day tank before being burned by oil burning equipment	
25	Fusible link valves	Immediately upstream of associated fuel oil filter	High temperature protection of fuel oil supply. Automatic shut off of fuel oil supply to Boiler B-1 if preset fusible link temperature limit is exceeded	
26	Fuel oil de-aerators	Immediately upstream of each boiler and DHWT burner	Removes entrained air from fuel oil before it reaches the burner	

END OF CHAPTER

CHAPTER 5

5. COMPONENT DETAILS

5.1 GENERAL OVERVIEW

The following tables describe the components of the various systems and provide some basic details and settings. For each table, there are drawings that can be referenced to better understand in what part of the Water Treatment Plant the components are located.

5.2 HEATING SYSTEMS

5.2.1 Heating Plant

(Refer to Drawing M301, M302, M500, M601, and M602 in Appendix A)

The following table identifies the components related to the Hydronic Heating System.

No.	Component	Details	Settings	Remarks
1	Thermometers (general)	Winters TBM-30040-B8	Range (dual): -20°C / 0°F to 120°C / 250°F	Supplier: Wolseley Canada Inc.
2	Pressure Gauges (general)	Winters P9S90201	Range (dual): 0 PSI to 60 PSI / 0 kPa to 414 kPa	Supplier: Wolseley Canada Inc.
3	Isolation Valves (general)	"Ball valves, Red-White Valve Corp.		
4	Manual Air Vent (general)	Butterfly valves, Apollo Valves"	Typically, Normally Open	Supplier: Wolseley Canada Inc.
5	Boiler B-1	Ball valves, Red-White Valve Corp.	Normally closed	Supplier: Wolseley Canada Inc.
6	AAV – Automatic Air Vent & Isolation Valve	Buderus G515/11-K c/w RL50/M burner	Controlled by BAS, modulating burners	Supplier: Methot Controls Inc
7	Boiler safety devices	Watts FV-4M		Supplier: Wolseley Canada Inc.
8	Temperature Sensor (TT)	Integral to boiler package	Hi temp limit, pressure relief, low water cutoff	Supplier: Methot Controls Inc
9	Temperature Sensor (TT)	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
10	Balancing Valve	Refer to Johnson Controls shop	N/A	Supplier: Johnson Controls

No.	Component	Details	Settings	Remarks
		drawings and record drawings		
11	Isolation Valve	Victaulic TA Series 789 Balancing valves	Flow rate per drawings for boiler heating output	Supplier: Wolseley Canada Inc.
12	Isolation Valve	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
13	Strainer	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
14	Boiler Circulation Pump (P-1.1)	Strainer, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
15	Check Valve	Grundfos UPS 100-40 F BF	On/off by BAS, interlocked with boiler, operates on speed 2	Supplier: Wolseley Canada Inc.
16	Isolation Valve	Check valve, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
17	Boiler B-2	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
18	AAV – Automatic Air Vent & Isolation Valve	Buderus G515/11-K c/w RL50/M burner	Controlled by BAS, modulating burners	Supplier: Methot Controls Inc
19	Boiler safety devices	Watts FV-4M		Supplier: Wolseley Canada Inc.
20	Temperature Sensor (TT)	Integral to boiler package	Hi temp limit, pressure relief, low water cutoff	Supplier: Methot Controls Inc
21	Temperature Sensor (TT)	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
22	Balancing Valve	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
23	Isolation Valve	Victaulic TA Series 789 Balancing valves	Flow rate per drawings for boiler heating output	Supplier: Wolseley Canada Inc.
24	Isolation Valve	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
25	Strainer	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
26	Boiler Circulation Pump (P-1.2)	Strainer, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.

No.	Component	Details	Settings	Remarks
27	Check Valve	Grundfos UPS 100-40 F BF	On/off by BAS, interlocked with boiler, operates on speed 2	Supplier: Wolseley Canada Inc.
28	Isolation Valve	Check valve, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
29	Air Separator & Automatic Air Vent (AAV)	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
30	Expansion Tank TK-1.1 & TK-1.2	Armstrong VAS-4		Supplier: Wolseley Canada Inc.
31	Pressure Sensor (PS)	Amtrol 130LBC		Supplier: Wolseley Canada Inc.
32	Glycol Fill System P-1.5	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
33	Check Valve	Axiom Industries SF-100		Supplier: Specified Technical Sales Ltd.
34	Isolation Valve	Check valve, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
35	Isolation Valves	Ball valve, Red-White Valve Corp.	Normally Open	Supplier: Wolseley Canada Inc.
36	Strainers	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
37	Heating Water Circulation Pumps (P-1.3 & P-1.4)	Strainer, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
38	Check Valves	Grundfos PACO 25709VL	VFD driven motors, speed controlled by BAS	Supplier: Wolseley Canada Inc.
39	Isolation Valves	Check valve, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
40	Chemical Pot Feeder	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
41	Sidestream Filter Assembly	Specified Technical Sales STS-8		Supplier: Specified Technical Sales Ltd.
42	Temperature Sensor (TT)	Specified Technical Sales PN165 HMS-10A filter housing & Filter Mate Flow Indicator		Supplier: Specified Technical Sales Ltd.
43	Temperature Sensor (TT)	Refer to Johnson Controls shop	N/A	Supplier: Johnson Controls

No.	Component	Details	Settings	Remarks
		drawings and record drawings		

5.2.2 Heating Systems – Terminal Heating

(Refer to Drawing M301, M302, M601, and 2/M602 in Appendix A)

The following table identifies the components related to terminal heating devices.

No.	Component	Details	Settings	Remarks
1	Isolation Valves (general)	"Ball valves, Red-White Valve Corp.		
2	Manual Air Vent (general)	Butterfly valves, Apollo Valves"	Typically, Normally Open	Supplier: Wolseley Canada Inc.
3	Drain Valve (general)	Ball valves, Red-White Valve Corp.	Normally closed	Supplier: Wolseley Canada Inc.
4	Balancing Valve (general)	Ball valves, Red-White Valve Corp.	Normally closed	Supplier: Wolseley Canada Inc.
5	Space Thermostat (T)	Victaulic TA Series 786/787/789 Balancing valves	Flow rate per drawings for equipment heating output	Supplier: Wolseley Canada Inc.
6	Hydronic Unit Heater	Refer to Johnson Controls shop drawings and record drawings	"10°C for Unit heaters	
7	Hydronic Cabinet Unit Heater	18°C for baseboard radiation"	Supplier: Johnson Controls	
8	Hydronic Baseboard Radiation	Engineered Air H-1, H-2, V-1,	N/A	Supplier: Engineered Air

5.2.3 Heating Systems – Air Handling Units & Heat Exchangers

(Refer to Drawing M301, M302, M601, and 2/M602 in Appendix A)

The following table identifies the components related to heating portions of the Air Handling Units and Heat Exchangers.

No.	Component	Details	Settings	Remarks
1	Thermometers (general)	Winters TBM-30040-B8	Range (dual): -20°C / 0°F to 120°C / 250°F	Supplier: Wolseley Canada Inc.
2	Isolation Valves (general)	"Ball valves, Red-White Valve Corp.		
3	Manual Air Vent (general)	Butterfly valves, Apollo Valves"	Typically, Normally Open	Supplier: Wolseley Canada Inc.
4	Drain Valve (general)	Ball valves, Red-White Valve Corp.	Normally closed	Supplier: Wolseley Canada Inc.
5	Balancing Valve (general)	Ball valves, Red-White Valve Corp.	Normally closed	Supplier: Wolseley Canada Inc.
6	Pre-heat coil control valve (HRV-1)	Victaulic TA Series 786/787/789 Balancing valves	Flow rate per drawings for equipment heating output	Supplier: Wolseley Canada Inc.
7	Re-heat coil control valve (HRV-1)	Refer to Johnson Controls shop drawings and record drawings	Normally open, modulates to maintain coil SAT	Supplier: Johnson Controls
8	Pre-heat coil pump (P-1.6 for AHU-2)	Refer to Johnson Controls shop drawings and record drawings	Normally open, modulates to maintain coil SAT	Supplier: Johnson Controls
9	Pre-heat coil control valve (AHU-2)	Grundfos UPS 40-80/4 F	On/off by BAS, operates on speed 2	Supplier: Wolseley Canada Inc.
10	Re-heat coil control valve (AHU-2)	Refer to Johnson Controls shop drawings and record drawings	Normally open, modulates to maintain coil SAT	Supplier: Johnson Controls
11	Heating coil control valve (AHU-3)	Refer to Johnson Controls shop drawings and record drawings	Normally open, modulates to maintain coil SAT	Supplier: Johnson Controls
12	Heat Exchanger control valve (HEX-3.1)	Refer to Johnson Controls shop drawings and record drawings	Normally open, modulates to maintain coil SAT	Supplier: Johnson Controls
13	Heat Exchanger control valve (HEX-3.2)	Refer to Johnson Controls shop drawings and record drawings	Normally closed, modulates to maintain HEX cold side discharge temperature	Supplier: Johnson Controls

5.3 VENTILATION SYSTEMS

5.3.1 Ventilation System - AHU-2 (Non-Classified Areas)

(Refer to Drawing M401, M402, M601, and 2/M602 in Appendix A)

The following table identifies the components related to the AHU-2 System

No.	Component	Details	Settings	Remarks
1	Outside air damper (CD-1)	Tamco 9000 BF SCT	Two-position, open when AHU operating, closed when AHU is not	Supplier: Cometal STD
2	Exhaust air damper (CD-2)	Tamco 9000 BF SCT	Two-position, open when AHU operating, closed when AHU is not	Supplier: Cometal STD
3	***Outdoor Air / Supply Air side of Unit (in order)***	Engineered Air LM8/C/CH/RA/MV	N/A	Supplier: Engineered Air
4	Outside air temperature sensor	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
5	Pre-Filters	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
6	Pre-filter differential pressure sensor	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
7	Pre-heat Coil	Integral to AHU (supplied with unit), refer to AHU shop drawings	DAT: -10°C	
8	Pre-heat coil temperature sensor	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
9	Face and Bypass Dampers	Integral to AHU (supplied with unit), refer to AHU shop drawings	Normally closed, forcing flow through heat recovery coil	
10	Heat Recovery Core (supply side)	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
11	Heat recovery supply air temperature sensor	Integral to AHU (supplied with unit),	N/A	

No.	Component	Details	Settings	Remarks
		refer to AHU shop drawings		
12	Final Filters	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
13	Final filter differential pressure sensor	Integral to AHU (supplied with unit), refer to AHU shop drawings	Filter manufacturer recommended max filter pressure drop	
14	Re-heat Coil	Integral to AHU (supplied with unit), refer to AHU shop drawings	DAT: 10°C	
15	Supply Fan	Integral to AHU (supplied with unit), refer to AHU shop drawings	VFD driven motor for 3 ACH and 6 ACH operation	
16	Supply air temperature sensor	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
17	Supply air freeze-stat	Integral to AHU (supplied with unit), refer to AHU shop drawings	5°C	
18	Supply air flow rate sensor	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
19	***Return Air / Exhaust Air side of Unit (in order)***			
20	Return air filter	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
21	Return filter differential pressure sensor	Integral to AHU (supplied with unit), refer to AHU shop drawings	Filter manufacturer recommended max filter pressure drop	
22	Return air temperature sensor	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
23	Heat Recovery Core (exhaust side)	Integral to AHU (supplied with unit),	N/A	

No.	Component	Details	Settings	Remarks
		refer to AHU shop drawings		
24	Heat recovery exhaust air temperature sensor	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
25	Exhaust fan	Integral to AHU (supplied with unit), refer to AHU shop drawings	VFD driven motor for 3 ACH and 6 ACH operation	
26	Exhaust air flow rate sensor	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	

5.3.2 Ventilation System - AHU-3 (Headworks)

(Refer to Drawing M401, M402, M601, and 2/M602 in Appendix A)

The following table identifies the components related to the AHU-3 System

No.	Component	Details	Settings	Remarks
1	Outside air damper	Tamco 9000 BF SCT	Two-position, open when AHU operating, closed when AHU is not	Supplier: Cometal STD
2	Exhaust air damper	Tamco 9000 BF SCT	Two-position, open when AHU operating, closed when AHU is not	Supplier: Cometal STD
3	***Outdoor Air / Supply Air side of Unit (in order)***	Existing AHU - Ingenia CAH-2SP-SF-CD-108/81.60-1	N/A	Supplier: Unknown
4	Pre-Filters			
5	Pre-filter differential pressure sensor	Refer to Johnson Controls shop drawings and record drawings	Filter manufacturer recommended max filter pressure drop	Supplier: Johnson Controls
6	Outside air temperature sensor	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
7	Face and Bypass Dampers	Integral to AHU (supplied with unit), refer to AHU shop drawings	Normally closed, forcing flow through heat recovery coil	

8	Heat Recovery Core (supply side)	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
9	Heat recovery supply air temperature sensor	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
10	Heating Coil	Integral to AHU (supplied with unit), refer to AHU shop drawings	DAT 10°C	
11	Supply Fan	Integral to AHU (supplied with unit), refer to AHU shop drawings	Two speed motor for 6 ACH and 12 ACH operation	
12	Supply air temperature sensor	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
13	Supply air freeze-stat	Refer to Johnson Controls shop drawings and record drawings	5°C	Supplier: Johnson Controls
14	Supply air flow rate sensor	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
15	***Return Air / Exhaust Air side of Unit (in order)***			
16	Return air temperature sensor	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
17	Return air filter	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	
18	Return filter differential pressure sensor	Refer to Johnson Controls shop drawings and record drawings	Filter manufacturer recommended max filter pressure drop	Supplier: Johnson Controls
19	Heat Recovery Core (exhaust side)	Integral to AHU (supplied with unit), refer to AHU shop drawings	N/A	

20	Heat recovery exhaust air temperature sensor	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
21	Exhaust fan	Integral to AHU (supplied with unit), refer to AHU shop drawings	Two speed motor for 6 ACH and 12 ACH operation	
22	Exhaust air flow rate sensor	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls

5.3.3 Ventilation System - HRV-1 (Office, Lab, and Washroom)

(Refer to Drawing M401, M402, M601, and 2/M602 in Appendix A)

The following table identifies the components related to the HRV-1 System

No.	Component	Details	Settings	Remarks
1	Outside air damper (CD-8)	Tamco 9000 BF SCT	Two-position, open when HRV operating, closed when HRV is not	Supplier: Cometal STD
2	Pre-Filters	Tri-Dim Ultra Pleat Filter		Supplier: Tri-Dim Filter Corporation
3	Pre-heat Coil (PHC-1)	Engineered Air Air Coil	DAT: -10°C	Supplier: Engineered Air
4	Pre-heat coil temperature sensor	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
5	Heat Recovery Ventilator (HRV-1)	Venmar Constructo 2.0ES	N/A	Supplier: EMCO
6	Final Filters	Tri-Dim Ultra Pleat Filter		Supplier: Tri-Dim Filter Corporation
7	Re-heat Coil (RHC-1)	Engineered Air Air Coil	DAT: 18°C	Supplier: Engineered Air
8	Supply air temperature sensor	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
9	Exhaust air backdraft damper	Tamco 7000	Open when HRV operating	Supplier: Cometal STD

5.3.4 Ventilation System - Cooling Systems

(Refer to Drawing M401, M402, M601, and 2/M602 in Appendix A)

The following table identifies the components related to the Cooling Ventilation Systems

No.	Component	Details	Settings	Remarks
1	Cooling Fan (CF-1)	Greenheck SQ-110-VG	N/A	Supplier: EH Price Limited
2	Space Thermostat for CF-1 (T)	Refer to Johnson Controls shop drawings and record drawings	24°C	Supplier: Johnson Controls
3	Outside air damper (CD-3)	Tamco 9000 BF SCT	Normally closed, modulates towards open	Supplier: Cometal STD
4	Return air damper (CD-4)	Tamco 9000 BF SCT	Normally open, modulates towards closed	Supplier: Cometal STD
5	Pre-Filter (CF-1)	Tri-Dim Ultra Pleat Filter		Supplier: Tri-Dim Filter Corporation
6	Pre-filter differential pressure sensor (CF-1)	Refer to Johnson Controls shop drawings and record drawings	Filter manufacturer recommended max filter pressure drop	Supplier: Johnson Controls
7	Supply air temperature sensor (CF-1)	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
8	Supply air freeze-stat (CF-1)	Refer to Johnson Controls shop drawings and record drawings	5°C	Supplier: Johnson Controls
9	Cooling Fan (CF-2)	Greenheck SQ-110-VG	N/A	Supplier: EH Price Limited
10	Space Thermostat for CF-2 (T)	Refer to Johnson Controls shop drawings and record drawings	24°C	Supplier: Johnson Controls
11	Outside air damper (CD-5)	Tamco 9000 BF SCT	Normally closed, modulates towards open	Supplier: Cometal STD
12	Return air damper (CD-6)	Tamco 9000 BF SCT	Normally open, modulates towards closed	Supplier: Cometal STD

No.	Component	Details	Settings	Remarks
13	Exhaust air damper (CD-7)	Tamco 9000 BF SCT	Normally closed, modulates towards open	Supplier: Cometal STD
14	Pre-Filter (CF-2)	Tri-Dim Ultra Pleat Filter		Supplier: Tri-Dim Filter Corporation
15	Pre-filter differential pressure sensor (CF-2)	Refer to Johnson Controls shop drawings and record drawings	Filter manufacturer recommended max filter pressure drop	Supplier: Johnson Controls
16	Supply air temperature sensor (CF-2)	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
17	Supply air freeze-stat (CF-2)	Refer to Johnson Controls shop drawings and record drawings	5°C	Supplier: Johnson Controls
18	Temperature Controller and space temperature sensor	Refer to Johnson Controls shop drawings and record drawings	30°C	Supplier: Johnson Controls
19	Outside air damper (CD-11)	Tamco 9000 BF SCT	Normally closed, two position, opens on generator startup	Supplier: Cometal STD
20	Outside air damper (CD-12)	Tamco 9000 BF SCT	Normally closed, modulates towards open	Supplier: Cometal STD
21	Return air damper (CD-13)	Tamco 9000 BF SCT	Normally open, modulates towards closed	Supplier: Cometal STD
22	Exhaust air damper (CD-14)	Tamco 9000 BF SCT	Normally closed, modulates towards open	Supplier: Cometal STD

5.4 DOMESTIC WATER SYSTEMS

(Refer to Drawings 1/M603, M201, and M202 in Appendix A)

The following table identifies the components related to the Domestic Water System.

No.	Component	Details	Settings	Remarks
1	Thermometers (general)	Winters TBM-30040-B8	Range (dual): -20°C / 0°F to 120°C / 250°F	Supplier: Wolseley Canada Inc.
2	Pressure Gauges (general)	Winters P9S90203	Range (dual): 0 PSI to 160 PSI / 0 kPa to 1103 kPa	Supplier: Wolseley Canada Inc.
3	Isolation Valves (general)	"Ball valves, Red-White Valve Corp.		
4	Water Service Entry Isolation Valve	Butterfly valves, Apollo Valves"	Typically, Normally Open	Supplier: Wolseley Canada Inc.
5	Water Service Recirc Isolation Valve	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
6	Temperature Sensor (TT)	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
7	Temperature Sensor (TT)	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
8	Water Service Recirc Pumps (P-3.1 & P-3.2)	Grundfos TP 40-40/4 B	On/off by BAS	Supplier: Wolseley Canada Inc.
9	Isolation Valves	Ball valves, Red-White Valve Corp.	Normally Open	Supplier: Wolseley Canada Inc.
10	Strainers	Strainer, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
11	Check Valves	Check valve, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
12	Isolation Valves	Ball valves, Red-White Valve Corp.	Normally Open	Supplier: Wolseley Canada Inc.
13	Water Service Heat Injection Pumps (P-3.4 & P-3.5)	Grundfos UPS 40-40 F B	On/off by BAS, operates on speed 3	Supplier: Wolseley Canada Inc.

No.	Component	Details	Settings	Remarks
14	Isolation Valves	Ball valves, Red-White Valve Corp.	Normally Open	Supplier: Wolseley Canada Inc.
15	Check Valves	Check valve, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
16	Isolation Valves	Ball valves, Red-White Valve Corp.	Normally Open	Supplier: Wolseley Canada Inc.
17	Water Service Heat Injection Heat Exchanger (HEX-3.1)	Danfos B3-052-70-H		Supplier: Specified Technical Sales Ltd.
18	Pressure/Temperature Relief Valve			
19	Water meter	See process		Refer to process for meter details
20	Isolation Valves	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
21	Bypass Valve	Butterfly valves, Apollo Valves	Normally Closed	Supplier: Wolseley Canada Inc.
22	Reduced pressure backflow preventer (RPBF-1)	Watts 957N, 75mmØ		Supplier: Wolseley Canada Inc.
23	Reduced pressure backflow preventer (RPBF-2)	Watts LF909M1, 50mmØ		Supplier: Wolseley Canada Inc.
24	Reduced pressure backflow preventer (RPBF-3)	Watts LF909M1, 32mmØ		Supplier: Wolseley Canada Inc.
25	Pressure reducing valve	Watts LFM115, 75mmØ	Set to 413 kPa	Supplier: Wolseley Canada Inc.
26	Pressure reducing valve	Watts LF25AUB-Z3, 50mmØ	Set to 413 kPa	Supplier: Wolseley Canada Inc.
27	Isolation Valves	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
28	Bypass Valve	Butterfly valves, Apollo Valves	Normally Open	Supplier: Wolseley Canada Inc.
29	Domestic Water Heater (DHWH-1)	AO Smith COF-315	60°C	Supplier: Wolseley Canada Inc.
30	Isolation Valves	Ball valves, Red-White Valve Corp.	Normally Open	Supplier: Wolseley Canada Inc.
31	Check Valves	Check valve, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
32	Domestic Hot Water Expansion Tank (TK-3.1)	Amtrol ST-42V		Supplier: Wolseley Canada Inc.
33	Domestic Hot Water Recirc Pump (P-3.3)	Grundfos ALPHA2 15-55SF	On/off by BAS, Integral VSD set for	Supplier: Wolseley Canada Inc.

No.	Component	Details	Settings	Remarks
			required flow rate	
34	Isolation Valve	Ball valves, Red-White Valve Corp.	Normally Open	Supplier: Wolseley Canada Inc.
35	Strainer	Strainer, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
36	Check Valve	Check valve, Red-White Valve Corp.		Supplier: Wolseley Canada Inc.
37	Isolation Valve	Ball valves, Red-White Valve Corp.	Normally Open	Supplier: Wolseley Canada Inc.
38	Temperature Sensor (TT)	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
39	Temperature Sensor (TT)	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls

5.5 NON-POTABLE WATER (NPW) FOR PROCESS USES

(Refer to Drawing 1/M603, M201, and M202 in Appendix A)

The following table identifies the components Non-Potable Water System for Process Use.

No.	Component	Details	Settings	Remarks
1	Thermometers (general)	Winters TBM-30040-B8	Range (dual): -20°C / 0°F to 120°C / 250°F	Supplier: Wolseley Canada Inc.
2	Pressure Gauges (general)	Winters P9S90203	Range (dual): 0 PSI to 160 PSI / 0 kPa to 1103 kPa	Supplier: Wolseley Canada Inc.
3	Isolation Valves (general)	Ball valves, Red-White Valve Corp.	Typically, Normally Open	Supplier: Wolseley Canada Inc.
4	Hot NPW Booster Heat Exchanger (HEX-3.2)	HTG HTG095DW-30		Supplier: Specified Technical Sales Ltd.
5	Pressure/Temperature Relief Valve			

No.	Component	Details	Settings	Remarks
6	Isolation Valves	Ball valves, Red-White Valve Corp.	Typically, Normally Open	Supplier: Wolseley Canada Inc.
7	Hot NPW Expansion Tank (TK-3.2)	Amtrol ST-8		Supplier: Wolseley Canada Inc.
8	Temperature Sensor (TT)	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls
9	Flow Switch (FS)	Refer to Johnson Controls shop drawings and record drawings	N/A	Supplier: Johnson Controls

5.6 SANITARY SYSTEMS

(Refer to Drawing 1/M603, M201, and M202 in Appendix A)

The following table identifies the components in the building Sanitary systems.

No.	Component	Details	Settings	Remarks
1	Duplex sump pumps (P-2.1 & P-2.2)	Pentair Hydromatic SPX50	Controlled by level switches in sump	Explosion proof motors
2	Check Valves	Flomatic 208T ball check valve	Normally closed unless pump(s) operating	
3	Isolation Valves	PVC union ball valve	Normally open	
4	Duplex sump pumps (P-2.3 & P-2.4)	Pentair Hydromatic SK60	Controlled by level switches in sump	
5	Check Valves	Flomatic 208T ball check valve	Normally closed unless pump(s) operating	
6	Isolation Valves	PVC union ball valve	Normally open	
7	Duplex sump pumps (P-2.5 & P-2.6)	Pentair Hydromatic SK60	Controlled by level switches in sump	

No.	Component	Details	Settings	Remarks
8	Check Valves	Flomatic 208T ball check valve	Normally closed unless pump(s) operating	
9	Isolation Valves	PVC union ball valve	Normally open	

5.7 PLUMBING FIXTURES

(Refer to Drawing M201 and M202 in Appendix A)

The following table identifies the components related to the plumbing fixtures.

No.	Component	Details	Settings	Remarks
1	Gravity flow portable eyewash station (EW-1)	Haws Model 7501	Requires addition of preservative / water treatment media on regular intervals to ensure solution is sterile	Supplier: Deschenes Group
2	Wash-down hose bibb station & hose (HB-2)	Charland Thermojet NL-553-BV-VB-41-12X12-30X063-RGT70S	N/A	Supplier: Deschenes Group
3	Washroom fixtures (LV-1, WC-1, SH-1)		N/A	Supplier: Deschenes Group

5.8 FIRE PROTECTION

(Refer to Drawing M201 and M202 in Appendix A)

The following table identifies the components related to the Fire protection System.

No.	Component	Details	Settings	Remarks
1	Fire Extinguisher (DCE-1)	Strike First WBDL-ABC340LV, 5lb Multi-purpose Dry Chemical Extinguisher	N/A	Supplier: Deschenes Group
2	Fire Extinguisher (DCE-2)	Strike First WBDL-ABC10, 10lb Multi-purpose Dry Chemical Extinguisher	N/A	Supplier: Deschenes Group

5.9 FUEL OIL SYSTEM

(Refer to Drawing M301 and M604 in Appendix A)

The following table identifies the components related to the Fuel System.

No.	Component	Details	Settings	Remarks
1	Isolation Valves (general)	Ball valves, Red-White Valve Corp.	Typically, Normally Open	Supplier: Wolseley Canada Inc.
2	Exterior Fuel Oil Storage Tank (TK-4.1)	Steelcraft Clemmer 25,000L storage tank, double walled, vacuum monitored		Supplier: Steelcraft
3	2-way Siphon Protection Valve	Parker Hannifin Corporation 7321GBN99N00	Normally Closed	Supplier: Johnson Controls
4	Pressure relief valve			
5	Bypass Valve	Ball valves, Red-White Valve Corp.	Normally Closed	Supplier: Wolseley Canada Inc.
6	Level switch (LC)	Gems Series LS800		Supplier: Wolseley Canada Inc.
7	Leak detector (HCD)	Refer to Johnson Controls shop drawings and record drawings		Supplier: Johnson Controls
8	Wall mounted Levelometer	Ktech Midget Model 277		Supplier: Wolseley Canada Inc.
9	Fuel oil Pre-Filter	Canadian General Filters Ltd		Supplier: Wolseley Canada Inc.
10	Duplex Fuel Oil Transfer Pump Package (P-4.1 & P-4.2)	Viking Duplex Fuel Oil Pump Package SG-40510-DUP-O	On/off by control panel	Supplier: Wolseley Canada Inc.
11	Fuel Oil Transfer Pump Control Panel	Viking Duplex Fuel Oil Pump Control Panel CPPA05-180581	Operates by floats in day tanks	Supplier: Wolseley Canada Inc.
12	Interior Fuel Oil Day Tank for Boilers & DHWT (TK-4.2)	Steelcraft Clemmer 680L storage tank, double walled		Supplier: Steelcraft
13	Level switch column (LC)	Gems Series LS800		Supplier: Wolseley Canada Inc.
14	Day tank fill solenoid valve (TK-4.2 CV)	Parker Hannifin Corporation 73218BN64N00	Normally Closed	Supplier: Johnson Controls
15	Pressure relief valve			

16	Bypass Valve	Ball valves, Red-White Valve Corp.	Normally Closed	Supplier: Wolseley Canada Inc.
17	Anti-siphon valve			
18	Interior Fuel Oil Day Tank for Generator (TK-4.3)	Steelcraft Clemmer 680L storage tank, double walled		Supplier: Steelcraft
19	Level switch column (LC)	Gems Series LS800		Supplier: Wolseley Canada Inc.
20	Day tank fill solenoid valve (TK-4.3 CV)	Parker Hannifin Corporation 73218BN64N00	Normally Closed	Supplier: Johnson Controls
21	Pressure relief valve			
22	Bypass Valve	Ball valves, Red-White Valve Corp.	Normally Closed	Supplier: Wolseley Canada Inc.
23	Anti-siphon valve			
24	Oil filters	Canadian General Filters Ltd		Supplier: Wolseley Canada Inc.
25	Fusible link valves	Firomatic	N/A	
26	Fuel oil de-aerators	Westwood Products Tigerloop	N/A	

END OF CHAPTER 5

CHAPTER 6

6. OPERATING PROCEDURES

6.1 GENERAL

The operations portion of this manual should be read in conjunction with Chapter 6 of the Process and Electrical, Instrumentation and Controls Operations and Maintenance Manuals. The operating procedures described in this section will relate to the WWTP Mechanical Controls Systems

6.2 BUILDING HVAC CONTROL SYSTEM

Refer to **Appendix H** for building HVAC controls sequences of operation. Additionally, refer to Controls System As-builts as found in the contractor assembled O&M manuals.

END OF CHAPER 6

CHAPTER 7

7. MAINTENANCE PROCEDURES AND SERVICE INFORMATION

7.1 GENERAL

To ensure uninterrupted use, equipment should be regularly inspected, tested, and proper repairs made and recorded. The objective is to minimize equipment operating problems and prevent failures by making minor or necessary repairs before major difficulties occur. The importance of record keeping cannot be over-emphasized. Good maintenance protects the owner's interest with manufacturer warranties, continuity, or maintenance despite staff turnovers and equipment reliability track record.

Environmental and operating conditions are key elements affecting proper and reliable operation of equipment. Costly repairs can be minimized if the following items are attended to:

KEEP IT CLEAN

KEEP IT TIGHT

7.1.1 Keep It Clean

Day-to day accumulation of normal atmospheric particles, lint, metallic particles form mechanical equipment cause problems with equipment over a long period of time. An accumulation affects equipment reliability and operating life. ALL equipment should be regularly cleaned.

7.1.2 Keep It Tight

All contactors and control devices operate with high speed movement. This motion creates vibration that can loosen hardware and other parts. External vibration from equipment may cause the loosening of hardware and connections in any equipment. All hardware and connections should be tightened regularly. This simple procedure takes only a small amount of time and can save hours of searching for intermittent problems. All rotating equipment such as motors are affected by vibrations. This can cause alignment problems, which can result in bearing failures.

7.1.3 Renewal Parts

Availability of parts can be a major problem these days as distributors are keeping very low inventories in a move to economize. This may make any part a long delivery item. For this reason local distributors should be contacted and parts availability assessed.

Any critical part affecting the reliability of the system should be ordered, recorded and stored by the maintenance department.

7.1.4 Parts and Equipment Ordering Procedure

During the first year of operation, the Contractor should be contacted for any replacement parts required. This will ensure that parts covered by warranty will be replaced under warranty. Failure to contact the Contractor may result in difficulties in obtaining warranty replacement.

Following the first year of operation, it is recommended that the Contractor also be contacted as many of the suppliers have a wholesale only policy. If it is necessary to purchase parts directly from the original supplier, the following information is required.

Make

Model No.

Year of Installation

Installing Contractor

Description of Part Required (i.e. Fan Bearing)

Part No. if Available

When quoting a part number contained in manufacturer's catalogue, always provide the date of the catalogue you are referring to, as these numbers are often subject to change. The equipment supplier will have the latest edition of the manufacturer's catalogue.

If the original supplier is no longer in business, contact the contractor who will be able to suggest an alternate source of supply.

7.1.5 Scheduled Preventive Maintenance Program

Scheduled preventive maintenance is an effective means to improve services from systems and equipment. Where failure of equipment can result in shutdown, scheduled preventive maintenance is an economical alternative.

<u>Causes of Equipment Failure</u>

An effective maintenance program will attempt to remove or reduce causes of equipment failure. Common failure initiating causes are:

- Loose and broken belts
- Misaligned pulleys
- Dirty or plugged filters
- Dirty or plugged coils

- Worn bearings
- Improper lubrication and oiling or lack of
- Persistent overloading
- Above normal temperatures
- Below normal temperatures
- Obstruction of ventilation by foreign objects or material
  (blockage of air, dirt on components etc.)
- Normal deterioration from age
- Severe weather conditions

The scheduled preventive maintenance suggestions presented will be applicable to most equipment, but all of the suggestions given in any one section may not be applicable to the particular mechanical component being maintained. Most of the work may be done by the building operator but some may have to be left to the discretion of the building operator.

When equipment repair is necessary, please refer to the Manufacturer Data section provided in this manual. The frequency, which the tasks should be done as indicated.

Most maintenance can be done by average personnel, with a minimum need for specialized service.

7.1.6 Maintenance Legend

D		Daily
W		Weekly
M		Monthly
SA		Semi-Annually
A		Annually
PMI		Per Manufacturer's Instructions
AN		As Necessary

7.2 GENERAL MAINTENANCE

Maintenance to be conducted as per recommendations of components suppliers.

Item	Maintenance Operations	Inspection Frequency	Remarks
Valves	Check for proper operation	A	
Actuated Valves	Follow maintenance schedule in the manufacturer's manual	PMI	
Control Dampers	Follow maintenance schedule in the manufacturer's manual	PMI	
Filters	Maintenance as required by the list in the manufacturer's manual	PMI	
Pumps	Follow maintenance schedule in the manufacturer's manual	PMI	
Fans	Follow maintenance schedule in the manufacturer's manual	PMI	
Air Handling Units	Follow maintenance schedule in the manufacturer's manual	PMI	
Boilers	Follow maintenance schedule in the manufacturer's manual	PMI	
Domestic Hot Water Heaters	Follow maintenance schedule in the manufacturer's manual	PMI	
Heat Exchangers	Follow maintenance schedule in the manufacturer's manual	PMI	
Unit Heaters & Cabinet Unit Heaters	Follow maintenance schedule in the manufacturer's manual	PMI	
Backflow Preventers	Follow maintenance schedule in the manufacturer's manual	PMI	
Fuel oil tanks	Follow maintenance schedule in the manufacturer's manual	PMI	
Tanks	Follow maintenance schedule in the manufacturer's manual	PMI	

7.3 MAINTENANCE SCHEDULE

Maintenance to be conducted as per recommendations of components suppliers. **Appendix C** provide a suggested maintenance schedule.

7.4 MAINTENANCE MANUALS

For all maintenance and inspection schedules, please refer to the manuals provided by component suppliers and manufacturers (**Appendix D**) and as shown in maintenance schedule (**Appendix C**), shop drawings (**Appendix B**) and contact service information (**Appendix F**).

Maintenance manuals of the following major mechanical components are provided in **Appendix D**:

- Air Handling Unit, AHU-2 (new unit)
- Heat Recovery Ventilator, HRV-1
- Fans
- Pumps
- Boilers and Burners
- Domestic Hot Water Heater
- Building HVAC Control System

7.5 SPARE PARTS LIST

Spare part list is provided in **Appendix E**.

END OF CHAPTER 7

CHAPTER 8

8. TESTING AND CERTIFICATION

Testing records, certificates and warranties are provided in **Appendix G**.

CHAPTER 9

9. CONTACT SERVICE INFORMATION

Owner, consulting engineer, contractors and main suppliers contact service information is grouped in **Appendix F**.

Vari-Green
Motor & Control Options

An EC motor that uses AC input power and internally converts it to DC power. Motor accepts a 0-10VDC control signal along with a 24V source to power controls in the motor. Motor is operable in the 2-10VDC range and off while in the 0-1.9VDC range. Vari-Green motors feature a soft-start and inherent thermal and current protection built into each unit. Inrush current at start up is eliminated and the motor will automatically reduce speed or turn off if overloaded or it becomes too hot.

An EC motor that uses AC input power and internally converts it to DC power. Potentiometer (dial) mounted on the fan housing adjusts the speed (RPM) down 80%. Vari-Green motors feature a soft-start and inherent thermal and current protection built into each unit. Inrush current at start up is eliminated and the motor will automatically reduce speed or turn off if overloaded or it becomes too hot.

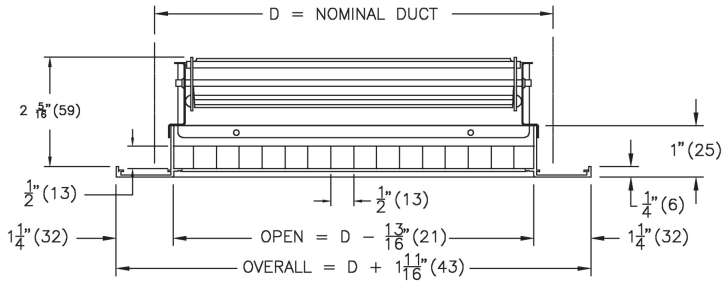
80 Egg Crate Register with Steel Damper – 1/2" x 1/2" x 1/2" Core



Fastening: A

Countersunk Screw Holes

Border: F

1 1/4" (32) Flat Frame

Material:

- Aluminum construction
- Damper: Coated Steel

Finish:

- B12 - White Powder Coat

Notes:

- 1/2" x 1/2" x 1/2" aluminum grid core
- Comes with opposed blade damper
- Factory tolerance ± 1/32" (1)

PROJECT: IQALUIT - WWTP Upgrade **SUBMITTAL NO:** 259683-E **SUBMITTAL DATE:** 5/29/2018

HEAT RECOVERY VENTILATOR

HRV CONSTRUCTO 2.0ES
Part no. 47110
82 to 192 CFM (0.4 in. w.g.)

VB0167

CONSTRUCTO® SERIES: PERFECT FOR NEW RESIDENTIAL CONSTRUCTION

Contractors and builders need cost-effective, reliable and code-compliant mechanical ventilation systems for new home construction. The Venmar AVS Constructo Series offers superior value at an entry-level price. The Constructo 2.0ES represents over 15 years of continuous improvement to deliver contractors the durability and reliability they have come to expect from Venmar.

Key features:

- Maintenance free, totally enclosed, sealed bearings motor
- Pressure taps, balancing dampers and straps for insulated ducts for quick, effective installation
- Integrated "snap-in" drain system installs in seconds with no additional parts
- ENERGY STAR® qualified
- Compatible with the Deco-Touch™ digital wall control

REPAIRS AND MAINTENANCE

All parts of the HRV Constructo 2.0ES that could need maintenance can be removed in less than 5 minutes, allowing direct access for easy repairs. The motor is permanently lubricated.

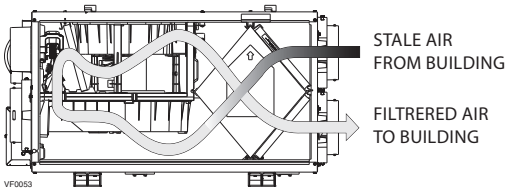
WARRANTY

The HRV Constructo 2.0ES is protected by a 5-year warranty on parts. The heat recovery core is covered by a limited lifetime warranty, with the original proof of purchase.

Available at:

Controls

- This unit is very simple to operate. Once it is installed, press on its push button, located on the bottom of the unit, to activate it. Press once for low speed, once again for high speed, and once more to stop it.
- For more convenience, this unit can also be controlled by an optional main control. For a complete list of optional main and auxiliary controls available, refer to the ***Wall Control Compatibility Chart*** on last pages of wall controls specification sheet, available at www.venmar.ca.
- For more details about controls, refer to the ***Main and auxiliary wall controls*** user guide, also available at www.venmar.ca.



Options

- Complete line of registers and diffusers

Defrosting System

The HRV Constructo 2.0ES uses an efficient defrosting method. No negative pressure is created by air exhausted to the outdoors, as the air is recirculated into the house, helping to prevent any backdraft.

Outdoor temperature		Defrost Cycle (minutes)
°C	°F	Defrost / Operation
Warmer than -5	Warmer than 23	No defrost
-5 to -15	23 to 5	6 / 50
-15 to -27	5 to -17	6 / 25
-27 and less	-17 and less	10 / 20

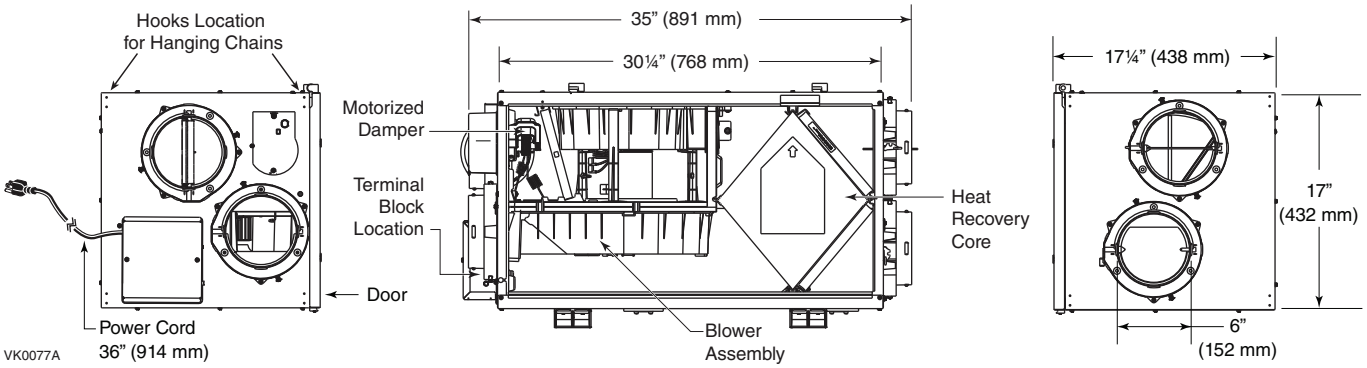
Heat Recovery Core

Dimensions: 12" x 14" x 15.5" (30.5 cm x 35.5 cm x 39.4 cm)

Exchange surface: 102 ft^2 (9.54 m^2)

Weight: 6.2 lb. (2.8 kg)

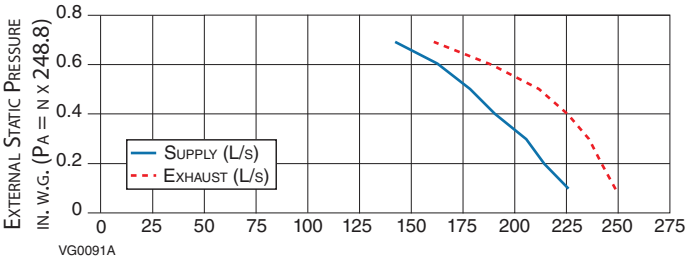
Material: Polypropylene



Type: Crossflow core

Warranty: Limited Lifetime

Requirements and Standards



- Complies with the UL 1812 requirements regulating the installation of Heat Recovery Ventilators
- Complies with the CSA C22.2 no. 113 Standard applicable to ventilators
- Complies with CSA F326 requirements regulating the installation of Heat Recovery Ventilators
- Technical data was obtained from published results of tests relating to CSA C439 Standards
- HVI certified and ENERGY STAR® qualified

Dimensions: HRV Constructo 2.0ES

Specifications and Ratings

- Model: HRV Constructo 2.0ES
- Part Number: 47110
- Total Assembled Weight (including polypropylene core): 65 lb. (29.5 kg)
- Drains: 1/2" (1.2 cm) fittings with 10 ft. (3 m) PVC drain hose
- Filters: 15 ppi washable reticulated foam 15.375" x 7.125" x 0.75" (39 cm x 18 cm x 1.9 cm)
- 6" Round Ports
- Housing: Pre-painted steel
- Insulation: Expanded polystyrene
- Mounting: Suspension by chains and springs
- Supply & Exhaust Blower Motor: 1 PSC Motor
  - Protection type: Thermally protected
  - Insulation class: B
- Speed Control on unit: Low and High speeds. Other modes available with optional mainl wall controls.
- Heat Recovery Core:
  - Heat Exchange Surface Area: 102 ft.² (9.54 m²)
  - Type: Crossflow
  - Material: Polypropylene
- Unit Electrical Characteristics: 120 volts, 60 Hz, 2.1 amps, 195 watts

www.tamcodampers.com

- Extruded aluminum (6063-T5) damper frame is not less than 0.080" (2.03 mm) in thickness. Damper frame is 4" (101.6 mm) deep x 1" (25.4 mm), with mounting flanges on both sides of frame.
- Entire frame is thermally broken by means of polyurethane resin pockets complete with thermal cuts.
- Blades are maximum 6" (152.4 mm) deep extruded aluminum (6063-T5) air-foil profiles, internally insulated with expanded polyurethane foam and thermally broken. Complete blade has an insulating factor of R-2.29 and a temperature index of 55 (tested to AAMA 1502.7 Test Method). All blades are symmetrically pivoted.
- Blade and frame seals are extruded, specially formulated silicone, for reduced air leakage at extreme cold temperatures. Silicone formula is the same as that used by NASA for its Aerospace program and retains flexibility to -100°F (-73°C). Blade and frame seals are secured in an integral slot within the aluminum extrusions and are mechanically fastened to prevent shrinkage and movement over the life of the damper.
- Bearings are composed of a Celcon inner bearing - fixed around a 7/16" (11.11 mm) aluminum hexagon blade pivot pin - rotating within a polycarbonate outer bearing inserted in the frame. This eliminates action between metal-to-metal or metal-to-plastic riding surfaces.
- Adjustable 7/16" (11.11 mm) hexagonal drive rod, U-bolt fastener, and hexagonal retaining nuts are zinc-plated steel. These provide a positive connection to blades and linkage.
- Aluminum and corrosion-resistant zinc-plated steel linkage hardware is installed in the frame side, complete with cup-point trunnion screws for a slip-proof grip.
- Dampers are designed for operation in temperatures ranging from -100°F (-73°C) to 212°F (100°C).
- Leakage Class 1A at 1 in w.g. (0.25 kPa) static pressure differential. Standard air leakage data is certified under the AMCA Certified Ratings Program.
- Dampers are custom made to required size, without blanking off free area. The blade stop is set at a fixed height and is a continuous and integral part of the top and bottom frames.
- Dampers selected with blade action as shown to the left.
- Dampers selected with install type as shown below.
- Installation of dampers must be in accordance with TAMCO's current on-line installation guidelines. (Printed installation guidelines are provided with each damper shipment, however all technical information available on TAMCO's web site at www.tamcodampers.com supersedes information contained within printed versions.)
- Intermediate structural support is required to resist applied pressure loads for dampers that consist of two or more sections in both height and width. (See TAMCO Aluminum Damper Installation Guidelines.)

FLANGED TO DUCT TYPE ▾

› Finished damper O.D. is 2" *(50.8 mm)* greater than opening width and height dimensions.

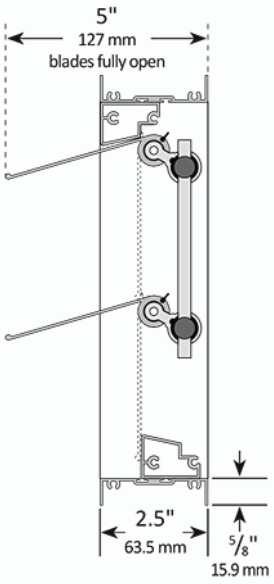
- Installation of dampers must be in accordance with TAMCO's current on-line installation guidelines. (Printed installation guidelines are provided with each damper shipment, however all technical information available on TAMCO's web site at www.tamcodampers.com supersedes information contained within printed versions.)
- Intermediate structural support is required to resist applied pressure loads for dampers that consist of two or more sections in both height and width. (See TAMCO Aluminum Damper Installation Guidelines.)

FLANGED TO DUCT TYPE ▼

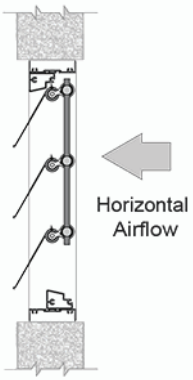


› For SP and NP Profiles, finished damper O.D. is 2" *(50.8 mm)* greater than opening width and height dimensions.

› For WP Profile, finished damper O.D. is 3.25" *(82.6 mm)* greater than opening width and height dimensions.

MINIMUM SECTION SIZE:	
4½"w x 4¼"h	*(115 mm x 108 mm)*
MAXIMUM SECTION SIZE:	
25 ft²	*(2.3 m²)*
60"w x 60"h or	*(1524 mm x 1524 mm) or*
48"w x 75"h	*(1220 mm x 1905 mm)*

Leakage:	TAMCO Series 7000 comply with the International Energy Conservation Code (IECC) and ASHRAE 90.1 leakage requirements for non-motorized dampers.



- Extruded aluminum (6063-T5) medium-duty backdraft damper frame is not less than 0.060" (1.52 mm) in thickness. Frame is 2.5" (63.5 mm) deep x 5/8" (15.9 mm), with mounting flanges on both sides of frame.
- Blades are extruded aluminum (6063-T5) profiles not less than 0.060" (1.52 mm) in thickness.
- Blade and frame seals are extruded silicone, secured in an integral slot within the aluminum extrusions. Seals are mechanically fastened to prevent shrinkage and movement over the life of the damper.
- Bearings are composed of 1/2" (12.7 mm) aluminum pivot points, rotating on Celcon bearings.
- Linkage system consists of hard aluminum alloy (6005-T6) crank arms fastened to aluminum pivot rods and doubly secured within a channel at the top of the blade. Large diameter 11/32" (8.73 mm) hard aluminum alloy (6005-T6) linkage rod connects the crank arms by means of a trunnion.
- Trunnions are zinc-plated steel. These provide a hard, smooth, and long-lasting rotating surface.
- Cup-point trunnion screw allows for a penetrating grip of the linkage rod. (Cup-point trunnion set screw creates a compression hard spot where it secures to the linkage rod.)
- Backdraft dampers are designed for operation in temperatures ranging from -40°F (-40°C) to 212°F (100°C).
- Air leakage for backdraft dampers with a width and height of 24" (610 mm) or greater does not exceed 6.93 cfm/ft² (35.20 l/s/m²) against 1 in. w.g. (0.25 kPa) differential static pressure. Air leakage for backdraft dampers with a width or height of less than 24" (610 mm) does not exceed 11.38 cfm/ft² (57.81 l/s/m²) against 1 in. w.g. (0.25 kPa) differential static pressure. Standard air leakage data is certified under the AMCA Certified Ratings Program.
- Medium-duty backdraft dampers are custom manufactured to required size, without blanking off free area.
- Medium-duty backdraft dampers selected with airflow direction as shown below.
- Medium-duty backdraft dampers selected with install type as shown below.
- Installation of medium-duty backdraft dampers must be in accordance with TAMCO's current on-line installation guidelines.
- Intermediate structural support is required to resist applied pressure loads for medium-duty backdraft dampers that consist of two or more sections in both height and width. (See TAMCO Medium-Duty Backdraft Damper Installation Guidelines.)
- Medium-duty backdraft dampers with dimensions greater than maximum section size will be manufactured in multiple sections. (See below for maximum section dimensions.) Multiple sections are not interlinked or connected. To install, each section must be individually fastened to a structural frame prepared on site. Jumpers and jackshafts are not available for multiple-section backdraft dampers.

INSTALLED IN DUCT TYPE ▾

› Finished damper O.D. is ¼" *(6.4 mm)* less than opening width and height dimensions.

MINIMUM SECTION SIZE:	
6"w x 6"h	*(153 mm x 153 mm)*
MAXIMUM SECTION SIZE:	
12.15 ft²	*(1.1 m²)*
36"w x 48.625"h	*(915 mm x 1235 mm)*

INSTALLATION AND OPERATION INSTRUCTIONS

"Model VIP"

CHIMNEY TYPE: FACTORY BUILT CHIMNEY FOR USE ON COMMERCIAL AND INDUSTRIAL POSITIVE PRESSURE, FORCED DRAFT AND NATURAL DRAFT APPLIANCES

SIZE: 6" TO 48" I.D.

A MAJOR CAUSE OF CHIMNEY RELATED FIRES IS FAILURE TO MAINTAIN REQUIRED CLEARANCE (AIR SPACE) TO COMBUSTIBLE MATERIALS. IT IS OF UTMOST IMPORTANCE THAT THIS CHIMNEY BE INSTALLED ONLY IN ACCORDANCE WITH THESE INSTRUCTIONS.

Use only factory supplied components. Failure to do so will void the certification and the warranty of this chimney.

If possible, install the chimney on the interior of the building as it will provide better performance than an exterior chimney. In areas with continuous temperatures below -18 °C (0 °F). The use of an exterior chimney may result in operating problems such as poor draft and excessive condensation of combustion products. If you do install an exterior chimney, we recommend that you install it within an insulated enclosure.

Read these instructions and keep them for future reference. Contact local building or fire officials about restrictions and installation inspection in your area

34" - 36"	7"	7"
38" - 48"	8"	8"

INSTALLATION NOTES

GENERAL:

1. The chimney is intended for use with commercial and industrial heating appliances and diesel engine generating positive pressure in the stack. This chimney is NOT for use in single or two family residences.

   Allowable Flue Gas Temperature:

MAXIMUM CONTINUOUS FIRING	1400°F	760°C
BRIEF FORCE FIRING	1700°F	927°C
TESTED TO	1800°F	980°C

2. Size the chimney in accordance with the appliance manufacturer's instructions. ICC will calculate correct chimney sizing on request.

3. The chimney must **NOT** be enclosed in a combustible chase. If it is desirable to enclose the chimney, then the enclosure must be constructed of non combustible materials. The fire rating required is determined by the local building code. A one hour fire rating is accepted in most areas.

4. Do not fill the space around the chimney with insulation or any other material. This space must remain empty.

5. The chimney shall extend at least 3'. above point of contact with the roof and at least 2'. higher than any wall, roof or adjacent building within 10'.

6. The maximum height of unguyed chimney above the roof is 5'.

7. The clearance between single wall connector and unprotected combustible material **must not be** less than 18" (refer to the Building Code in use in your area).

8. Factory built chimneys which extend through any story above that on which the connected appliance is located are to be provided with enclosures having a fire rating equal to or greater than that of the floor or roof assembly through which they pass.

9. A support must be installed on the first chimney section above each vertical tee.

10. **Chimney Cleaning:**

    Keep your chimney clean. Access should be provided for the inspection and cleaning of all sections of the chimney.

    Have your chimney cleaned by a qualified chimney sweep. If you want to clean your chimney yourself, then clean your chimney using a nylon or metal chimney brush of the **CORRECT SIZE. DO NOT** use a brush that will scratch the stainless steel interior of the chimney.

11. **Soot Formation and Need for Removal (oil appliance):**

    Soot can accumulate on the chimney flue when connected to an oil fired appliance. If not removed periodically this deposit can ignite and possibly damage the chimney.

    The chimney should be inspected at least once every year during the heating season to determine if any build-up of soot has occurred.

    If soot has accumulated, it should be removed to reduce the risk of chimney fire.

MODEL "VIP" CHIMNEY

1. The maximum height of chimney supported is:

2. The supports described in this booklet are the only supports which should be used with ICC's MODEL "VIP" Factory Built Chimney.

3. If additional height is required, use an additional support at the specified maximum chimney support height.

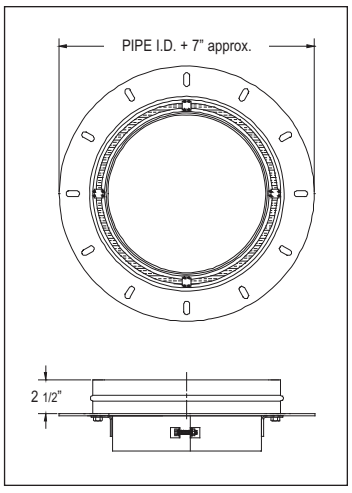
INSTALLATION INSTRUCTIONS

UNIVERSAL ADAPTOR PLATE (AP)

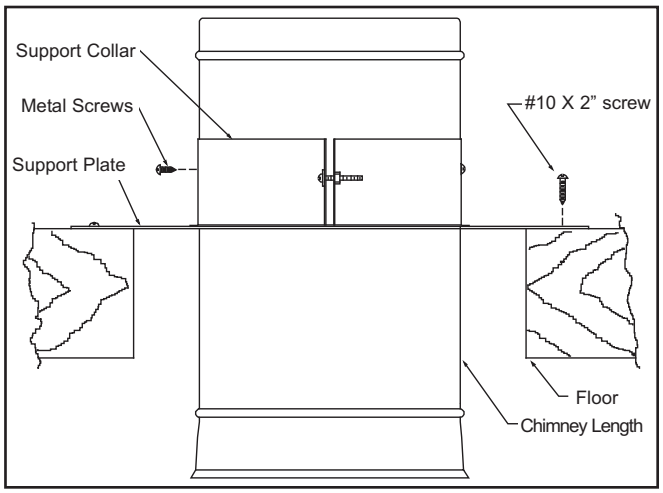
The chimney may be supported directly on top of the appliance. This is achieved by attaching a Universal Adaptor Plate (AP) directly to the outlet of the appliance. There are many flue collar designs as there are boiler manufacturers.



Custom plate sizes and hole patterns are available upon request.

The maximum supported height is the lesser of: the maximum allowable weight that the appliance can support or the height specified in our technical specifications.

1. Attach the adaptor plate to the appliance flue outlet using clamps, bolts or stainless steel metal screws depending on the flue outlet type.



2. Place the first chimney length on the adaptor plate.

3. Attach the chimney length to the adaptor plate using stainless steel metal screws through the adaptor plate retaining brackets.

BASE SUPPORT (BS)

This Support may be attached to a combustible or non-combustible floor or roof.

1. Attach the support to the floor or roof using at least a #10 X 2" screw through each hole in the support.

2. Place the support collar around the chimney length at the desired height. Tighten the ring and then screw the stainless steel metal screws (supplied with support) through the collar and into the chimney casing. Be sure to use a metal screw in each prepunched hole.

3. Place the chimney and collar in the support.

4. Continue installing chimney lengths as required.

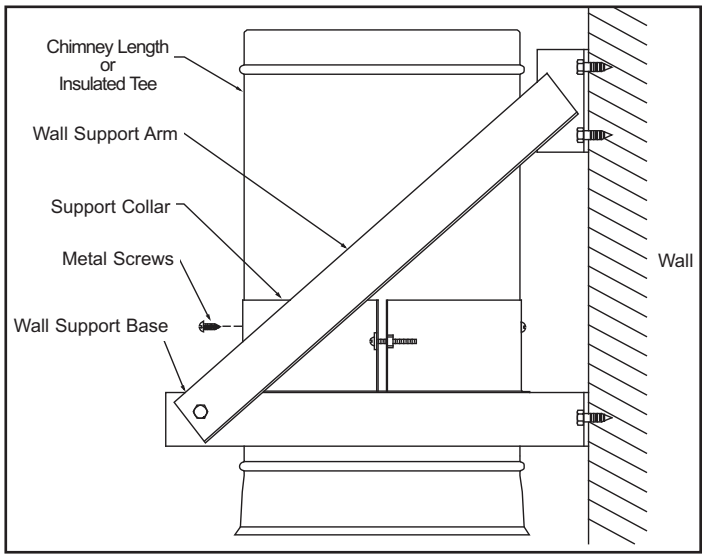
The Minimum Hole Size (1000°F flue gas)

Chimney Size (I.D.)	6”	8”	10”	12”	14”	16”	18”	20”
Combustible	12”	14”	16”	18”	20”	22”	24”	26”
Non-Combustible	9”	11”	13”	15”	17”	19”	21”	23”

Chimney Size (I.D.)	22”	24”	26”	28”	30”	32”	34”	36”
Combustible	28”	34”	38”	40”	44”	46”	50”	52”
Non-Combustible	25”	27”	29”	31”	33”	35”	37”	39”

Chimney Size (I.D.)	38”	40”	42”	44”	46”	48”
Combustible	56”	58”	60”	62”	64”	66”
Non-Combustible	41”	43”	45”	47”	49”	51”

The Minimum Hole Size (1400°F flue gas)



Chimney Size (I.D.)	6”	8”	10”	12”	14”	16”	18”	20”
Combustible	12”	14”	16”	18”	24”	28”	32”	34”
Non-Combustible	9”	11”	13”	15”	17”	19”	21”	23”

Chimney Size (I.D.)	22”	24”	26”	28”	30”	32”	34”	36”
Combustible	38”	40”	42”	44”	46”	48”	50”	52”
Non-Combustible	25”	27”	29”	31”	33”	35”	37”	39”

Chimney Size (I.D.)	38”	40”	42”	44”	46”	48”
Combustible	56”	58”	60”	62”	64”	66”
Non-Combustible	41”	43”	45”	47”	49”	51”

WALL SUPPORT (WS)

This support may be attached to a combustible or non-combustible wall. It may be used to support an Insulated Tee or a Chimney Length.

1. Attach the main support plate to the wall using at least a #10 X 2" screw through each hole in the plate. Make sure the support is horizontal, then attach the angle arms to the wall above the support.

2. Place the support collar around the chimney length at the desired height. Tighten the ring and then screw the stainless steel metal screws (supplied with support) through the collar and into the chimney casing. Be sure to use as many metal screws as there are prepunched holes in the chimney lengths.

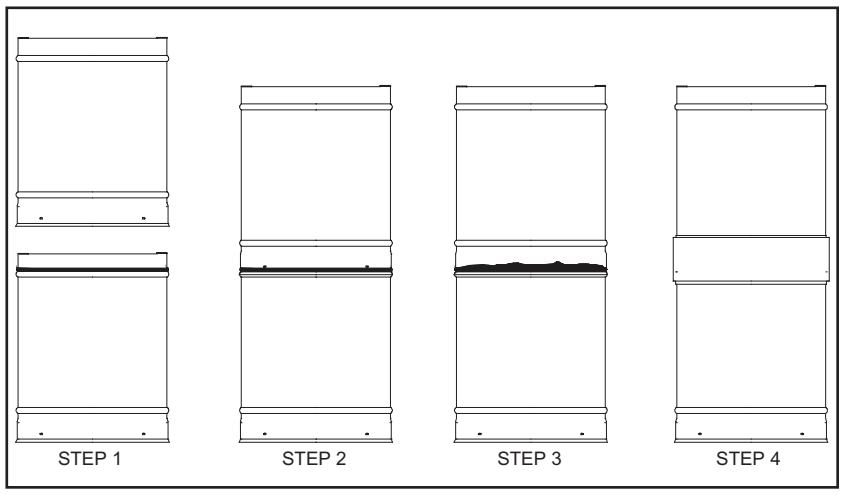
3. Place the chimney and collar in the support.

4. Continue installing chimney lengths as required.

CHIMNEY LENGTHS (L)

Typical for Chimney Length, Tee and Elbow installation.

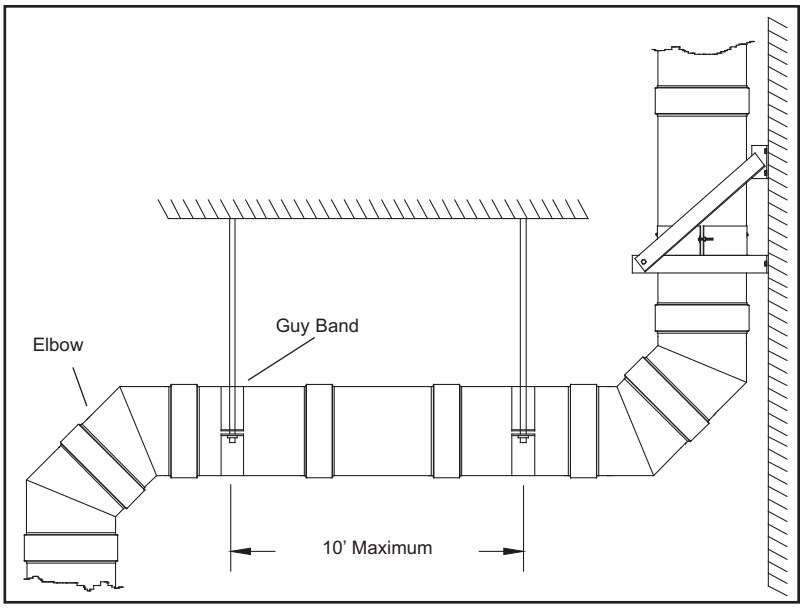
Install Chimney lengths as follows:



1. Before you fasten the chimney sections together apply caulking (apx. 3/16 Ø) above the top bead of the first chimney section.

2. Firmly place the next chimney section on top of the first section. Screw the stainless steel metal screws (supplied with the length) through the prepunched holes in the bottom of the length and into the lower length. Be sure to use a metal screw in each prepunched hole.

3. Wipe the excess caulking over the screw heads and along the joint surface.



4. Install the locking band over the joint. The locking band overlaps one of the beads above and one of the beads below the joint.

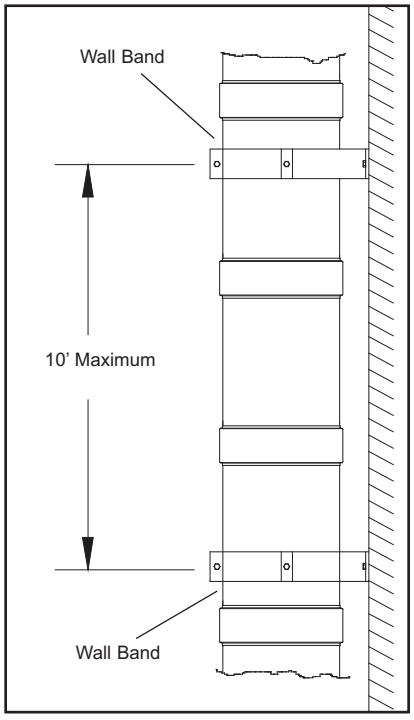
5. Continue until the required chimney height is achieved.

Note: *Only use the Caulking supplied by ICC with your chimney order.*

ELBOWS (E15, E22.5, E30, E45)

Elbows are used to offset the chimney in order to bypass a building obstruction. The number of elbows used and the degree of offset should be kept to a minimum because offsets reduce the draft available to the chimney.

The elbows are attached and sealed in the same manner as the chimney lengths.



A support must be used above any offset.

A Guy Band (GB) must be used for any offset of more than ten feet. Use additional Guy Bands at ten foot intervals of the offset chimney.

1. Place the elbow on the chimney length.

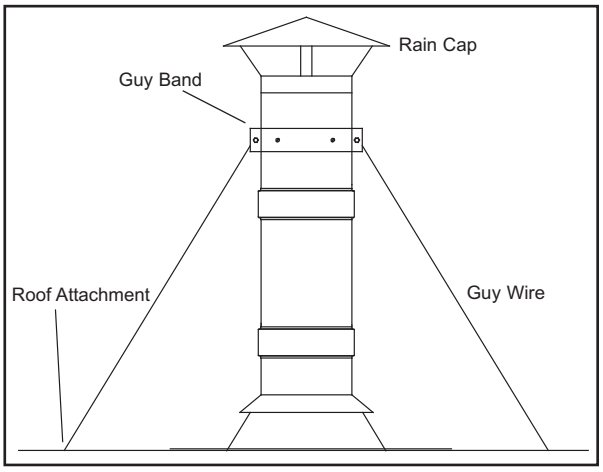
2. Screw the stainless steel metal screws (supplied with the elbow) through the prepunched holes in the bottom of the elbow and into the lower length. Be sure to use a metal screw in each prepunched hole.

WALL BAND (WB)

The Wall Band is used to secure the chimney to an exterior or interior wall. The recommended maximum length of chimney between wall bands is ten feet.

1. Choose a convenient location for the Wall Band.

2. Place the band collar around the chimney length at the desired height. Tighten the ring and then screw the stainless steel metal screws (supplied with wall band) through the collar and into the chimney casing. Be sure to use a metal screw and sealant in each prepunched hole.

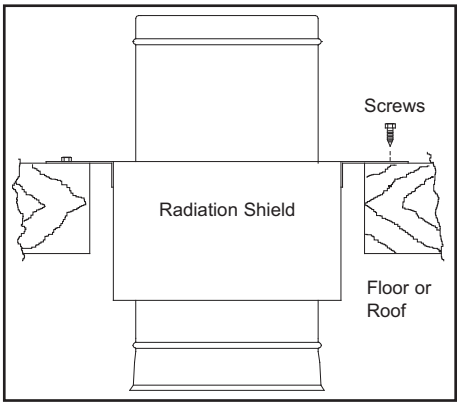


3. Attach the band arms to the collar using the bolts supplied.

4. Attach the band arms to the wall a minimum of #10 X 2" metal screws through each hole in the support.

GUY BAND (GB)

The Guy Band may be used to support an offset chimney. The maximum distance between Guy Bands is ten feet.



The Guy Band may also be used to secure a chimney above the roof. The maximum length of unguyed chimney above the roof is five feet. The maximum length of guyed chimney above the roof is twenty feet. The maximum length of chimney between guy bands is ten feet. If height greater than twenty feet is required above the roof, an engineered support system should be installed.

1. Place the band collar around the chimney length at the desired location. Tighten the ring and then screw the stainless steel metal screws (supplied with the band) through the band and into the chimney casing. Be sure to use a metal screw in each prepunched hole.
2. Attach guy wires to the band and to the roof or ceiling using adequate attachments (not supplied). Tighten the guy wires until the chimney is properly located and secure.

RADIATION SHIELD (RS)

The Radiation Shield is used to shield the chimney when passing through a combustible floor or roof.

1. Install the length of chimney that passes through the floor or roof.
2. Fit the Radiation Shield over the chimney and position it so that the attachment tabs touch the floor or roof.
3. Attach the tabs to the floor or roof using #8 X 2" screws.

The Minimum Hole Size (1000°F flue gas)

Chimney Size (I.D.)	6”	8”	10”	12”	14”	16”	18”	20”
Hole size	12”	14”	16”	18”	20”	22”	24”	26”

Chimney Size (I.D.)	22”	24”	26”	28”	30”	32”	34”	36”
Hole size	28”	34”	38”	40”	44”	46”	50”	52”

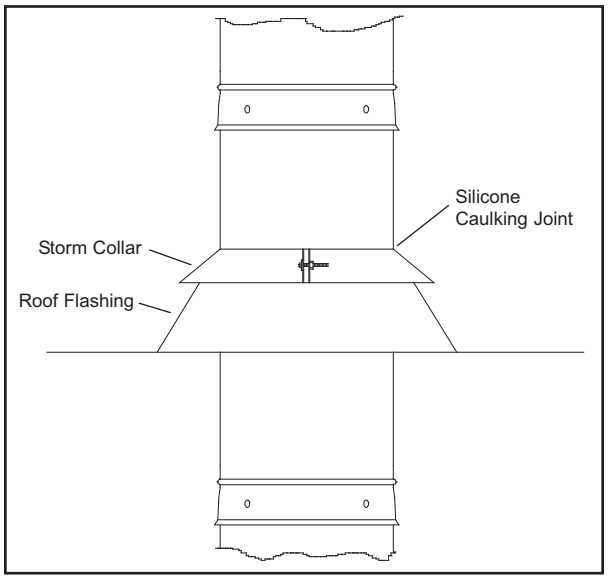
Chimney Size (I.D.)	38”	40”	42”	44”	46”	48”
Hole size	56”	58”	60”	62”	64”	66”

The Minimum Hole Size (1400°F flue gas)

Chimney Size (I.D.)	6”	8”	10”	12”	14”	16”	18”	20”
Hole size	12”	14”	16”	18”	24”	28”	32”	34”

Chimney Size (I.D.)	22”	24”	26”	28”	30”	32”	34”	36”
Hole size	38”	40”	42”	44”	46”	48”	50”	52”

Chimney Size (I.D.)	38”	40”	42”	44”	46”	48”
Hole size	56”	58”	60”	62”	64”	66”



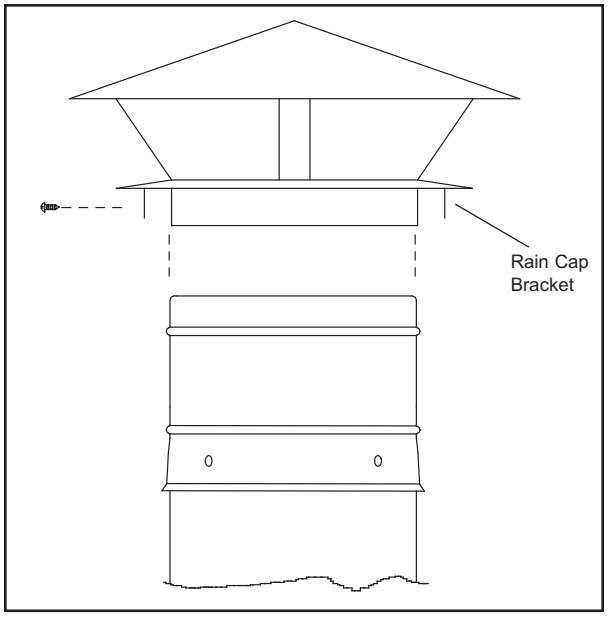
ROOF FLASHING (FF, FA, FB, FC)

1. Put the roof flashing in place. Seal the joint between the roof and the flashing with roofing pitch.

   For sloping roofs, place the flashing under the upper shingles and on the top of the lower shingles.

2. Nail the flashing to the roof using roofing nails.

3. Place the storm collar over the chimney and the flashing. Tighten it with the bolt supplied making sure the joint is properly caulked.



RAIN CAP (RC) AND EXIT CONE (EC)

A chimney must be terminated using either a Rain Cap or an Exit Cone. If an Exit Cone is installed, then a Drain Tee Cap (DT) must be installed.

1. Fit the Cap or Cone on to the top chimney length.

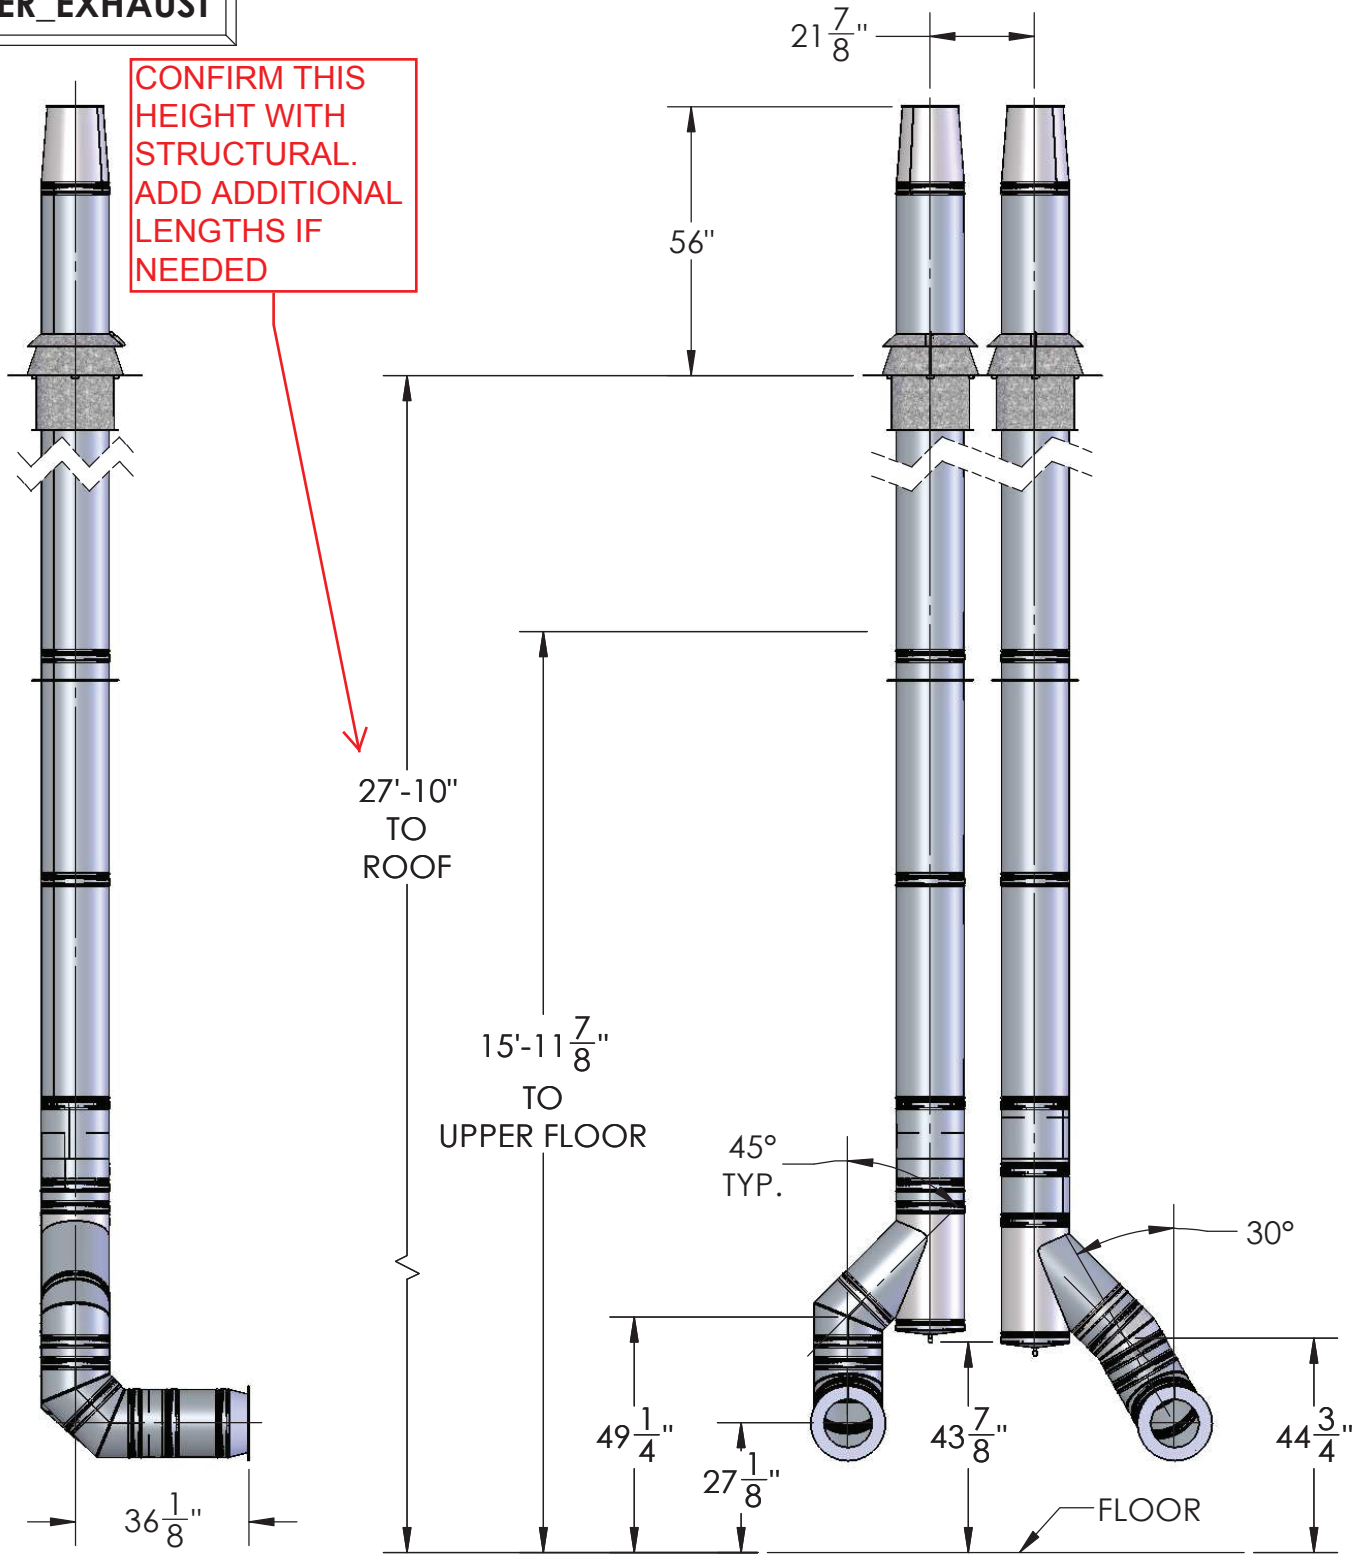
2. Screw the stainless steel metal screws (supplied with the cap) through the prepunched holes in the bottom of the cap and into the lower length. Be sure to use a metal screw in each prepunched hole.

ADJUSTABLE LENGTH (A1, A2)

The adjustable length is to allow the chimney to fit in a fixed distance when a suitable standard length is not available. Typical applications are between two elbows when a fixed offset distance is required or between two boiler outlet flanges which are a fixed distance apart.

The length of the outer casing of the adjustable length must be set before it is installed. The adjustable length is installed by sliding the flue (inner stainless steel) into the section below it after the two piece outer casing has been adjusted to the correct overall length. The adjustable length should be installed with a straight chimney section below it, there is not sufficient room for it to adjust into a tee or elbow.

1. Measure the exact length required, be sure to allow for the overlap between chimney sections.



2. Slide the two piece outer casing together until the correct overall length is achieved.

3. Fasten the two casing sections together using the stainless steel sheet metal screws provided. Be sure to put a screw and sealant in each pre-punched hole.

4. Cut off the exposed insulation. You do not need to remove any extra insulation in order to allow for overlap, the insulation will compress sufficiently when assembled.

5. Slide the flue into the length below it and fasten the exterior together in the same manner as a conventional chimney section. It may require somewhat more effort to connect the adjustable length since you are compressing the insulation at the same time.

HYDRONIC PUMPS

Product photo could vary from the actual product

Product No.: 96402934

The pump is of the canned rotor type, i.e. pump and motor form an integral unit without shaft seal and with only two gaskets for sealing.
The bearings are lubricatd by the pumped liquid.

In order to avoid problems in connection with disposal, great importance has been attached to using as few different materials as possible.

SPEC 23 21 23
PUMP SCHEDULE
DRAWING M802

The pump is characterized by:
* 3 speed motor.
* Ceramic radial bearings.
* Carbon axial bearing.
* Stainless steel rotor can, bearing plate and rotor cladding.
* Aluminium alloy stator housing.
* Bronze pump housing.
* Stator with built-in thermal switch.

The motor is a 3-phase motor.

The pump is supplied with a standard module in the terminal box.
The standard module is to be connected to the mains supply via external contactor.

Controls:

Relay:	without relay

Liquid:

Pumped liquid:	Water
Liquid temperature range:	14 .. 248 °F
Liquid temperature during operation:	140 °F
Density:	61.35 lb/ft³

Technical:

Actual calculated flow:	8.158 l/s
Resulting head of the pump:	2.756 m
Approvals on nameplate:	CUL

Materials:

Pump housing:	Cast Iron DIN W.-Nr. 2.1176.01
Impeller:	Stainless steel DIN W.-Nr. 1.4301 AISI 304

Installation:

Range of ambient temperature:	32 .. 104 °F
Maximum operating pressure:	145.04 psi
Flange standard:	ANSI
Type of connection:	F
Pipe connection:	GF 100

Do not install pump larger than 215JM in vertical piping.

Pressure and drain tap locations are approximate.

Suction and discharge flanges, are cast per 250# ANSI thickness and diameter. All flanges are flat face. Some holes may be threaded because of nut clearances.

NOT FOR CONSTRUCTION, Unless certified and referenced on order

HYDRONIC PUMP

Product photo could vary from the actual product

Product No.: 96404950

The pump is of the canned rotor type, i.e. pump and motor form an integral unit without shaft seal and with only two gaskets for sealing.
The bearings are lubricatd by the pumped liquid.

In order to avoid problems in connection with disposal, great importance has been attached to using as few different materials as possible.

SPEC 23 21 23
PUMP SHEDULE
DRAWING M802

The pump is characterized by:

* 3 speed motor.
* Ceramic radial bearings.
* Carbon axial bearing.
* Stainless steel rotor can, bearing plate and rotor cladding.
* Aluminium alloy stator housing.
* Cast iron pump housing.
* Stator with built-in thermal switch.

The motor is a 3-phase motor.

The pump is supplied with a standard module in the terminal box.
The standard module is to be connected to the mains supply via external contactor.

Controls:

Relay:	without relay

Liquid:

Pumped liquid:	Water
Liquid temperature range:	14 .. 248 °F
Liquid temperature during operation:	140 °F
Density:	61.35 lb/ft³

Technical:

Actual calculated flow:	2.971 l/s
Resulting head of the pump:	6.364 m
Approvals on nameplate:	CUL

Materials:

Pump housing:	Cast iron EN-JL1040 ASTM 35 B - 40 B
Impeller:	Stainless steel DIN W.-Nr. 1.4301 AISI 304

Installation:

Range of ambient temperature:	32 .. 104 °F
Maximum operating pressure:	145.04 psi
Flange standard:	USA Oval
Type of connection:	F

PUMP SCHEDULE M802

Product No.: On request

Single-stage centrifugal volute in-line single-head pump:
- neck rings and impeller made of stainless steel
- cataphoresis treatment
- shell coupling
- top-pull-out principle for easy maintenance
- optimized hydraulics
- in-line design with opposite suction and discharge ports enabling mounting in pipework or on a concrete foundation
- corrosion resistant maintenance-free mechanical shaft seal.

The motor is a 1-phase AC motor.

PUMP SCHEDULE M802

Product No.: 99163937

GRUNDFOS ALPHA2
The next generation of energy efficient circulators.

Grundfos ALPHA2 is versatile and efficient whether you use one of its seven speed or pressure control settings or simply leave it on the factory setting AUTOADAPT™.
The ALPHA2 with its ECM motor design reduces energy consumption by 50%.

In AUTOADAPT mode, the pump will automatically analyze the heating system,
find the optimum setting, continue to adjust its operation to changes in demand, ensuring the lowest possible energy consumption without
sacrificing comfort.

Compact design
With the electronics integrated into the motor housing and standard 2-Bolt flange connection, installation into confined spaces and challenging applications are now possible.
The ALPHA2 materials and design resist blockage from magnetite and iron oxide particles found in closed hydronic systems.

ALPHA2 is complete with an integrated check-valve, foam insulation jacket, and nut captures for flanges. ALPHA2 comes in both cast iron and stainless steel models

Two options for power connections
The large LED display shows the current energy consumption in Watts and estimated flow in gallons per minute For installation, you have the flexibility to use either our unique ALPHA Plug with line cord or the ALPHA2 with
terminal box for conduit connections

One-touch operation
Simple push button control enables the ALPHA2 to be programmed in one of 3-constant speed, 3-constant pressure, or AUTOADAPT control modes. The current operating mode is always visible on the ALPHA2's LED display

LED Display
The easy-to-read LED display indicating power (Watts) consumption and flow (GPM) estimation.

Robust startup
Enables the ALPHA2 to continuously attempt to restart – indefinitely – in blocked rotor conditions

VIKING PUMP CANADA

Specifications
Viking Duplex Fuel Oil Pump Package

The Duplex Fuel Oil Pump Set shall be Viking # **SG-40510-DUP-O** complete with the following equipment.

• (2) SG-40510 Spur Gear Pump in cast iron construction, heat treated steel gears, case-hardened shafts, carbon graphite bushings, mechanical seal, plain head and 1/2" NPT ports.

• (2) M-drive adaptor to mount the pump on the motor

Pump 1 P/N: Pump 2 P/N: Bracket P/N:

The pumps shall deliver:

Capacity	*Liquid*	*Differential Pressure*	*Viscosity/Sp. Gr.*
3.4 USGPM	No. 2 Fuel Oil	100.0 PSIG	38 SSU
12.8 L/min		6.90 Bar	3 cPs
0.21 L/sec		690.0 kPa	0.85 Sp. Gravity

• Motors shall be Totally Enclosed Fan Cooled, C-Faced, NEMA Frame, CSA, fractional motor

0.5 hp 1 ph 60 Hz 115 Volt 1750 rpm 56C Frame

Motor P/N: **350E0.50-60-115TC**

• **Common Base** shall be made of heavy gauge steel plate with 1 1/4" high drip-lip and 1/2" NPT drain.

• **Suction Line Equipment** shall consist of the following components in 1" Header Size

- (2) Lid-Ease Basket Strainers with 40 mesh
- (2) Ball valve, 1" NPT, 600 PSI pressure rated, full port, two piece brass body, PTFE seat, UL-Listed
- (2) 30"Hg-0-30 PSI, Compound gauges, 2.5" face, brass internals, liquid filled
- (2) Gage Valve - Ball valves, 1/4" NPT, 600 PSI, full port, two piece brass body, PTFE seat, UL-Listed
- Schedule 80 carbon steel piping and nipples, malleable iron screwed fittings; Class 125/150 Flanges where applicable. North American fittings standard

• **Discharge Line Equipment** shall consist of the following components in 1/2" Header Size

- (3) Spring Check Valve, 1/2" NPT, 400 PSI pressure rated, bronze body, PTFE poppet
- (2) Ball valve, 1/2" NPT, 600 PSI pressure rated, full port, two piece brass body, PTFE seat, UL-Listed
- (2) In-Line Relief Valve - continuous bypass type, cast iron body, stainless steel spring
- (2) Pressure Gauge, 2.5" dial, brass internals, liquid filled, 0-160 Range
- (2) Gage Valve - Ball valves, 1/4" NPT, 600 PSI, full port, two piece brass body, PTFE seat, UL-Listed
- Schedule 80 carbon steel piping and nipples, malleable iron screwed fittings; Class 125/150 Flanges where applicable. North American fittings standard
- Pump Set to be leak tested with 100 PSI air and soapy water.
- Unit to be coated with Vinyl Toluene Alkyd, Quick Dry Enamel
- Magnetic Float Switch with Alarm for Drip Tray Leak Detection
- Pressure Switch - Dual Stage - High and Low, EEMAC1 enclosure

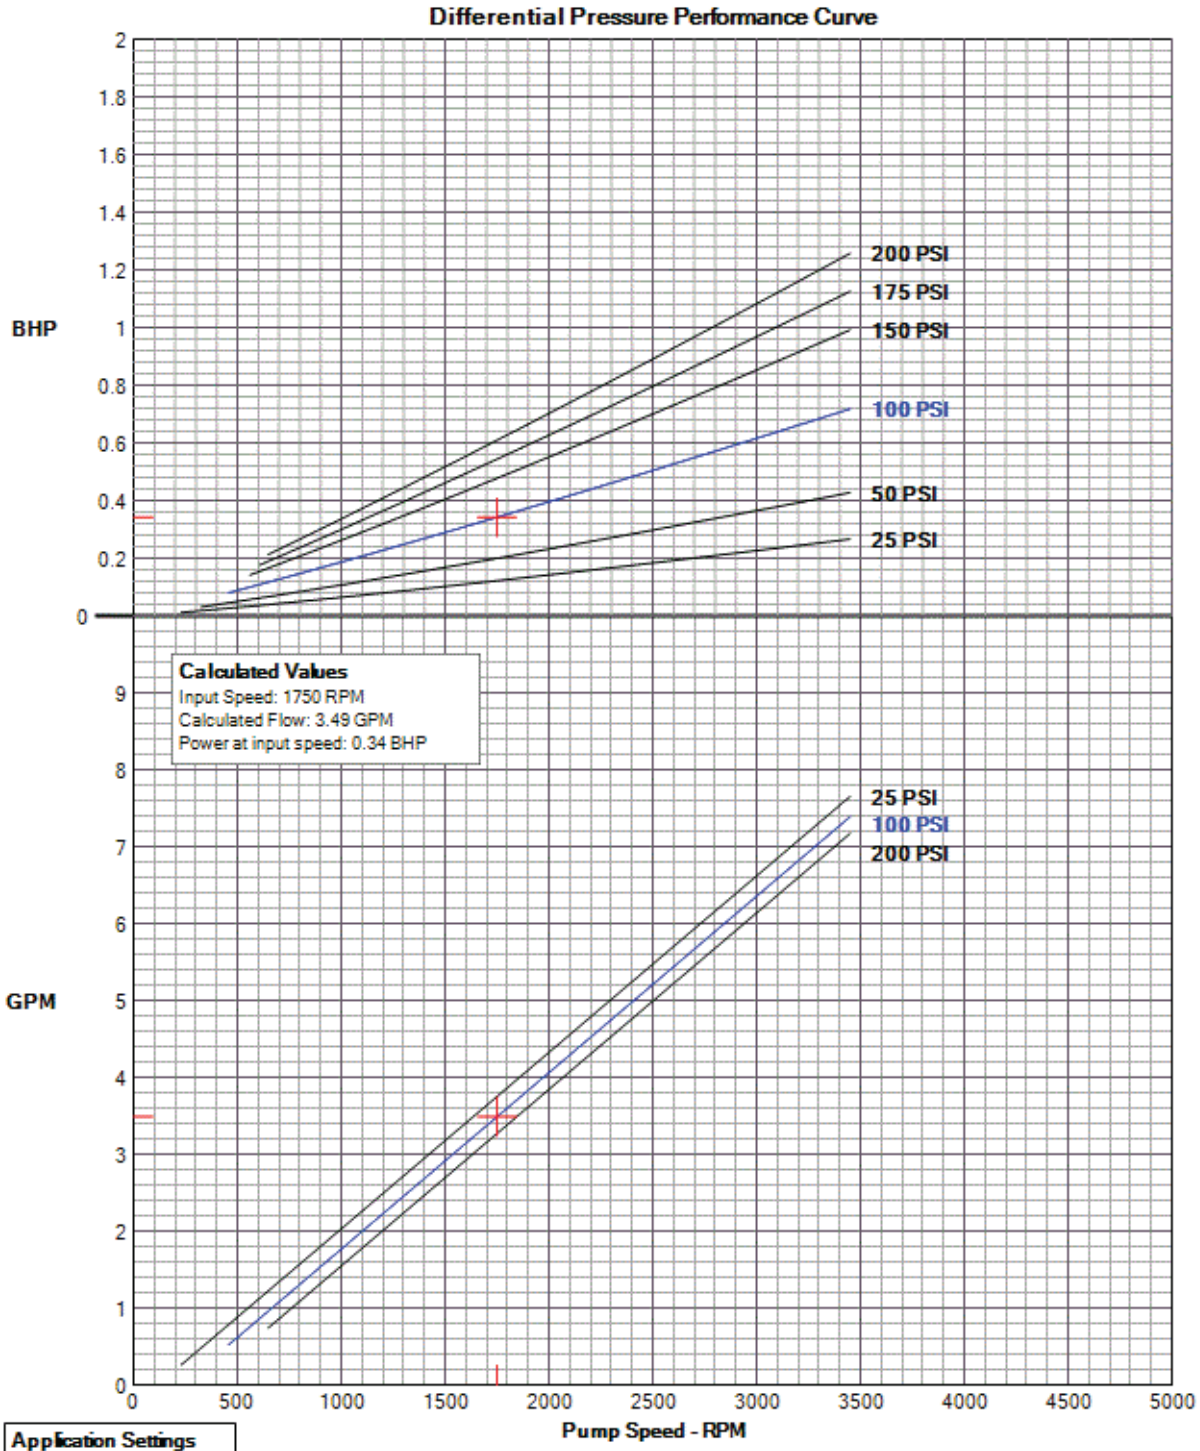
VIKING PUMP CANADA

Specifications
Control Panel for Viking Duplex Fuel Oil Pump Package

The Control Panel for the Viking Duplex Fuel Oil Pump Set shall be Viking part number: **CPPA05-180581**

Duplex Control Panel 0.5 HP, 1/60/115V:



- NEMA 4 enclosure
- Individual disconnect switches, motor protectors and transformer c/w through the door operation and control circuit fuse (1 phase - 115 Volt)
- Magnetic motor starters (2)
- Hand-Off-Auto selector switches (2)
- Power on pilot light (white) (1)
- Run pilot lights (green) (2)
- Terminal Strip
- Provision to connect 9 float switches
- Control circuit fuse
- P1 - Auto - P2 alternating selector switch
- Redundant Contactors (Back-up to Primary Contactors)
- Lead pump failure pilot light & manual reset, lag pump start (automatic transfer to non operating pump in case of motor overload or short circuit)
- High pressure cut out - red pilot light & manual reset
- Low pressure cut out - red pilot light & override timers (2) (manual reset)
- High pressure alarm signal
- Low pressure alarm signal
- Low level alarm signal & red pilot light (Fuel Oil Day Tank TK-4.2)
- High level alarm signal & red pilot light (Fuel Oil Day Tank TK-4.2)
- Low level alarm signal & red pilot light (Fuel Oil Day Tank TK-4.3)
- High level alarm signal & red pilot light (Fuel Oil Day Tank TK-4.3)
- Low level alarm signal & red pilot light (Main Fuel Oil Tank TK-4.1)
- Provision to connect N/C solenoid valve (TK4.2CV)
- Provision to connect N/C solenoid valve (TK4.3CV)
- Drip tray leak detection alarm signal & red pilot light (Duplex System)
- Drip tray leak detection alarm signal & red pilot light (Fuel Oil Day Tank TK-4.2)
- Drip tray leak detection alarm signal & red pilot light (Fuel Oil Day Tank TK-4.3)

Important Notes: When quoting an electrical control panel for the DFO set, please check any Federal, State, or Local requirements under the electrical code. Consult our Applications Engineering Department at 1-888-VIK-PUMP for options not listed above

Disclaimer: Any on-site modification needed to meet Federal, State, or Local electrical codes not specified on the order will be the responsibility of the Distributor or End-User and not Viking Pump, Inc. or Viking Pump of Canada Inc.

PUMP SCHEDULE M802

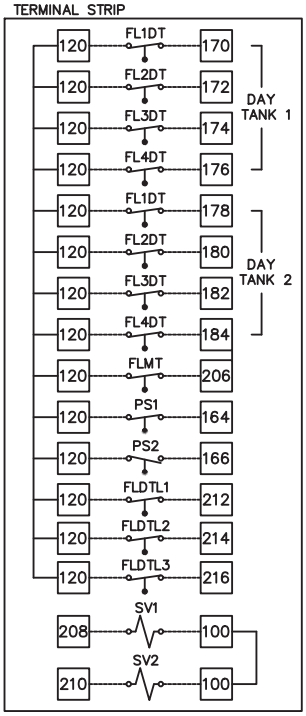
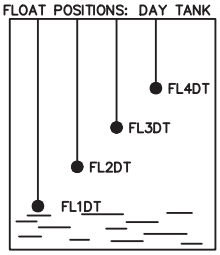
120VAC/60Hz/1PH

ENCLOSURE TYPE: NEMA 4/12

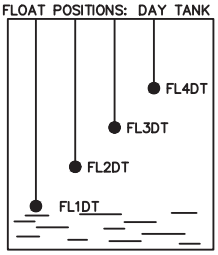


(DEPTH OF PILOT AND OPERATOR DEVICES IN ADDITION TO LISTED DIMENSION)

CERTIFICAITON REQUIRED:
☐ESA
☒CSA
☐UL508A



TERMINAL STRIP



JMP MOTOR1: 120VAC LINE
JMP MOTOR1: 120VAC NEUTRAL
JMP MOTOR2: 120VAC LINE
JMP MOTOR2: 120VAC NEUTRAL

FLOAT POSITIONS: DAY TANK 2

FLOAT POSITIONS: DAY TANK 1

DEVICE AND OPERATION COMMENTS

P1–AUTO–P2: THE LEAD PUMP WILL ALTERNATE AFTER ALL THE PUMPS HAVE STOPPED UNDER NORMAL CONDITIONS IF SELECTOR SWITCH IS PLACED IN AUTO. IF LEAD PUMP FAILS, LAG PUMP WILL START

DT1–AUTO–DT2: DT1 AND DT2 FILL RESPECTIVE DAY TANKS ONLY. AUTO FILLS BOTH TANKS AS REQUIRED.

FL1DT: LOW LEVEL DAY TANK – STARTS LAG PUMP WHEN FLOAT SWITCH CLOSES. ACTIVATES VISUAL ALARM AND ALARM RELAY. ALARM MUST BE MANUALLY RESET

FL2DT: START LEAD PUMP – STARTS LEAD PUMP WHEN FLOAT SWITCH CLOSES. ACTIVATES VISUAL SIGNAL.

FL3DT: STOP ALL PUMPS – STOPS ALL PUMPS IN AUTOMATIC MODE WHEN FLOAT SWITCH OPENS.

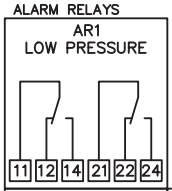
FL4DT: HIGH LEVEL DAY TANK – STOPS ALL PUMPS WHEN FLOAT SWITCH OPENS. ACTIVATES VISUAL ALARM AND ALARY RELAY. ALARM AUTOMATICALLY RESETS..

PS1: LOW PRESSURE – STOPS ALL PUMPS IN AUTO MODE WHEN PRESSURE SWITCH CLOSES AFTER 1 MINUTE OF RUN TIME. ACTIVATES VISUAL ALARM AND ALARM RELAY. ALARM MUST BE MANUALLY RESET.

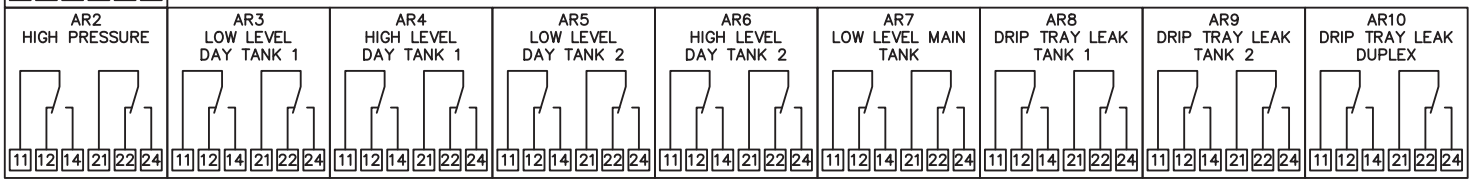
PS2: HIGH PRESSURE – STOPS ALL PUMPS WHEN SWITCH CLOSES. ACTIVATES VISUAL ALARM AND ALARM RELAY. ALARM MUST BE MANUALLY RESET.

SV1: SOLENOID VALVE – ENERGIZED WHEN FILLING DAY TANK 1

SV2: SOLENOID VALVE – ENERGIZED WHEN FILLING DAY TANK 2



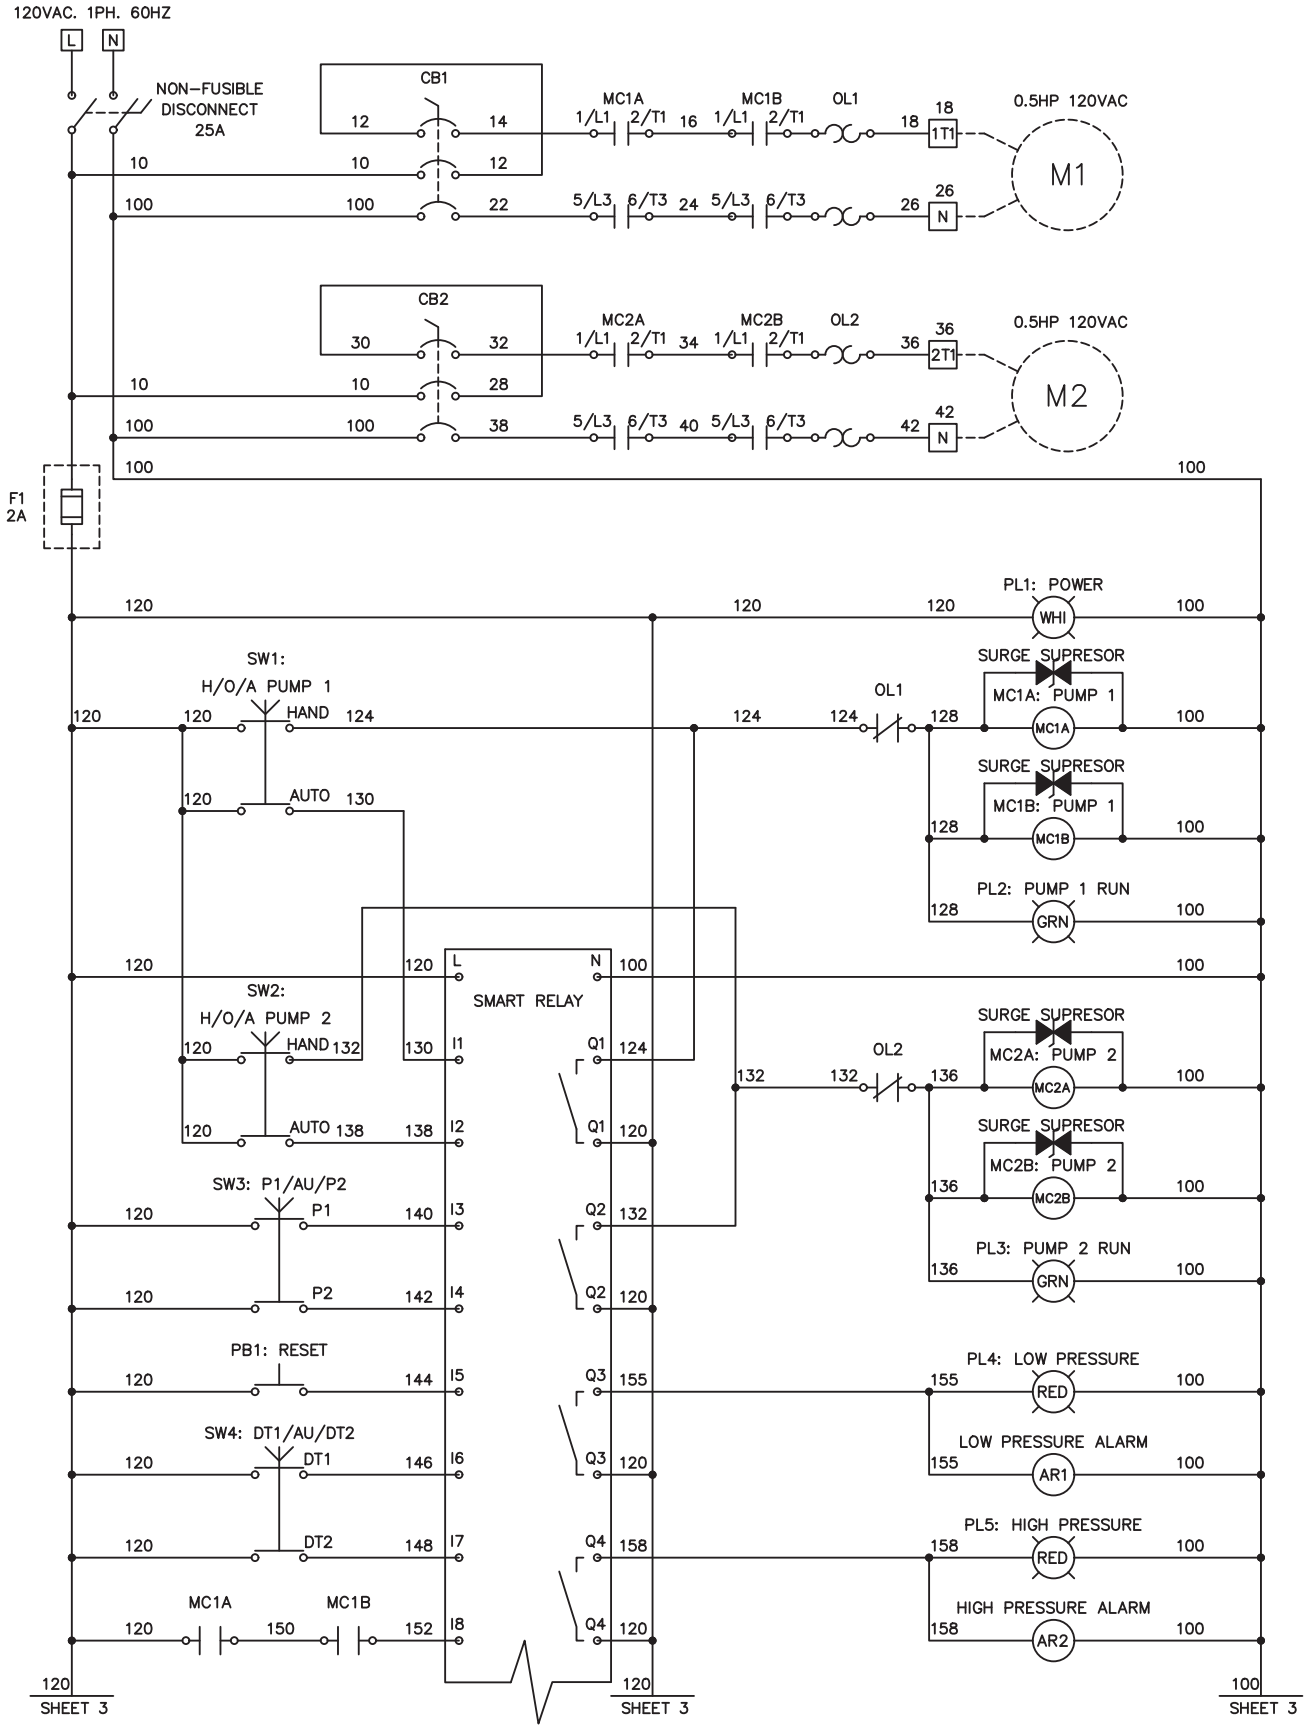
FLMT: LOW LEVEL MAIN TANK – ACTIVATES VISUAL ALARM AND ALARM RELAY. ALARM MUST BE MANUALLY RESET



FLDTL1: DRIP TRAY LEAK DUPLEX – ACTIVATES VISUAL ALARM AND ALARM RELAY. ALARM AUTOMATICALLY RESETS.

FLDTL2: DRIP TRAY LEAK MAIN TANK 1 – ACTIVATES VISUAL ALARM AND ALARM RELAY. ALARM AUTOMATICALLY RESETS.

FLDTL3: DRIP TRAY LEAK MAIN TANK 2 – ACTIVATES VISUAL ALARM AND ALARM RELAY. ALARM AUTOMATICALLY RESETS.



ALARM RELAYS

Commercial Oil-Fired Water Heaters

SPEC 22 30 05 2.1 & 2.2

COMMERCIAL OIL-FIRED WATER HEATERS

FEATURES

MEETS THE THERMAL EFFICIENCY AND STANDBY LOSS REQUIREMENTS OF THE U.S. DEPARTMENT OF ENERGY AND CURRENT EDITION ASHRAE/IESNA 90.1

LIME TAMER™ MODELS INHIBIT LIME AND SEDIMENT BUILDUP—Lime Tamer™ models are warranted against tank failure due to sedimentbuildup for three years.

GLASSLINED TANK — Maximizes tank life. 160psi working pressure.

180° ADJUSTABLE THERMOSTAT— Has upper and lower sensingbulbs to average water temperatures at top and bottom of heater formaximum temperature control (120°-180°).

SAFETY SHUTOFF— Limits temperature buildup.

UL LISTED OIL BURNER— Precision engineered to match the units they are used with; designed to fire 1.75 to 5.0 gallons of oil per hour. All models equipped with single phase continuous duty motor 120 volt AC60 Hz, 3450 rpm with manual overload switch and interrupted ignition. Standard burners equipped with single stage pump with 1 or 2 line capability. Flame retention principle assures high rate of combustion efficiency, yet maintains low operating noise levels. Fuel unit includes pump, strainer, pressure regulating valve and ignition transformer. Transformer rated at 120 volt AC, 60 Hz with 10,000 volt secondary, UL listed for use with No. 1 and 2 commercial grade fuel oil. Burner mounted cadmium cell relay for flame detection - 15 second safety switch timing eliminates the need for RA890F Electronic Safeguard. Complies with UL A708.5-32/33.

EFFICIENT COMBUSTION CHAMBER— Precast, high temperature combustion chamber made of alumina silica ceramic fiber. Engineered for maximum insulation and heat reflection. Unique design assures more complete combustion by stabilizing flame pattern.

INTERRUPTED IGNITION— Reduces electrical consumption.

OIL SOLENOID SAFETY VALVE— Standard on COF-455 and 700.

3/4" DRAIN VALVE— Provided in lower tank for fast draining.

TWO HAND-HOLE CLEANOUTS—Allows easy cleaning on standard models COF-385 and larger and ASME models.

ANODIC PROTECTION—For longer tank life.

FLAME OBSERVATION PORT—Permits convenient flame check.

FOAM INSULATION—Saves fuel, helps maintain constant temperature.

JACKET—Heavy gauge steel with baked enamel finish over bonderized undercoat. Not approved for installation on combustible flooring.

EASY TO INSTALL BURNER—Three bolt mounting of burner assures easy installation.

BAROMETRIC DRAFT REGULATOR

CSA CERTIFIED AND ASME RATED T&P RELIEF VALVE

OTHER FEATURES

- Two Stage Pump - For use with underground oil storage tanks or JP-5 fuel
- ASME Construction Available - All models are rated 160 psi max working pressure
- CAUTION: Units must be installed on noncombustible surface.

THREE-YEAR LIMITED TANK WARRANTY

- Factory Start-Up included - Required for activating warranty and assuring maximum operating performance. Contact your local sales representative or Authorized Start-Up Agent to arrange a FREE Certified Start-Up.
- For complete warranty information, consult written warranty

*Based on No. 2 fuel oil. Capacity rating are actual heater performance at 80% thermal efficiency.
NOTE: Above 2000' altitude, input ratings should be reduced 4% for each 1000' above sea level.

SUGGESTED SPECIFICATION

Water heater(s) shall be commercial oil model number _____ or equivalent. Heater(s) shall have a minimum oil firing rate of _____ gph at 100°F temperature rise and a storage capacity of _____ gallons. The 160 psi working pressure tank shall be glass-lined with the alkaline borosilicate composition being fused to the steel at 1600° and be equipped with 1 1/2" water inlet and outlet openings, and 2 3/4" x 3 3/4" boiler-type hand-hole cleanout (2) on COF-315 and larger or ASME models. The tank shall be insulated with 2" fiber glass insulation. The outer jacket shallhave baked enamel finish over a bonderized undercoating. The burner shall be Underwriters' Laboratories listed and have a _____ (one or two) stage oil pump. The burner shall have flame retention, interrupted ignition and be equipped with primary controls which will provide for 15 second safety shutdown in the event of flame failure. The heater(s) shall be factory equipped with primary controls which will provide for 15 second safety shutdown in the event of flame failure. The heater(s) shall be factory equipped with temperature limiting device, drain valve, flame observation port and 180° adjustable thermostat having upper and lower sensing bulbs which average the water temperatures at the top and bottom of the tank for maximum water temperature control. A CSA Certified and ASME Rated T&P Relief Valve shall be furnished and installed by the factory. Heater tank shall have a 3 year limited warranty against corrosion and tank failure due to sediment buildup as outlined in the warranty.

For Technical Information and Automated Fax Service, call 800-527-1953. A. O. Smith Corporation reserves the right to make product changes or improvements without prior notice.

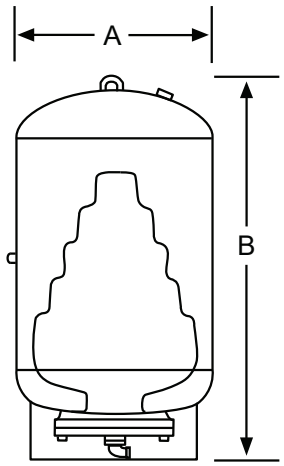
EXTROL®

Hydronic Expansion Tanks: LBC Series ASME

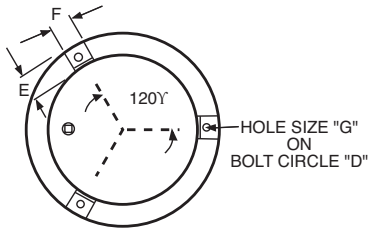
SPEC 23 21 14 2.1



125 PSIG Working Pressure

Construction

Shell	ASME Approved Steel
Bladder Design	Partial Acceptance; Replaceable
Bladder Thickness (models 35-100)	.087 In Minimum
Bladder Thickness (models 130-600)	.100 In Minimum
System Connection	NPTF Malleable Iron
Finish	Red Oxide Primer
Air Valve	Schrader Valve w/EPDM Seats
Factory Precharge	12 PSIG (.8 bar)



Application

- For use in closed, non-potable hydronic heating and chilled water systems.
- Replaceable, partial acceptance bladder design.
- Meets all ASME Code Section VIII, Division 1 standards.
- Available with optional sight glass and seismic restraints.

Performance

Maximum Operating Temperature	240°F (115°C)
Maximum Working Pressure	125 PSIG (8.6 bar)
Warranty	1 Year

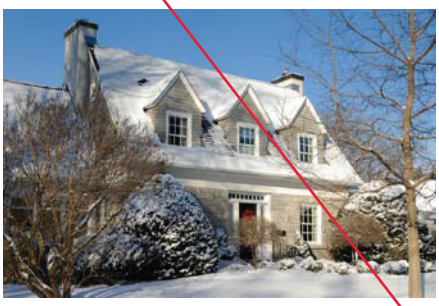
Models and Specifications

Extrol® In-Line Models

- Suitable for expansion control in most residential closed-loop boiler systems.
- Patent-pending InSight™ indicator cap provides visual check of tank condition.
- In-line mounting adds convenience and space savings.



EX Series Specifications

Model Number	Tank Volume (Gallons)	Max. Accept. Volume (Gallons)	Diameter (Inches)	Height (Inches)	System Connection (NPTM)	Shipping Weight (lbs.)

Vortex Air Separators - Models VA / VAS: 4" to 12"

SUBMITTAL

JOB: _____ REPRESENTATIVE: _____

ORDER NO: _____ DATE: _____

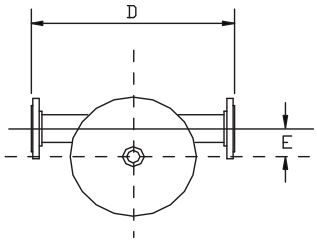
ENGINEER: _____ SUBMITTED BY: _____ DATE: _____

CONTRACTOR: _____ APPROVED BY: _____ DATE: _____

MODEL NO. ORDERED: _____ QTY.: _____

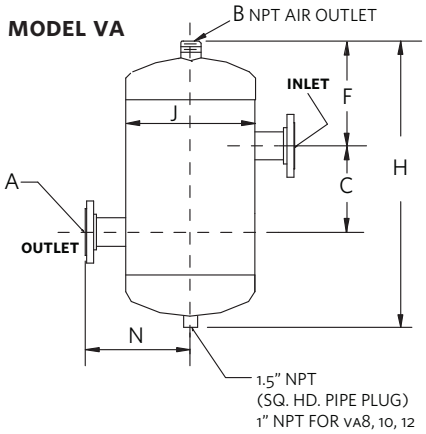
TAG NO.: _____

All models designed and built to ASME Pressure Vessel Code, Section VIII, Division 1.



TYPICAL SPECIFICATION

Furnish & install an Armstrong Vortex® Air Separator, Model ___ VA or Model ___ VAS (with strainer) with flanged tangential connections as shown on plans. The unit shall be designed and built in accordance with the latest revisions of ASME Pressure Vessel Code, Section VIII, Division 1. A blowdown connection is provided for routine cleaning of the unit.



TECHNICAL DATA

BUDERUS

G315 | G515 | G615

Cast Iron Commercial Boilers

- High Efficiency—Combustion Efficiencies Up to 88.2%
- 350 to 3,982 MBH Output
- Thermostream Design Eliminates Thermal Shock

Superior Equipment by Design

Comfortable. Efficient. Intelligent Heating.

Buderus

G315 | G515 | G615

Thermostream Design

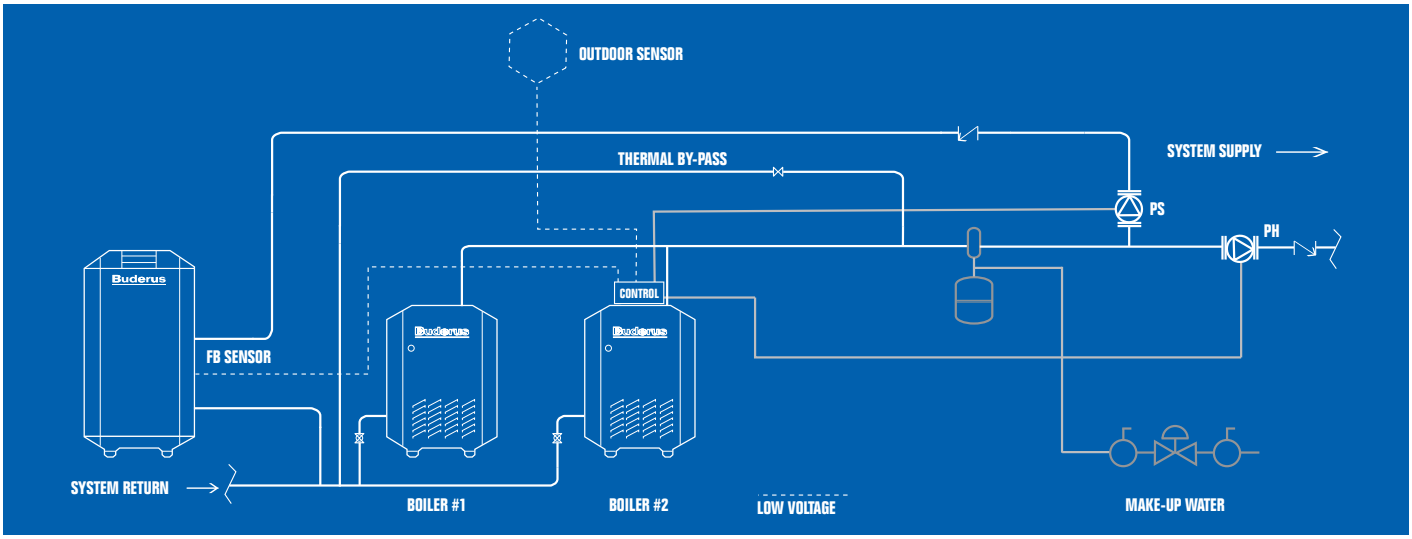
The Buderus developed Thermostream principle is proven for higher efficiency and improved system reliability in high volume heating systems. Condensation and thermal shock are made impossible by design, as cool return water mixes internally and is preheated with supply water before exposure to directly heated surfaces. This process eliminates hot and cold spots in the boiler and balances water flow throughout all boiler sections. The Thermostream design permits continuous low temperature operation under normal return water without requiring a minimum boiler return temperature. Internal water circulation and injection into each boiler section combined with deflection plates ensure condensate free boiler operation—even under no flow conditions.

A Better Way to Heat

The Buderus commercial Thermostream boilers are designed with many physical attributes setting them above the competition and increasing their longevity and efficiency. The burner doors are field adjustable to swing fully open from either side, to enable the boilers to fit in any location. These boilers are shipped knocked down for easy transport, the G315 and the G515 can also be shipped as an assembled block. Due to the unique chamber design, no refractory materials are used. This reduces the number of service calls and maximizes heat transfer. Buderus precision castings eliminate the need for manual grinding. Precision beveled steel push nipples join cast iron sections and high temperature flue sealants are used to sustain pressurized operation.

The G315 and G515 come with a full 3½" of thermal insulation, and the G615 comes with a full 4" of thermal insulation to reduce standby heat loss. All Buderus cast iron commercial boilers are manufactured with the Buderus GL-180M cast iron with a silicone "barrier skin." To streamline the appearance of the boilers, the supply and return connections for the G315 are located at the rear of the boiler, while the G515/G615 have top supply and a rear return. These boilers are for use with hot water and can be installed with gas, oil or dual fuel burners.

Intelligent Heating—by Design



Buderus, the world leader in heating technology, manufactures the highest quality boilers based on centuries of experience. With its innovative design and quality manufacturing, a Buderus boiler will outlast and out-perform virtually any other commercial hot water boiler system in the world.

The G315, G515 and G615 are designed to maximize the heating value of every ounce of fuel and are built with the highest quality materials. Established in 1731, Buderus uses state-of-the-art techniques in the design and manufacturing of its boilers.

Design Benefits

- Eliminates the need for bypass loop or shunt pump
- Eliminates hot and cold spots in the boiler
- Allows operation at low return water temperatures without thermal shock concerns
- Minimum supply temperature of 122°F with standard control
- Ensures balanced water flow through all boiler sections

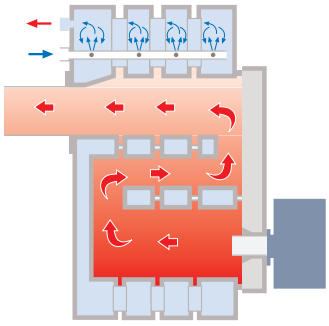
NOTE: This drawing is conceptual in nature and does not purport to address all design, installation or safety considerations.

Boiler Construction

The boiler sections are assembled with beveled, surface-profiled push nipples for long, trouble-free watertight operation. Boiler flueways are manufactured to be gas tight with tongue and groove section design and elastic, high temperature resistant sealing rope. A permanent dry door gasket ensures repeated positive sealing of the full swing burner door. Because flue gases cannot escape through the seams between boiler sections, the boilers are able to retain heat more efficiently.

GL-180M Gray Cast Iron

Buderus GL-180M silicone injected, gray cast iron obtains its superior material characteristics primarily from a high carbon (graphite) and silicone content.



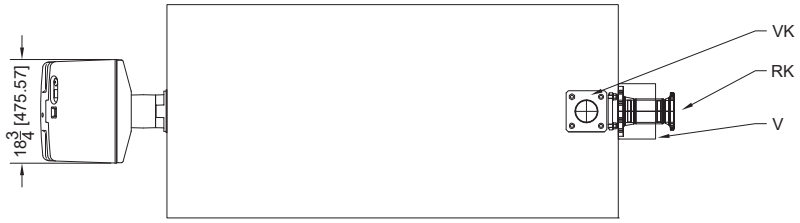
Buderus GL-180M gray cast iron has excellent corrosion resistance, exceptional casting characteristics, 40% greater flexibility and elasticity as well as high thermal conductivity. Buderus developed the special substances that are impregnated during the casting process to improve the mechanical properties of cast iron. The graphite precipitates into smaller, modified flakes which produce GL-180M cast iron with 40% greater elasticity and a high silicone barrier for corrosion protection. All sections are heat treated to relieve thermal stresses. Additional elements further enhance the properties of the GL-180M. The graphite appears in two different forms in the microstructure: nodular form producing excellent tensile strength and great elasticity and graphite flakes producing excellent corrosion resistance against acidic combustion products.

Full Three Pass Design—for High Efficiency

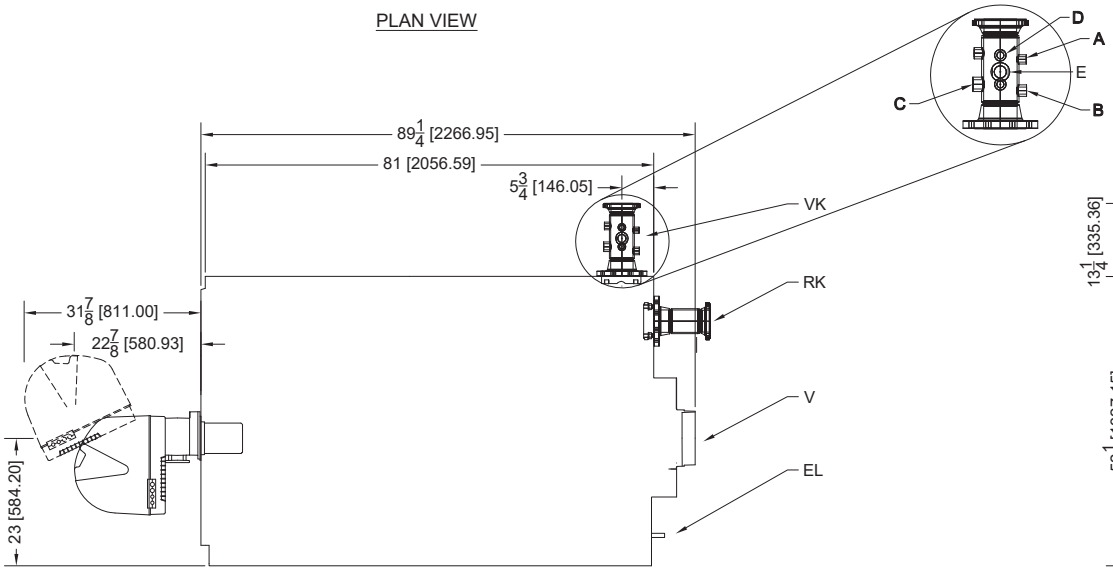
Buderus developed the full three pass system to increase the heat transfer and efficiency of boilers. This design allows more heat to be transferred during all three passes, unlike conventional boilers that only use one pass to transfer heat. This system maximizes the total possible heat available with the lowest fuel consumption possible. To greatly decrease standby loss Buderus has manufactured a 3½" and 4" thick thermal insulation.

The Three-Pass Boiler is Designed for:

- Optimized combustion with positive pressure-fired boilers and tailored chamber geometry—no need for a heat-consuming refractory or target wall eliminating the need for costly repairs
- Minimal stack losses with the modified three-pass flue design's large heat transfer areas
- Low standby losses with a full 3½" to 4" jacket of thermal insulation around the entire block—even underneath the boiler



How it Works



The flame fires into the first chamber. Then the flue products flow through the second pass to the front of the boiler. From there they reverse direction again—moving through the third pass to the back, and finally exiting via the flue connection into the chimney. Because the gases are held in the boiler longer this allows the cast iron to absorb the maximum amount of heat, resulting in a lower stack temperature and a higher efficiency.

SPECIFICATIONS		
BOILER MODEL	G515/11	G515/11

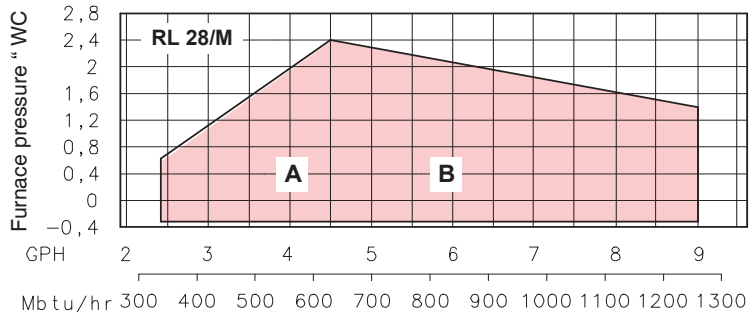
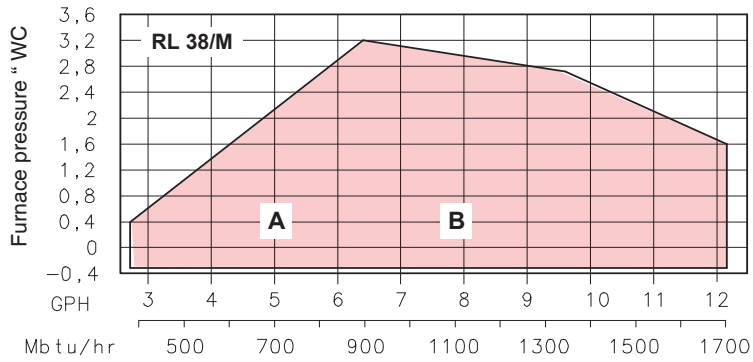
BURNER DESCRIPTION (A)

1 Ignition electrodes
2 Combustion head
3 Screw for combustion head adjustment
4 Photocell (cad cell)
5 Screw for fixing fan to flange
6 Servomotor provides adjustment of fuel delivery regulator and of air damper. When the burner is not operating the air damper is fully closed in order to reduce heat dispersion from the boiler due to the flue draft which draws air from the fan suction inlet.
7 Slide bars for opening the burner and inspecting the combustion head
8 Safety solenoid valve
9 Pump delivery valve
10 Valve on nozzle return
11 Pressure regulator on nozzle return
12 Pump
13 Plate prearranged to drill 4 holes for the passage of hoses and electrical cables.
14 Air damper
15 Non-drip nozzle holder
16 Fan pressure test point
17 Boiler mounting flange
18 Flame stability disk
19 Flame inspection window
20 Power switch for different operation:
automatic - manual - off
Button for:
power increase - power reduction
21 Motor contactor and thermal overload with reset button (RL 38 - 50/M)
22 Extensions for slide bars 7)
23 Flame safeguard with lock-out pilot light and lock-out reset button
24 Terminal strip
25 High oil pressure switch
26 Pump pressure adjustment
27 Pressure gauge for pressure on nozzle return
28 Protection (for RL 50/M single-phase burner)

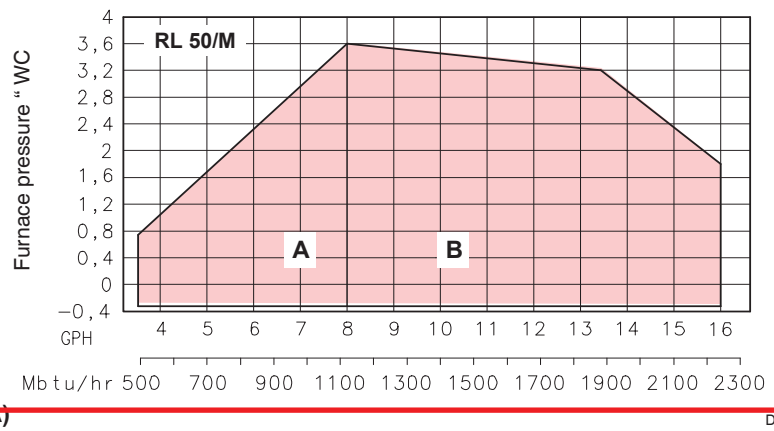
Two types of burner failure may occur:
Flame safeguard lock-out:
If the flame relay 23)(A) pushbutton lights up, it indicates that the burner is in lock-out.
To reset, press the pushbutton.
Motor trip (RL 38 - 50/M):
release by pressing the pushbutton on thermal overload 21)(A).



PACKAGING - WEIGHT (B) - Approximate measurements



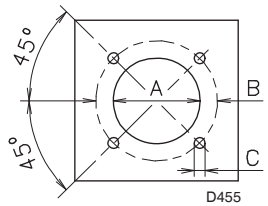
- The burners are shipped in cardboard boxes with the maximum dimensions shown in Table (B).
- The weight of the burner complete with packaging is indicated in Table (B).

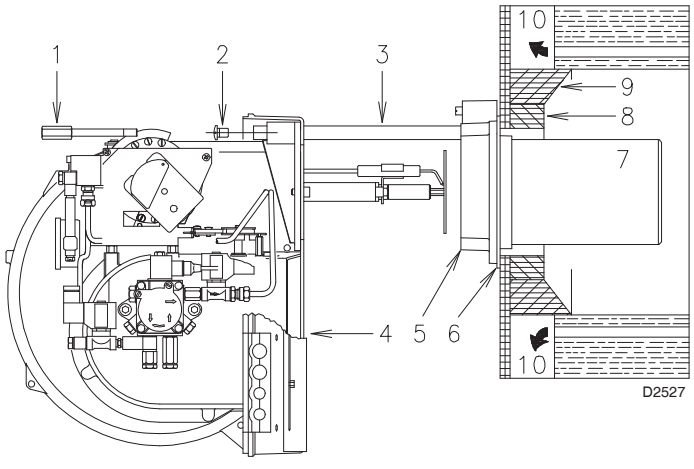


MAX. DIMENSIONS (C) - Approximate measurements
The maximum dimensions of the burner are given in (C).
Inspection of the combustion head requires the burner to be opened and the rear part withdrawn on the slide bars.
The maximum dimension of the burner, without casing, when open is give by measurement H.

STANDARD EQUIPMENT

2 - Flexible hoses
2 - Gaskets for flexible hoses
1 - Burner head gasket
4 - Screws to secure the burner flange to the boiler 3/8 W x 1”
1 - Adaptor G 1/8“ / 1/8“ NPT
1 - Instruction booklet
1 - Spare parts list





(A) D2526

inch	A	B	C

RL 38/M	$6^{5}/_{16}$"	$8^{13}/_{16}$"	$^{3}/_{8}$ W
RL 50/M	$6^{5}/_{16}$"	$8^{13}/_{16}$"	$^{3}/_{8}$ W

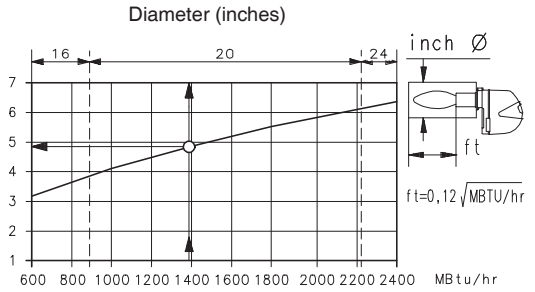
(B)

(C)

FIRING RATES (A)

During operation, burner output varies between:
- **MINIMUM OUTPUT** : area A
- **MAXIMUM OUTPUT** : area B

Graphs (A):
Horizontal axis : Burner output
Vertical axis : Heater furnace pressure
The firing rate may be found by plotting a vertical line from the desired delivery and a horizontal line from the pressure in the combustion chamber. The intersection of these two lines is the firing rate which must lie within area A, for MIN output, and within area B, for MAX output.
Important:
The FIRING RATE area values have been obtained considering a surrounding temperature of 68 °F (20 °C), and an atmospheric pressure of 394" W.C. and with the combustion head adjusted as shown on page 6.



Note:
The FIRING RATE areas given in figure (A) have been reduced by 10% with respect to the maximum range that can be reached.

Consult Appendix on page 22 for operation at different ambient temperatures and / or altitudes.

MINIMUM FURNACE DIMENSIONS

The firing rates were set in relation to certified test boilers.
Figure below indicates the diameter and length of the test combustion chamber.

Example:
output 1388 MBTU/h:
diameter 20 inch - length 4.9 ft.

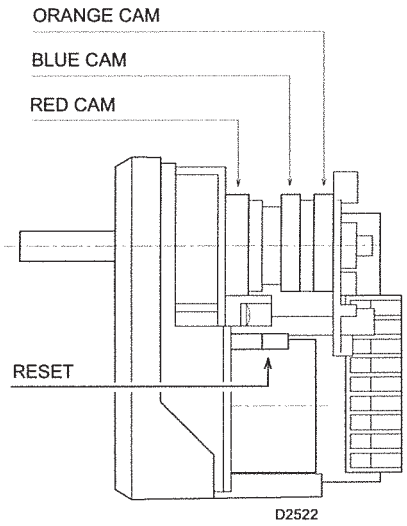
INSTALLATION

BOILER PLATE (B)

Drill the combustion chamber mounting plate as shown in (B). The position of the threaded holes can be marked using the burner head gasket supplied with the burner.

BLAST TUBE LENGTH (C)

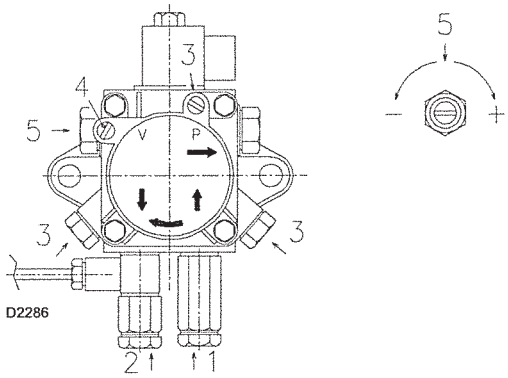
The length of the blast tube 7) must be selected according to the indications provided by the manufacturer of the boiler, and in any case it must be greater than the thickness of the boiler door complete with its insulation. The range of lengths available, (inch), is as follows:



Blast tube 7):	RL 28/M	RL 38/M	RL 50/M
• short	$9^{15}/_{32}$"	$9^{15}/_{32}$"	$9^{15}/_{32}$"
• long	$13^{13}/_{16}$"	$13^{13}/_{16}$"	$13^{13}/_{16}$"

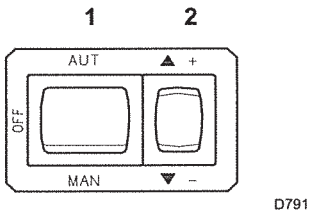
For boilers with front flue passes 10) or flame inversion chambers, protective insulation 8) must be inserted between the boiler refractory 9) and the blast tube 7).
This protective insulation must not compromise the extraction of the blast tube.
For boilers having a water-cooled front the insulation 8)-9)(C) is not required unless it is required by the boiler manufacturer.

SECURING THE BURNER TO THE BOILER (C)



Disassemble the blast tube 7) from the burner 4) by proceeding as follows:
- remove the screws 2) from the two slide bars 3).
- Remove the screw 1) fixing the burner 4) to the flange 5).
- Withdraw the blast tube 7) complete with flange 5) and slide bars 3).

Secure flange 5)(C) to the boiler plate inserting the supplied gasket 6). Use the 4 screws provided after having protected the thread with an antilocking product.
The burner-boiler seal must be airtight.



(A)

SUNTEC AL 95 C

		AL 95 C
A	GPH	32
B	PSI	145 - 290
C	"Hg	13
D	cSt	2 - 12
E	°F - °C	140 - 60
F	PSI	29
G	PSI	290
H	inch	0,006

(B)

(C)

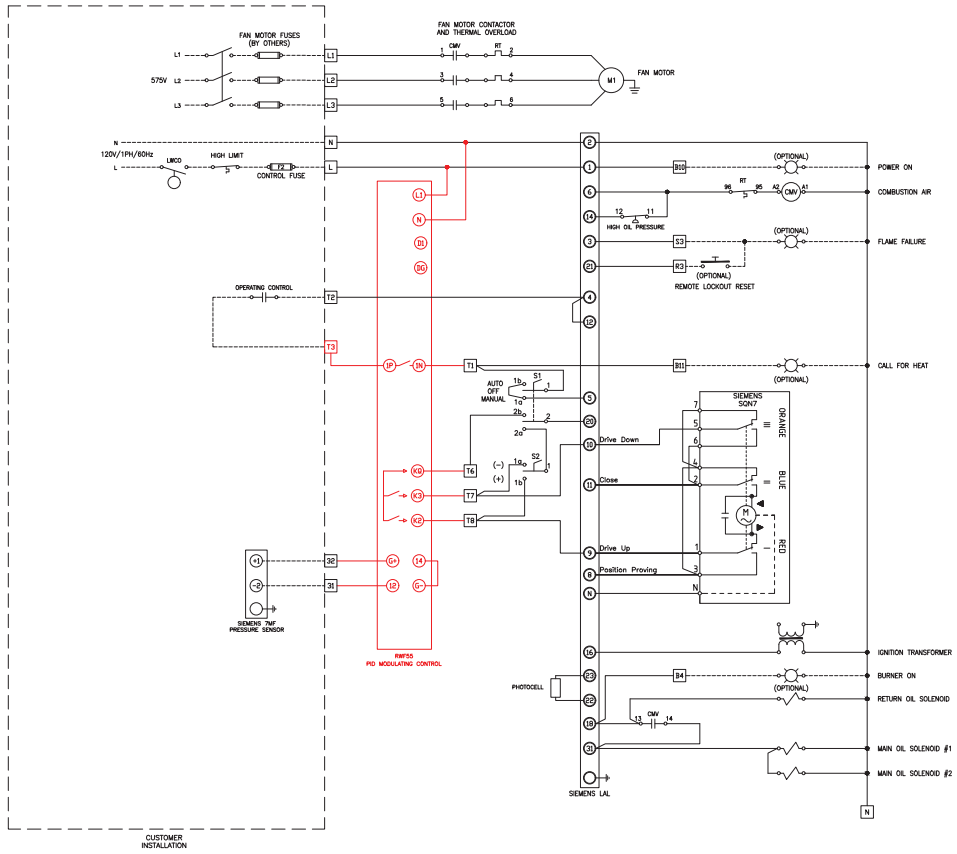
SERVOMOTOR (A)

The servomotor provides simultaneous adjustment of the air damper 11)(B) page 9 and the pressure regulator 9) by means of a double variable profile cam, 4) and 7). The servomotor rotates through 90° in 25 seconds.
Do not alter the factory setting for the cams; simply check that they are set as indicated below:

Red cam : 90°
Limits rotation toward maximum position.
Blue cam : 0°
Limits rotation toward the minimum position. When the burner is shut down the air damper must be closed: 0°.
Orange cam : 15°
Adjusts the ignition position and the MIN output.

PUMP (B)

1 - Suction	1/4" NPT
2 - Return	1/4" NPT
3 - Pressure gauge attachment	G 1/8"
4 - Vacuum gauge attachment	G 1/8"
5 - Pressure adjustment screw	



A - Min. delivery rate at 290 PSI pressure
B - Delivery pressure range
C - Max. suction pressure
D - Viscosity range
E - Max fuel oil temperature
F - Max. suction and return pressure
G - Pressure calibration in the factory
H - Filter mesh width

PUMP PRIMING

- **Before starting the burner, make sure that the tank return line is not clogged. Obstructions in the line could cause the seal located on the pump shaft to break.**
- In order for self-priming to take place, one of the screws 3)(B) of the pump must be loosened to bleed off the air contained in the suction line.
- Start the burner by closing the control circuit switch 1)(C) in the "MAN" position. As soon as the burner starts, check the direction of rotation of the fan blade, by looking through the flame inspection window 19)(A)p.4.
- The pump can be considered primed when the fuel oil starts coming out of the screw 3). Stop the burner: switch 1)(C) set to "OFF" and tighten the screw 3).

The time required for this operation depends upon the diameter and length of the suction tubing. If the pump fails to prime at the first cycle of the burner and the burner locks out, wait approx. 15 seconds, reset the burner, and then repeat the starting operation as often as required. After 5 or 6 starting operations allow 2 or 3 minutes for the transformer to cool.

Important
The priming operation is possible because the pump is already full of fuel when it leaves the factory. If the pump has been drained, fill it with fuel through the opening for the vacuum gauge prior to starting; otherwise, the pump will seize. Whenever the length of the suction piping exceeds 66 - 99 ft, the supply line must be filled using a separate pump.

RWF55 Control

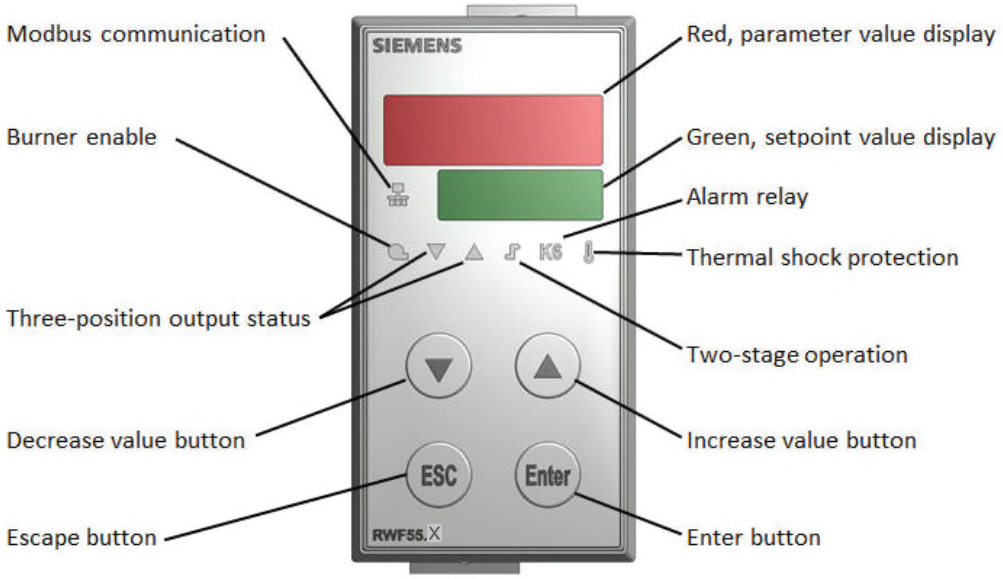
Product Description

The RWF55 is a modulating burner/boiler control designed and engineered specifically for burner/boiler applications. The RS-485 Modbus RTU communications port allows the RWF55 control to communicate with a Building Management System (BMS) or function as an integral part of a PLC or BMS based lead/lag boiler room management system.

Sample Specification

1. The control shall have a four character, bright red LED, continuous display of process variable and a four character, bright green LED, continuous display of process setpoint. Either display shall be configurable to show analog input 1, 2, or 3, output, or thermal shock end value.
2. Active Modbus communication shall be indicated by a flashing green LED.
3. Burner enabled indication shall be indicated by a steady green LED.
4. Three-position output status shall be indicated by two orange LED's.
5. Two-stage operation status shall be indicated by an orange LED.
6. Alarm relay activation shall be indicated by a red LED.
7. Active thermal shock protection shall be indicated by an orange LED.
8. The control shall be equipped with an integral 24 VDC/30 mA power supply.
9. The control shall be configurable to accept the following process variable inputs:
    - Pt100, 2-wire or 3-wire
    - Pt1000, 2-wire or 3-wire
    - LG-Ni1000, 2-wire or 3-wire
    - B, J, K, N, R, S, or T-type thermocouples
    - 0-20 mA or 4-20 mA
    - 0-5 VDC, 1-5 VDC, or 0-10 VDC
    - 0-135 Ω

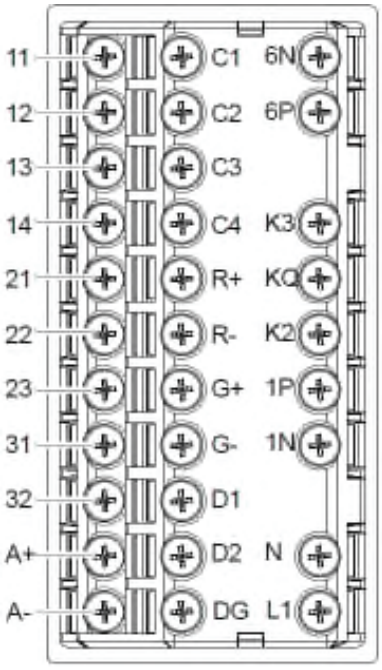
10. The control shall function as a continuously modulating control and provide one of the following selectable output signals:
    - Three-position, floating (bumping)
    - 0-20 mA or 4-20 mA
    - 0-10 VDC
11. The control shall be configurable, via a digital input, to function as either a PID control or two-stage (high/low) control.
12. The control shall provide the burner enable function.
13. The control shall function as a PID control with the following adjustable parameters:
    - Proportional band (Pb.1)
    - Integral action time (rt)
    - Derivative time (dt)
    - Dead band (db)
    - Actuator running time (tt)
14. The control action shall be selectable as either heating (reverse) or cooling (direct).
15. The control shall have a PID “Auto Tune” function that can be enabled to automatically tune the control parameters to the control characteristics of the burner/boiler.
16. The control shall be configurable for one of the following analog input signals to allow remote process setpoint control via BMS or other boiler room management systems:
    - 0-20 mA or 4-20 mA
    - 0-5 VDC, 1-5 VDC, or 0-10 VDC
    - 0-1000 Ω
17. The control shall be programmable with a second setpoint.
18. The control shall be programmable to offset setpoint 1, via digital input contact closure, to provide a dual setpoint.
19. The control shall be programmable with high and low operating limits.
20. The control shall be able to accept either of the following temperature sensing devices to reset the outdoor temperature setpoint:
    - LG-Ni1000, 2-wire
    - Pt1000, 2-wire



21. The control shall allow for time-averaged readings of outdoor temperatures, and configurable parameters for adjusting the slope of the outdoor temperature reset curve.
22. The control shall include adjustable high and low process setpoint limits to prevent the process setpoint from being programmed outside of the defined range by any of the following methods:
    - Manually using a keypad
    - Remotely via the analog process setpoint control input
    - Remotely via Modbus
23. The control shall include thermal shock protection providing configurable field parameters to adjust the slope and tolerance band.
24. Temperature process variables shall be displayed in ˚F or ˚C.
25. The process variable shall be displayed with zero, one, or two digits after the decimal point.
26. The control shall have a manual control feature. The display should alternate between "HAnd" and the output percentage when in manual control mode.
27. The control shall have an intelligent and configurable burner on-off cycle minimizing feature with the following functionality:
    - When demand on the boiler is less than low fire, the control will hold the burner at low fire.
    - When the demand on the boiler increases, the control will release the burner to modulate.
28. The control shall have a configurable alarm relay in relation to any of the analog inputs with the following features:
    - Can be programmed relative to an absolute value, or in relation to the setpoint
    - Configurable to break open or closed
29. The control shall be configurable to retransmit analog input 1, 2, or 3 to the analog output. The analog input can be scaled to produce varying analog outputs.
30. The control shall have three lockable levels of programming access:
    - Configuration menu
    - Parameter and configuration menus
    - Keyboard

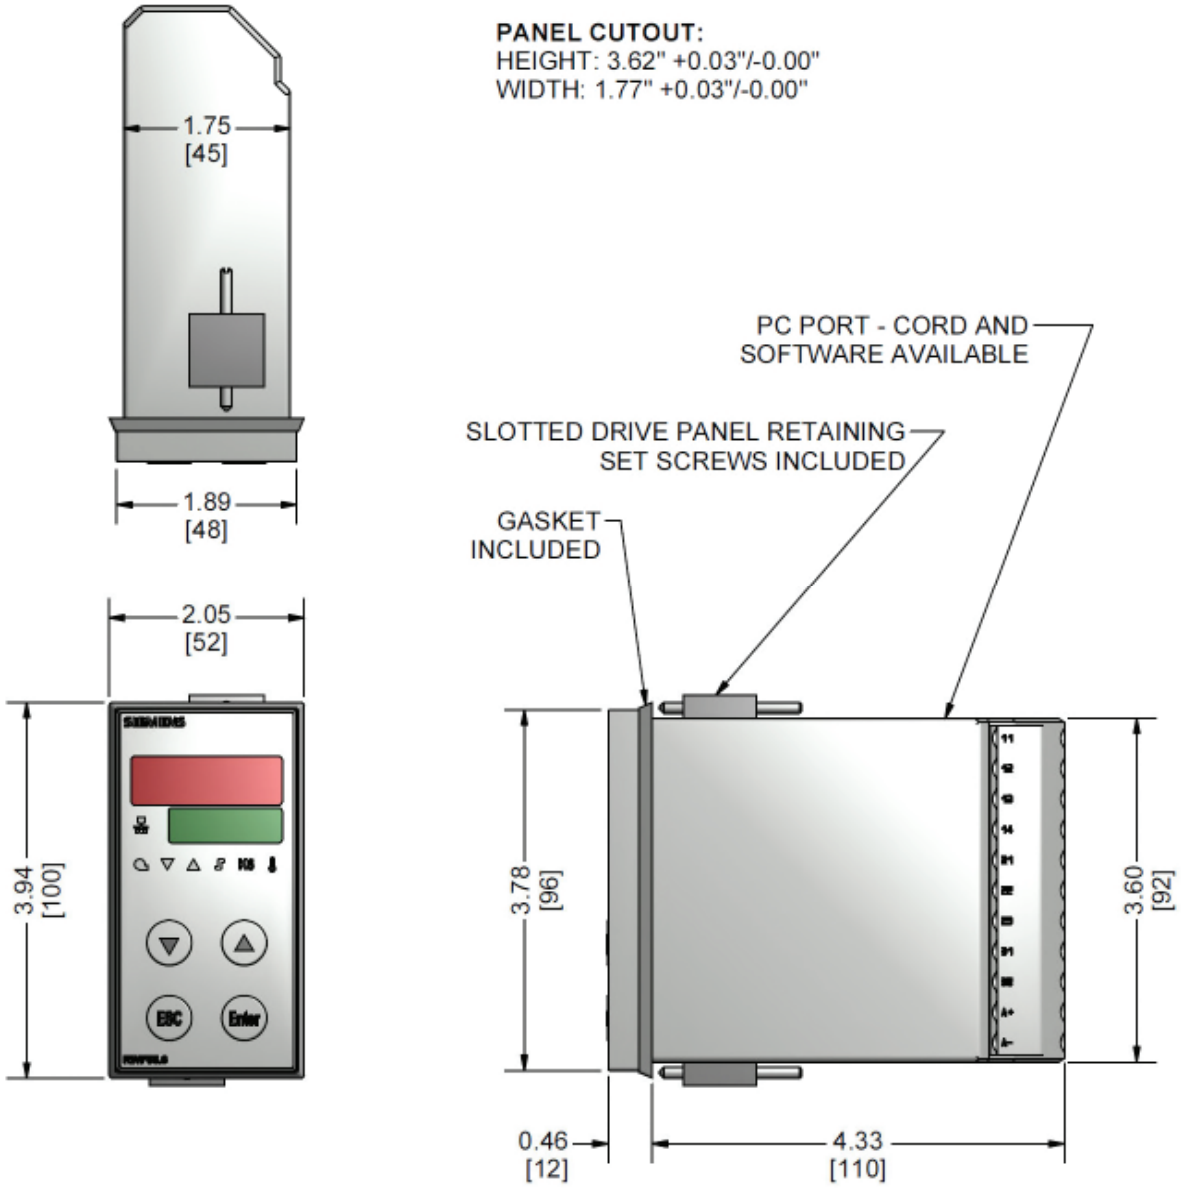
31. The control front panel shall be IP66 rated.
32. The control's configuration data shall be stored in EEPROM, ensuring power failure protection.
33. The control shall utilize universal voltage inputs of 110-240 VAC, 48-63 Hz.
34. The control shall have a Modbus communications port with the following features:
    a. Standard RS-485 Modbus RTU communication protocol
    b. Selectable baud rate (4800-38400)
    c. Programmable Modbus address (1-254)
    d. Ability to apply analog inputs 2 and 3 as read only, to perform the following functions:
        i. Input 2 can be connected to a 0-1000 Ω potentiometer, on a firing rate control motor, to transmit the actual firing rate.
        ii. Input 3 can be connected to a temperature sensor to transmit outdoor temperature, boiler water temperature, or stack temperature.
    e. Remote control functions:
        i. Unfiltered, direct reading of analog inputs 1, 2, and 3
        ii. Programmable timer function for fail-safe return to local control, if communications fail
        iii. Burner shutdown capability
        iv. Manual control (floating or analog output)
        v. Control of the alarm relay
35. The control shall return to displaying the process variable and setpoint if none of the buttons on the front panel have been pressed for the duration of a programmable amount of time.
36. The control shall have associated software available to save, adjust, or upload parameter settings.

Technical Specifications



Input Voltage	110-240 VAC (+10/-15%), 48-63 Hz
Power Consumption	Max 20 VA
Operating Temperature	-20 to 50 °C, -4 to 122 °F
Enclosure Rating	IP66 keypad display, rel. humidity <95% (non-condensing)
Aux. DC Power Output	24 VDC, 30 mA
Output Relay Contact Rating	24-240 VAC, 2 A max
Analog Output Rating	0-10 VDC (500 Ω load min), 0-20 mA or 4-20 mA (500 Ω load max)
Modbus RTU Port	Configurable baud rate (4800, 9600, 19200, 38400) Address 1-254
Size	1/8 DIN, 122 mm mounting depth
Data Storage	Non-volatile EEPROM
Approvals	UL, CSA, CE

Front Display Features



Terminals

Terminal Number	Terminal Group	Terminal Description

HVAC WATER TREAMENT SPEC 23 25 000

Water Technologies & Solutions
fact sheet

Ferroquest* FQ7103

neutral pH iron cleaner

description and use

- Removes rust, oil-based coating, organic debris
- Passivates steel surfaces
- Non-corrosive to base metal
- Safe in multimetal systems

description and use

Ferroquest* FQ7103 is a neutral pH cleaner which removes iron deposits, oil-based coatings, and organic debris from metal surfaces. Use of Ferroquest FQ7103 in new systems establishes system cleanliness and protection as the first step toward process efficiency and equipment longevity.

treatment and feeding requirements

Recirculate a 1% Ferroquest FQ7103 solution throughout the system for a minimum of 72 hours. After cleanout, rinse for 24 hours with fresh water, drain, and initiate system treatment. Ferroquest FQ7103 is best fed neat (undiluted) from the storage tank into the system. It can be introduced to the system by means of a chemical pump, bypass feeder or an inductor feeder.

general properties

Physical properties of Ferroquest FQ7103 are shown on the Material Safety Data Sheet, a copy of which is available upon request.

packaging information

Ferroquest FQ7103 is a liquid blend available in a variety of containers and delivery methods. Contact your SUEZ representative for details.

storage and handling

Protect from freezing. If this product is frozen during shipment or storage, slight mixing may be required to ensure homogeneity.

safety precautions

A Material Safety Data Sheet containing detailed information about this product is available upon request.

Find a contact near you by visiting www.suezwatertechnologies.com and clicking on "Contact Us."

*Trademark of SUEZ; may be registered in one or more countries.

Water Technologies & Solutions
fact sheet

CorrShield* MD4102

closed system corrosion inhibitor

- Excellent corrosion protection
- Low toxicity
- Highly buffered
- Easy to apply and control
- Compatible with most corrosion inhibitors

description and use

CorrShield MD4102 is a highly buffered, molybdate based corrosion inhibitor for use in multi-metal closed recirculating water systems that are subjected to air ingress contamination and/or trace acidic contaminants. This product also contains a scale inhibitor to retard the formation of objectionable deposits on high temperature heat exchange surfaces.

CorrShield MD4102 has a high buffering capacity which will maintain the pH of a closed water system in the desirable alkaline pH range, even in the presence of air ingress and/or trace acidic contaminants. Complete protection is provided against corrosion for ferrous and non-ferrous metals in both chilled and hot water heating systems.

treatment and feeding requirements

Maintain a molybdenum residual in the system as specified by your SUEZ representative. CorrShield MD4102 may be added full strength directly to the closed system by means of a by-pass feeder or chemical pump of standard construction. Inject chemical to suction side of recirculating pump or at any convenient location where good mixing is assured.

general properties

Physical properties of CorrShield MD4102 are shown on the Material safety Data Sheet (MSDS), a copy of which is available upon request.

packaging information

CorrShield MD4102 is available in a variety of containers and delivery methods. Contact your SUEZ representative for details.

storage

The product should be stored at moderate temperatures and protected from freezing. If frozen, thaw completely and mix thoroughly prior to use.

safety precautions

An MSDS containing detailed information about this product is available upon request.

Find a contact near you by visiting www.suezwatertechnologies.com and clicking on "Contact Us."

JOB: ***CONTACTOR:*** ***DATE:***

SYSTEM: ***TEST KIT USE:*** ***VOLUME:***

FQ7103 CLOSED SYSTEM CLEANING PROCEDURE

PART 1 - Add FQ7103 Cleaner (*Dosages:* 1L FQ7103 per every 100 L system volume)

1. Fill system with domestic water and establish circulation. Heat the system to maximum 60 degrees Celsius if possible.
2. After 2 hours of circulation, flush dirt legs until no solids are visible, while refilling to maintain the system pressure and circulation.
3. Dosage of closed loop system pipe cleaner **FQ7103** should now be added to the system via the pot feeder or pump, with the quantity determined by the system volume. Typical dosage of **1%** of total system volume is adequate for new installations.
4. Allow solution to circulate for 48 hours if cleaning is done while being heated, allow 72 hours of circulation on cold systems.
5. During the cleaning, periodically do hard short blow downs on low points in the system to remove any sediment accumulations.
6. **Take sample # 1** after the cleaner is completely mixed, before proceeding onto the next stage. Have Specified Technical Sales (STS) perform a laboratory analysis on the sample to confirm that sufficient cleaner has been added to the system. Confirmation that sufficient cleaner has been added to the system must first be received from STS prior to moving onto **PART 2**.

PART 2 – Thoroughly Flush the system to remove the cleaner

7. After the solution has adequately circulated and STS has confirmed that the recommended amount of FQ7103 is present, begin flushing. A gradual process of continuous bleed-off and make-up is recommended. Drain from the lowest available source, at the same rate as the system make-up. Observe the discharge.
8. When the effluent is clean and clear, matching the raw water quality, cease the bleed-off. Check for any remaining sediment or water loss at system drain valves.
9. **Take sample #2.** Have STS perform a laboratory test to confirm that the organo phosphonate levels within the sample show that sufficient FQ7103 cleaner has been removed from the system. (For a successful flush to have been performed < 4 ppm must be achieved). Confirmation that a satisfactory flush was completed must first be received from STS prior to moving onto **PART 3.**

PART 3 – Add Corrshield MD 4102/ Glycol to the system (*Dosages:4 liter per every 1000 liters of system volume)*

10. To provide passivation add the specified dosage of corrosion inhibitor (and glycol if required) as soon as possible, after confirming flush results. Circulate the entire system well to mix the inhibitor. Test the inhibitor concentration with the test kit provided. **Take sample #3**. Have STS perform a laboratory test to evaluate the inhibitor levels, pH, conductivity, and freeze point (if applicable). At this point STS will either provide a final written report confirming that the system is in good starting condition, or advise that insufficient inhibitor is present. If insufficient inhibitor is present an additional sample or samples will be required for laboratory analysis by STS until the recommended levels in the system are achieved. Only at the point where the inhibitor levels achieve the recommended control range criteria can a final written report be provided.
11. Install by-pass filter cartridge to remove any contaminants that remain. Monitor the filter flow and replace cartridge as necessary.
12. Before tying in a new system to an existing system take a sample of the existing system water and return it to STS, for chemical analysis for compatibility and an indication of systems chemical program integrity. **Label sample # 4 (Only if applicable)**

CUSTOMERS RESPONSIBILITIES

1. Customer shall provide STS with full details of the size of the system at the time of quotation for the job to enable an accurate and precise calculation to be made in consideration of the amount of FQ7103 cleaner that will be required to adequately clean the system.
2. Leaving raw water in the system for an extended period of time is not desirable as this may result in flash corrosion occurring in the system, so please submit each water sample to STS for testing without undue delay.

DISCLAIMER

The reports provided are based exclusively on the samples provided.

If at any time the above procedure is not followed or the customers responsibilities are not fulfilled, i.e. samples 1,2,or 3 are not received, all three samples are received at once at the conclusion of the cleaning procedure, samples are received a long time past the date that they were taken, etc; STS reserves the right to decline to issue a final written report attesting that the system is in good starting condition.

Molybdenum (Mo) Test Kit
1 drop = 2, 5, 20, or 50 ppm

STS-6213-TK

FOR BEST ACCURACY (1) ENSURE ACCURATE SAMPLE SIZE. (2) HOLD DROPPER BOTTLE VERTICALLY, NOT AT AN ANGLE.

Testing Tips:

- *Wear appropriate safety equipment.*
- *Read MSDS before use.*
- *Be sure there is adequate lighting during testing.*
- *Hold reagent bottles vertically for best results.*
- *Make sure you have an accurate sample.*

Kit Components:

STS-6213-B	*Molybdenum Buffer, 60 mL*
STS-6213-I	*Molybdenum Indicator, 60 mL*
STS-6213-T	*Molybdenum Titrating Sol., 60 mL*
SY-2005-P	*Syringe, 5 mL*
SY-2001-P	*Syringe, 1 mL*
VL-1005-V	*Vial, 10-50 mL*

EndPoint ID® Test Procedure +PLUS

1 **Select a sample size** based on the desired drop equivalency. Rinse and fill the vial with desired amount.

1 drop = 2 ppm	25 mL sample
1 drop = 5 ppm	10 mL sample
1 drop = 20 ppm	2.5 mL sample*
1 drop = 50 ppm	1.0 mL sample*

For 2.5 and 1.0 mL sample size: Use 5 mL syringe to add sample, then dilute to 10 mL with molybdenum free water.

2 **Add 1 mL of Molybdenum Buffer** (STS-6213-B) to the sample using the 1 mL syringe.

3 **Add 10 drops of Molybdenum Indicator** (STS-6213-I) and swirl to mix. The sample will turn red if molybdenum is present.

4 **Add Molybdenum Titrating Solution** (STS-6213-T) one drop at a time while swirling. Count the number of drops until the sample color changes from red to green and no further color change occurs.

5 Record your results by multiplying by the factor chosen in step 1.

# of drops x factor = ppm Molybdenum (Mo)

Note: To convert Molybdenum (Mo) to Molybdate (MoO_4), multiply by 1.7

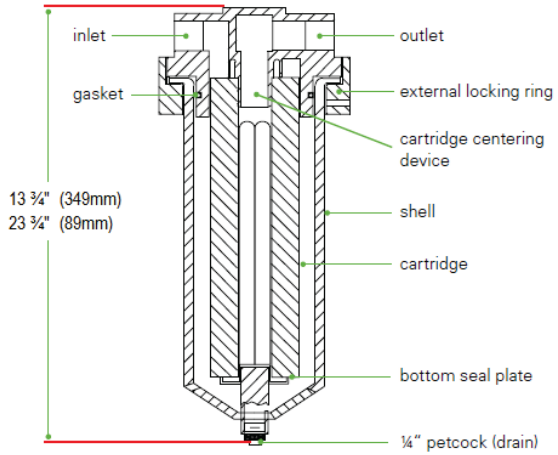
String Wound Tinned Core Cartridges



The **AWP String Wound Tinned Core Cartridges** are a dirt/rust cartridge with a natural cotton string wound media. These string wound cartridges are ideal for point-of-use, point-of-entry or commercial/industrial applications as they can handle a range of flow rates depending on the cartridge size. The natural cotton can be used for treatment of potable liquids, vegetable oils, beverages, organic solvents, water, dilute acids, petroleum oils, and other services. The maximum temperature rating is 150°C (300°F) with a variety of micron sizes to choose from. These ratings range from 1 to 50 microns Specified Technical Sales Ltd. offers a 9 7/8", 20" and 30" cartridge length for application flexibility.

These cartridges are an economical choice for pre-filtration applications.

SF100 Automatic Glycol Feed System

PUMP PERFORMANCE

0.09 l/s (1.4gpm) @ free flow
0.06 l/s (1.0gpm) @ 345kPa (50psi)

Pump Model

Axiom 8000 Series

Motor

115/60/1, 0.7AMPS

Specification

Hydronic system feeder shall be AXIOM INDUSTRIES LTD. Model SF100. System shall include 208 litre (55 US gallon) storage/mixing tank with cover; pump suction hose with inlet strainer; pressure pump with thermal cut-out; integral pressure switch; integral check valve; cord and plug; pre-charged accumulator tank with EPDM diaphragm; manual diverter valve for purging air and agitating contents of storage tank; pressure regulating valve adjustable (35 – 380 KPa; 5 – 55 psig) complete with pressure gauge; integral replaceable strainer; built-in check valve; union connection; 12 mm (½") x 900 mm (36") long flexible connection hose with check valve; low level pump cut-out. Pressure pump shall be capable of running dry without damage. Power supply 115/60/1 0.7 A. Unit shall be completely pre-assembled and certified by a recognized testing agency to CSA standard C22.2 No 68.

Options

☒ **RIA10-1-SAA-** Low Level Alarm Panel c/w Remote Monitoring Dry Contacts and Selectable Audible Alarm

LIMITED WARRANTY

The SF100 is warranted against defects in materials and workmanship for one year.

Certified to CAN/CSA C22.2 No. 68

2. Hazard(s) identification

Physical hazards	Not classified.	
Health hazards	Serious eye damage/eye irritation	Category 2
	Specific target organ toxicity, single exposure	Category 3 respiratory tract irritation

Label elements

Signal word	Warning
Hazard statement	Causes serious eye irritation. May cause respiratory irritation.
Precautionary statement	
Prevention	Avoid breathing mist or vapor. Wash thoroughly after handling. Use only outdoors or in a well-ventilated area. Wear eye protection/face protection.
Response	IF INHALED: Remove person to fresh air and keep comfortable for breathing. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Call a poison center/doctor if you feel unwell. If eye irritation persists: Get medical advice/attention.
Storage	Store in a well-ventilated place. Keep container tightly closed. Store locked up.
Disposal	Dispose of contents/container in accordance with local/regional/national/international regulations.
Other hazards	None known.
Supplemental information	None.

3. Composition/information on ingredients

Mixtures

Components	CAS #	Percent (wt/wt)
PHOSPHATE ESTER POTASSIUM SALT	66057-30-5	2.5 - 10
Sodium sulphite	7757-83-7	2.5 - 10

Composition comments Information for specific product ingredients as required by the WHMIS Regulations is listed. Refer to additional sections of this SDS for our assessment of the potential hazards of this formulation.

4. First-aid measures

Inhalation Remove victim to fresh air and keep at rest in a position comfortable for breathing. Call a POISON CENTER or doctor/physician if you feel unwell.

Skin contact Wash off with soap and water. Get medical attention if irritation develops and persists.

Eye contact Immediately flush eyes with plenty of water for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice/attention.

Ingestion Rinse mouth. Get medical attention if symptoms occur.

Most important symptoms/effects, acute and delayed Severe eye irritation. Symptoms may include stinging, tearing, redness, swelling, and blurred vision. May cause respiratory irritation.

Indication of immediate medical attention and special treatment needed Provide general supportive measures and treat symptomatically. Keep victim under observation. Symptoms may be delayed.

General information If you feel unwell, seek medical advice (show the label where possible). Ensure that medical personnel are aware of the material(s) involved, and take precautions to protect themselves.

5. Fire-fighting measures

Suitable extinguishing media Water fog. Foam. Dry chemical powder. Carbon dioxide (CO2).

Unsuitable extinguishing media Do not use water jet as an extinguisher, as this will spread the fire.

Specific hazards arising from the chemical During fire, gases hazardous to health may be formed.

Special protective equipment and precautions for firefighters Wear full protective clothing, including helmet, self-contained positive pressure or pressure demand breathing apparatus, protective clothing and face mask.

Fire fighting equipment/instructions In case of fire and/or explosion do not breathe fumes. Use standard firefighting procedures and consider the hazards of other involved materials. Move containers from fire area if you can do so without risk. Cool containers / tanks with water spray.

Specific methods Use standard firefighting procedures and consider the hazards of other involved materials.

General fire hazards No unusual fire or explosion hazards noted.

6. Accidental release measures

Personal precautions, protective equipment and emergency procedures Keep unnecessary personnel away. Keep people away from and upwind of spill/leak. Wear appropriate protective equipment and clothing during clean-up. Avoid breathing mist or vapor. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Ensure adequate ventilation. Local authorities should be advised if significant spillages cannot be contained. For personal protection, see section 8 of the SDS.

Methods and materials for containment and cleaning up Large Spills: Stop the flow of material, if this is without risk. Dike the spilled material, where this is possible. Absorb in vermiculite, dry sand or earth and place into containers. Following product recovery, flush area with water.

Small Spills: Wipe up with absorbent material (e.g. cloth, fleece). Clean surface thoroughly to remove residual contamination.

Never return spills to original containers for re-use. For waste disposal, see section 13 of the SDS.

Environmental precautions Avoid discharge into drains, water courses or onto the ground.

7. Handling and storage

Precautions for safe handling Avoid breathing mist or vapor. Avoid contact with eyes. Provide adequate ventilation. Wear appropriate personal protective equipment. Observe good industrial hygiene practices.

Conditions for safe storage, including any incompatibilities Store locked up. Store in original tightly closed container. Store away from incompatible materials (see Section 10 of the SDS). Protect from freezing. If frozen, thaw and mix completely prior to use.

8. Exposure controls/personal protection

Occupational exposure limits	No exposure limits noted for ingredient(s).
Biological limit values	No biological exposure limits noted for the ingredient(s).
Appropriate engineering controls	Good general ventilation (typically 10 air changes per hour) should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level. Provide eyewash station. Good general ventilation should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level.

Individual protection measures, such as personal protective equipment

Eye/face protection	Wear safety glasses with side shields (or goggles).
Skin protection	
Hand protection	Wear appropriate chemical resistant gloves. The choice of an appropriate glove does not only depend on its material but also on other quality features and is different from one producer to the other. Suitable gloves can be recommended by the glove supplier. Glove selection must take into account any solvents and other hazards present.
Other	Wear suitable protective clothing.
Respiratory protection	If engineering controls do not maintain airborne concentrations below recommended exposure limits (where applicable) or to an acceptable level (in countries where exposure limits have not been established), an approved respirator must be worn.
Thermal hazards	Wear appropriate thermal protective clothing, when necessary.
General hygiene considerations	Always observe good personal hygiene measures, such as washing after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants.

9. Physical and chemical properties

Appearance	Liquid
Color	Colorless to light yellow
Odor	Slight
pH (concentrated product)	5.9 Neat
Initial boiling point and boiling range	216 °F (102 °C)
Flash point	> 199 °F (> 93 °C) P-M(CC)
Evaporation rate	Slower than Ether
Flammability (solid, gas)	Not applicable.
Upper/lower flammability or explosive limits	
Explosive limit - lower (%)	Not available.
Explosive limit - upper (%)	Not available.
Vapor pressure	18 mmHg
Vapor pressure temp.	70 °F (21 °C)
Vapor density	< 1
Relative density	1.12
Relative density temperature	70 °F (21 °C)
Solubility(ies)	
Solubility (water)	100 %
Viscosity	20 mPa.s
Viscosity temperature	70 °F (21 °C)
Other information	
Explosive properties	Not explosive.
Oxidizing properties	Not oxidizing.
Pour point	31 °F (-1 °C)
Specific gravity	1.122
VOC	0 % CALCULATED

10. Stability and reactivity

Reactivity	The product is stable and non-reactive under normal conditions of use, storage and transport.
Chemical stability	Material is stable under normal conditions.
Possibility of hazardous reactions	Hazardous polymerization does not occur.
Conditions to avoid	Avoid temperatures exceeding the flash point. Contact with incompatible materials.
Incompatible materials	Strong oxidizing agents.
Hazardous decomposition products	Oxides of carbon, nitrogen, phosphorus, and sulphur evolved in fire.

11. Toxicological information

Information on likely routes of exposure

Inhalation	May cause irritation to the respiratory system.
Skin contact	Prolonged or repeated contact may cause irritation.
Eye contact	Causes serious eye irritation.
Ingestion	Expected to be a low ingestion hazard.
Symptoms related to the physical, chemical and toxicological characteristics	Severe eye irritation. Symptoms may include stinging, tearing, redness, swelling, and blurred vision. May cause respiratory irritation.

Information on toxicological effects

Acute toxicity May cause respiratory irritation.

Product	Species	Test Results
FERROQUEST FQ7103 (CAS Mixture)		
Acute		
Dermal		
LD50	Rabbit	> 5000 mg/kg, (Calculated according to GHS additivity formula)
Oral		
LD50	Rat	> 5000 mg/kg, (Calculated according to GHS additivity formula)

Components	Species	Test Results
Sodium sulphite (CAS 7757-83-7)		
Acute		
Dermal		
LD50	Rabbit	> 2000 mg/kg
Inhalation		
LC50	Rat	> 5.5 mg/l, 4 Hour
Oral		
LD50	Rat	2610 mg/kg

* Estimates for product may be based on additional component data not shown.

Skin corrosion/irritation	Prolonged skin contact may cause temporary irritation.
Serious eye damage/eye irritation	Causes serious eye irritation.

Respiratory or skin sensitization

Respiratory sensitization	This product is not expected to cause respiratory sensitization.
Skin sensitization	This product is not expected to cause skin sensitization.
Germ cell mutagenicity	No data available to indicate product or any components present at greater than 0.1% are mutagenic or genotoxic.
Carcinogenicity	Not classified.

IARC Monographs. Overall Evaluation of Carcinogenicity

Sodium sulphite (CAS 7757-83-7) 3 Not classifiable as to carcinogenicity to humans.

Reproductive toxicity This product is not expected to cause reproductive or developmental effects.

Specific target organ toxicity - single exposure	May cause respiratory irritation.
Specific target organ toxicity - repeated exposure	Not classified.
Aspiration hazard	Based on available data, the classification criteria are not met.

12. Ecological information

Ecotoxicity

Product		Species	Test Results
FERROQUEST FQ7103 (CAS Mixture)			
	0% Mortality	Fathead Minnow	2000 mg/L, Static Renewal Bioassay, 96 hour
Aquatic			
Crustacea	0% Mortality	Daphnia magna	845 mg/L, Static Renewal Bioassay, 48 hour
	30% Mortality	Daphnia magna	1300 mg/L, Static Renewal Bioassay, 48 hour

Bioaccumulative potential	No data available.
Mobility in soil	No data available.
Other adverse effects	Not available.

Persistence and degradability

No data is available on the degradability of this product.

13. Disposal considerations

Disposal instructions	Collect and reclaim or dispose in sealed containers at licensed waste disposal site. Dispose of contents/container in accordance with local/regional/national/international regulations.
Local disposal regulations	Dispose in accordance with all applicable regulations.
Waste from residues / unused products	Dispose of in accordance with local regulations. Empty containers or liners may retain some product residues. This material and its container must be disposed of in a safe manner (see: Disposal instructions).
Contaminated packaging	Since emptied containers may retain product residue, follow label warnings even after container is emptied. Empty containers should be taken to an approved waste handling site for recycling or disposal.

14. Transport information

TDG

Not regulated as dangerous goods.

The goods described above have been classified using a combination of testing, technical data, calculations and manufacturer knowledge in accordance with Part 2, Classification. TDG Classification is valid for road or rail transport only. For shipment by air or water, refer to IATA or IMDG regulations.

DOT

Not regulated as a dangerous good.

Some containers may be exempt from Dangerous Goods/Hazmat Transport Regulations, please check BOL for exact container classification.

IMDG

Not regulated as dangerous goods.

IATA

Not regulated as dangerous goods.

15. Regulatory information

Canadian regulations

Controlled Drugs and Substances Act

Not regulated.

Export Control List (CEPA 1999, Schedule 3)

Not listed.

Greenhouse Gases

Not listed.

SAFETY DATA SHEET
CORRSHIELD* MD4102

1. Identification

Product identifier	**CORRSHIELD MD4102**
Other means of identification	None.
Version #	2.1
Prepared by	This SDS has been prepared by SUEZ Regulatory Department (1-215-355-3300).
Revision date	Dec-17-2017
Supersedes date	Oct-23-2017
Recommended use	Water-based corrosion inhibitor
Recommended restrictions	None known.

Company/undertaking identification

SUEZ Water Technologies & Solutions Canada
3239 Dundas Street West
Oakville, Ontario, L6M 4B2
T 905-465-3030

Emergency telephone

(800) 877-1940

2. Hazard(s) identification

Physical hazards	Not classified.	
Health hazards	Skin corrosion/irritation	Category 1B
	Serious eye damage/eye irritation	Category 1

Label elements

Signal word	Danger
Hazard statement	Causes severe skin burns and eye damage. Causes serious eye damage.
Precautionary statement	
Prevention	Do not breathe mist or vapor. Wash thoroughly after handling. Wear eye protection/face protection.
Response	IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water. IF INHALED: Remove person to fresh air and keep comfortable for breathing. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER/doctor. Wash contaminated clothing before reuse.
Storage	Store locked up.
Disposal	Dispose of contents/container in accordance with local/regional/national/international regulations.
Other hazards	None known.
Supplemental information	None.

3. Composition/information on ingredients

Mixtures

Components	CAS #	Percent (wt/wt)
Boric Acid (hbo2), Sodium Salt, Dihydrate	16800-11-6	2.5 - 10
Morpholine	110-91-8	2.5 - 10

Composition comments Information for specific product ingredients as required by the WHMIS Regulations is listed. Refer to additional sections of this SDS for our assessment of the potential hazards of this formulation.

4. First-aid measures

Inhalation Move to fresh air. Call a physician if symptoms develop or persist.

Skin contact Take off immediately all contaminated clothing. Rinse skin with water/shower. Call a physician or poison control center immediately. Chemical burns must be treated by a physician. Wash contaminated clothing before reuse.

Eye contact Immediately flush eyes with plenty of water for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Call a physician or poison control center immediately.

Ingestion Call a physician or poison control center immediately. Rinse mouth. Do not induce vomiting. If vomiting occurs, keep head low so that stomach content doesn't get into the lungs.

Most important symptoms/effects, acute and delayed Burning pain and severe corrosive skin damage. Causes serious eye damage. Symptoms may include stinging, tearing, redness, swelling, and blurred vision. Permanent eye damage including blindness could result.

Indication of immediate medical attention and special treatment needed Provide general supportive measures and treat symptomatically. Chemical burns: Flush with water immediately. While flushing, remove clothes which do not adhere to affected area. Call an ambulance. Continue flushing during transport to hospital. Keep victim under observation. Symptoms may be delayed.

General information Ensure that medical personnel are aware of the material(s) involved, and take precautions to protect themselves.

5. Fire-fighting measures

Suitable extinguishing media Water fog. Foam. Dry chemical powder. Carbon dioxide (CO2).

Unsuitable extinguishing media Do not use water jet as an extinguisher, as this will spread the fire.

Specific hazards arising from the chemical During fire, gases hazardous to health may be formed.

Special protective equipment and precautions for firefighters Wear full protective clothing, including helmet, self-contained positive pressure or pressure demand breathing apparatus, protective clothing and face mask.

Fire fighting equipment/instructions In case of fire and/or explosion do not breathe fumes. Use standard firefighting procedures and consider the hazards of other involved materials. Move containers from fire area if you can do so without risk. Cool containers / tanks with water spray.

Specific methods Use standard firefighting procedures and consider the hazards of other involved materials.

General fire hazards No unusual fire or explosion hazards noted.

6. Accidental release measures

Personal precautions, protective equipment and emergency procedures Keep unnecessary personnel away. Keep people away from and upwind of spill/leak. Wear appropriate protective equipment and clothing during clean-up. Do not breathe mist or vapor. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Ensure adequate ventilation. Local authorities should be advised if significant spillages cannot be contained. For personal protection, see section 8 of the SDS.

Methods and materials for containment and cleaning up Large Spills: Stop the flow of material, if this is without risk. Dike the spilled material, where this is possible. Absorb in vermiculite, dry sand or earth and place into containers. Following product recovery, flush area with water.

Small Spills: Wipe up with absorbent material (e.g. cloth, fleece). Clean surface thoroughly to remove residual contamination.

Never return spills to original containers for re-use. For waste disposal, see section 13 of the SDS.

Environmental precautions Avoid discharge into drains, water courses or onto the ground.

7. Handling and storage

Precautions for safe handling Do not breathe mist or vapor. Do not get in eyes, on skin, or on clothing. Avoid prolonged exposure. Provide adequate ventilation. Wear appropriate personal protective equipment. Observe good industrial hygiene practices.

Conditions for safe storage, including any incompatibilities Store locked up. Store in original tightly closed container. Store away from incompatible materials (see Section 10 of the SDS).

8. Exposure controls/personal protection

Occupational exposure limits

US. ACGIH Threshold Limit Values

Components	Type	Value
Morpholine (CAS 110-91-8)	TWA	20 ppm

Canada. Alberta OELs (Occupational Health & Safety Code, Schedule 1, Table 2)

Components	Type	Value
Morpholine (CAS 110-91-8)	TWA	71 mg/m3 20 ppm

Canada. British Columbia OELs. (Occupational Exposure Limits for Chemical Substances, Occupational Health and Safety Regulation 296/97, as amended)

Components	Type	Value
Morpholine (CAS 110-91-8)	TWA	20 ppm

Canada. Manitoba OELs (Reg. 217/2006, The Workplace Safety And Health Act)

Components	Type	Value
Morpholine (CAS 110-91-8)	TWA	20 ppm

Canada. Ontario OELs. (Control of Exposure to Biological or Chemical Agents)

Components	Type	Value
Morpholine (CAS 110-91-8)	TWA	20 ppm

Canada. Quebec OELs. (Ministry of Labor - Regulation Respecting the Quality of the Work Environment)

Components	Type	Value
Morpholine (CAS 110-91-8)	TWA	71 mg/m3 20 ppm

Biological limit values No biological exposure limits noted for the ingredient(s).

Exposure guidelines

Canada - Alberta OELs: Skin designation

Morpholine (CAS 110-91-8) Can be absorbed through the skin.

Canada - British Columbia OELs: Skin designation

Morpholine (CAS 110-91-8) Can be absorbed through the skin.

Canada - Manitoba OELs: Skin designation

Morpholine (CAS 110-91-8) Can be absorbed through the skin.

Canada - Ontario OELs: Skin designation

Morpholine (CAS 110-91-8) Can be absorbed through the skin.

Canada - Quebec OELs: Skin designation

Morpholine (CAS 110-91-8) Can be absorbed through the skin.

Canada - Saskatchewan OELs: Skin designation

Morpholine (CAS 110-91-8) Can be absorbed through the skin.

US ACGIH Threshold Limit Values: Skin designation

Morpholine (CAS 110-91-8) Can be absorbed through the skin.

Appropriate engineering controls Good general ventilation (typically 10 air changes per hour) should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level. Eye wash facilities and emergency shower must be available when handling this product. Good general ventilation should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level.

Individual protection measures, such as personal protective equipment

Eye/face protection Splash proof chemical goggles. Face shield.

Skin protection

Hand protection Wear appropriate chemical resistant gloves. The choice of an appropriate glove does not only depend on its material but also on other quality features and is different from one producer to the other. Glove selection must take into account any solvents and other hazards present.

Other Wear appropriate chemical resistant clothing.

Respiratory protection	If engineering controls do not maintain airborne concentrations below recommended exposure limits (where applicable) or to an acceptable level (in countries where exposure limits have not been established), an approved respirator must be worn.
Thermal hazards	Wear appropriate thermal protective clothing, when necessary.
General hygiene considerations	Always observe good personal hygiene measures, such as washing after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants.

9. Physical and chemical properties

Appearance	Liquid
Color	Colorless to light yellow
Odor	Slight
Odor threshold	Not available.
pH (concentrated product)	10.5
Melting point/freezing point	25 °F (-4 °C)
Initial boiling point and boiling range	212 °F (100 °C)
Flash point	> 200 °F (> 93 °C) P-M(CC)
Evaporation rate	< 1 (Ether = 1)
Flammability (solid, gas)	Not applicable.
Upper/lower flammability or explosive limits	
Flammability limit - lower (%)	Not available.
Flammability limit - upper (%)	Not available.
Explosive limit - lower (%)	Not available.
Explosive limit - upper (%)	Not available.
Vapor pressure	18 mm Hg
Vapor pressure temp.	70 °F (21 °C)
Vapor density	< 1 (Air = 1)
Relative density	1.09
Relative density temperature	70 °F (21 °C)
Solubility(ies)	
Solubility (water)	100 %
Partition coefficient (n-octanol/water)	Not available.
Auto-ignition temperature	Not available.
Decomposition temperature	Not available.
Viscosity	10 cps
Viscosity temperature	70 °F (21 °C)
Other information	
Explosive properties	Not explosive.
Oxidizing properties	Not oxidizing.
Pour point	30 °F (-1 °C)
Specific gravity	1.091
VOC	5 % (Calculated)

10. Stability and reactivity

Reactivity	The product is stable and non-reactive under normal conditions of use, storage and transport.
Chemical stability	Material is stable under normal conditions.
Possibility of hazardous reactions	Hazardous polymerization does not occur.
Conditions to avoid	Avoid temperatures exceeding the flash point. Contact with incompatible materials.
Incompatible materials	Strong acids. Strong oxidizing agents.

Hazardous decomposition products	Elemental oxides.

11. Toxicological information

Information on likely routes of exposure

Inhalation	May cause irritation to the respiratory system. Prolonged inhalation may be harmful.
Skin contact	Causes severe skin burns.
Eye contact	Causes serious eye damage.
Ingestion	Causes digestive tract burns.
Symptoms related to the physical, chemical and toxicological characteristics	Burning pain and severe corrosive skin damage. Causes serious eye damage. Symptoms may include stinging, tearing, redness, swelling, and blurred vision. Permanent eye damage including blindness could result.

Information on toxicological effects

Acute toxicity

Product	Species	Test Results
CORRSHIELD MD4102 (CAS Mixture)		
Acute		
Dermal		
LD50	Rabbit	> 5000 mg/kg, (Estimated value)
Oral		
LD50	Rat	> 5000 mg/kg, (Estimated value)

Components	Species	Test Results
Morpholine (CAS 110-91-8)		
Acute		
Dermal		
LD50	Rabbit	504 mg/kg
Inhalation		
LC50	Rat	8 mg/l, 4 Hour
Oral		
LD50	Rat	1680 mg/kg

* Estimates for product may be based on additional component data not shown.

Skin corrosion/irritation	Causes severe skin burns and eye damage.
Serious eye damage/eye irritation	Causes serious eye damage.
Respiratory or skin sensitization	
Respiratory sensitization	This product is not expected to cause respiratory sensitization.
Skin sensitization	This product is not expected to cause skin sensitization.
Germ cell mutagenicity	No data available to indicate product or any components present at greater than 0.1% are mutagenic or genotoxic.
Carcinogenicity	Not classified.

ACGIH Carcinogens

Morpholine (CAS 110-91-8)	A4 Not classifiable as a human carcinogen.

Canada - Manitoba OELs: carcinogenicity

Morpholine (CAS 110-91-8)	Not classifiable as a human carcinogen.

IARC Monographs. Overall Evaluation of Carcinogenicity

Morpholine (CAS 110-91-8)	3 Not classifiable as to carcinogenicity to humans.

Reproductive toxicity	This product is not expected to cause reproductive or developmental effects.
Specific target organ toxicity - single exposure	Not classified.
Specific target organ toxicity - repeated exposure	Not classified.
Aspiration hazard	Based on available data, the classification criteria are not met.
Chronic effects	Prolonged inhalation may be harmful.

12. Ecological information

Ecotoxicity No ecotoxicity data noted for the ingredient(s).

Bioaccumulative potential

Partition coefficient n-octanol / water (log Kow)

Morpholine	-0.86

Mobility in soil No data available.

Other adverse effects Not available.

Persistence and degradability

13. Disposal considerations

Disposal instructions Collect and reclaim or dispose in sealed containers at licensed waste disposal site. Dispose of contents/container in accordance with local/regional/national/international regulations.

Local disposal regulations Dispose in accordance with all applicable regulations.

Waste from residues / unused products Dispose of in accordance with local regulations. Empty containers or liners may retain some product residues. This material and its container must be disposed of in a safe manner (see: Disposal instructions).

Contaminated packaging Since emptied containers may retain product residue, follow label warnings even after container is emptied. Empty containers should be taken to an approved waste handling site for recycling or disposal.

14. Transport information

TDG

Not regulated as dangerous goods.

The goods described above have been classified using a combination of testing, technical data, calculations and manufacturer knowledge in accordance with Part 2, Classification. TDG Classification is valid for road or rail transport only. For shipment by air or water, refer to IATA or IMDG regulations.

DOT

Not regulated as a dangerous good.

Some containers may be exempt from Dangerous Goods/Hazmat Transport Regulations, please check BOL for exact container classification.

IMDG

Not regulated as dangerous goods.

IATA

Not regulated as dangerous goods.

15. Regulatory information

Canadian regulations This product has been classified in accordance with the hazard criteria of the HPR and the SDS contains all the information required by the HPR.

Controlled Drugs and Substances Act

Not regulated.

Export Control List (CEPA 1999, Schedule 3)

Not listed.

Greenhouse Gases

Not listed.

Precursor Control Regulations

Not regulated.

Inventory status

Country(s) or region	Inventory name	On inventory (yes/no)*
Canada	Domestic Substances List (DSL)	No
Canada	Non-Domestic Substances List (NDSL)	No
United States & Puerto Rico	Toxic Substances Control Act (TSCA) Inventory	No

*A "Yes" indicates that all components of this product comply with the inventory requirements administered by the governing country(s)
A "No" indicates that one or more components of the product are not listed or exempt from listing on the inventory administered by the governing country(s).

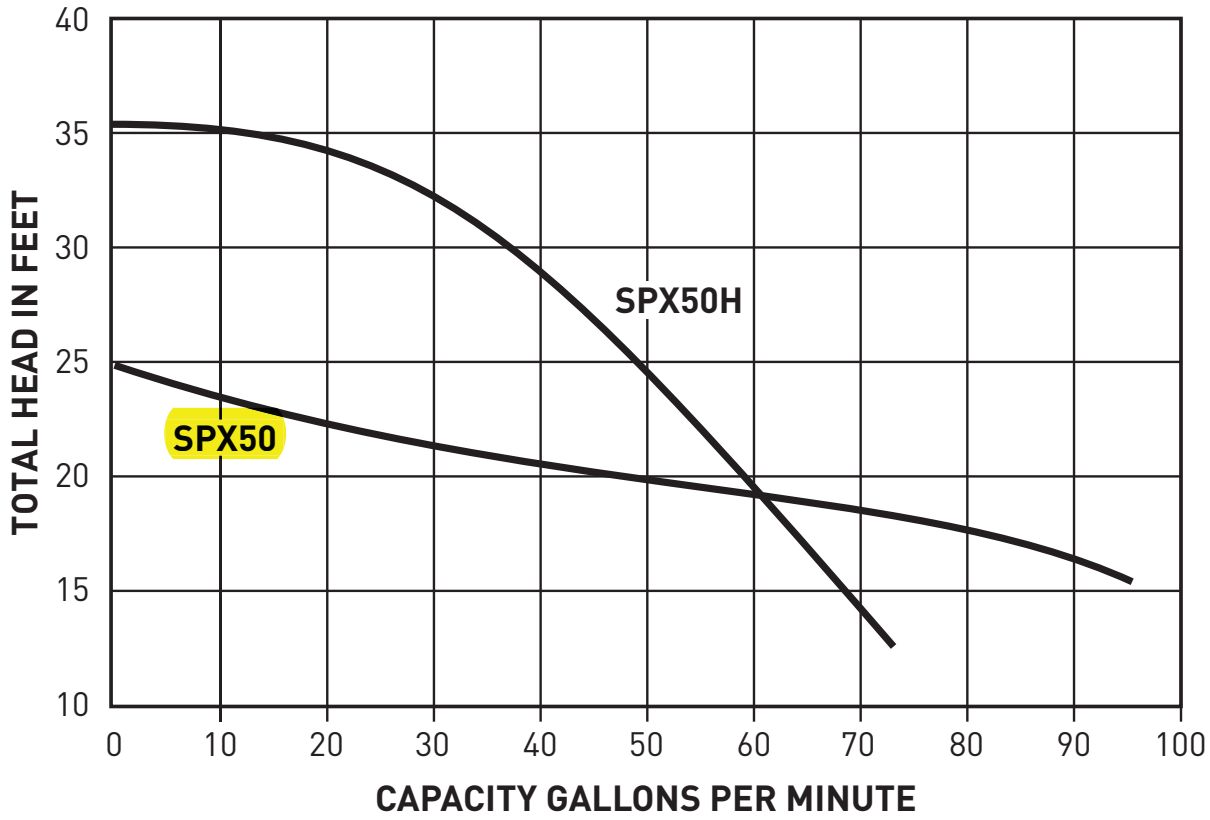
HYDROMATIC®
SPX50/SPX50H
EXPLOSION PROOF, SEWAGE EJECTOR



PERFORMANCE DATA

Wholesale Products **Page:** 6800-1
Dated: October 2007
SPX50 RPM: **1750** Discharge: **2"** Solids: **2"**
SPX50H RPM: **1750** Discharge: **1 ½"** Solids: **¾"**

TAG : P-2.1 & P-2.2
SUMP (DUPLEX)

THE TRUE COMPLETE NUMBER WITH THE VOLTAGE AND LENGHT OF CABLE IS : SPX50M7-20

The curves reflect maximum performance characteristics without exceeding full load (Nameplate) horsepower. All pumps have a service factor of 1.2. Operation is recommended in the bounded area with operational point within the curve limit. Performance curves are based on actual tests with clear water at 70° F. and 1280 feet site elevation.

Dated: October 2007

MODELS: SPX50/SPX50H

1.01 **GENERAL**

Contractor shall furnish all labor, materials, equipment and incidentals required to provide _____ (Qty.) submersible centrifugal sewage pump(s) as specified herein. The pump models covered in this specification are the SPX50/SPX50H. The pump furnished for this application shall be MODEL _____ as manufactured by Hydromatic Pumps.

2.01 **DESIGN CONDITIONS**

Each pump shall be rated _____ H.P., _____ volts, _____ phase, _____ hertz and operate at _____ RPM.

3.01 **OPERATING CONDITIONS**

The pump shall deliver _____ U.S. GPM/LPS at feet/meters TDH, and handle a _____ inch solid. The curve submitted for approval shall state, in addition to head and capacity performance, solid handling capability, amp rating, and design impeller diameter.

4.01 **CONSTRUCTION**

Each pump shall be of the sealed submersible type, incorporating features normally found in pumps furnished for the residential market.

These features include:

1. The seal housing for the SPX50/SPX50H is corrosion resistant cast iron.
2. The pump inlet shall be open and clear, without screening to provide access for sewage and solids.
3. All external mating parts shall be machined and Buna N, O-Ring sealed.
4. All fasteners exposed to the pumped liquid shall be 300 series stainless steel.
5. All power cords shall be water resistant UL or CSA approved, with double insulation, and sized as a function of Amp. draw.

5.01 **MOTOR AND SHAFT**

The stator, rotor and bearings shall be mounted in a sealed submersible type housing. Single phase motors shall be split phase or capacitor start with centrifugal switch. Three phase motors shall be Polyphase. Full Load and Locked Rotor Amps as well as Start and Run winding resistance shall be tabulated for each pump.

6.01 **BEARINGS, SHAFT AND MECHANICAL SEAL**

An upper radial and lower thrust bearing shall be required. These shall be heavy duty single row ball bearings which are permanently and continuously lubricated and cooled by the dielectric oil which fills the motor housing. The motor shaft shall be stainless steel and sealed from the pumped liquid with a carbon ceramic mechanical seal.

HYDROMATIC®
SPX50/SPX50H
EXPLOSION PROOF, SEWAGE EJECTOR

7.01 **IMPELLER**

The Impeller shall be high capacity, two vane, non clog design with pump out vanes on the back side. These vanes wash out grit and stringy material that will damage the shaft and mechanical seal.

8.01 **AUTOMATIC CONTROL**

All single phase pumps should be capable of automatic operation.

9.01 **MANUAL CONTROL**

The Single Phase pumps are not supplied with any type of automatic control. A super or double wide angle piggy-back float switch can be supplied and fitted to these pumps.

10.01 **PAINTING**

All cast iron parts shall be painted before assembly with a water reducible alkyd air dried enamel. The paint shall be applied in one coat with a minimum thickness of 3 to 4 mils.

TWO COATS OF ENAMEL AS PER 22 10 10 2.3.4

12.01 **TESTING**

All pumps shall be individually tested to include the following:

1. The pump and power cord shall be visually inspected for imperfections, cuts or nicks.
2. The pump shall have a ground continuity check and the motor chamber shall be Hi-potted to test for moisture content and/or insulation defects.
3. The motor and volute housing shall be pressurized and a 10 second air leak decay test run.
4. Oil is added, and the pump is run. Voltage and current are monitored visually, electronically, and the tester listens for any noise or malfunction.

HYDROMATIC® SPX50/SPX50H SUBMERSIBLE EXPLOSION-PROOF PUMPS

HYDROMATIC SPX50 and SPX50H are specifically designed to pump contaminated effluent and water. The SPX50/SPX50H is UL and CSA approved (Class 1, Division 1, Group D) to handle a wide variety of pollutants, including gas and oil.

Features

- HYDROMATIC SPX50/SPX50H is recommended to be sold/used with HYDROMATIC'S UL 913 listed control panel.
- Oil-filled motor for maximum heat dissipation and constant bearing lubrication.
- Recessed impeller reduces radial bearing loads, increases bearing life.
- High torque capacitor start, single phase motor for assured starting under heavy load.
- Seal leak probes warn of seal leak condition.
- On winding heat sensors will stop motor in case of over-heating to prevent costly motor damage.

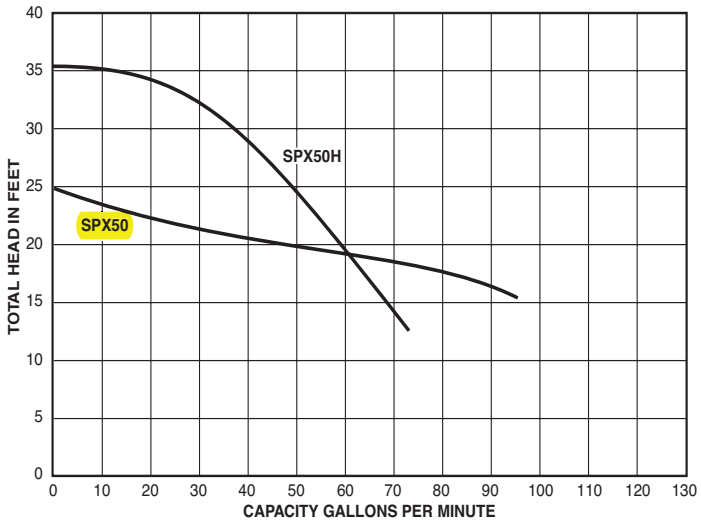
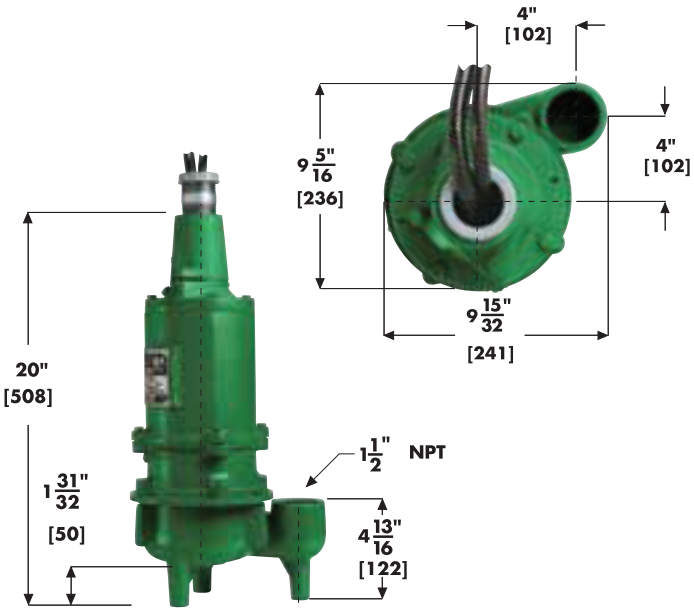
HYDROMATIC® SPX50/SPX50H



Pump Characteristics

Pump/Motor Unit	Submersible Explosion-Proof Sump	
Phase	1 Ø	
Voltage	200	230
Horsepower	1/2 HP	
Run Amps	SPX50 6.5	SPX50H 5.3
Solid Size	2" (SPX50)	3/4" (SPX50H)
Motor Type	Oil Cooled Induction	
	Capacitor Start	
R.P.M.	1750	
Temp. Stator	Max. Design 266° F (130° C)	
Operation	Intermittent	
Coolant Oil	Oil Flash Pt. 390° F	
Hertz	60 Hz	
Heat Sensor	Bi-Metallic	
Temperature	Max. Water 140° F	
NEMA Design	Type N	Type N
Insulation	Class B	
Discharge Size	SPX50 2" NPT	SPX50H 1-1/2" NPT
Unit Weight	SPX50 80 lbs.	SPX50H770 lbs.
Power Cord	Type SOW/SOW-A | Water Resistant 15' 14/4 600 V, 60° C | CSA/UL approved	



Materials of Construction

Part Name	Material
Motor Housing	Cast Iron ASTM-48, 76
Pump Casing	Cast Iron ASTM-48, 76
Coolant/Lubricant	Dielectric Oil
Shaft	416 Stainless Steel
Mechanical Shaft Seal	Dual: Carbon/Ceramic Type 21 BF1C1
Impeller	Recessed, Cast Iron Class 20 A-48-62
Upper Bearing	Ball Radial 6203
Lower Bearing	Ball Thrust 6306
Fasteners	316 Stainless Steel

SJE SIGNALMASTER® Control Switch

Mechanically-activated, narrow-angle float switch designed to activate pump control panels and alarms.

This narrow-angle sensing device is used to accurately monitor liquid levels in:

- water
- sewage applications

The SJE SignalMaster® control switch is not sensitive to rotation.

Normally Open Model (high level)
The control switch turns on (closes) when the switch tips slightly **above** horizontal signaling a high level, and turns off (opens) when the switch drops slightly below horizontal.

Normally Closed Model (low level)
The control switch turns on (closes) when the switch tips slightly **below** horizontal signaling a low level, and turns off (opens) when the switch tips slightly above horizontal.

FEATURES

- Mechanically-activated, snap action contacts.
- High impact, corrosion resistant, polypropylene float housing.
- Not sensitive to rotation.
- Control differential of 1.5 inches (4 cm) above or below horizontal.
- Yellow colored cap for easy identification of normally open control switch.
- White colored cap for easy identification of normally closed control switch.
- UL Listed for use in water and sewage.
- CSA Certified.
- Five-year limited warranty.

SSPMA MEMBER

LR54245

LISTED 83N2

Member of: Hydraulic Institute

SPECIFICATIONS

CABLE: flexible 18 gauge, 2 conductor (UL, CSA) SJOW, water-resistant (CPE)

FLOAT: 2.74 inch diameter x 4.83 inch long (7.0 x 12.3 cm) high impact, corrosion resistant, polypropylene housing for use in sewage and water up to 140°F (60°C)

MAXIMUM WATER DEPTH: 30 feet (9 meters), 13 PSI (90 kPa)

ELECTRICAL: 5 amp, 125/250 VAC, 50/60 Hz

NOTE: This switch is not recommended for controlling:

- electric loads less than 100 milliamps, 12 VAC
- non-arcing electric loads

OPTIONS

This switch is available:

- CE certified unit available upon request.
- for normally open (high level) applications or normally closed (low level) applications.
- in standard cable lengths of 10, 15, 20, or 30 feet and 3, 5, 6, or 10 meters (longer lengths available)
- with two mounting options that allow for flexibility in installation:

  Mounting Clamp: for applications where the switch can be attached to a discharge pipe or similar mounting device.

  Externally Weighted: for applications where the switch can be suspended from above.

SEE BACKSIDE FOR ORDERING INFORMATION.

FLOAT ACCESSORIES

Cable Clamp Assembly, Float Brackets, Pipe Mounting Bracket, Cable Weights, ETM w/ Piggy-Back Plug, Vertical Reed Switch, Anchor and Chain

CABLE WEIGHT

Provides an accurate pivot point for suspended float switches.

U.S. Patent 5,306,885

- Gripper teeth on clip and weight channel securely lock float cable into place
- Cable Weight can be adjusted without the use of tools

HOUSING: 1 pound, 12 ounce (0.8 kgs.), 2.8 inch diameter x 3.3 inch long (7.1 cm diameter x 8.4 cm), impact resistant, non-corrosive, PVC housing for use in liquids up to 140°F (60°C).

CLIP: injection molded acetal plastic
WIRE/CABLE ACCOMMODATED: SJOW, SJTW, 18/2, 18/3, 16/2, 16/3, 14/2 and 14/3
SHIP WEIGHT: 2 lbs. (.907 kgs)

Part Number	Description
1002230	Cable Weight

CABLE WEIGHT MINI

Provides an accurate pivot point for suspended float switches.

- One piece cable weight
- Turn and Lock for easy installation.

HOUSING: 9.6 ounces (0.27 kgs.), 2.5 inch diameter x 2.5 inch long (6.35 cm diameter x 6.35 cm), impact resistant, non-corrosive, PVC housing for use in liquids up to 140°F (60°C)
WIRE/CABLE ACCOMMODATED: SJOW, SJTW, 18/2, 18/3

Part Number	Description
1030356	Cable Weight Mini

ELAPSED TIME METER WITH PIGGY-BACK PLUG

Plugs into switched outlet or piggy-back switch of plugger control panel. Unit must be placed inside an enclosure.

- Screws and mounting adhesive included.

Part Number	Description
1022846	ETM w/120V piggy-back plug
1032834	ETM w/230V piggy-back plug

VERTICAL REED SWITCH

- Control differential: .375 inch (1 cm)
- Maximum angle from vertical: 5°
- Electrical: 250 mAmps, 12-125 VAC, 50/60 Hz
  500 mAmps, 6-12 VDC, 50/60 Hz
- Housing and Float: 1.60 inch diameter x 6.7 inch long (4.06 cm X 17.01 cm), high impact, corrosion resistant PVC for use in sewage and non-potable water up to 120°F (50°C)

Part Number	Description
1011027	10ft VRS 120V Bulk
1016561	15ft VRS 120V Bulk

ANCHOR

- 10 lb. weight
- Yellow, vinyl coated, mushroom style

Part Number	Description
1018687	10 lb. Mushroom Anchor

CHAIN

- 1/8" thickness
- 316 grade stainless steel
- Available in one foot increments

Part Number	Description
1018823	1/8 inch Chain

PRODUCTS CONTINUED ON NEXT PAGE.

COMPACT PVC / CPVC BALL VALVES

PVC Ball Valves

0929 Series 1/2" - 4" Threaded (FPT)
0929S Series 1/2" - 4" Slip

- 150 PSI Working Pressure @ 73°F (22°C)
- Temperature Rating: 32°F to 122°F (0°C to 50°C)
- EPDM Seats/EPDM O-ring Seal
- White PVC Molded Body with Black PVC Handle

PVC Ball Valves

0921 Series 1/2" - 4" Threaded (FPT)
0921S Series 1/2" - 4" Slip

- EPDM Seats/EPDM O-Ring Seal
- White PVC Body with Black PVC Handle
- NSNSF/ANSI Standard 61 & 372 Certified

0923 Series 1/2" - 2" Threaded (FPT)
0923S Series 1/2" - 2" Slip

- 150 PSI Working Pressure @ 73°F (22°C)
- Temperature Rating: 41°F to 122°F (5°C to 50°C)
- PTFE Seats/Viton O-ring Seal
- White PVC Body with Red PVC Handle

Refer to Temperature Correction Factors

NO LEAD LEAD-FREE — Third Party Certified to NSF / ANSI 372

CPVC Hot Water System Ball Valves

0922CTS Series 1/2" - 2" Threaded (CTS x CTS)

- 150 PSI Working Pressure
- Temperature Rating: Continuous 194°F (90°C)
  Short Hours 212°F (100°C)
- PTFE Seats/EPDM O-ring Seal
- Beige CPVC Molded Body with Red Handle
- NSF/ANSI Standard 61 & 372 Certified

UNION PVC BALL VALVES

PVC Blocked True Union Ball Valves

0924 Series 1/2" - 2" Threaded (FPT)

- Double Union/Double block design permits in-line maintenance without disconnecting pipe
- Bayonet style locks prevent ball from being blown out
- Handle equipped with removable spanner devise
- Full unobstructed flow without any turbulence or pressure drop
- Working Temperature Range: 41°F to 122°F (5°C to 50°C)
- 150 PSI Working Pressure at 73°F (22°C)
- EPDM O-rings
- Suitable for both schedule 40 & 80 PVC pipe

Shipped complete with both thread and slip interchangeable connections

NO LEAD LEAD-FREE — Third Party Certified to NSF / ANSI 372

PVC Blocked True Union Ball Valves

0925NL Series 1/2" - 4" EPDM "O" RING SEAL ← 2"
0926 Series 1/2" - 4" VITON "O" RING SEAL

- 2-Way Blocking True Union Ball Valve - 150 PSI Working Pressure @ 73°F (22°C)
- Unique Double Union/Double Block design permits in-line maintenance without disconnecting pipe
- Both ends blocked with bayonet-style locks which prevent ball from being blown out
- Handle equipped with removable spanner device
- Full, unobstructed flow without any turbulence or pressure drop
- Available with either EPDM or Viton "O"-ring seals
- Self Lubricating PTFE (polytetrafluoroethylene) Seats are corrosion and chemical resistant
- Quick and easy disassembly without use of special tools, hand tighten only
- Suitable for both schedule 40 & 80 PVC pipe

PVC Single Union Ball Valves

0933 Series 1-1/2" - 2" Threaded (FPT)
0933S Series 1-1/2" - 4" Slip

- Threaded or socket
- Working Pressure 150 PSI @ 73°F
- Lightweight and compact design suitable for plumbing, pool and spa field
- PTFE (polytetrafluoroethylene) seat is corrosion and chemical resistantto most chemicals
- Non blocking design
- Suitable for both schedule 40 & 80 PVC pipe

SUBMERSIBLE SEWAGE EJECTOR

Wholesale Products Page: 6290-5
Dated: January 2001

MODEL: SK50

1.01 **GENERAL**

Contractor shall furnish all labor, materials, equipment and incidentals required to provide _____ (Qty.) submersible centrifugal sewage ejector pump(s) as specified herein. The pump model covered in this specification is the SK60. The pump furnished for this application shall be MODEL _____ as manufactured by Hydromatic Pumps.

2.01 **DESIGN CONDITIONS**

Each pump shall be rated _____ H.P., _____ volts, _____ phase, _____ hertz and operate at _____ RPM.

3.01 **OPERATING CONDITIONS**

The pump shall deliver _____ U.S. GPM/LPS at feet/meters TDH, and handle a _____ inch solid. The curve submitted for approval shall state, in addition to head and capacity performance, solid handling capability, amp rating, and design impeller diameter.

4.01 **CONSTRUCTION**

Each pump shall be of the sealed submersible type, incorporating features normally found in pumps furnished for the residential market.

These features include:

1. The pump volute, motor, and seal housing shall be high quality gray cast iron, ASTM A-48, Class 30.
2. The pump inlet shall be open and clear, without screening to provide access for sewage and solids.
3. All external mating parts shall be machined and Buna N, O-Ring sealed.
4. All fasteners exposed to the pumped liquid shall be 300 series stainless steel.
5. All power cords shall be water resistant UL or CSA approved, with double insulation, and sized as a function of Amp. draw.

5.01 **MOTOR AND SHAFT**

The stator, rotor and bearings shall be mounted in a sealed submersible type housing. Single phase motors shall be split phase or capacitor start with centrifugal switch. Three phase motors shall be Polyphase. Full Load and Locked Rotor Amps as well as Start and Run winding resistance shall be tabulated for each pump.

6.01 **BEARINGS, SHAFT AND MECHANICAL SEAL**

An upper bushing bearing and lower thrust bearing shall be required. The upper bearing shall be brass while the lower bearing is a heavy duty single row ball. They are both permanently and continuously lubricated and cooled by the dielectric oil which fills the motor housing. The motor shaft shall be stainless steel and sealed from the pumped liquid with a carbon ceramic mechanical seal.

SK60
SUBMERSIBLE SEWAGE EJECTOR

7.01 **IMPELLER**

The Impeller shall be high capacity, two vane, non-clog design with pump out vanes on the back side. These vanes wash out grit and stringy material that will damage the shaft and mechanical seal.

8.01 **AUTOMATIC CONTROL**

All single phase pumps should be capable of automatic operation.

9.01 **PRESSURE SWITCH**

The Single Phase SK60 pump is furnished with a pressure diaphragm switch that features a piggy-back plug that allows the pump to be operated manually without removal from the sump.

10.01 **PAINTING**

All cast iron parts shall be painted before assembly with a water reducible alkyd air dried enamel. The paint shall be applied in one coat with a minimum thickness of 3 to 4 mils.

11.01 **TESTING**

All pumps shall be individually tested to include the following:

1. The pump and power cord shall be visually inspected for imperfections, cuts or nicks.
2. The pump shall have a ground continuity check and the motor chamber shall be Hi-potted to test for moisture content and/or insulation defects.
3. The motor and volute housing shall be pressurized and a 10 second air leak decay test run.
4. Oil is added, and the pump is run. Voltage and current are monitored visually, electronically, and the tester listens for any noise or malfunction.

SJE SIGNALMASTER® Control Switch

Mechanically-activated, narrow-angle float switch designed to activate pump control panels and alarms.

This narrow-angle sensing device is used to accurately monitor liquid levels in:

- water
- sewage applications

The SJE SignalMaster® control switch is not sensitive to rotation.

Normally Open Model (high level)
The control switch turns on (closes) when the switch tips slightly **above** horizontal signaling a high level, and turns off (opens) when the switch drops slightly below horizontal.

Normally Closed Model (low level)
The control switch turns on (closes) when the switch tips slightly **below** horizontal signaling a low level, and turns off (opens) when the switch tips slightly above horizontal.

FEATURES

- Mechanically-activated, snap action contacts.
- High impact, corrosion resistant, polypropylene float housing.
- Not sensitive to rotation.
- Control differential of 1.5 inches (4 cm) above or below horizontal.
- Yellow colored cap for easy identification of normally open control switch.
- White colored cap for easy identification of normally closed control switch.
- UL Listed for use in water and sewage.
- CSA Certified.
- Five-year limited warranty.

SSPMA MEMBER

LR54245

LISTED 83N2

Member of: Hydraulic Institute

SPECIFICATIONS

CABLE: flexible 18 gauge, 2 conductor (UL, CSA) SJOW, water-resistant (CPE)

FLOAT: 2.74 inch diameter x 4.83 inch long (7.0 x 12.3 cm) high impact, corrosion resistant, polypropylene housing for use in sewage and water up to 140°F (60°C)

MAXIMUM WATER DEPTH: 30 feet (9 meters), 13 PSI (90 kPa)

ELECTRICAL: 5 amp, 125/250 VAC, 50/60 Hz

NOTE: This switch is not recommended for controlling:

- electric loads less than 100 milliamps, 12 VAC
- non-arcing electric loads

OPTIONS

This switch is available:

- CE certified unit available upon request.
- for normally open (high level) applications or normally closed (low level) applications.
- in standard cable lengths of 10, 15, 20, or 30 feet and 3, 5, 6, or 10 meters (longer lengths available)
- with two mounting options that allow for flexibility in installation:

  Mounting Clamp: for applications where the switch can be attached to a discharge pipe or similar mounting device.

  Externally Weighted: for applications where the switch can be suspended from above.

SEE BACKSIDE FOR ORDERING INFORMATION.
SEE PRICE BOOK FOR LIST PRICE.

FLOAT ACCESSORIES

Cable Clamp Assembly, Float Brackets, Pipe Mounting Bracket, Cable Weights, ETM w/ Piggy-Back Plug, Vertical Reed Switch, Anchor and Chain

CABLE WEIGHT

Provides an accurate pivot point for suspended float switches.

U.S. Patent 5,306,885

- Gripper teeth on clip and weight channel securely lock float cable into place
- Cable Weight can be adjusted without the use of tools

HOUSING: 1 pound, 12 ounce (0.8 kgs.), 2.8 inch diameter x 3.3 inch long (7.1 cm diameter x 8.4 cm), impact resistant, non-corrosive, PVC housing for use in liquids up to 140°F (60°C).

CLIP: injection molded acetal plastic
WIRE/CABLE ACCOMMODATED: SJOW, SJTW, 18/2, 18/3, 16/2, 16/3, 14/2 and 14/3
SHIP WEIGHT: 2 lbs. (.907 kgs)

Part Number	Description
1002230	Cable Weight

CABLE WEIGHT MINI

Provides an accurate pivot point for suspended float switches.

- One piece cable weight
- Turn and Lock for easy installation.

HOUSING: 9.6 ounces (0.27 kgs.), 2.5 inch diameter x 2.5 inch long (6.35 cm diameter x 6.35 cm), impact resistant, non-corrosive, PVC housing for use in liquids up to 140°F (60°C)
WIRE/CABLE ACCOMMODATED: SJOW, SJTW, 18/2, 18/3

Part Number	Description
1030356	Cable Weight Mini

ELAPSED TIME METER WITH PIGGY-BACK PLUG

Plugs into switched outlet or piggy-back switch of plugger control panel. Unit must be placed inside an enclosure.

- Screws and mounting adhesive included.

Part Number	Description
1022846	ETM w/120V piggy-back plug
1032834	ETM w/230V piggy-back plug

VERTICAL REED SWITCH

- Control differential: .375 inch (1 cm)
- Maximum angle from vertical: 5°
- Electrical: 250 mAmps, 12-125 VAC, 50/60 Hz
  500 mAmps, 6-12 VDC, 50/60 Hz
- Housing and Float: 1.60 inch diameter x 6.7 inch long (4.06 cm X 17.01 cm), high impact, corrosion resistant PVC for use in sewage and non-potable water up to 120°F (50°C)

Part Number	Description
1011027	10ft VRS 120V Bulk
1016561	15ft VRS 120V Bulk

ANCHOR

- 10 lb. weight
- Yellow, vinyl coated, mushroom style

Part Number	Description
1018687	10 lb. Mushroom Anchor

CHAIN

- 1/8" thickness
- 316 grade stainless steel
- Available in one foot increments

Part Number	Description
1018823	1/8 inch Chain

COMPACT PVC / CPVC BALL VALVES

PVC Ball Valves

0929 Series 1/2" - 4" Threaded (FPT)
0929S Series 1/2" - 4" Slip

- 150 PSI Working Pressure @ 73°F (22°C)
- Temperature Rating: 32°F to 122°F (0°C to 50°C)
- EPDM Seats/EPDM O-ring Seal
- White PVC Molded Body with Black PVC Handle

PVC Ball Valves

0921 Series 1/2" - 4" Threaded (FPT)
0921S Series 1/2" - 4" Slip

- EPDM Seats/EPDM O-Ring Seal
- White PVC Body with Black PVC Handle
- NSNSF/ANSI Standard 61 & 372 Certified

0923 Series 1/2" - 2" Threaded (FPT)
0923S Series 1/2" - 2" Slip

- 150 PSI Working Pressure @ 73°F (22°C)
- Temperature Rating: 41°F to 122°F (5°C to 50°C)
- PTFE Seats/Viton O-ring Seal
- White PVC Body with Red PVC Handle

Refer to Temperature Correction Factors

NO LEAD LEAD-FREE — Third Party Certified to NSF / ANSI 372

CPVC Hot Water System Ball Valves

0922CTS Series 1/2" - 2" Threaded (CTS x CTS)

- 150 PSI Working Pressure
- Temperature Rating: Continuous 194°F (90°C)
  Short Hours 212°F (100°C)
- PTFE Seats/EPDM O-ring Seal
- Beige CPVC Molded Body with Red Handle
- NSF/ANSI Standard 61 & 372 Certified

UNION PVC BALL VALVES

PVC Blocked True Union Ball Valves

0924 Series 1/2" - 2" Threaded (FPT)

- Double Union/Double block design permits in-line maintenance without disconnecting pipe
- Bayonet style locks prevent ball from being blown out
- Handle equipped with removable spanner devise
- Full unobstructed flow without any turbulence or pressure drop
- Working Temperature Range: 41°F to 122°F (5°C to 50°C)
- 150 PSI Working Pressure at 73°F (22°C)
- EPDM O-rings
- Suitable for both schedule 40 & 80 PVC pipe

Shipped complete with both thread and slip interchangeable connections

NO LEAD LEAD-FREE — Third Party Certified to NSF / ANSI 372

PVC Blocked True Union Ball Valves

0925NL Series 1/2" - 4" EPDM "O" RING SEAL ← 2"
0926 Series 1/2" - 4" VITON "O" RING SEAL

- 2-Way Blocking True Union Ball Valve - 150 PSI Working Pressure @ 73°F (22°C)
- Unique Double Union/Double Block design permits in-line maintenance without disconnecting pipe
- Both ends blocked with bayonet-style locks which prevent ball from being blown out
- Handle equipped with removable spanner device
- Full, unobstructed flow without any turbulence or pressure drop
- Available with either EPDM or Viton "O"-ring seals
- Self Lubricating PTFE (polytetrafluoroethylene) Seats are corrosion and chemical resistant
- Quick and easy disassembly without use of special tools, hand tighten only
- Suitable for both schedule 40 & 80 PVC pipe

PVC Single Union Ball Valves

0933 Series 1-1/2" - 2" Threaded (FPT)
0933S Series 1-1/2" - 4" Slip

- Threaded or socket
- Working Pressure 150 PSI @ 73°F
- Lightweight and compact design suitable for plumbing, pool and spa field
- PTFE (polytetrafluoroethylene) seat is corrosion and chemical resistantto most chemicals
- Non blocking design
- Suitable for both schedule 40 & 80 PVC pipe

SPEC 22 42 01 2.13 TAG : EW-1

model 7501

Portable Gravity Fed Eyewash

FEATURES & BENEFITS

CONSTRUCTION

FDA approved high-density green polyethylene tank provides the light and durable construction required in a portable unit.

MOUNTING

J-shaped stainless steel wall bracket makes for a well constructed portable mount for easy removal and re-mount.

FLOW CONTROLS

Pulling down the eyewash arm will begin flushing the 9-gallon (34.1 L) portable tank at .4 gpm (1.5 L) for a full 15 minutes, creating a full patterned flushing of the eyes.

DESIGN

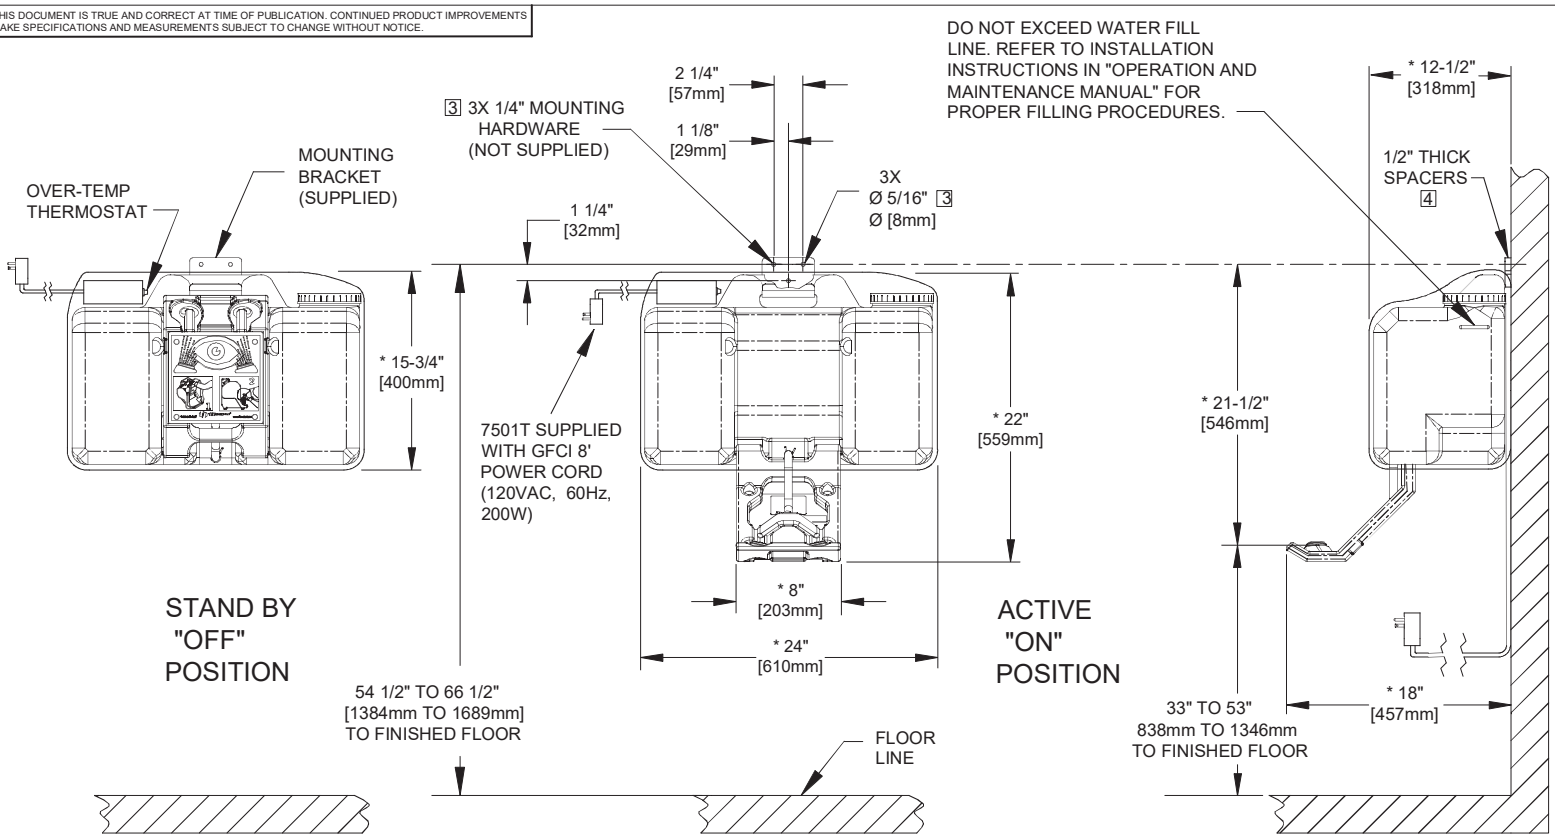
Tank comes complete with a wide-fill opening and threaded cap for quick inspection, cleaning, and filling. Unit also comes equipped with top and side handles making relocation easy.

OPTIONS

- ☐ Water Additive: Model 9082, 'sterile' bacteriostatic preservative for use in portable eyewash stations. One 5 oz. (148 ml) bottle will preserve 5 to 20 gallons (18.9 to 75.7 L) of potable water for up to three months. Four bottles per carton.
- ☐ Waste Container: Model 9009 is a twenty-gallon (75.7 L) wastewater container constructed of tough yellow polymer resin. Unit is used to collect water during weekly testing of emergency equipment.

For more information, visit www.hawsco.com or call (888) 640-4297.

SPECIFICATIONS



Model 7501 portable gravity operated eyewash shall include a FDA approved high-density green polyethylene 9 gallon (34.1 L) tank, ABS plastic eyewash heads with .4 gpm (1.5 L) flow rate over 15 minutes, yellow pull-down activation arm, integral handle on top, wide-fill threaded cap, sign-mounted operating instructions, and stainless steel wall bracket (unit must be hung). Additive not included - Order separately.

APPLICATIONS

Where the eyes of any person may be exposed to injurious or corrosive materials, when suitable facilities for quick flushing of the eyes needs to be provided and a continuous supply of water is not available. Although the 7501 may be installed in a wide variety of locations, it is ideal for remote areas where protective measures are still needed. Emergency eyewash equipment shall be in unobstructed and accessible locations that require no more than 10 seconds for the injured person to reach. Model 7501 is certified by CSA to meet the ANSI Z358.1 Standard for Emergency Eyewash and Shower Equipment.

DISCLAIMER: Continued product improvements make specifications subject to change without notice. Check www.hawsco.com for the latest product information and updates.

THIS DOCUMENT IS TRUE AND CORRECT AT TIME OF PUBLICATION. CONTINUED PRODUCT IMPROVEMENTS MAKE SPECIFICATIONS AND MEASUREMENTS SUBJECT TO CHANGE WITHOUT NOTICE.

NOTES: (CONTINUED FROM SHEET 1 OF 2)

4 LOCATE ONE 1/2" THICK SPACER (QTY. 3 SUPPLIED) BEHIND EACH HOLE IN THE MOUNTING BRACKET AS SHOWN.

5. * DIMENSIONS MAY VARY ±1/2" [12.7mm].

6. **UNIT MUST BE FILLED WITH WATER BEFORE CONNECTING TO POWER SOURCE.**

(FOR MODELS 7501T240 & 7501BL240:)

7. CORD SET SHALL BE LISTED TO UL 817 AND CSA-C22.2 NO. 21 AND PROVIDED WITH 3 WIRE GROUNDING TYPE ATTACHMENT PLUG RATED 240 V, MIN. 15 A.
8. THE FLEXIBLE CORD TYPE SHALL BE TYPE S, SE, SJ, SJE, SJO, SJOO, SJT, SJTO, SJTOO, SO, SOO, ST, STO, OR STOO AND HAVE A TYPE LETTER SUFFIX OF "W," "W-A" OR "OUTDOOR."
9. THE CORD SET SHALL BE MIN. 6 FT IN LENGTH AND MIN 18 AWG SIZE FOR FLEXIBLE POWER SUPPLY CORD.
10. LISTED STRAIN RELIEF BUSHING SUITABLE FOR CORD SET SIZE AND OUTDOOR USE SHALL BE USED.
11. THE FIELD INSTALLED POWER SUPPLY CORD SET NEEDS TO BE INSTALLED BY QUALIFIED PERSONNEL.

FOR TRAP GUARDS INSERTING INTO GASKET CONNECTED DRAINS, SEE DRAWING TG-23-G

IMPORTANT NOTES :

1. This insert can be installed into any open ended pipe to prevent sewer gas emission.
2. They can be inserted into an open end pipe that connects larger top floor drains.
3. They can be inserted into open ended pipe that connects floor sinks or hub drains,
4. To make a watertight seal, use an adhesive type caulk under the top flange or if the pipe opening is PVC, a small amount of solvent cement can be used under the flange.

If the trap guard device should get damaged or impaired in any way, the device can be easily removed by using a sharp screw driver under the flange.

Note: Care should be taken not to touch the elastomeric flexible material with the primer.

MAINTENANCE INSTRUCTIONS:

The Trap Guard device should be inspected periodically for build up of any type debris. The device should then be flushed out thoughly with clear warm water.

NO FIRE RATINGS ARE
REQUIRED FOR UNDERGROUND
PIPING OR OPENINGS

T-70 SERIES

INDUSTRIAL AUTOMATIC SPRAY NOZZLE GUN

Ideal for many cleaning tasks in every kind of industrial plants. Easy to use.

NOZZLE GUN : For use with hot and cold water only.
Do not use with steam

T-70 MODEL

T-75 MODEL

T-77 MODEL

FEATURES

- Body made from brass casting. (Alse available in stainless steel in option.)
- Maximum operating pressure : 150 PSI (1034 kPa).
- Maximum operating temperature : 200 °F (93 °C).
- Flow rates : 5-7 GPM (18.9 – 26.5 l/min) under normal operating conditions 50-80 PSI (345 – 552 kPa), 10 GPM (37.9 l/min) @ 150 psi (1034 kPa).
- This gun does a better work with less water flow. The precision of construction of this gun allow the operator to have several types of water jets simply by pressing the handle. This model close automatically when the handle is released, which eliminate any water wasting.

DECLYN™ WALL-HUNG LAVATORY
VITREOUS CHINA

DECLYN™ WALL-HUNG LAVATORY

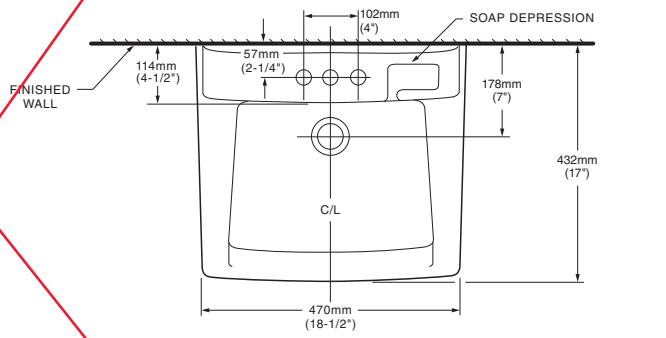
Revised per SI-003

- Wall-hung sink
- Vitreous china
- Rear overflow
- Soap depression
- Faucet ledge

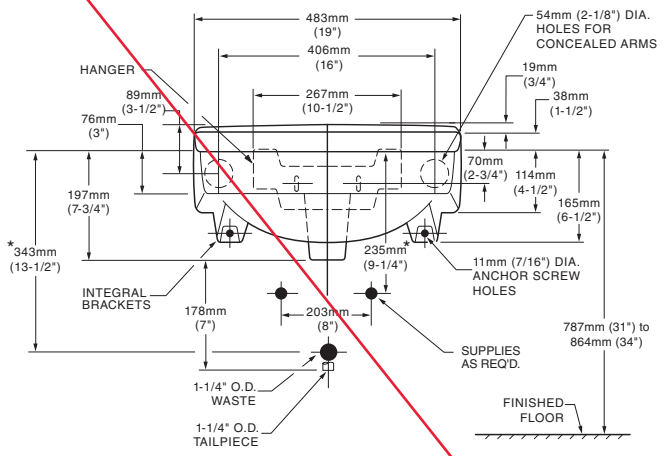
Shown with 2000.101 Ceramix faucet (not included)

❑ **0321.026** With wall hanger (Illustrated)
Faucet holes on 102mm (4") centers

❑ **0321.075** For concealed arms support
Faucet holes on 102mm (4") centers



Nominal Dimensions:
470 x 432mm
(18-1/2" x 17")



Bowl sizes:
362mm (14-1/4") wide
273mm (10-3/4") front to back
152mm (6") deep

Compliance Certifications -
Meets or Exceeds the Following Specifications:
• ASME A112.19.2 for Vitreous China Fixtures

To Be Specified:
❑ Color: ❑ White
❑ Faucet*:
❑ Faucet Finish:
❑ Supplies:
❑ 1-1/4" Trap:
❑ Nipple:
❑ Concealed Arms Support (by others):

* See faucet section for additional models available

NOTES:
* DIMENSIONS SHOWN FOR LOCATION OF SUPPLIES AND "P" TRAP ARE SUGGESTED.
PROVIDE SUITABLE REINFORCEMENT FOR ALL WALL SUPPORTS.
FITTINGS NOT INCLUDED AND MUST BE ORDERED SEPARATELY.

IMPORTANT: Dimensions of fixtures are nominal and may vary within the range of tolerances established by ANSI Standard A112.19.2. These measurements are subject to change or cancellation. No responsibility is assumed for use of superseded or voided pages.

Bulk Packed (12 per carton):
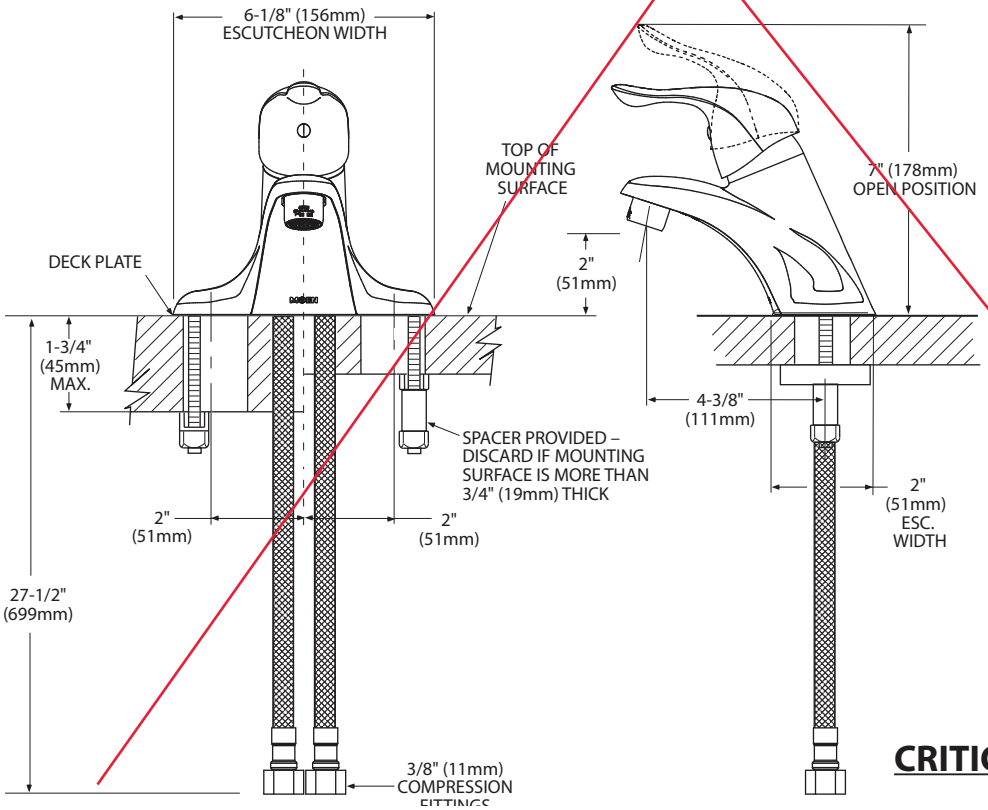
L64600 series

NOTE: THIS FAUCET IS DESIGNED TO BE INSTALLED THRU 3-1" DIA. HOLES, 2" ON CENTER

Revised per SI-003

DESCRIPTION
- Metal construction with various finishes identified by suffix
- Flexible supplies with 3/8" compression fittings
- Includes metal or 50/50 pop-up type waste assembly where noted

OPERATION
- Pivot action lever style handle
- Temperature controlled through 100˚ degree arc of handle travel



FLOW
- Flow is limited to 1.5 gpm max (5.7L/min) at 60 psi

CARTRIDGE
- 1255™ Duralast™ cartridge
- Nonmetallic/nonferrous and stainless steel material

STANDARDS
- Third party certified to WaterSense,® CSA B-125.1, ASME A112.18.1 and all applicable requirements referenced therein including NSF61/9
- Contains no more than 0.25% weighted average lead content
- Complies with California Proposition 65 and with the Federal Safe Drinking Water Act
- **ADA** for lever handle

WARRANTY
- Lifetime limited warranty against leaks, drips and finish defects to the original consumer purchaser
- 5 year warranty if used in commercial installations

WaterSense Meets EPA Criteria
Certified by IAPMO R&T

DESCRIPTION

The Aerostar® Series 400 pleated air filter utilizes a state-of-the-art 100% synthetic media to achieve exceptionally high levels of efficiency with the lowest resistance to air flow available. The media is laminated to an expanded metal grid on the air exiting side to provide exceptional strength during installation. The media support grid prevents fluttering and maintains pleat uniformity for optimum performance. The filter pack is enclosed in a heavy-duty, moisture resistant die-cut frame that will not warp, crack, or distort under normal operating conditions.

The 1" and 2" depth filters handle air velocities up to 500 fpm; 4" depth filters up to 625 fpm. Aerostar Series 400 pleats are recommended for most commercial and industrial applications to protect people and equipment, or as pre-filters to even higher efficiency air filters.

BENEFITS

The improved Aerostar Series 400 pleated filter has independent test lab data confirming exceptionally high levels of airborne particle removal with the lowest resistance to air flow available.

- Series 400 HC model achieves MERV 10
- Series 400 SC model achieves MERV 8
- Series 400 HC model initial resistance of 0.17" w.g. @ 500 fpm
- Series 400 SC model initial resistance of 0.19" w.g. @ 500 fpm
- Higher levels of filtration make the Series 400 extremely effective removing many airborne irritants such as pollens, molds, dander, and dust.
- Low resistance improves air flow and can greatly reduce energy costs
- Series 400 pleat filters can be a valuable tool in achieving points for USGBC - LEED certification projects.

APPLICATIONS

Aerostar Series 400 pleated air filters are designed for use in commercial buildings, hotels, industrial filtration, airports, school and universities, or any application desiring higher levels of air filtration to protect occupants from airborne irritants and protect cooling coils, ductwork, and other components of the HVAC system from dust and dirt.

INITIAL RESISTANCE

FRACTIONAL EFFICIENCY

SERIES 400 ENGINEERING SPECIFICATIONS

1.0 General

1.1 Filters shall be Aerostar® Series 400 extended surface pleated air filters as manufactured by Dafco Filtration Group.
1.2 Filters shall be available in standard and high capacity configurations and available in nominal depths of 1", 2", and 4".
1.3 Underwriters Laboratories classified to UL 900.

2.0 Filter Materials of Construction

2.1 Media shall be 100% synthetic, mechanical media that does not support microbial growth.
2.2 Frame shall be a heavy duty, high strength, moisture resistant paperboard with a cross member design that increases filter rigidity and prevents breaching. Frame shall be made with 100% recycled paperboard with an average of 35% post-consumer content. Frame shall be recyclable.
2.3 Filters shall have an expanded metal support grid bonded to the air-exiting side of the filter to maintain pleat uniformity and prevent fluttering. Metal support grid shall be recyclable and contain a significant amount of post-consumer and pre-consumer content.

3.0 Filter Performance

3.1 Filters shall be MERV 10 in a high capacity configuration and MERV 8 in a standard capacity configuration in all filter depths when fully tested in accordance with the ASHRAE 52.2-2007 Test Standard.
3.2 Initial resistance of filters shall not exceed the following:

Filter Depth	Flow Rate (fpm)	Initial Resistance Standard Capacity Filter	Initial Resistance High Capacity Filter
1"	375	0.18" w.g.	0.15" w.g.
2"	500	0.19" w.g.	0.17" w.g.
4"	500	0.12" w.g.	0.11" w.g.

3.3 Filters shall be rated to withstand a continuous operating temperature up to 200°F.
3.4 Filters shall have a recommended final resistance of 1.0" w.g.

DAFCO FILTRATION GROUP®

GEOPLEAT®

AEROSTAR®

GEOPLEAT®

- *Advanced pleat design for even dust loading and maximum service life*
- *High impact plastic frame for harsh environments*
- *Very low resistance to air flow results in lower energy costs*
- *Underwriters Laboratories classified to UL 900*
- *Robust filter media resists tearing or damage*
- *Lightweight and compact design saves shipping and storage space*
- *Completely incinerable*
- *Sustainable component for a LEED Green Building initiative*
- *Exceeds LEED MERV 13 efficiency requirement*

DESCRIPTION

The new GeoPleat's advanced pleating technology increases media area per filter, reducing resistance to air flow and maximizing service life. The GeoPleat is designed to perform in nearly any HVAC installation and will not warp or collapse over time.

The GeoPleat frame is formed with high impact plastic to precise dimensions for a secure fit in either housing or holding frames. The frame is impervious to moisture, rigid, and exceptionally lightweight for safe and easy handing and installation.

Pleats are thermoformed at the tips to maintain integrity. Uniformed beads of foamed hot-melt separate the pleats to the most efficient and exacting tolerances to lower air drag across the filter. The media pack is adhesively bonded on all four sides of the filter frame, eliminating the possibility of air by-pass around the filter media.

BENEFITS

Low Air Flow Resistance

GeoPleat's improved media and pack design combine for the lowest pressure drop available in a compact rigid box filter. The lower pressure drop leads to considerable energy savings in variable drive HVAC systems.

Longer Filter Life

The New GeoPleat now has 30% more media per filter, lowering media velocity and expanding the dust holding capacity. Increased media and higher DHC extend and maximize the life of the filter. Longer filter life reduces labor and disposal footprint of used filters.

Lightweight

The GeoPleat is extremely light in weight allowing for easier and less expensive transportation, handling, safe installation and removal. GeoPleat weighs up to 75% less than competitive 12" filters. It is specifically recommended for applications with space constraints, roof-top air handling units, or anywhere a safer filter installation is desired.

Robust Media

The media is extremely durable, designed to resist damage from shipping, handling, and installation. The media is resistant to moisture and microbial growth.

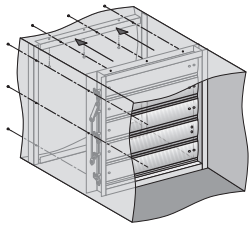
SPECIFICATIONS

SERIES 1000
AIR-FOIL CONTROL DAMPER



- Extruded aluminum (6063T5) damper frame is not less than .080" (2.03mm) in thickness. Damper frame is 4" deep.
- Blades are extruded aluminum (6063T5) profiles.
- Blade gaskets are extruded EPDM. Frame seals are extruded TPE thermoplastic. Gaskets are secured in an integral slot within the aluminum extrusions.
- Bearings are composed of a celcon inner bearing fixed to a 7/16" (11.11mm) aluminum hexagon blade pin rotating within a polycarbonate outer bearing inserted in the frame, resulting in no metal-to-metal or metal-to-plastic contact.
- Linkage hardware is installed in the frame side and constructed of aluminum and corrosion-resistant, zinc-plated steel, complete with cup-point trunnion screws for a slip-proof grip.
- Dampers are designed for operation in temperatures ranging between -40°F (-40°C) and 212°F (100°C).
- Dampers are available with either opposed blade action or parallel blade action.
- Air leakage through a 48" x 48" (1220mm x 1220mm) damper does not exceed 10.3 cfm/ft.² (52 l/s/m²) against 4" (1kPa) w.g. differential static pressure at standard air. Standard air leakage data is certified under the AMCA Ratings Program.
- Pressure drop of a fully open 48" x 48" (1220mm x 1220mm) damper does not exceed .02" (.004 kPa) w.g. at 1000 fpm (5.08 m/s).
- Dampers are made to size required without blanking off free area.
- Dampers are available in two mounting types: i.e., "Installed in Duct" or "Flanged to Duct".
- Installation of dampers must be in accordance with manufacturer's installation guidelines.

"FLANGED TO DUCT" TYPE
2" added to duct width & height dimensions

Note:
- *To reduce pressure drop, use "Flanged to Duct" type for sizes under 9 ft.² (.83m²).*
- *Suitable for operation in breathable air environments within stated temperature range.*
- *Dampers sized for duct openings exceeding 37½" (953mm) in height are equipped with a stiffener bar at mid-height to strengthen and maintain air leakage tolerances.*
- *For open blade clearance in tight spaces, consider the Series 1400 – 4" wide air-foil blade option.*

"INSTALLED IN DUCT" TYPE
½" deducted for clearance from width & height dimensions unless otherwise specified

System 350™ A350P Electronic Proportional Plus Integral Temperature Control

The A350P is an electronic, proportional plus integral temperature control with analog 0 to 10 VDC and 0 to 20 mA outputs. The control is equipped with three user-selectable time integration constants and an adjustable throttling range of 2 to 30F° (1 to 17C°). Two models cover a setpoint range of -30 to 130°F (-35 to 55°C) and 90 to 250°F (32 to 121°C).

As are all System 350™ products, the A350P control is housed in a NEMA 1, high-impact plastic enclosure. The modular design provides easy, plug-together connections for quick installation and future expandability.

Figure 1: A350P Electronic Proportional Plus Integral Temperature Control

Features and Benefits

❑ **Modular Design**	Enables stage, display, and power modules to be purchased and installed as needed
❑ **Plug-Together Connectors and 35 mm DIN Rail Mounting**	Eliminates wiring between modules, which reduces installation costs
❑ **Two Models Cover a Wide Setpoint Range of -30 to 250°F (-35 to 121°C)**	Reduces inventory by encompassing temperature ranges required to support the majority of Heating, Ventilation, Air Conditioning, and Refrigeration (HVAC/R) applications
❑ **Minimum Output Adjustable from 0 to 60%**	Tailors the output to the requirements of the controlled device; can be used to set minimum valve or damper position
❑ **Adjustable Throttling Range of 2 to 30F° (1 to 17C°)**	Enables the user to tune the system for optimum stable performance
❑ **Field-selectable Reverse or Direct Acting Mode**	Works in heating or cooling applications
❑ **Three User-Selectable Integration Time Constants**	Provides selection of the integration constant for applications requiring proportional plus integral control
❑ **Interchangeable Temperature Sensors**	Increase versatility and serviceability

© 2014 Johnson Controls, Inc.
Part No. 24-7664-192, Rev. G
Code No. LIT-930020

Application

The A350P Temperature Control can be used as a standalone device or in conjunction with plug-together accessory modules. The addition of S350 Stage Modules allows for the control of multiple stage HVAC/R applications. Typical application for the A350P includes:

- proportional heating control with staged direct expansion cooling
- simple temperature control for air handling units
- modulating damper actuators for mixed air control
- simple proportional mixed air control

A typical System 350 Temperature Control setup includes the following:

- A350P Temperature Control
- A99B Series Temperature Sensor
- Y350R Power Module (or 24 VAC Class 2 transformer)
- S350 Stage Modules
- D350 Digital Temperature Display Module

Operation

The A350P control operates on 24 VAC/VDC and provides two simultaneous analog outputs: 0 to 10 VDC and 0 to 20 mA. A cover-mounted, 10-segment Light-Emitting Diode (LED) bar graph indicates percentage of output.

Features include:

- adjustable setpoint
- adjustable minimum output
- adjustable throttling range (proportional band)
- selectable integration time constant
- selectable Reverse Acting (RA) or Direct Acting (DA) mode of operation

IMPORTANT:	All System 350 controls are designed for use **only** as operating controls. Where an operating control failure would result in personal injury and/or loss of property, it is the responsibility of the installer to add devices (safety, limit controls) or systems (alarm, supervisory systems) that protect against, or warn of, control failure.

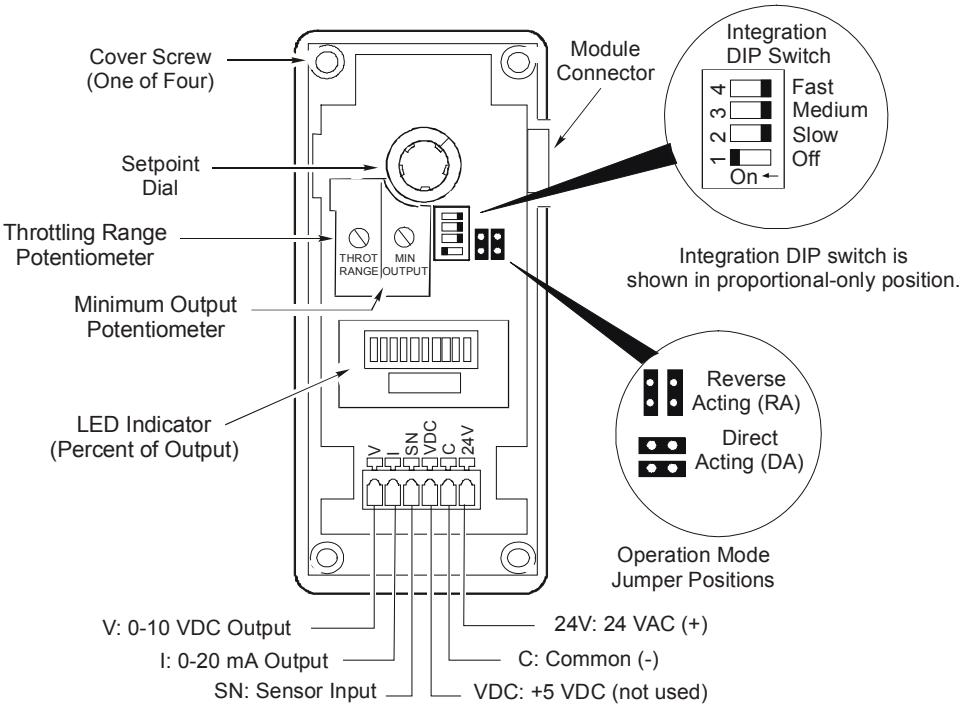

Figure 2: Interior View Showing A350P Control's Features

Minimum Output Adjustment

The minimum output adjustment sets the minimum voltage or milliampere output provided by the A350P control. It can be adjusted from 0 to 60% (0 to 6 VDC or 0 to 12 mA) of the output range.

Example:

A controlled device responding to a 4-20 mA output would require the minimum output to be adjusted to 20% or 4 mA. (See Figure 3.) The minimum output adjustment may also be used to set valves or dampers to minimum positions.

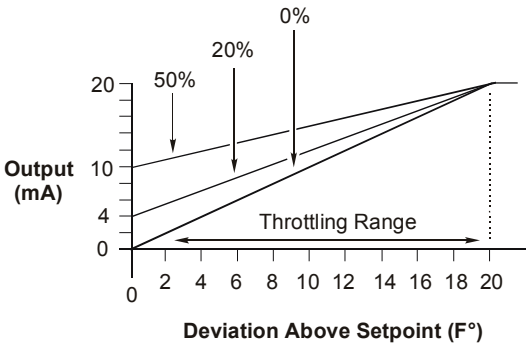

Figure 3: Output vs. Deviation from Setpoint for: Minimum Output = 0, 20, and 50%, Throttling Range = 20°F (DA)

Make the adjustment at the minimum output potentiometer marked as MIN OUTPUT. (See Figure 2.) For each 10% increase in output, the **next** bar on the LED indicator will light (only one bar is lit at any time).

Note: Before setting the minimum output potentiometer, verify that the control reads zero output (that is, no LEDs are lit).

Throttling Range (Proportional Band)

The throttling range is the range over which a control is active. Throttling range for the A350P control can be adjusted from 2 to 30F° (1 to 17C°). Make the adjustment at the throttling range potentiometer marked THROT RANGE (see Figure 2).

Integration Function

Proportional-only controls cannot hold a process at the exact setpoint. A proportional offset is always present because the control output is 0% at setpoint. Any load on the system will cause the control point to be offset from the setpoint. The greater the load on the system, the further the control point will be offset from the setpoint. (This is commonly referred to as proportional offset, and under maximum load this error will approach the throttling range.)

Some proportional-only controls are designed with their setpoint located midway through the proportional band to help compensate for this offset. This results in a plus/minus error from the setpoint rather than a single-ended error. Refer to Figure 4.

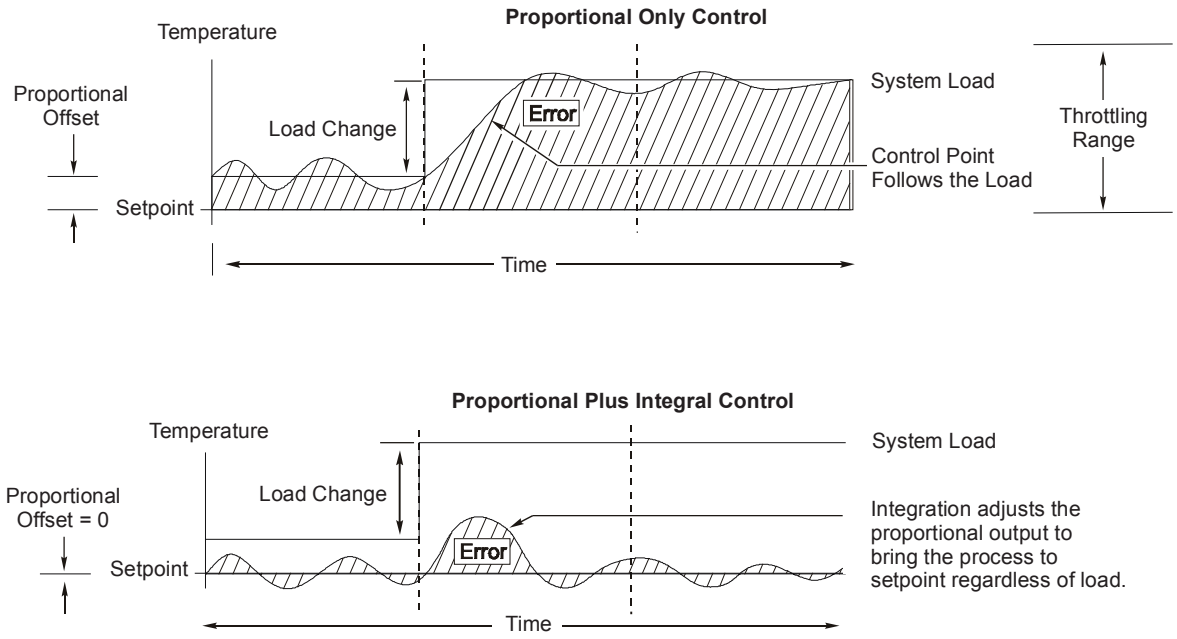

Figure 4: Comparison Between Proportional Only and Proportional Plus Integral Control

The A350P control has an integration feature that forces the control point to match the setpoint. Over time, the A350P will control the heating/cooling equipment to balance the system load at the control setpoint. (See Figure 4.)

On traditional proportional plus integral controls, the amount of correction will become too large if the system load exceeds the capacity of the equipment. When the actuated device (valve or damper) is fully open or closed and the setpoint still cannot be reached, the integration error continues to grow. The result is called *integral windup*.

The A350P control avoids *integral windup* with a patented circuit that puts a dynamic ceiling on the integrator. This resets the integration error when the sensor goes just above the setpoint plus the throttling range (in DA mode) or just below the setpoint minus the throttling range (in RA mode). This allows the process to recover from an out-of-range condition without a large overshoot.

The A350P control has three field-selectable integration constants and an off position. The integration DIP switch selects the integration constant. (See Figure 2 for location.)

The field-selectable integration constants include:

- **OFF: Switch 1 to On position, all others Off** provides proportional-only operation.

Note: In open-loop (without feedback) applications, select OFF (proportional-only) operation.

- **Slow (C3): Switch 2 to On position, all others Off** is the slowest integration constant (26 minute), and is suitable for most proportional plus integral applications. Slow is the recommended initial setting.
- **Medium (C2): Switch 3 to On position, all others Off** selects a 13-minute integration constant. If the rate of system recovery to setpoint is sluggish with the control set to slow, and if the system has enough capacity to drive the process to setpoint at a faster rate, the medium setting may be used.
- **Fast (C1): Switch 4 in On position, all others Off** is the fastest integration constant (6.5 minutes). Use fast only in instances where the rate of change at the sensor is extremely rapid and system capacity can compensate for that rapid change.

Reverse or Direct Acting Operation

With the operation jumpers in the Reverse Acting (RA) position, the analog output increases as the temperature drops below setpoint. (See Figure 5.)

With the operation jumpers in the Direct Acting (DA) position, the analog output will increase as the temperature rises above the setpoint.

Select the RA/DA mode by positioning the operation jumpers vertically or horizontally. (See Figure 2.) Position the operation jumpers vertically for RA and horizontally for DA.

The RA/DA operation jumpers are installed in the RA mode at the factory.

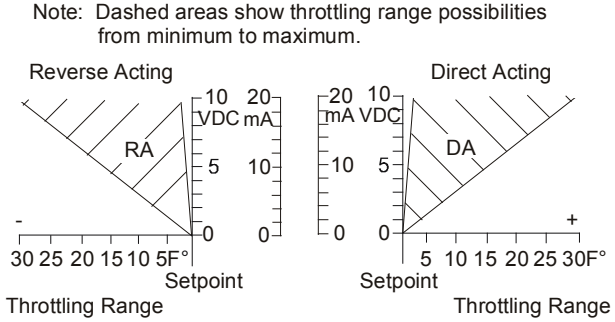

Figure 5: RA and DA Proportional Bands Shown in Proportional-Only Mode

Add-on Modules

The maximum number of add-on modules is listed in Table 1.

Table 1: Maximum Number of S350 Stage Modules per A350P

Power Source	Number of S350A or S350C Stage Modules Allowed	Number of S350A or S350C Modules (with One S350P) Allowed	Number of S350A or S350C Modules (with Two S350Ps) Allowed
Y350R	4	2	0
External Class 2 Transformer	9	8	7

S350A On-Off Stage Modules

S350A On-Off stage modules receive power, setpoint, and sensor input from the A350P control. S350A stage modules perform switching functions based on the control's setpoint and sensor information, as well as the offset and differential selected at the S350A stage module.

For more information on these modules, refer to the *System 350™ S350 Temperature, S351 Humidity, and S352 Pressure On/Off Stage Modules Product/Technical Bulletin (LIT-930080)*.

S350C Slave Stage Module

S350C slave stage modules receive power and sensor input from the A350P control. S350C slave stage modules perform switching functions based upon the control's sensor information, as well as the setpoint and differential selected at the S350C stage module.

For more information on these modules, refer to the *System 350™ S350C Temperature Slave Stage Module Product/Technical Bulletin (LIT-930084)*.

S350P Proportional Stage Modules

S350P proportional stage modules receive power, setpoint, and sensor input from the A350P control. The S350P stage module responds with an analog 0 to 10 VDC and 0 to 20 mA output signal. This is based upon the control's setpoint and sensor information, as well as the offset, throttling range, and minimum output selected at the S350P stage module.

For more information on these modules, refer to the *System 350™ S350P Proportional Plus Integral Temperature Stage Module Product/Technical Bulletin (LIT-930086)*.

Dimensions

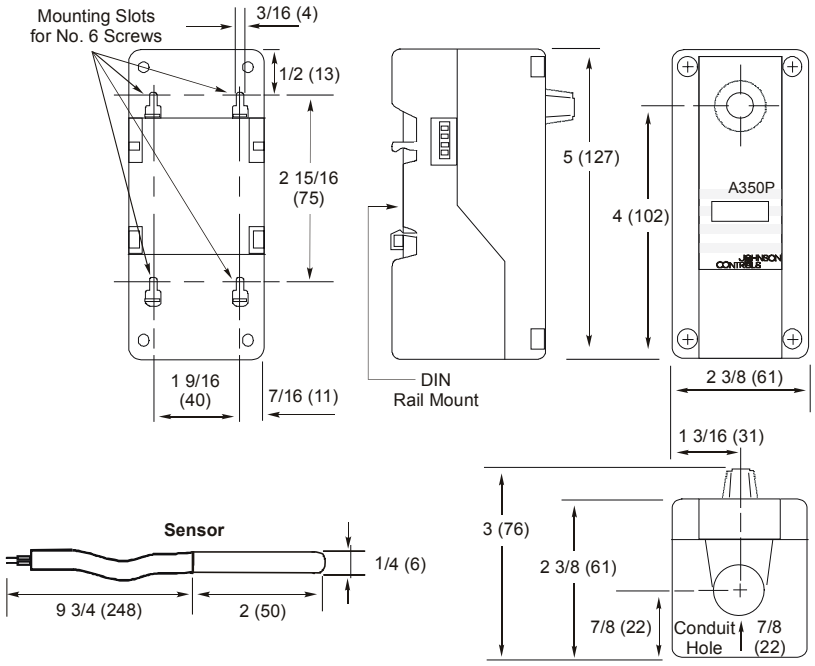

Figure 6: A350P Control and Sensor Dimensions, in. (mm)

Installation and Wiring

Celsius Scale Conversion

A Celsius scale throttling range decal is included with the A350P control. If the Celsius scale is desired:

1. Locate the throttling range and minimum output potentiometers on the main PC board. (See Figure 2.) Carefully remove the knobs and the existing decal.
2. Apply the Celsius scale decal in the same place as the original decal.
3. Rotate both knob stems completely counterclockwise (CCW).
4. Reinstall the potentiometer knobs so the arrows point to the minimum values.

The A350P Temperature Control is housed in a compact NEMA 1 plastic enclosure designed for standard 35 mm DIN rail mounting. Four key-slot mounting holes on the back of the control case are provided should surface mounting be required. If a Y350R is used, it should be mounted immediately to the right of the control. Any S350 modules would follow on the right, with the D350 being the last module mounted, also on the right.

Note: When mounting any System 350 module to rigid conduit, attach the hub to the conduit before securing the hub to the control enclosure.

WARNING: Risk of Electrical Shock.
Disconnect the power supply before making electrical connections. Contact with components carrying hazardous voltage can cause electric shock and may result in severe personal injury or death.

AVERTISSEMENT: Risque de décharge électrique.
Débrancher l'alimentation avant de réaliser tout branchement électrique. Tout contact avec des composants conducteurs de tensions dangereuses risque d'entraîner une décharge électrique et de provoquer des blessures graves, voire mortelles.

Wiring Terminals

Install all wiring to conform to the National Electrical Code and local regulations. For maximum electrical rating of control, refer to the label inside the control cover. Terminals will accept 12 to 26 AWG wire. Use only copper conductors.

1. Use a 1/8 in. (3 mm) flat-blade screwdriver to push the clamp arm down.
2. Insert the appropriate wire into the opening. Refer to Table 2 for terminal designations.
3. Release the clamp arm to secure the wire. See Figure 7.

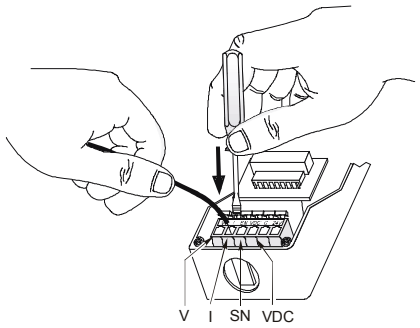

Figure 7: Cage Clamp Terminal Block

Table 2: Terminal Designations

Terminal	Description
V	0 to 10 VDC output
I	0 to 20 mA output
SN	Temperature sensor input
VDC	5 VDC power supply (not used)
C	Common for power supply, temperature sensor, and outputs
24V	24 Volts AC

Note: Output signals from the A350P control vary from 0 to 10 VDC and 0 to 20 mA. (Both outputs can be used simultaneously.) Connections can be made to both the V and I terminals, allowing the control to drive two outputs from the same RA or DA ramp simultaneously. This feature can be used to drive motor actuators of different types in a single application.

Sensor Connection

Shielded cable is not generally required for sensor wiring on runs of less than 50 feet. When using shielded cable, isolate and tape the shield at the sensor. Connect the shield to Terminal C on the A350P control.

Refer to Table 3 for the maximum recommended cable lengths for particular sizes of wire.

Table 3: Maximum Recommended Sensor Cable Lengths

Wire Gauge	Shielded Cable Length	
	Feet	Meters
14 AWG	800	244
16 AWG	500	152
18 AWG	310	94
20 AWG	200	61
22 AWG	124	38

- Various A99B Series Temperature Sensors and mounting hardware are available for use with A350P Series controls.

  The sensor must be connected to Terminals SN and C. (See Figure 2.) The sensors are not polarity sensitive.

- The sensor must be mounted so that it can accurately sense the temperature of the controlled medium.

Table 4: A350P Controls And Sensors

Control	Sensor Included Sensor Lead Length is 9-3/4 in. (0.25 m)
A350PS-1C	A99BB-25C; Range: -40 to 212°F (-40 to 100°C)
A350PS-1CM	A99BB-25C; Range: -40 to 212°F (-40 to 100°C)
A350PS-2C	A99BC-25; Range: -40 to 248°F (-40 to 120°C)
A350PS-2CM	A99BC-25; Range: -40 to 248°F (-40 to 120°C)
A350PT-1C	No Sensor Included
A350BA-2C	A99BC-25; Range: -40 to 248°F (-40 to 120°C)

- For more information regarding sensor options and installation, refer to the *A99B Series Temperature Sensors Product/Technical Bulletin (LIT-125186).*

Adjustments

Follow this procedure to set up the A350P control for the types of operation desired.

1. Remove its cover by loosening the four captive cover screws. (See Figure 2.)
2. Set the RA/DA operation jumpers to the desired mode of operation. Position the operation jumpers vertically for RA (Reverse Acting) or horizontally for DA (Direct Acting). (See Figure 2.)
3. Adjust the throttling range potentiometer to desired setting. Rotate Clockwise (CW) to increase the throttling range.

Notes: Included with the control is a Celsius scale throttling range decal. If the Celsius scale is desired, refer to the *Celsius Scale Conversion* section for decal installation instructions.

If the A350P is to be used in proportional plus integral control, the initial throttling range adjustment is seldom set below 6F° (3C°). A narrow proportional band used in conjunction with the integration may result in unstable control.

4. If minimum output is required, set the minimum output potentiometer (see Figure 2) to the desired position. The 10-segment front LED panel or a voltmeter can be used to read the minimum output. (The minimum setting for the **control** is designated by the 0 on the decal.)

Notes: Before adjusting the minimum output potentiometer, verify that the control reads zero output (that is, no LEDs are lit).

For each 10% increase in output, the **next** bar will light on the LED bar graph (only one bar is lit at anytime). In a milliampere application, each bar equals 2 mA. In a voltage application, each bar equals 1 VDC. (Refer to Figure 3.)

Example:

To set the control for a minimum output of 4 mA, turn the minimum output potentiometer clockwise until the second LED segment just lights.

If the control system does not function properly, verify that the proper operation mode is selected on each module (DA or RA), and perform the following procedures to determine the cause of the problem:

1. Check for proper voltages on the A350P control.
5. Make sure the system is stable in the proportional mode before selecting integration. Refer to the *Checkout Procedure* section.
6. Reinstall the cover and secure in place with the four captive cover screws.
7. Adjust the setpoint dial to the desired setpoint.

   If using the D350 Display Module, press and hold the setpoint button on the D350 while rotating the setpoint dial.

Note: The control's setpoint is factory calibrated at midscale to a tolerance of ±1F° (0.6C°). The setpoint tolerance at the extreme ends of the setpoint scale may be ± 4F° (2.2C°). The D350 Display Module is unaffected by this tolerance shift. Use the D350 for the most accurate setpoint selection.

Checkout Procedure

Follow this procedure to verify the A350P control is connected and functioning properly.

1. Before applying power, make sure that the installation and wiring connections are according to job specifications.
2. Set up the system for proportional mode (Integration = OFF), and make any necessary adjustments to the setpoint, throttling range, and minimum output. Then select Reverse or Direct Acting mode.
3. After making adjustments and electrical connections, apply power to the system, and observe it for stable operation.
4. If integration is required, select the fast (C1), medium (C2), or slow (C3) integration constant. Slow is the recommended initial setting. (Refer to the *Integration Function* section.)
5. Put the system back into operation. If instability occurs, consider increasing the throttling range.

Troubleshooting

a. Connect a digital voltmeter (DVM) between Terminals 24V (+) and C (-) located on the A350P's terminal block. (See Figure 2.)

   If an external transformer is used, select AC volts on the DVM. Verify that the voltage is between 20 and 30 VAC.

If a Y350R Power Module is used, select DC volts on the DVM. Verify that the voltage is between 16 and 38 VDC.

If an external DC power supply is used, select DC volts on the DVM. Verify that the voltage is between 22 and 29 VDC.

b. If the DVM reading is within the indicated voltage range, select DC volts on the DVM (DVM must be accurate to +/-0.01 VDC), and connect the (+) lead to Terminal VDC and the (-) lead to Terminal C.

   If the DVM voltage is between 4.9 and 5.1 VDC, proceed to Step 2.

   If the DVM voltage is above 5.1 VDC, replace the A350P.

c. If the DVM voltage is below 4.9 VDC, check the control using the following procedure.

   Disconnect all loads from the A350P control. (If in Direct Acting mode with power on, the system will go to full output when the sensor is disconnected. Thus, ensure that any loads are disconnected *before* disconnecting the temperature sensor.)

   Disconnect the temperature sensor completely, and recheck the DVM voltage.

   If the DVM voltage rises to a value between 4.9 and 5.1 VDC, replace the sensor.

   If the DVM voltage is still below 4.9 VDC, replace the A350P control.

2. Check sensor for proper resistance at a given temperature. (The resistance across the sensor changes with the temperature of the sensor.)

   a. Disconnect power from the A350P control.

   b. Disconnect the sensor from the control and measure the resistance across sensor leads.

   c. When measuring the sensor's resistance, use an accurate thermometer to measure the temperature at the sensor.

   d. Refer to Figure 8 to determine the optimal resistance for the measured temperature.

   e. If the measured resistance varies substantially from the optimal resistance for that temperature, the sensor or wiring must be replaced.

   f. If the sensor's resistance conforms to the chart in Figure 8, reconnect the sensor to the control.

   g. Reconnect power to the control.

Note: The sensor reading indicated by the D350 may differ somewhat from thermometer readings due to sensor tolerances, time constants, thermometer accuracy, and other factors.

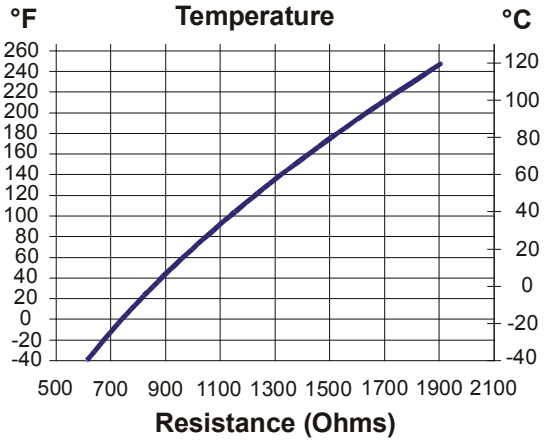

Figure 8: Temperature vs. Resistance Chart for the A99B Series Sensor

3. Check the A350P control for proper operation.

Note: Perform Steps 1 and 2 first.

a. Reconnect the sensor to the control and re-apply power.

b. Turn the throttling range and the minimum output to minimum by turning both potentiometers counterclockwise.

c. Switch off the integration.

d. Select the RA mode.

e. Connect the DVM (+) lead to the A350P control's Terminal SN and the (-) lead to Terminal C.

If the sensor voltage is less than 1.8 VDC on model A350PS-1C or less than 2.3 VDC on model A350PS-2C, go to Step 3g.

f. If the voltage is greater than 1.8 VDC on model A350PS 1C or greater than 2.3 VDC on model A350PS-2C, adjust the setpoint to 120°F (49°C) on model A350PS-1C or 240°F (116°C) on model A350PS-2C.

The output Terminal V should be less than 0.1 VDC, and all LEDs in the bar graph display should be off. If not, replace the A350P.

1. Adjust the minimum output to the maximum by turning the potentiometer CW. As the potentiometer is turned CW, the LEDs in the bar graph should turn on from left to right until the fifth or sixth bar is on. If not, replace the A350P control.

2. Adjust the minimum output to zero again, and select the DA mode.

3. If the right most LED in the bar graph is on (Terminal V = 10 VDC, Terminal I = 20 mA), go to Step 3h. If the LED is not on, replace the A350P.

g. If the sensor voltage is above 1.1 VDC on A350PS-1C or above 1.6 VDC on A350PS-2C, adjust the setpoint to match the actual temperature (T_S). The output Terminal V should be less than 0.1 VDC, and all LEDs in the bar graph should be off.

Note: Some tolerance error is present between the setpoint scale and the setpoint knob pointer. Refer to the *Adjustments* section.

1. Make sure the A350P control is in RA mode.

2. Increase the setpoint in increments of 2F° (1C°).

3. As the setpoint is increased, the control's Terminal V output voltage should go from 0 to 10 VDC, the Terminal I output current should go from 0 to 20 mA, and the LEDs should turn on, one at a time from left to right.

4. If the LEDs do not turn on and if the outputs of terminals V and I do not change as described above, replace the control.

h. Readjust the A350P control to the desired control settings.

Repairs and Replacement

Do not make field repairs or perform calibration. A99B Temperature Sensors and replacement controls are available through the nearest Johnson Controls representative. (See Tables 5 and 6 for ordering information.)

Ordering Information

Table 5: System 350 Products

Item	Product Code Number	Description
A350P Proportional Plus Integral Temperature Controls	A350PS-1C	Range: -30 to 130°F (-35 to 55°C) Throttling Range: 2 to 30 F° (1 to 17C°) (Includes the A99BC-25C Temperature Sensor)
	A350PS-2C	Range: 90 to 250°F (30 to 120°C) Throttling Range: 2 to 30 F° (1 to 17C°) (Includes the A99BC-25C Temperature Sensor)
	A350PT-1C	Range: -30 to 130°F (-35 to 55°C) Throttling Range: 2 to 30F° (1 to 17C°) (Sensor not included)
Display Modules	D350AA-1C D350BA-1C	Digital Temperature Display Module (Fahrenheit Scale) Digital Temperature Display Module (Celsius Scale)
On/Off Stage Modules	S350AA-1C S350AB-1C	Fahrenheit Scale Celsius Scale
Slave Stage Module	S350CC-1C	Dual Scale (°F and °C)
Proportional Stage Module	S350PQ-1C	Dual Scale (°F and °C)
Power Module	Y350R-1C	120 or 240 VAC, 50/60 Hz Input, Rectified Class 2, 24 VAC Output

Table 6: System 350 Accessories

Item	Product Code Number	Description
Wall Mount Plate	TE-6001-4	Includes sensor mounting clip
Cover	T-4000-2644	For wall mount plate
Mounting Clip	A99-CLP-1	Surface mounting clip for the A99B Temperature Sensor
Duct Mounting	TE-6001-1	Duct-mounting hardware with handy box
Duct Mounting	TE-6001-11	Duct-mounting hardware without handy box
Conduit Adaptor	ADP11A-600R	1/2 in. snap-fit EMT conduit adaptor (box of 10)
Immersion Well	WEL11A-601R	For liquid sensing applications
Sun Shield	SHL10A-603R	For use with outside sensors in sunny locations
DIN Rail Sections	BKT287-1R BKT287-2R	12 in. (0.3 m) long 39-1/3 in. (1.0 m) long
DIN Rail End Clamp	PLT344-1R	Consists of two end clamps

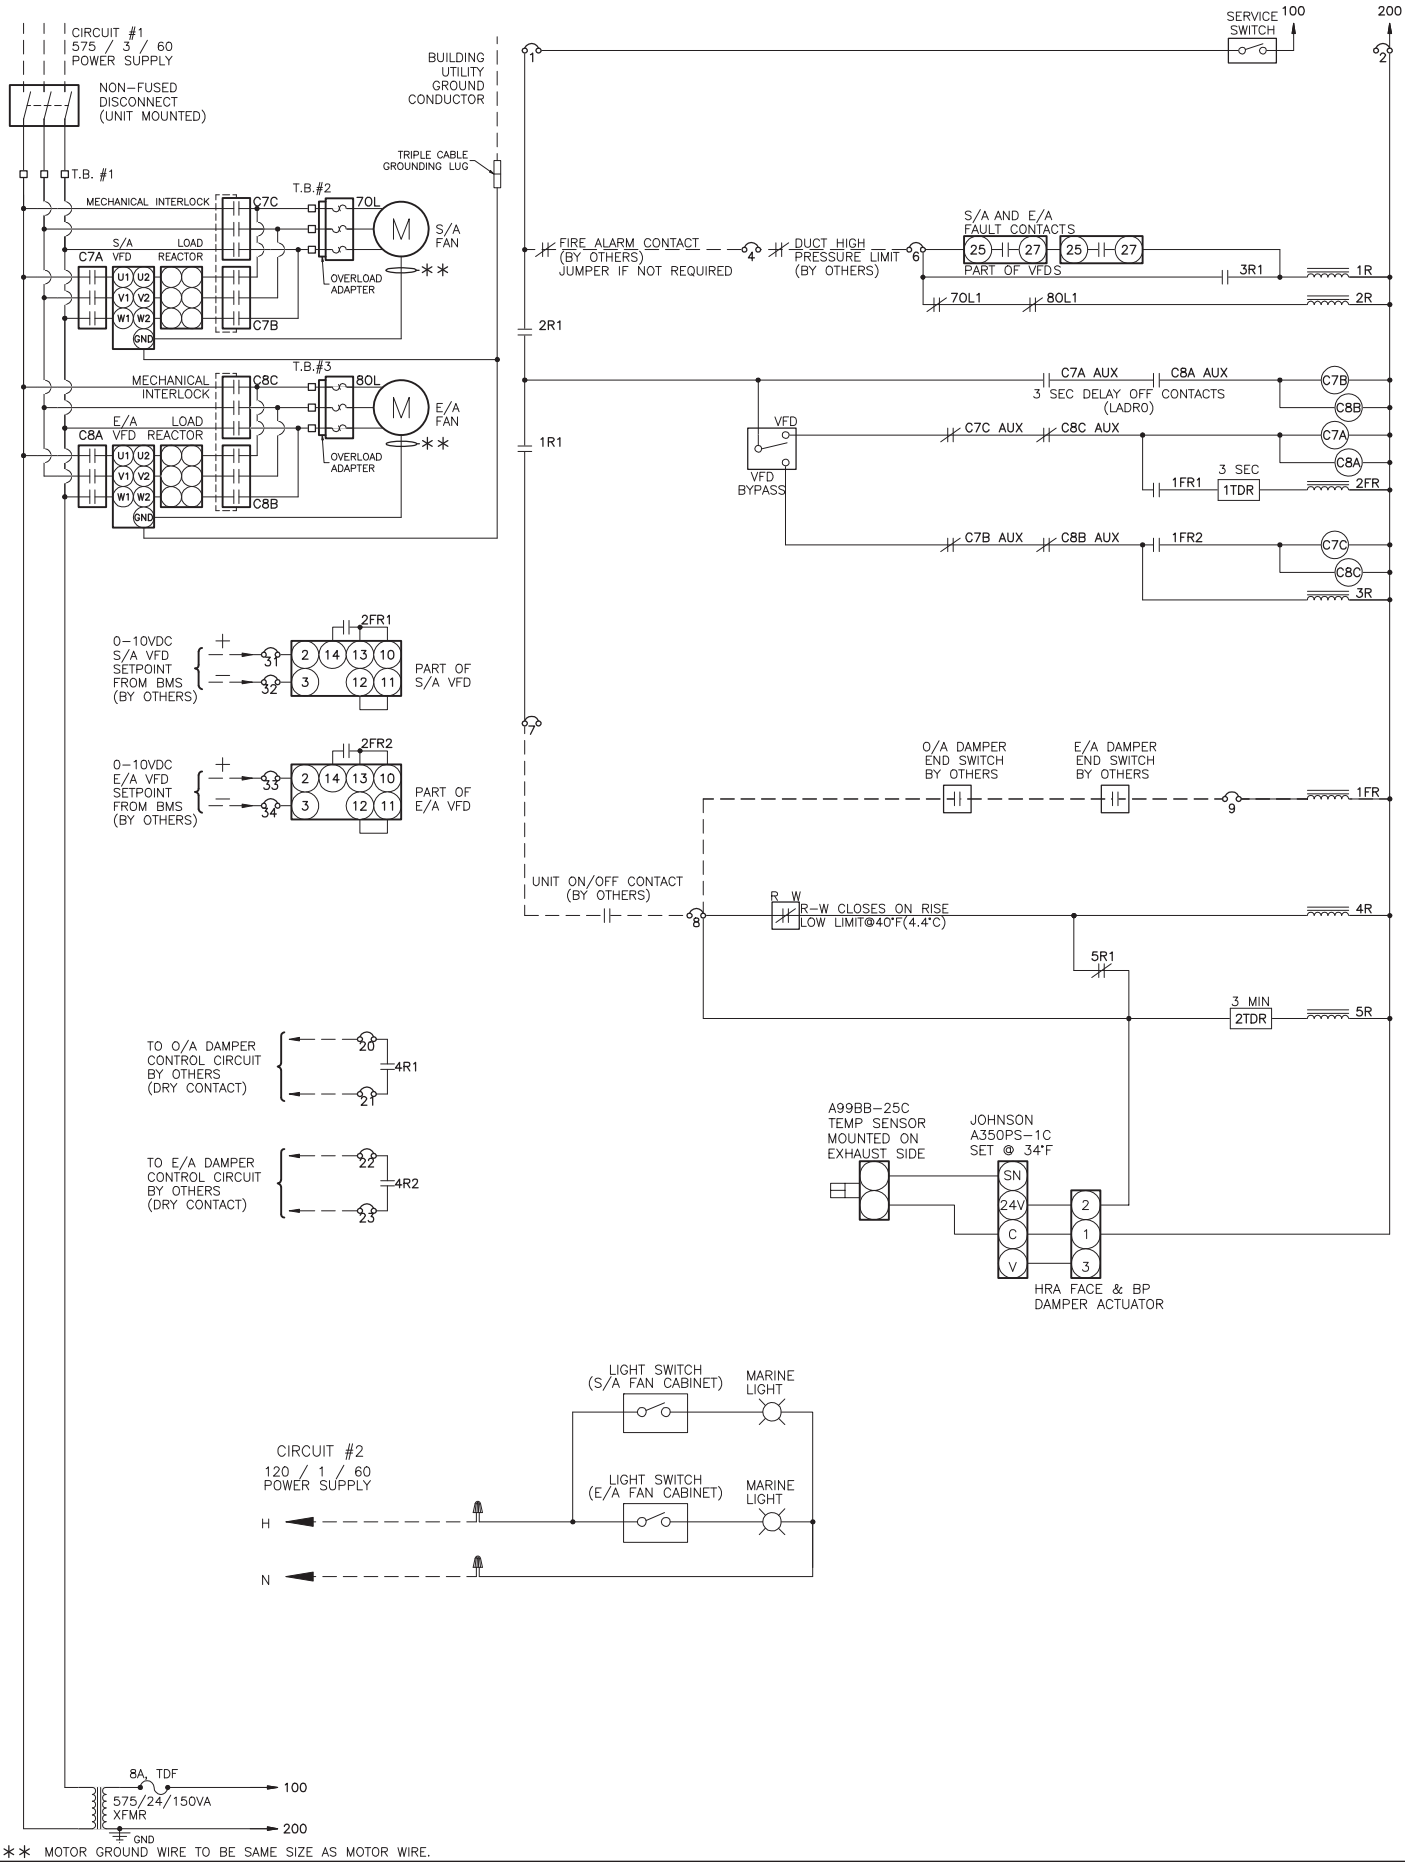
*WHA29A-600R may be used to daisy chain S350 modules together.



Specifications

Product	A350P Proportional Plus Time Integral Temperature Control	
Supply Voltage	Y350R Power Module:	Input: 120/240 VAC 50/60 Hz
		Output: 24 VDC, unfiltered, 10 VA
	External Source:	24 VAC, 50/60 Hz, Class 2 (20-30 VAC)
	Note: Only one supply voltage source may be used.	
Power Consumption	3.2 VA maximum	
Ambient Temperature	Operating:	-30 to 150°F (-34 to 66°C)
	Shipping:	-40 to 185°F (-40 to 85°C)
Humidity (all modules)	0 to 95% RH non-condensing; maximum dew point 85°F (29°C)	
Setpoint Adjustment Range	A350PS-1C:	-30 to 130°F (-35 to 55°C)
	A350PS-2C:	90 to 250°F (30 to 120°C)
	A350PT-1C:	-30 to 130°F (-35 to 55°C)
Throttling Adjustment Range	2 to 30F° (1 to 17C°)	
Analog Outputs	0 to 10 VDC (550 ohm load minimum) and 0 to 20 mA (600 ohm load maximum)	
Minimum Output	Adjustable from 0 to 60% of the output	
Output Indication	A ten segment LED bar graph indicates percentage of output.	
Control Action	Direct or reverse action is jumper selectable.	
Integration Constant	Four selectable rates: fast, medium, slow, and off	
Sensor	Replaceable positive temperature coefficient sensor	
	Reference resistance 1035 ohms at 77°F (25°C)	
Material	Case and cover:	NEMA 1 high-impact thermoplastic
Agency Listing	UL Listed, CCN XAPX, File E27734	
	UL Listed for Canada, CCN XAPX7, File E27734

THREADED WATER HAMMER ARRESTORS

www.pppinc.net

SPEC 22 42 01 2.5

ONLY ONE MOVING PART!

WATER HAMMER ARRESTORS ARE SPECIFIED FOR COMMERCIAL, INDUSTRIAL AND RESIDENTIAL USES.

ON DRAWING M603
DHW & NPW SYSTEM

PPP WATER HAMMER ARRESTORS SPECIFIED FOR MANY INSTALLATIONS!

A maintenance-free installation is assured when using this type of arrestor...the only moving part is the free-moving piston furnished with "O"ring seals which have been tested for reliability in excess of normal operating ranges.

SC-500A - SC-2000F

FLUID HAMMER IN FLUID TRANSMISSION LINES – a definition.
Fluid Hammer is a series of hydraulic shock waves generated within the confines of a piping system due to the sudden stopping of fluid flow. This condition is caused by fast closing of positive valves incorporated within the system. The effect of fluid hammer is damaging if allowed to exist for any length of time and will result in broken pipes and damage to other components in the system.

U.S. Patent No. 3,633,627

40 Years of outstanding performance

LIMITED SBCCI PST&ESI
Low Lead UPC®
Complies with low lead law.
ASSE 1010
Made in the U.S.A. We do not export jobs.
ISO AMERICAN GLOBAL STANDARDS 14001 CERTIFIED-GREEN
ISO AMERICAN GLOBAL STANDARDS 9001 CERTIFIED

SPECIFICATIONS & INSTALLATIONS

A

B

INSTALLATION: May be installed in new or existing plumbing systems with a standard pipe tee.
MAINTENANCE: Maintenance free – the piston is the only moving part.
TEMPERATURE RANGE: -40º F to + 212º F (-4.4º C to + 100º C)
CONSTRUCTION: Barrel-fabricated of type "L" hard drawn copper.
Cap: Copper or free turning brass.
Piston: Machined of Composite Material
Threaded Adapter: Machined of C69300 Low Lead Brass
Seals: "O"rings: EPDM.
Seal Lubricant: Dow-Corning Silicone Compound #111, FDA listed for use in potable water systems.
Nickel Plated: For Salt Water Application.
OPERATING PRESSURE: Designed to operate on all domestic and commercial systems.
Normal operating pressure 0 to 80 PSIG. Max spike pressure 400 PSIG. System Pressures above 80 PSI consult factory.

MIDWEST Sight Flow Indicators

Inexpensive Protection for Expensive Equipment and Systems

MODEL 100, 100MP

MODEL 300, 300MP

MODEL 360F

MODEL 400

MODEL 700

Patent No. 5,103,757

Midwest Sight Flow Indicators are manufactured of quality materials and safety tested to assure long, dependable service at economical prices. Available in window viewing style in the 100 and 300 Series and tube viewing style in the 400 and 700 Series with connection choices of female NPT, BSPP, or BSPT threaded and flanged. Series 700 has impeller and internal wipers for cleaning sight tube, which is perfect for fluids with suspended solids. Just rotate the glass tube and restore full 360° visibility without disrupting the flow.

Models

- 100 - Single window with impeller
- 300 - Double window with impeller
- 350 - Double window with no indicator
- 360 - Double window with flapper
- 400 - Tube type with no indicator
- 700 - Tube type with impeller and internal wipers to clean glass tube

Service: Compatible gases and liquids.
Wetted Materials: Window: Tempered glass. Body: Bronze or 316 SS. Gasket: Buna-N, Fluoroelastomer, or PTFE. Indicator: ABS or 316 SS impeller (100 and 300), 304 SS or 316 SS Flapper (360).
Temperature Limit: 200°F (93°C).
Pressure Limit: 125 psig (8.62 bar), 150 psig (10.34 bar) on "MP" Models.
Connections: Threaded.

Example	SFI	300	SS	2	G2	SFI-300SS-2-G2 Sight Flow Indicator; double window, temper glass, Fluoroelastomer gaskets, 316SS body, ABS impeller, 2 inch female NPT connections.
Model Designator	SFI					Sight flow indicator, tempered glass standard, Buna-N gaskets standard, female NPT connections standard.
Body Style		100 300 350 360				Single window, bronze body, ABS Impeller Double window, bronze body, ABS Impeller Double window, bronze body, no moving indicator Double window, bronze body, 304SS flapper
Body Options			SS MP			316SS body option for 300, 350, 360 150 psig maximum pressure option, includes Fluoroelastomer gaskets

Options					W2 G1 G2 S2 S3 I1 I2 I3 F1 BSPT BSPP	Plexiglass window PTFE gasket Fluoroelastomer gasket 316SS Shaft (Not on 350 Model) Monel Shaft (Not on 350 Model) ABS impeller with bronze bushing (Not on 350, 360) 316SS impeller (Not on 350, 360) No impeller (100 only) 316SS Flapper (360 only) BSPT threads BSPP threads

(Maximum flow on impeller models: 5FPS with liquids, 5000 FPM with gases)

SFI-700 SERIES
Tube Style with Threaded Connections

SPECIFICATIONS
Service: Compatible gases and liquids.
Wetted Materials: Tube: Tempered Borosilicate. Body: Brass or 316 SS. Gasket: Fluoroelastomer. Indicator: Acetal.
Temperature Limit: 212°F (100°C).
Pressure Limit: 230 psig (15.86 bar).
Connections: Threaded.

Example	SFI	700SS	1-1/2		SFI-700SS-1-1/2 Sight Flow Indicator; tube type with 8 blade Acetal impeller and integral wipers to clean tube interior, tempered borosilicate tube, Fluoroelastomer gaskets, 316SS body, 1-1/2 inch female NPT connections
Model Designator	SFI				Sight flow indicator, tube type with 8 blade Acetal impeller and integral wipers to clean tube interior, tempered borosilicate tube, Fluoroelastomer gaskets
Body Style		700 700SS			Brass body 316SS body
Body Size			1/4 3/8 1/2 3/4 1 1-1/4 1-1/2		1/4 inch female NPT connection size 3/8 inch female NPT connection size 1/2 inch female NPT connection size 3/4 inch female NPT connection size 1 inch female NPT connection size 1-1/4 inch female NPT connection size 1-1/2 inch female NPT connection size
Options				BSPT BSPP	BSPT threads BSPP threads

SFI-300F SERIES
Window Style with Flanged Connections

SPECIFICATIONS
Service: Compatible gases and liquids.
Wetted Materials: Window: Tempered glass. Body: Carbon Steel or 316 SS. Gasket: Buna-N, Fluoroelastomer, or PTFE. Indicator: 316 SS Flapper (360).
Temperature Limit: 200°F (93°C).
Pressure Limit: 150 psig (10.34 bar).
Connections: Flanged.

Example	SFI	360FSS	1-1/2	G1	SFI-360FSS-1-1/2-G1 Sight Flow Indicator; double window, tempered glass, PTFE gasket, 316SS body, 304SS flapper, 1-1/2 inch raised face flange connections
Model Designator	SFI				Sight flow indicator, double window, tempered glass, Buna-N gaskets standard, raised face flange connections
Body Style		350FCS 350FSS 360FCS 360FSS			Carbon steel body, no moving indicator 316SS body, no moving 316SS indicator Carbon steel body, 316SS flapper 316SS body, 316SS flapper
Body Size			1-1/2 2 3 4 6		1-1/2 inch raised face flange connection size 2 inch raised face flange connection size 3 inch raised face flange connection size 4 inch raised face flange connection size 6 inch raised face flange connection size
Options				G1 G2	PTFE gasket Fluoroelastomer gasket

SFI-400 SERIES
Tube Style with Threaded or Flanged Connections

SPECIFICATIONS
Service: Compatible gases and liquids.
Wetted Materials: Tube: Borosilicate. Body: Cast Iron or 316 SS. Gasket: PTFE.
Temperature Limit: 200°F (93°C).
Pressure Limit: 50 psig (3.45 bar).
Connections: Threaded or Flanged.

Example	SFI	400	1-1/2	SFI-400SS-1-1/2 Sight Flow Indicator; tube type, borosilicate tube, PTFE gaskets, 316SS body, 1-1/2 inch female NPT connections
Model Designator	SFI			Sight flow indicator, tube type, borosilicate tube, PTFE gaskets
Body Style		400CI 400SS 400F		Female NPT connections, cast iron body (only for 1 through 2 inch sizes) Female NPT connections, 316SS body Raised face flange connection, 316SS body (only for 1 inch and up sizes)
Body Size			1/2 3/4 1 1-1/4 1-1/2 2 3 4	1/2 inch connection size 3/4 inch connection size 1 inch connection size 1-1/4 inch connection size 1-1/2 inch connection size 2 inch connection size 3 inch connection size 4 inch connection size

(Best for use in vertical pipelines where there are no mechanical strains)

Series LF25AUB-Z3

Water Pressure Reducing Valves**

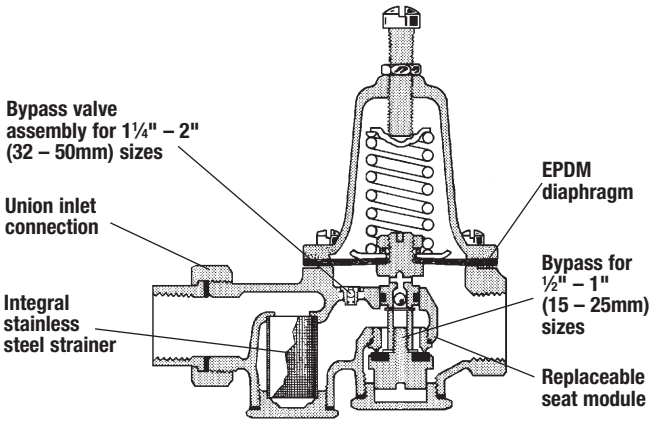
Sizes: ½" – 2" (15 – 50mm)

Series LF25AUB-Z3 Water Pressure Reducing Valves are designed to reduce incoming water pressure to a sensible level to protect plumbing system components and reduce water consumption. This series is suitable for water supply pressures up to 300psi (20.7 bar) and may be adjusted from 25 – 75psi (172 – 517 kPa). The LF25AUB-Z3 features Lead Free* construction to comply with Lead Free* installation requirements. The standard setting is 50psi (345 kPa). All parts are quickly and easily serviceable without removing the valve from the line. The standard bypass feature permits the flow of water back through the valve into the main when pressures, due to thermal expansion on the outlet side of the valve, exceed the pressure in the main supply.

Features

- Standard construction includes Z3 sealed spring cage and stainless steel corrosion resistant adjusting & cage screws for accessible outdoor or pit installations
- Union inlet connection
- Integral stainless steel strainer
- Replaceable seat module
- Lead Free* cast copper silicon alloy construction
- Serviceable in line
- Bypass feature controls thermal expansion pressure***
- High temperature resistant reinforced diaphragm for hot water

Models



LF25AUB-Z3	NPT threaded female union inlet x NPT female outlet
LF25AUB-S-Z3	Solder union inlet x NPT female outlet
LF25AUB-DU-Z3	Double Union – NPT threaded union female inlet and outlet
LF25AUB-S-DU-Z3	Double Union – Solder union inlet and outlet
LF25AUB-DU-THDxPEX-Z3	Double Union – NPT threaded female inlet and PEX union outlet
LF25AUB-DU-LF-Z3	Double union body less fittings (¾", 1", 1¼")
LF25AUB-QC-Z3	Single Union – Quick-Connect union inlet (½", ¾", 1")
LF25AUB-DU-QC-Z3	Double Union – Quick-Connect inlet and outlet (½", ¾", 1")

Specifications

A Water Pressure Reducing Valve with integral strainer shall be installed in the water service pipe near its entrance to the building where supply main pressure exceeds 60psi (413 kPa) to reduce it to 50psi (345 kPa) or lower. The water pressure reducing valve shall be constructed using Lead Free* materials. Lead Free* regulators shall comply with state codes and standards, where applicable, requiring reduced lead content. The valve shall feature a Lead Free* cast copper silicon alloy suitable for water supply pressures up to 300psi (20.7 bar). Provision shall be made to permit the bypass flow of water back through the valve into the main when pressures, due to thermal expansion on the outlet side of the valve, exceed the pressure in the main supply. Water Pressure Reducing Valve with built-in bypass check valves will be acceptable. Approved valve shall be listed to ASSE 1003 and IAPMO and certified to CSA B356. Valve shall be a Watts Series LF25AUB-Z3.

LF25AUB-Z3

DOMESTIC COLD WATER

*The wetted surface of this product contacted by consumable water contains less than 0.25% of lead by weight.

**A water saving test program concluded that reducing the supply pressure from 80-50psi (551-345 kPa) resulted in a water savings of 30%.

***The bypass feature will not prevent the pressure relief valve from opening on the hot water supply system with pressure above 150psi (10.3 bar).

Pressure Reducing Control Valve

NON-POTABLE WATER 3"

Schematic

- Throttles to reduce high upstream pressure to constant lower downstream pressure
- Reducing setpoint is adjustable

Standard Components

1 – Main Valve (Single Chamber)
2 – Pressure Reducing Control
3 – Fixed Orifice

Options & Accessories

- ○ X – Isolation Cocks *(2)*
- ○ FC – Flo-Clean Strainer *(1)*
- ○ Y – Y-Strainer (Replaces Flo-Clean) *(2)*
- ○ ACS – Adjustable Closing Speed *(3)* (Replaces Fixed Orifice)
- ○ AOS – Adjustable Opening Speed *(1)*
- ○ P – Position Indicator *(3)*
- ○ L – Limit Switch *(3)*

(1) Standard 3" & Smaller
(2) Standard 4" & Larger
(3) Optional All Sizes

Operations

The Watts ACV Pressure Reducing Control Valve is designed to automatically reduce a fluctuating higher upstream pressure to a constant lower downstream pressure regardless of varying flow rates. It is controlled by a normally open, pressure reducing pilot designed to: 1) Open (allowing fluid out of the main valve cover chamber) when downstream pressure is below the adjustable setpoint, and 2) Close (allowing fluid to fill the main valve cover chamber) when downstream pressure is above the adjustable setpoint. A decrease in downstream pressure causes the valve to modulate toward an open position, raising downstream pressure. An increase in downstream pressure causes the valve to modulate toward a closed position, lowering downstream pressure.

***The wetted surface of this product contacted by consumable water contains less than 0.25% of lead by weight.**

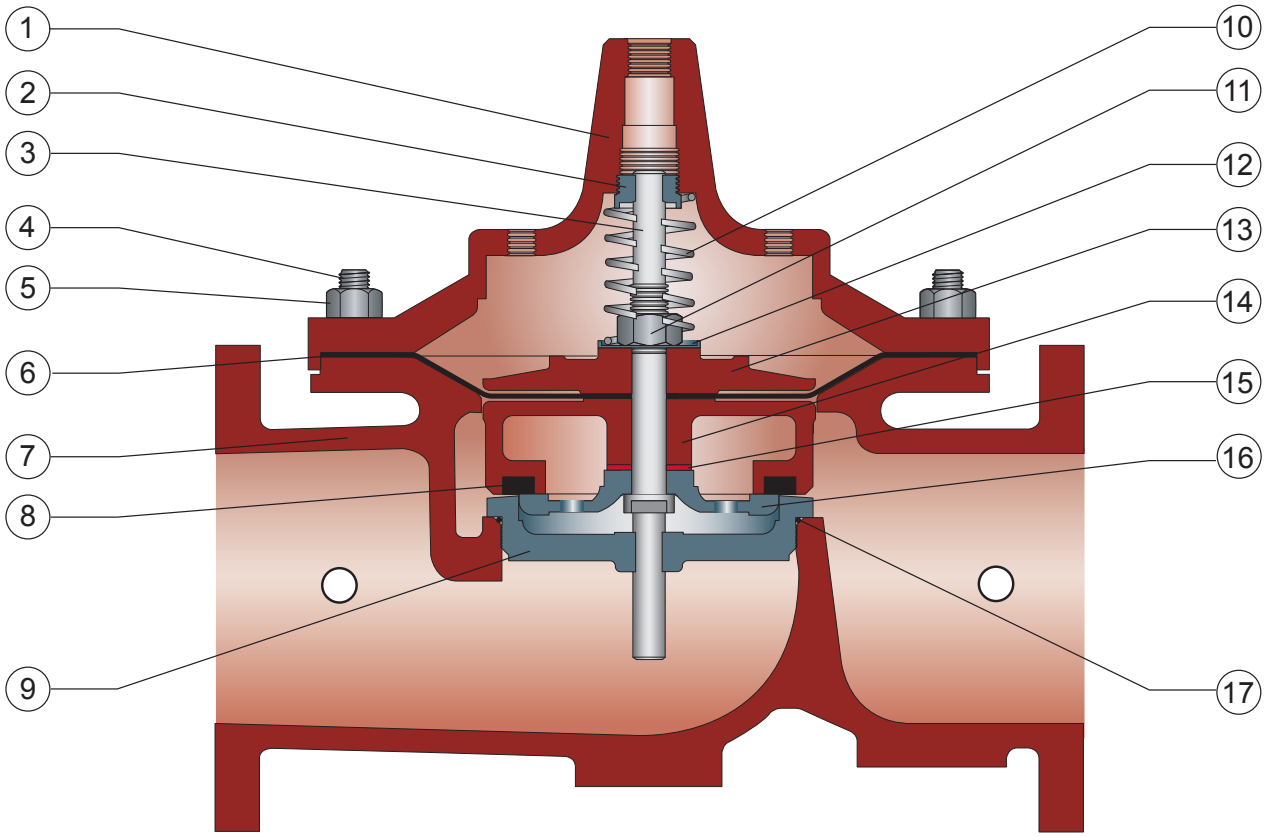
Maximum intermittent flow based on velocity of 25 ft. per second.
Minimum continuous flow based on velocity of 1 ft. per second.

NOTE: The above chart is a suggested guide. Inlet pressure, outlet pressure, minumum, normal and maximum flow rates should be considered for specific valve sizing. Contact Watts ACV for details.



Cavitation Chart

After selecting the valve size, locate inlet and outlet pressures on this chart. If the intersection point falls in the shaded area, cavitation can occur. Operation of valves continually in the cavitation zone should be avoided. Consult Watts ACV for alternatives.

Series LF009

Reduced Pressure Zone Assemblies

Sizes: ¼" – 3" (8 – 80mm)

Series LF009 Reduced Pressure Zone Assemblies are designed to protect potable water supplies in accordance with national plumbing codes and water authority requirements. This series can be used in a variety of installations, including the prevention of health hazard cross-connections in piping systems or for containment at the service line entrance.The LF009 features Lead Free* construction to comply with Lead Free* installation requirements.

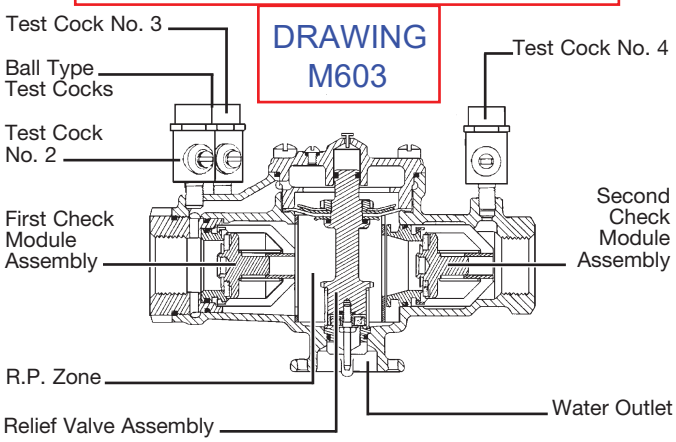
This series features two in-line, independent check valves, captured springs and replaceable check seats with an intermediate relief valve. Its compact modular design facilitates easy maintenance and assembly access. Sizes ¼" – 1" (8 – 25mm) shutoffs have tee handles.

Features

- Single access cover and modular check construction for ease of maintenance
- Top entry - all internals immediately accessible
- Captured springs for safe maintenance
- Internal relief valve for reduced installation clearances
- Replaceable seats for economical repair
- Lead Free* cast copper silicon alloy body construction for durability ¼" – 2" (8 – 50mm)
- Fused epoxy coated cast iron body 2½" and 3" (65 and 80mm)
- Ball valve test cocks — screwdriver slotted ¼" – 2" (8 – 50mm)
- Large body passages provides low pressure drop
- Compact, space saving design
- No special tools required for servicing

Specifications

A Reduced Pressure Zone Assembly shall be installed at each potential health hazard location to prevent backflow due to backsiphonage and/or backpressure. The assembly shall consist of an internal pressure differential relief valve located in a zone between two positive seating check modules with captured springs and silicone seat discs. Seats and seat discs shall be replaceable in both check modules and the relief valve. There shall be no threads or screws in the waterway exposed to line fluids. Service of all internal components shall be through a single access cover secured with stainless steel bolts. Body and shutoffs shall be constructed using Lead Free* cast copper silicon alloy materials. Lead Free* reduced pressure zone assembly shall comply with state codes and standards, where applicable, requiring reduced lead content.



The assembly shall also include two resilient seated isolation valves, four resilient seated test cocks and an air gap drain fitting. The assembly shall meet the requirements of: USC; ASSE Std. 1013; AWWA Std. C511; CSA B64.4. Shall be a Watts Series LF009.

TAG: SECTION 22 42 01 2.6 DAR REDUCED PRESSURE

Available Models: ¼" – 2" (8 – 50mm)

Suffix:

QT – quarter-turn ball valves
S – strainer
LF – without shutoff valves
PC – internal polymer coating

Prefix:

U – union connections

Available Models: 2½" – 3" (65 – 80mm)

Suffix:

NRS – non-rising stem resilient seated gate valves
OSY – UL/FM outside stem and yoke resilient seated gate valves
S-FDA – FDA epoxy coated strainer
QT-FDA – FDA epoxy coated quarter-turn ball valves
LF – without shutoff valves

Note: The installation of a drain line is recommended. When installing a drain line, an air gap is necessary (see ES-AG).

Materials: ¼" – 2" (8 – 50mm)

Lead Free* cast copper silicon alloy body construction, silicone rubber disc material in the first and second check plus the relief valve. Replaceable polymer check seats for first and second checks. Removable stainless steel relief valve seat. Stainless steel cover bolts.

Standardly furnished with NPT body connections.
Model LF009QT furnished with quarter-turn, full port, resilient seated, Lead Free* cast copper silicon alloy body ball valve shutoffs.

Materials: 2½" and 3" (65 – 80mm)

- (FDA approved) Epoxy coated cast iron unibody with plastic seats
- Relief valve with stainless steel seat and trim
- Lead Free cast copper silicon alloy body ball valve test cocks

Pressure / Temperature

Sizes ¼" – 2" (8 – 50mm) Suitable for supply pressure up to 175psi (12 bar). Water temperature: 33°F – 180°F (0.5° – 75°C).

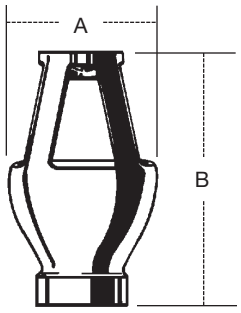
Sizes 2½" and 3" (65 and 80mm) are suitable for supply pressures up to 175psi (12.1 bar) and water temperature at 110°F (43°C) continuous, 140°F (60°C) intermittent.

Standards

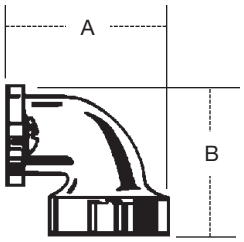
USC
ASSE No. 1013
AWWA C511
CSA B64.4
IAPMO File No. 1563.

Approvals

ASSE, AWWA, CSA, IAPMO



Approved by the Foundation for Cross-Connection Control and Hydraulic Research at the University of Southern California.



Approval models QT, PC, NRS, OSY.

UL Classified
2½" and 3" (65 and 80mm) with OSY gate valves.
¾" - 2" (20-50mm) without shutoff valves (-LF) (except LF009M3LF)

Air Gaps, Elbows and Test Cocks

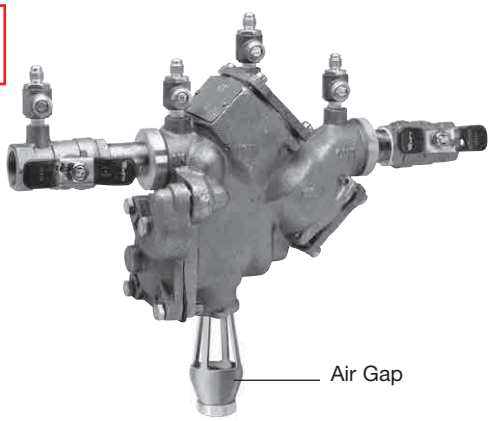
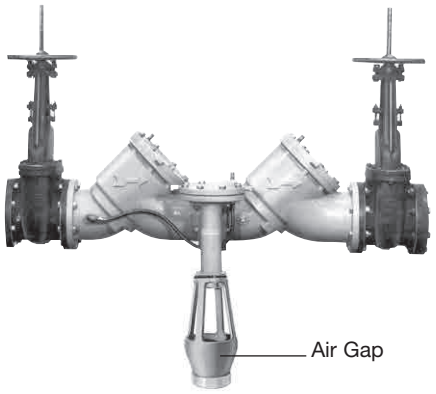
for Reduced Pressure Zone Assemblies



REVIEWED BY MV

Air Gaps

An air gap provides the unobstructed, physical separation between the discharge end of a potable water supply line and an open receiving vessel.



The installation of an air gap and drain line are recommended.

Series 957, 957N, 957Z

Reduced Pressure Zone Assemblies

Sizes: 2½" – 10" (65 – 250 mm)

Series 957, 957N, 957Z Reduced Pressure Zone Assemblies provide protection to the potable water system from contamination in accordance with national plumbing codes. Series 957, 957N, 957Z are normally used in health hazard applications for protection against backsiphonage or backpressure.

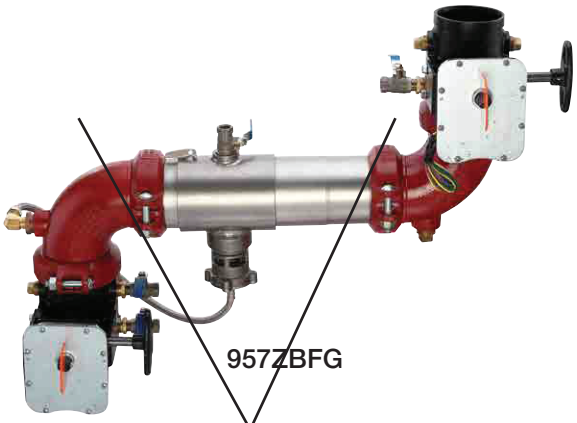
Features

- 2½" 3" and 4" (65, 80 and 100mm) sizes available with quarter-turn ball valve shutoffs
- Replaceable check disc rubber
- Extremely compact design
- 70% Lighter than traditional designs
- 304 (Schedule 40) stainless steel housing & sleeve
- Groove fittings allow integral pipeline adjustment
- Patented torsion spring checks provide lowest pressure loss
- Unmatched ease of serviceability
- Bottom mounted cast stainless steel relief valve
- Available with grooved butterfly valve shutoffs

Specifications

The Reduced Pressure Zone Assembly shall consist of two independent torsion spring check modules, a differential pressure relief valve located between and below the two modules, two drip tight shutoff valves, and required torsion spring check modules and relief valve shall be contained with a sleeve accessible single housing constructed from 304 (Schedule 40) stainless steel pipe with groove end connections. Torsion spring checks shall have replaceable elastomer discs and in operation produce drip tight closure against the reverse flow of liquid caused by backpressure or backsiphonage. Assembly shall be a Watts Regulator Company Series 957, 957N, 957Z.

NOTICE



Inquire with governing authorities for local installation requirements

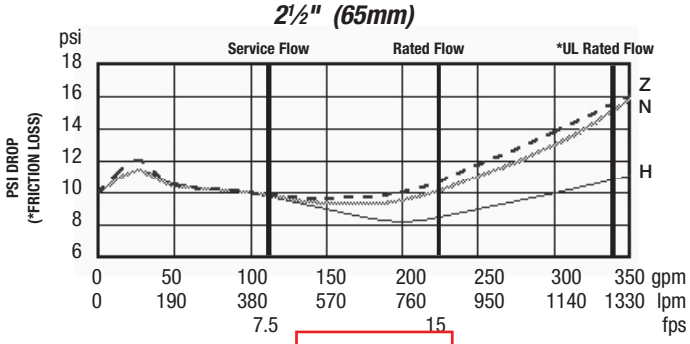
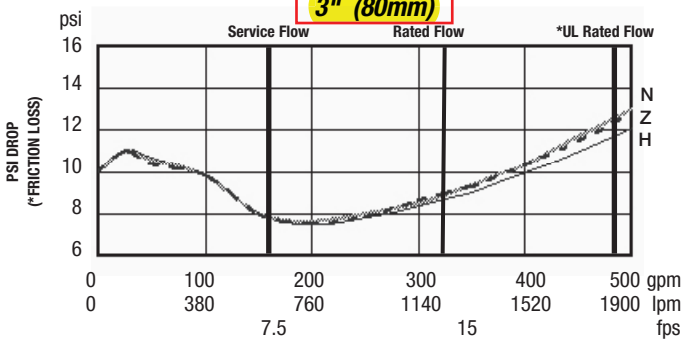
Capacity

Series 957, 957N, 957Z flow curves as tested by Underwriters Laboratory.



Flow characteristics collected using butterfly shutoff valves

——— Horizontal ——— N-Pattern - - - - - Z-Pattern



Flow capacity chart identifies valve performance based upon rated water velocity up to 25fps

- Service Flow is typically determined by a rated velocity of 7.5fps based upon schedule 40 pipe.
- Rated Flow identifies maximum continuous duty performance determined by AWWA.
- UL Flow Rate is 150% of Rated Flow and is not recommended for continuous duty.
- AWWA Manual M22 [Appendix C] recommends that the maximum water velocity in services be not more than 10fps.

Firestop Collar (CP 643N)

Product description

- A ready-to-use firestop collar, made of a galvanized steel housing and intumescent inserts for firestopping combustible pipes

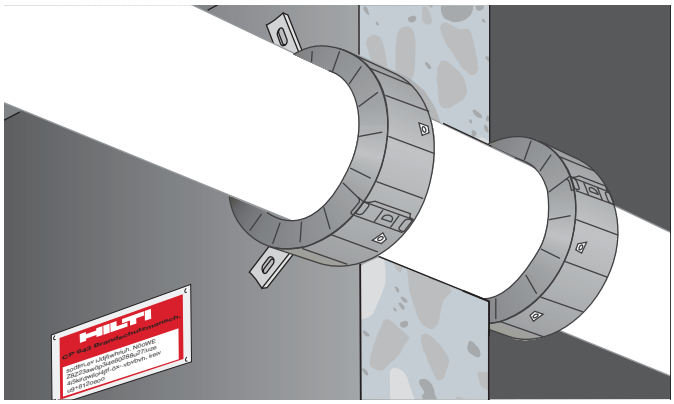
Product features

- Ready-to-use collar
- No construction required
- Fast installation time
- Adjustable mounting tabs
- Low profile for tight installations

Areas of application

- Firestopping combustible pipes up to 6" diameter in penetrations through fire walls and floors
- Suitable for the following pipe materials:
- PVC, CPVC, ABS, PVDF, PP and FRPP

For use with



- Concrete, masonry, wood floor and gypsum wall assemblies
- Wall and floor assemblies rated up to 4 hours

Types of installation

- Wall: two collars, one on each side
- Floor: one collar on underside (bottom)

Example

- Waste water pipes
- Fresh water pipes

Technical Data	CP 643N		
Description	Pipe outside dia (in.)	Collar outside dia. (in.)	Collar Height (in.)	No. of hooks and fasteners

Installation instructions for CP 643N

Notice

- Before handling, read Material Safety Data Sheet and product label for safe usage and health information.
- Instructions below are general guidelines — always refer to the applicable drawing in the UL Fire Resistance Directory or Hilti Firestop Systems Guide for complete installation information

Opening

1. Clean the plastic pipes. Expansion of the intumescent material during a fire acts to close the plastic pipe. Very dirty pipes (ie: with remains of mortar) may lead to a delay in this closing action. Soiled plastic pipes should, therefore, be cleaned in the area where the CP 643N Firestop Collar is to be installed.

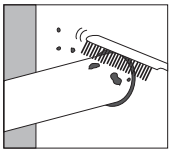
Application of firestop system

2. Seal the opening if required. Gaps may be closed with FS-ONE. The approved methods vary and are given in the specific UL system.
3. Close the CP 643N Firestop Collar. Place the CP 643N Firestop Collar around the plastic pipe and lock the closure by applying firm pressure until it latches.
4. Attach fastening hooks. The fastening hooks can be attached to various points on the metal housing. This allows the fastening points to be made to suit the space available in each case. The hooks must be positioned as symmetrically as possible. The required number of fastening hooks is indicated on the packaging.
5. Fastening the CP 643N Firestop Collar. Only when fastened properly can CP 643N offer protection against fire.

a. Mark the fastening points.

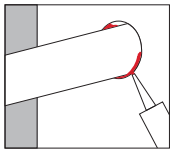
b. Drill holes with a Hilti rotary hammer drill (i.e. TE 4-A18) or, depending on base material, fasten using Hilti powder-actuated tool.

c. To secure the CP 643N Firestop Collar, use Hilti anchors/fasteners.



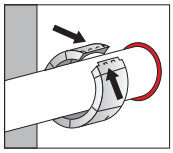
d. For maintenance reasons, a penetration can be permanently marked with an identification plate and fastened in a visible position next to the seal.

Not for use

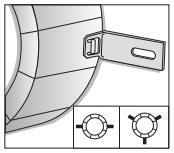


- With metal pipes
- In highly corrosive surroundings
- With unapproved anchors/fasteners

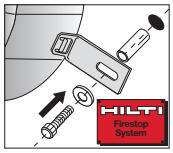
Storage



- Store only in the original packaging in a location protected from moisture



1. Clean plastic pipe.



2. Close remaining gap to provide smoke and gas resistant seal.

3. Close collar.

4. Attach fastening hooks.

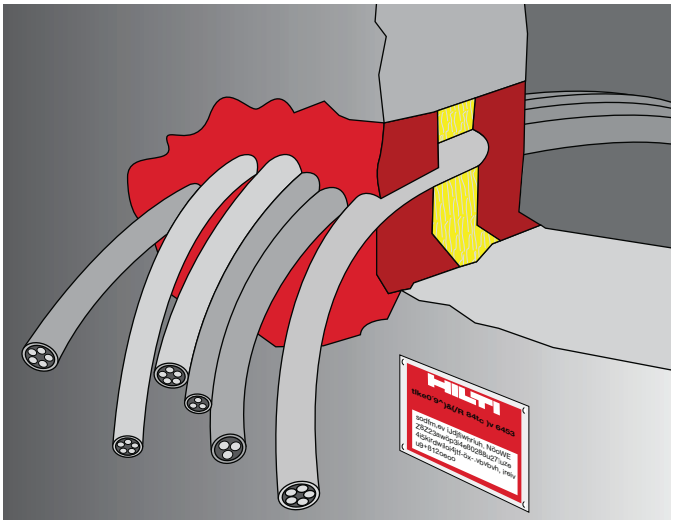
5. Fasten collar and identification plate (if required).

Hilti Firestop
Saving lives through innovation and education

Hilti. Outperform. Outlast.

High performance intumescent firestop sealant FS-ONE MAX

Product description



- Intumescent (expands when exposed to fire) firestop sealant that helps protect combustible and non-combustible penetrations for up to 4 hours fire rating

Applications

- Effectively seals most common through penetrations in a variety of base materials
- For use on concrete, masonry and drywall
- Mixed and multiple penetrations
- Metal pipe penetrations
- Insulated metal pipe penetrations
- Plastic pipe penetrations
- Cable bundles and trays
- HVAC penetrations

Advantages

- One product for a variety of common through penetrations
- Cost-effective and easy-to-use solution
- Water-based and paintable
- W-rated systems available
- Ethylene glycol-free
- Industry leading VOC results
- Convenient multi application firestop solution for penetrations

Technical Data*	
Chemical basis	Water-based acrylic dispersion
Color	Red
Application temperature	41°F to 104°F
Storage and transportation range	41°F to 77°F
Approx. cure time *	4 mm / 3 days
Shelf life	12 months **
Temperature resistance range	-4°F to 212°F
Mold and mildew performance	Class 0 (ASTM G21-13)
Mold and mildew resistant	Yes
Surface burning characteristics (ASTM E 84-14)	Flame Spread: 0 Smoke Development: 10
Approvals	California State Fire Marshal - in progress
Tested in accordance with	ASTM G21 ASTM E 90 CAN/ULC-S115 UL 1479 ASTM E 814 ASTM E84

* At 75°F (24°C) and 50% relative humidity
** from date of manufacture

DESCRIPTION

The Apollo® LD141/WD141 Series Ductile Iron Butterfly Valves are ideal for use in Industrial and HVAC/Mechanical applications. The WD141 Series is a wafer style valve and the LD141 Series is a companion lug style.

FEATURES

- Compatible with ANSI 125# & 150# Flanges
- ISO 5211 Top Plate Allows Choice of Apollo® Pneumatic Actuators and manual operators
- Conforms to MSS SP-67 & API 609
- LD141 Series Suitable for End of Line Service to Rated Pressure (2" - 12")
- 3" -24" meet performance requirements of AWWA C-504

PERFORMANCE RATING

- Pressure Rating: 2" to 12": 200 psi
- Pressure Rating: 14" to 24": 150 psi

APPROVALS

- NSF/ANSI 372 Lead Free
- CRN 0C12102.8CL

MATERIAL OPTIONS

Body
- Ductile Iron ASTM A536, (65-45-12)

Disc Material
- Aluminum Bronze
- Ductile Iron A536 Nickel Plated
- Stainless Steel, CF8M

Seat Material
- EPDM: -20°F to +250°F Intermittent, 225°F Continuous
- BUNA-N: +10°F to +180°F

Operator
- -0 - None
- -1 - 10 Position Handle
- -2 - Gear Operator (12" handwheels)
- -3 - Infinite Position Handle
- -4 - Locking Handle
- -5 - Gear Operator w/ Chain Wheel
- -7 - Locking Gear Operator
- -8 - Locking Gear Operator w/ Chain Wheel

Provide with nickel plated ductile iron disc

Provide with 10 position lever handle

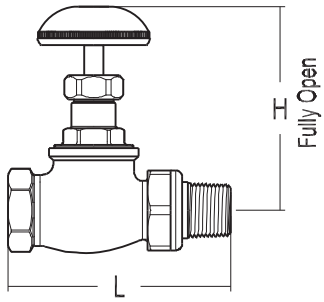
SECTION 23 05 22 2.4 RADIATOR GLOBE VALVES

Dahl Brass Radiator Valves
Heavy Pattern - Straight

TDS-1004
Rev July/10
Replaces: TDS-3



For Steam, Forced Heating or Cooling Systems

- Self-adjusting, spring loaded packing system
- Low friction packing
- Working pressure/temperature: 250 psi / 250°F
- Designed and manufactured in Canada
- Swivel-type disc holder minimizes wear
- Replaceable disc
- Glass-filled Teflon® disc is good for low pressure steam applications (150 WSP / 300 W), standard on all heavy pattern valves

Balancing Valves
TA Series 786/787/788/789 and Series 78K

08.16

Product Description:

Tour & Andersson calibrated balancing valves offer a reliable, simple and cost effective way to measure and balance all flow rates. Full throttling range is achieved by 4, 8, 12, 16, 20 or 22 full turns of the handwheel, enabling a precise setting. This high degree of accurate adjustment means that the system can be balanced precisely.

The actual pressure drops in heating and cooling systems are difficult to establish by calculation because water flows vary from design flows. They can be corrected easily by regulating the desired water flow with Tour & Andersson globe style balancing valves. By measuring the pressure drop across measuring ports at a particular handwheel setting, the water flow for the valve size can be read easily from the appropriate pressure drop graph or flow balancing wheel. If the flow does not conform with that specified, adjust the valve and repeat the measuring procedure until the correct flow has been obtained.

NOTE: All Tour & Andersson balancing valves include a concealed memory feature with a locking tamper-proof setting.

Series 78K and TA Series 786 and 787 valves have an Ametal® body.

TA Series 788 and 789 balancing valves have ductile iron bodies and Ametal or ductile iron trim, depending on size. Test ports feature self-sealing construction for insertion-type pressure or temperature probes.

All valves are rated from –4°F/–20°C to +250°F/+120°C. Service will also be governed by the connecting coupling gasket ratings for grooved and flanged valves.

Insulation kits are available for ½ – 6"/15 – 150 mm sizes for Series 78K and TA Series 786, 787, 788 and 789 balancing valves.

Victaulic Series 799/79V KOIL-KIT™ Coil Pack
Note: TA Series 787 shown, other options available.

Balancing valves can be ordered individually or as a component of the Series 799, 79V, 79B, or 79A KOIL-KIT Coil Pack. See the Series 799/79V/79B/79A Contractor Order Form (A) (publication SF-33) for help ordering your Victaulic KOILKIT Coil Pack.

Victaulic KOIL-KIT Coil Packs provide a simplified, quality coil installation while ensuring optimal hydronic systems design requirements are met. The Series 799/79V is suitable for a variety of hot and cold water applications including treated and untreated water systems.

The Victaulic KOIL-KIT Coil Pack consists of the following components: Series 78Y Y-Strainer/Ball Valve or Series 78T Ball Valve Union Combination, two Coil Hoses, a Series 78U Union Port Fitting and a TA balancing valve. There are two options when ordering a Victaulic KOIL-KIT Coil Pack: Series 799 KOIL-KIT Coil Pack or Series 79V KOIL-KIT Coil Pack with ATC Valve.

The Series 799 and Series 79V comes standard with the components listed above. Additionally, the Series 79V includes the option to have the ATC valve of your choosing assembled and shipped with the Victaulic KOIL-KIT Coil Pack. Please note that when ordering a Series 79V, Victaulic offers one balancing valve, the Series 78K. Specify either Series 799 or Series 79V when ordering.

The Series 79B and Series 79A come standard with the components listed above, however these two packages also include the Bypass Option. When choosing a Victaulic KOIL-KIT Coil Pack with a Bypass Option, the following components are available as options: Series 78Y with Bypass Tee or Series 78T with Bypass Tee, a third coil hose, and a bypass valve. (Bypass valve options consist of Series 78Y, 78T, 78K, 786, 787).

The Series 79A includes the Bypass Option and the option to have the ATC valve of your choosing assembled and shipped with the Victaulic KOIL-KIT Coil Pack.

For added convenience, when coil hoses are ordered as a component of the Series 799 or 79V KOIL-KIT Coil Pack, all hoses can be provided pre-connected to the Series 78Y or 78T on the supply side and the Series 78U on the return side (specify connection preference when ordering).

For information on Victaulic KOIL-KIT Coil Packs in ½ – 2"/15 – 50 mm sizes, refer to publication 08.30.

For information on Victaulic KOIL-KITS for air handling units in 2 ½ – 6"/65 – 150 mm sizes, refer to publication 08.35.

Material Specifications:

Balancing Valves

Body:

Series 78K and TA Series 786, 787: Ametal, (pressure die cast, nonporous copper alloy)

TA Series 788, 789: Ductile iron, ASTM A536 Grade 60-40-18 (BS Grade 400/15)

Body coating:

TA Series 788, 789: 2 ½, 3, 4" – Epoxy resin coated

5 – 16" – painted

Trim: (Bonnet, Stem and Restriction Cone)

Series 78K and TA Series 786, 787: Ametal

TA Series 788, 789:

Bonnet – 2 ½ – 6" – Ametal

Bonnet – 8 – 16" – Ductile Iron

Stem: Ametal

Restriction Cone: Ametal

Union:

Series 78K: Brass with EPDM o-ring

Tailpiece & adapter:

Series 78K: DZR Brass

Seat:

Series 78K, and TA Series 786, 787: Ametal

TA Series 788, 789: Ductile Iron

Seat seal:

Series 78K and TA Series, 786, 787, 788, 789: EPDM

Stem seals:

EPDM

Probe seals:

EPDM

Handwheel:

Series 78K and TA Series 786, 787 – Red Polyamide plastic

TA Series 788, 789: 2 ½ – 6" – Red Polyamide plastic

8 – 16" – Aluminum

Optional Equipment:

☐ TA Series 786, 787: Drain kit-Ametal

☐ TA Series 786, 787: Insulation Kit-Polyurethane.

Also available on TA Series 789 2 ½ – 6" sizes.

Allen wrench sizes:

3 mm memory ½ – 2" TA Series 786, 788 valves

5 mm memory 2 ½ – 12" TA Series 788 & 2 ½ – 6" TA Series 789 valves

8 mm memory 8 – 16" TA Series 789 valves

5 mm drain kit ½ – 2" TA Series 786 valves

Comparison of balancing valve throttling characteristics

This curve illustrates the advantage of the four (4) turn adjustment available with Tour & Andersson balancing valves (½ – 2"/15 – 50 mm). Valves 2 ½"/65 mm) and larger have 8, 12 or 16 turns.

A 90° fully open to closed valve requires just a 12° change in adjustment to equal 30% change of the flow.

Tour & Andersson balancing valves would require a 408° change in adjustment to equal the same 30% change in the flow.

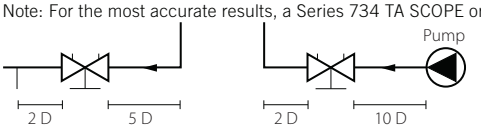
Important Notes:



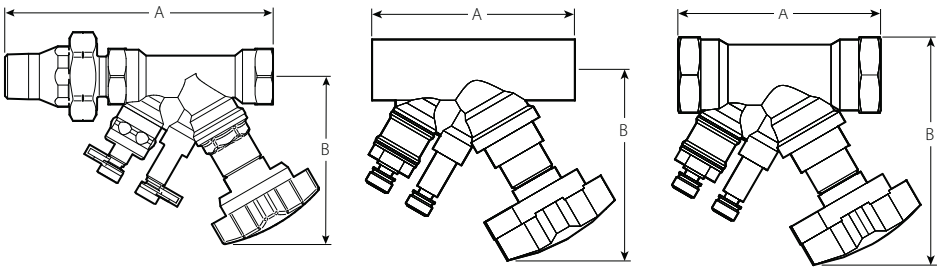
Balancing valves should be sized in accordance with the GPM/LPM flows (and not in relation to pipeline size). Sizing balancing valves based on the minimum or maximum flow rates is not recommended. Valves should be sized using the nominal flow rate only. The Minimum Flow is calculated from the minimum open setting of the valve and a minimum pressure drop 1 Ft. WG (= 3 kPa). The Nominal Flow is calculated from the maximum open setting of the valve and the minimum recommended pressure drop, 2 Ft. WG (= 6 kPa). The Maximum Flow is calculated from the maximum open setting of the valve and the maximum pressure drop, 20 Ft. WG (= 60 kPa). A computer program, TA-Select, is available for calculation of valve handwheel pre-set position and other applications.

Note: For information regarding Allen Wrench sizes see the Material Specifications section on page 3..

Measuring Accuracy:

The hand wheel zero position is calibrated and must not be changed. Valves have an accuracy of flow measurement of 2% to 3% when used within their recommended flow range and installed in accordance with the figure below.

Note: For the most accurate results, a Series 734 TA SCOPE or Series 73M CMI should be used. However, any differential pressure meter may be used.



The illustration relates to the accuracy of differential pressure measurement and is not an installation requirement.

3 Only the TA Series 788 Flanged End Balancing Valves is available in 14-16" / 350-400mm sizes

Important Notes (See page 5 for Balancing Accuracy):

Balancing valves should be sized in accordance with the GPM/LPM flows (and not in relation to pipeline size). Sizing balancing valves based on the minimum or maximum flow rates is not recommended. Valves should be sized using the nominal flow rate only. The Minimum Flow is calculated from the minimum open setting of the valve and a minimum pressure drop 1 Ft. WG (= 3 kPa). The Nominal Flow is calculated from the maximum open setting of the valve and the minimum recommended pressure drop, 2 Ft. WG (= 6 kPa). The Maximum Flow is calculated from the maximum open setting of the valve and the maximum pressure drop, 20 Ft. WG (= 60 kPa).A computer program, TA-Select, is available for calculation of valve handwheel pre-set position and other applications.

Note: For information regarding Allen Wrench sizes see the Material Specifications section on page 3.

Note: For the most accurate results, a Series 734 TA SCOPE or Series 73M CMI should be used. However, any differential pressure meter may be used.

Link Differential Pressure Sensor

TA Series 736

Provides connection between a building's heating and cooling and building's monitoring system (BMS).

Continuously measures the flow and differential pressure through and across the Tour & Andersson balancing valves.

Measurement probes provided for direct connection to the measurement points on all TA Series 786, 787, 788, and 789 balancing valves.

TA Select Computer Program

TA Select helps you choose the right balancing valve, taking the desired flow rate and pressure drop into consideration. The software will advise the correct combination of valve, handwheel position and pipe size to correctly balance the system. A sophisticated viscosity correction procedure displays the density, viscosity, specific heat and freezing point of fluids such as glycols and brines. It also displays the true value of flow through each valve.

The program will also size the pipe, generate Cv values for the ATC valves and give pre-set information for all TA valves on the project.

TA SCOPE

TA Series 734

The TA Series 734 SCOPE is a wireless, handheld device for the swift and accurate measurement of differential pressure, flow, temperature and power.

An independent sensor communicates with the TA SCOPE to deliver data quickly, thereby enabling contractors to balance a system, troubleshoot hydronic problems and log system performance.

The TA Series 734 SCOPE Premium is a more robust case compared to the TA Series 734 SCOPE. See page 12 of this publication for additional details on the TA SCOPE and TA SCOPE Premium.

Differential pressure:
- TA SCOPE: 0-29 psi / 0-200 kPa
- TA SCOPE (High Pressure): 0-145 psi / 0-1000 kPa

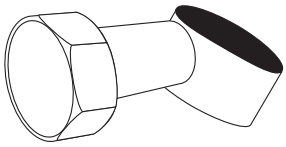
 © 2014 Victaulic Company. All rights reserved.

TA Series 734 SCOPE Premium / SCOPE

TA SCOPE Premium case is a robust partitioned case that includes:

- Combined safety pressure and temperature probe allowing automatic correction for fluid temperatures and easier power measurements
- A large set of accessories
- Extra space for a second (optional) differential pressure sensor and tools.

The TA SCOPE contains a reduced set of accessories compared to the TA SCOPE Premium. All * marked parts are included in both the TA SCOPE Premium and TA SCOPE kits.



1. *Handheld unit (Hh)
2. *Dp Sensor unit (DpS)
3. *Digital Temperature Sensor (DTS)
4. *Measuring hoses, 20 in. red/blue
5. Safety pressure and temperature probe (SPTP)
6. Safety pressure probes (SPP)
7. Measuring hoses with twin needle, 5.9 in
8. Flashlight
9. Mirror
10. Chucks for older valves, red/blue
11. *Allen Keys 3mm/5mm
12. Spanner for measuring points on older valves
13. *Presetting tool TA Series TC/TCM/TCP
14. *Spare filters (4 pcs)
15. Chain for mounting
16. Neckstrap
17. *USB-cables for connection: Hh - DpS and Hh - PC
18. *Multi-charger for handheld, Dp sensor(s) and TA-SCOPE Relays
19. *DC cable (2 PCS)
20. *AC cable (EU, UK, US or AU.NZ)
21. Cable wrapping
22. *Case
23. TA-Select Software
24. User manual
25. *Calibration certificates for DpS, DTS, and SPTP
26. *Quick Guide
27. SPTP/SPP instruction
28. SPTP/SPP stickers

NOTE: * Denotes this part is available in the SCOPE as well as the SCOPE Premium.

Accessories

Drain Kit Series 786-DK

- A separate drain kit with a ¾"/20 mm connection is available for Series 786 and Series 787 valves
- Kit must be field mounted
- Kit comes complete with 2 gaskets and a hexnut.
- Partcode= K-000-786-CBV

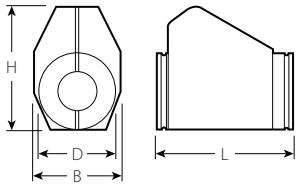
Balancing Wheel



By using the balancing wheel it is easy to determine the relationship between flow, pressure drop and the handwheel setting values for all valve sizes. Order the balancing wheel from your nearest Victaulic representative.

Correction Factors:

For liquids other than water, the flow values from the balancing wheel can be adjusted as follows:

Divide the flow rate (as indicated by the balancing wheel) by the square root of the specific gravity.

$$\text{Actual Flow} = \frac{q_{CBI}}{\sqrt{SG}}$$

This applies to liquids having, on the whole, the same viscosity as water, i.e. most water/glycol mixtures and water/brine solutions at room temperature. At low temperatures, the viscosity increases and laminar flow may occur in certain valves. The risk increases with small valves, low settings and low differential pressures.

A computer program (TA-Select) is available for calculation of pre-setting values and other applications. When the flow setting is verified or changed to the final setting, the memory stop should be set. Contact Victaulic for further information.

Correction Factors:

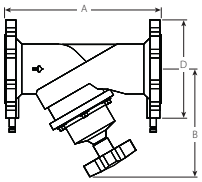
When Δp and the design flow rate are known, use the formula shown to calculate the C_V value or use the graphs on page 17 – 19. The Tour & Andersson balancing wheel can also be used.

$$C_v = 1.52 \frac{q}{\sqrt{\Delta p}}$$

q in GPM, Δp in Ft. of H_2O

$$C_v = \frac{q}{\sqrt{\Delta p}}$$

q in GPM, Δp in psi



A computer program, TA-Select, is available from Victaulic for calculation of pre-setting values and other applications.

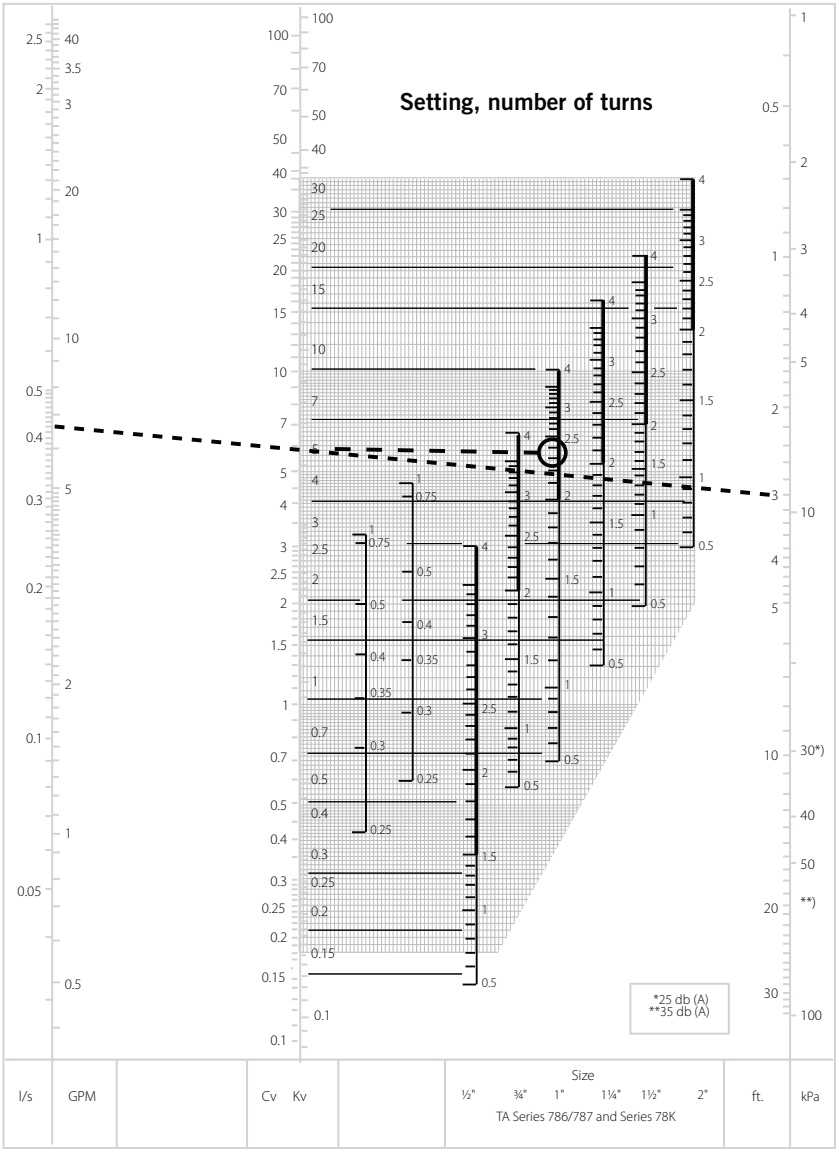
Diagram

TA Series 786/787 and Series 78K

This graph shows the pressure drop across the pressure test points of the valve.

A straight line connecting the bars for flow rate, C_V and pressure drop shows the relationship between these variables. The position for each valve size is arrived at by drawing a horizontal line from the C_V value obtained.



Example:

Wanted: Pre-setting for a 1" valve at a desired flow rate of 6.7 GPM and a pressure drop of 3 ft.

Solution: Draw straight line joining 6.7 GPM and 3 ft. This gives C_V = 5.9. Now draw a horizontal line from C_V = 5.9. This intersects the bar for a 1" valve at the desired pre-setting of 2.35 turns.

Note:

If the flow rate falls outside of the scale in the diagram, the reading can be made as follows: Starting with the example above, we get 3 ft., C_V = 5.9 and the flow rate 6.7 GPM. At 3 ft. and C_V = .59 we get the flow rate .67 GPM. That is, for a given pressure drop, it is possible to read 10 times or 0.1 times the flow and C_V values.

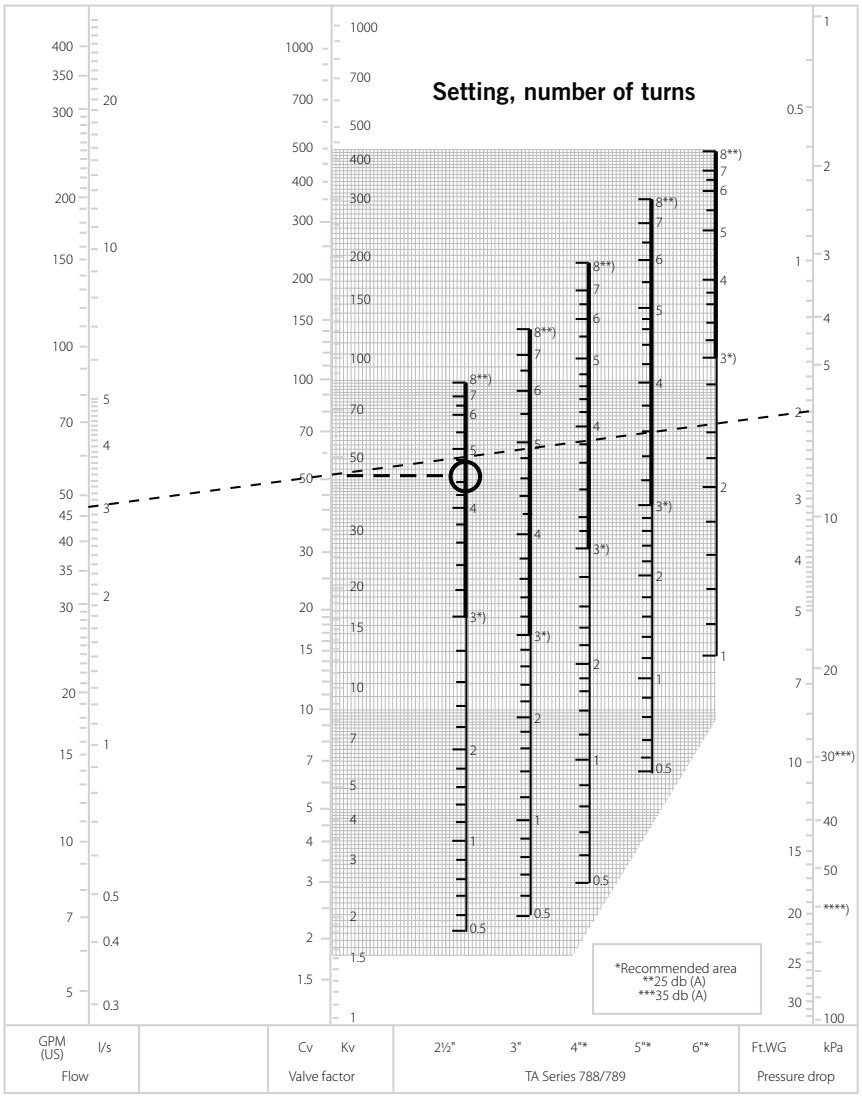
Diagram

TA Series 788/789
Sizes 2½ – 6"/60 – 150 mm

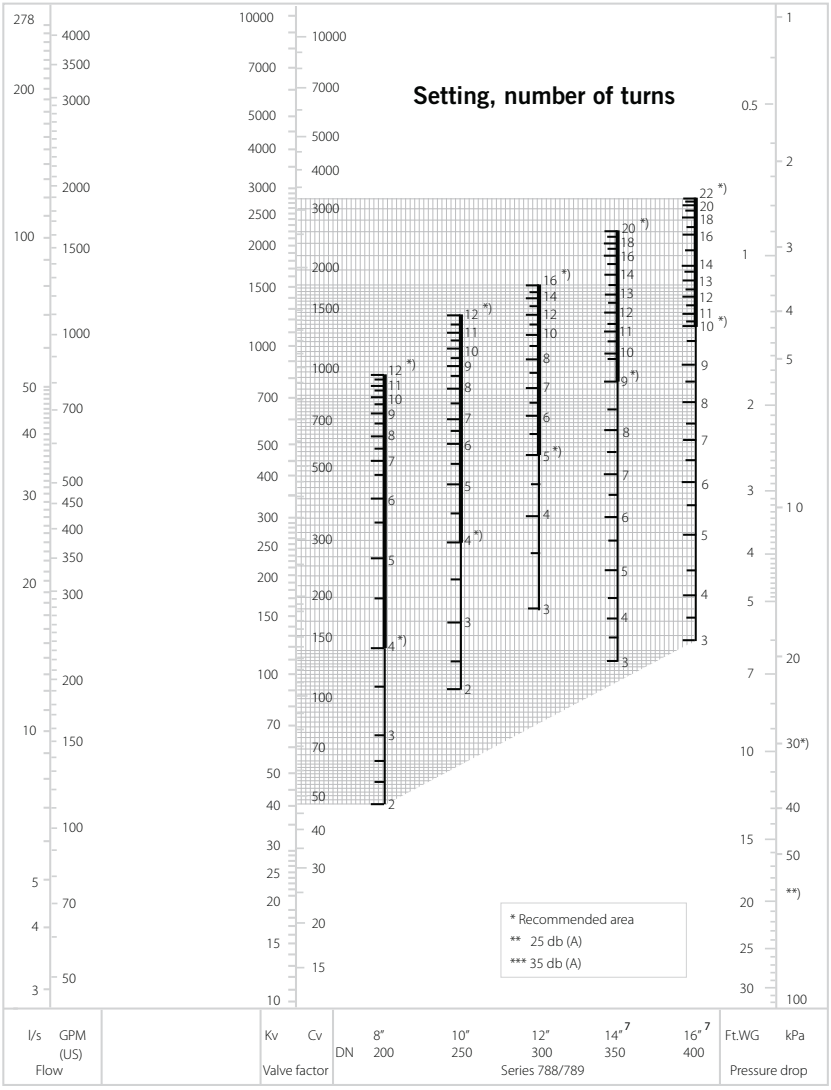


This graph shows the pressure drop across the pressure test points of the valve.

A straight line connecting the flow rate scale, C_V and pressure drop shows the relationship between these variables.

Example:

Wanted: Pre-setting for a TA Series 788 or TA Series 789 2 ½" at a desired flow rate of 47 GPM and a pressure drop of 2 ft. WG.



Solution: Draw straight line joining 47 GPM and 2 ft. WG. This gives C_V = 50. Now draw a horizontal line from C_V = 50. This intersects the flow rate scale for Series 788 2 ½" at the desired pre-setting of 4.5 turns.

Typical Specifications:

SERIES 78K – (½ – 2" M x F)

TA SERIES 786 STAS – (½ – 2" SOLDER WITH DIGITAL HAND WHEEL)

TA SERIES 787 STAD – (½ – 2" NPT)

Furnish and install, as shown on the job plans, TA Series 786/787 Balancing Valves with provision for connecting a portable differential (Ft. of Head) pressure meter. Each meter shall have pressure/temperature probes.

The balancing valves shall be Y-pattern globe style design and all metal parts of nonferrous, pressure die cast, nonporous Ametal. Each valve shall provide four (4) functions:

(1) Precise flow measurement, (2) Precision flow balancing, (3) Positive shut-off with no drip seat, eliminating the need of an additional isolation valve, (4) Drain connection using 3/4 " NPT hose end thread.

These valves shall have four (4) 360° adjustment turns of the handwheel for precise setting with hidden memory to provide a tamper-proof balancing setting. Handwheel shall have digital readout. The handwheel can be installed in any position without affecting performance.

TA SERIES 788 STAF – (2 ½ – 12" FLANGED WITH DIGITAL HAND WHEEL)

TA SERIES 789 STAG – (2 ½ – 12" GROOVED WITH DIGITAL HAND WHEEL)

Furnish and install, as shown on the job plans, TA Series 788/789 Balancing valves with provision for connecting a portable differential (Ft. of Head) pressure meter. Each meter connection shall have pressure/temperature probes.

The balancing valves shall be Y-pattern globe style design with ductile iron body all other wetted parts of nonferrous, pressure die cast Ametal. Each valve shall provide three (3) functions:

(1) Precision flow measurement, (2) Precision flow balancing, (3) Shut-off feature, eliminating the need of an additional isolation valve.

These valves shall have eight (8), twelve (12), sixteen (16) or twenty-two (22) 360° adjustment turns of the handwheel for precise setting with hidden memory feature to program the valve with precision tamper-proof balancing setting. Handwheel shall have digital readout. The handwheel can be installed in any position without affecting performance.

TA Balancing Valves ½" through 2":

300 psi/2065 kPa, y-pattern, globe type with soldered or threaded ends, non-ferrous Ametal® brass copper alloy body, EPDM o-ring seals. 4-turn digital readout handwheel for balancing, hidden memory feature with locking tamper-proof setting, and connections for portable differential meter. TA Series 786 STAS or 787 STAD.

TA Balancing Valves 2 ½" through 16":

250 psi / 1725 kPa (TA Series 788) 350 psi / 2400 kPa (TA Series 789), y-pattern, globe type with flanged or grooved ends, ASTM A536 ductile iron body, all other metal parts of Ametal® brass copper alloy, EPDM O-ring seals. 8, 12, 16, 20 or 22 turn digital readout handwheel for balancing, hidden memory feature with locking tamper-proof setting, and connections for portable differential meter. TA Series 788 STAF or 789 STAG.

Purchased TA CBI-II or TA CMI balancing instruments are to be left with the project owner upon completion of the project.

Balancing Meter:

If a balancing meter is required to be left with the owner after commissioning, the balancing meter shall be from the same provider as the balancing valves, Victaulic/Tour and Andersson. The Series 734 TA-Scope, or TA Series 73M CMI Pressure Differential Meter are acceptable and are manufactured by Tour and Andersson. Needle gauge type meters will not be allowed.

INSULATION:

For insulation against heat loss or condensation. Preformed rigid polyurethane insulation is available for ½ – 2" TA Series 786/787 valves and for 2 ½ – 6" TA Series 788/789 valves.

Installation
Reference should always be made to the current TA Hydronics installation/assembly instructions for the product you are installing. For coupling and strainer installation, reference should always be made to the I-100 Victaulic Field Installation Handbook for the product you are installing. Handbooks are included with each shipment of Victaulic products for complete installation and assembly data, and are available in PDF format on our website at www.victaulic.com

Warranty
Refer to the Warranty section of the current Price List or contact Victaulic for details.

Note
This product shall be manufactured by Victaulic or to Victaulic specifications. Victaulic recommends all products to be installed in accordance with current TA Hydronics installation/assembly instructions. Victaulic and TA Hydronics reserve the right to change product specifications, designs and standard equipment without notice and without incurring obligations.

DESCRIPTION

The Apollo® LD141/WD141 Series Ductile Iron Butterfly Valves are ideal for use in Industrial and HVAC/Mechanical applications. The WD141 Series is a wafer style valve and the LD141 Series is a companion lug style.

FEATURES

- Compatible with ANSI 125# & 150# Flanges
- ISO 5211 Top Plate Allows Choice of Apollo® Pneumatic Actuators and manual operators
- Conforms to MSS SP-67 & API 609
- LD141 Series Suitable for End of Line Service to Rated Pressure (2" - 12")
- 3" -24" meet performance requirements of AWWA C-504

PERFORMANCE RATING

- Pressure Rating: 2" to 12": 200 psi
- Pressure Rating: 14" to 24": 150 psi

APPROVALS

- NSF/ANSI 372 Lead Free
- CRN 0C12102.8CL

MATERIAL OPTIONS

Body

- Ductile Iron ASTM A536, (65-45-12)

Disc Material

- Aluminum Bronze
- Ductile Iron A536 Nickel Plated
- Stainless Steel, CF8M

Seat Material

- EPDM: -20°F to +250°F Intermittent, 225°F Continuous
- BUNA-N: +10°F to +180°F

Operator

- -0 - None
- -1 - 10 Position Handle
- -2 - Gear Operator (12" handwheels)
- -3 - Infinite Position Handle
- -4 - Locking Handle
- -5 - Gear Operator w/ Chain Wheel
- -7 - Locking Gear Operator
- -8 - Locking Gear Operator w/ Chain Wheel

provide nickel plated ductile iron disc

provide 10 position lever handle

TAG: SECTION 23 21 14 2.2 AUTOMATIC AIR VENT

ES-FV-4M1

For Hydronic Heating Applications

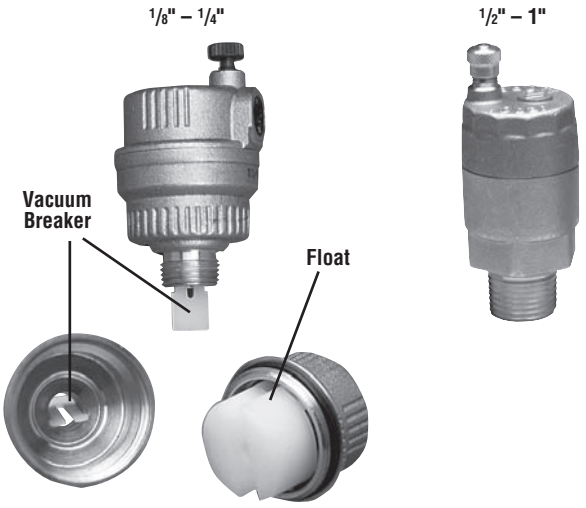
Job Name _____ Contractor _____

Job Location _____ Approval _____

Engineer _____ Contractor's P.O. No. _____

Approval _____ Representative _____

Series FV-4M1



Automatic Air Vent Valves

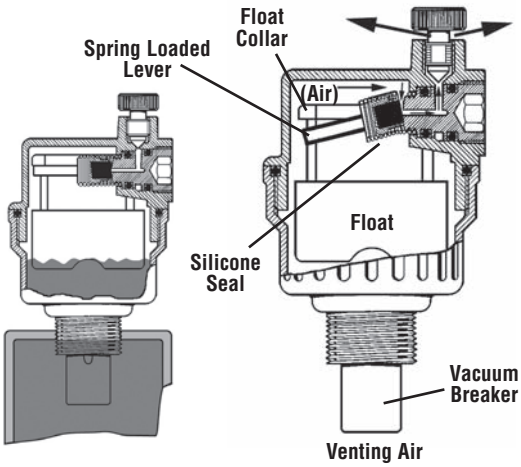
Sizes: ⅛" – 1" (3 – 25mm)

Series FV-4M1 Automatic Air Vent Valves provide automatic air venting for hot or cold water distribution systems. These vents purge air that may be in the water system.

The vent valve utilizes a float to actuate the valve plug which is located at the top of the valve. Once the air is displaced and the system pressure is sustained, the valve plug seals and prevents any water from escaping from the system.

The float vent can also operate as an anti-vacuum device since it will permit air to enter the system when it must be drained. It can also be installed to permit the separation and dispersal of air while fluid is actually circulating in the system.

Features



- Body and cover are brass construction
- Air vent with silicone rubber seal
- Impurities do not usually affect function as maximum float line of water is always lower than the valve seal
- Float is high temperature resistant polyethylene
- Suitable for use with glycol systems
- Can be disassembled for inspection and cleaning

Pressure – Temperature

Minimum working pressure: 1.45psi (10 kPa)

Maximum working pressure: 150psi (10 bars)

Temperature Range: 33˚F – 240˚F (5˚C – 116˚C)

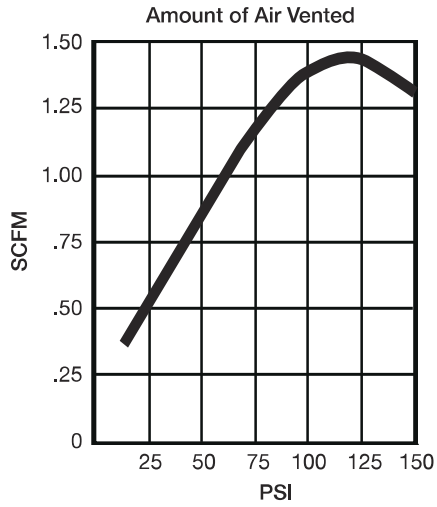


Diagram above shows the quantity of air vented by the "Float Vent" according to the pressure in the system.

Specifications

Air vent shall have brass body & cover and silicone rubber seal. Float shall be constructed of high temperature resistant polyethylene and shall be for use with glycol systems. Air vent shall be Watts Regulator Company Series FV-4M1.

WATTS® REGULATOR

Watts product specifications in U.S. customary units and metric are approximate and are provided for reference only. For precise measurements, please contact Watts Technical Service. Watts reserves the right to change or modify product design, construction, specifications, or materials without prior notice and without incurring any obligation to make such changes and modifications on Watts products previously or subsequently sold.

TAG: SECTION 23 21 14 2.2 AUTOMATIC AIR VENT

Installation

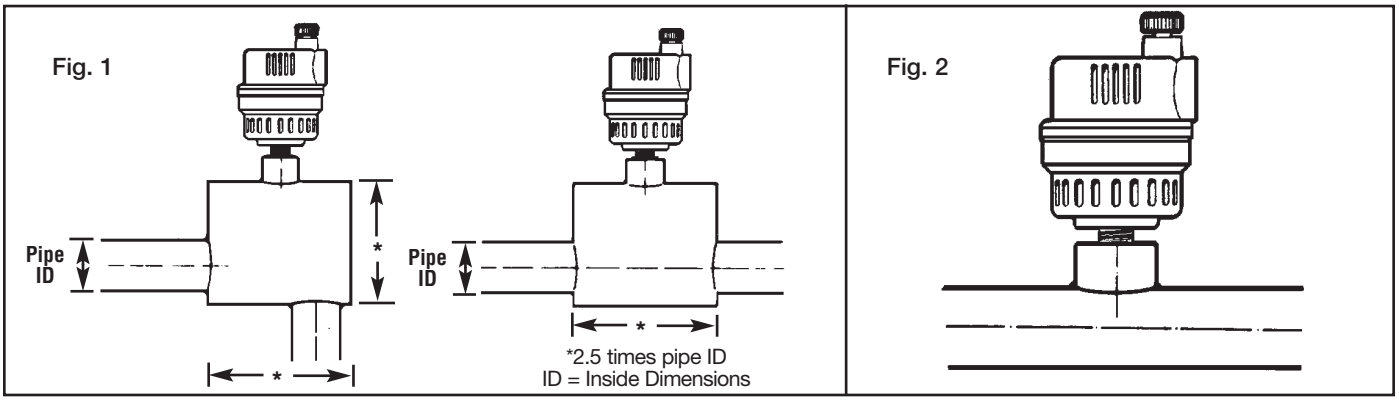

Figure 1 shows the installation of the FV-4M1 for the venting of air while the fluid is circulating in the system. The figure shows the required increase in pipe size in order to obtain proper separation of air from water. Watts Series AS Air Scoop which is designed for efficient separation of air from water in hydronic heating systems can also be installed. See Watts literature S-AS.

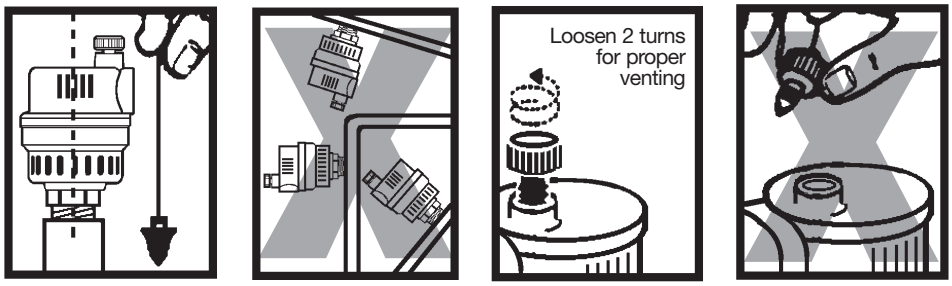
Figure 2 – When the FV-4M1 is installed as shown, the air will not be vented while the fluid is circulating in the system, but it can vent when the system is shut off.

The FV-4M1 should be mounted only in a vertical position as its operation is based on the vertical movement of the float (see Fig. 3).

Note: In order to get the best results in venting air from risers, use connecting pipes of at least ½" diameter between the "Float Vent" valves and the installation.

Maintenance

No maintenance is normally necessary. However, if the FV-4M1 is disassembled for inspection or cleaning it is important that when re-assembling to ensure that the spring loaded lever properly engages under the float collar (see reverse side).



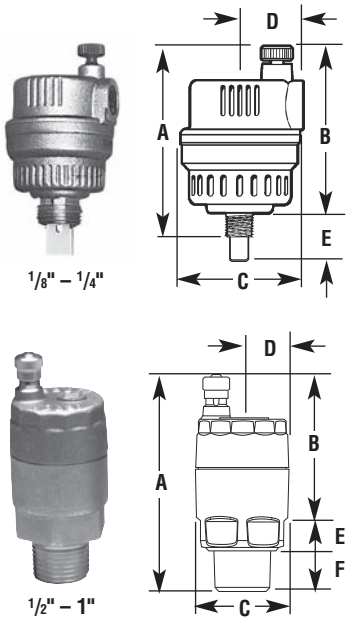


Fig. 3 Fig. 4

Operation: IMPORTANT!

After installing the FV-4M1, back off the small vent cap two turns (see Fig. 4). This is the proper operating setting which will allow air to be vented from the system. It is advisable to leave the cap on to prevent impurities from entering the valve.

Free Floating Lever Air/Gas Vents—Cast Iron

For Pressures to 300 psig (21 bar) or Specific Gravity Down to 0.40

Model 1-AV

Model 2-AV, 3-AV and 6-AV

REVIEWED by MV

Armstrong free floating lever Air/Gas Vents use the same bodies, caps, lever mechanisms, valves and seats of Armstrong inverted bucket steam traps that have been proven in years of service.

Elliptical floats and high leverage make it possible to open large orifices to provide adequate capacity for vent size and weight. The hemispherical valve, seat and leverage are identical in design, materials and workmanship to those for saturated steam service up to 1,000 psig, with the exception of the addition of a guidepost to assure a positive, leaktight valve closing under all conditions.

1-AV—A cast iron air vent that uses a positive-closing free floating lever to ensure leaktight closing under all conditions. This vent is good for low capacity air/gas venting up to 300 psi.

For a fully detailed certified drawing, refer to CD #1070.

2-AV, 3-AV and 6-AV—Cast iron vents using the same proven free floating lever mechanisms used in Armstrong steam traps. For applications where high air/gas venting capacity is required up to 250 psi.

For a fully detailed certified drawing, refer to CD #1034.

TAG: SECTION 23 05 21 2.2 DIRECT READING THERMOMETERS

Description & Features:

- A general purpose, versatile 1" (25mm) to 6" (150mm) dial, 304 stainless steel thermometer
- Bi-metallic sensing element for reliable readings
- Back, bottom or adjustable angle connection
- Welded stem length from 2.5" (63mm) and up
- ±1% accuracy
- Anti-parallax dial that reduces operator reading errors
- Re-zero adjustment screws are standard on the 2" (50mm) to 6" (150mm) dials
- 5 year warranty

Applications:

- Industrial process, food processing and wastewater

Specifications	
Dial	1” (25mm), 2” (50mm), 3” (75mm), 4” (100mm), 5” (125mm), 6” (150mm) aluminum with black markings, dish-shaped
Case	AISI 304 SS
Stem	AISI 304 SS welded to socket, centre back, bottom or adjustable angle configurations (316 SS optional*) 2” (50mm): centre back connection only
Recalibrator	Standard**
Lens	1” (25mm): Acrylic Others: Glass standard, hermetically sealed
Ring	AISI 304 SS
Connection	1” (25mm): None 2” (50mm): ¼” NPT standard 3” (75mm), 4” (100mm), 5” (125mm), 6” (150mm): ½” NPT standard
Sensing Element	Bi-metallic coil
Pointer	Aluminum, painted black
Maximum Operating Pressure	125 psi (861 kPa)
Operating Temperature	75% of full scale value (recommended maximum)
Ambient Temperature	-58°F to 248°F (-50°C to 120°C)
Accuracy	±1%
Enclosure Rating	IP68

*Contact Winters for 316 SS requirements
**Not available on 1” pocket and 2” laboratory thermometer
Note: The use of a thermowell is recommended to protect the thermometer in corrosive or pressure applications, as well as to maintain a closed system during its removal from the process

TBR Bi-Metal Threaded Thermowell

TAG: SECTION 23 05 21 2.3 THERMOWELL

RoHS compliant

Description & Features:

- Available in a wide range of materials for use on most applications
- Standard “stepped construction” offering is complemented by an array of custom thermowells including: straight, tapered, sanitary and flanged configurations
- CRN registered
- 1 year warranty

Applications:

- Allows for the creation of a “sealed system”, whereby the thermometer can be removed from the application without the need for shutting down or draining the system
- To protect the thermometer from possible exposure to the process media

Specifications	
Thermometer Connection	½” NPT female connection standard Other thread sizes are available upon request

TAG: SECTION 23 05 21 2.3 THERMOWELL

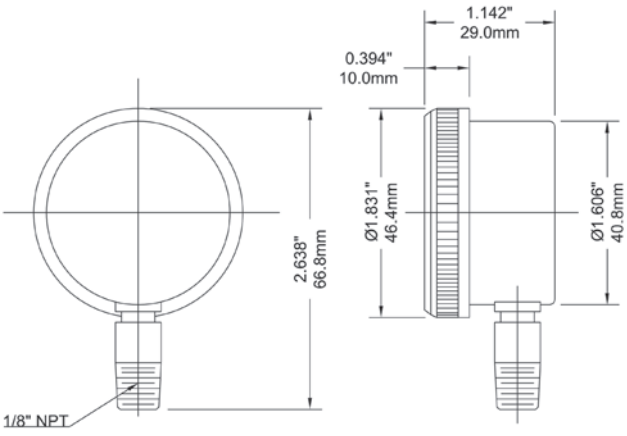
Standard Thermowell without lag

Standard Thermowell with lag

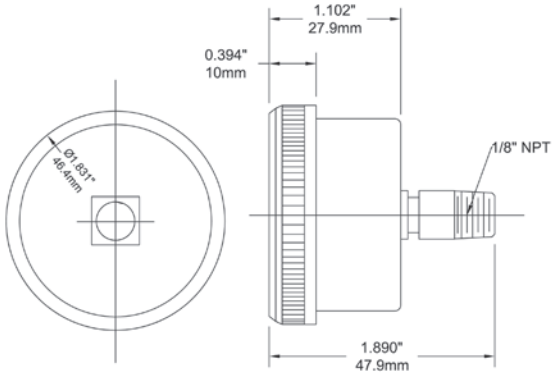
TAG: SECTION 23 05 21 2.4 PRESSURE GAUGES

Description & Features:



- A general-purpose gauge that is serviceable and pulsation resistant
- 1.5” (40mm) to 3.5” (90mm) dial sizes
- Dampened movement combined with a flutterless pointer
- Removable lens
- Zero-adjustment
- ASME B40.100 compliant
- CRN registered
- ±2-1-2% accuracy
- 5 year warranty

Applications:



- Compressors, filters, regulators, water pumps, paint sprayers and a variety of other rapid pressure fluctuation applications
- Suitable for non-clogging and non-corroding media

Specifications	
Dial	1.5” (40mm), 2” (50mm), 2.5” (63mm), 3.5” (90mm) white aluminum with black and red markings
Case	Steel, painted black
Lens	Acrylic, threaded
Socket	Brass
Connection	1/8” NPT or 1/4” NPT standard
Bourdon Tube	Phosphor bronze
Movement	Brass (flutterless) with zero adjustment
Pointer	Aluminum, black
Welding	<1,000 psi: 60% tin 40% lead, ≥1,000 psi: silver alloy
Over-pressure Limit	25% of full scale value
Working Pressure	Maximum 75% of full scale value
Ambient/Process Temperature	-40°F to 150°F (-40°C to 65°C)
Accuracy	±2-1-2% ANSI/ASME Grade A

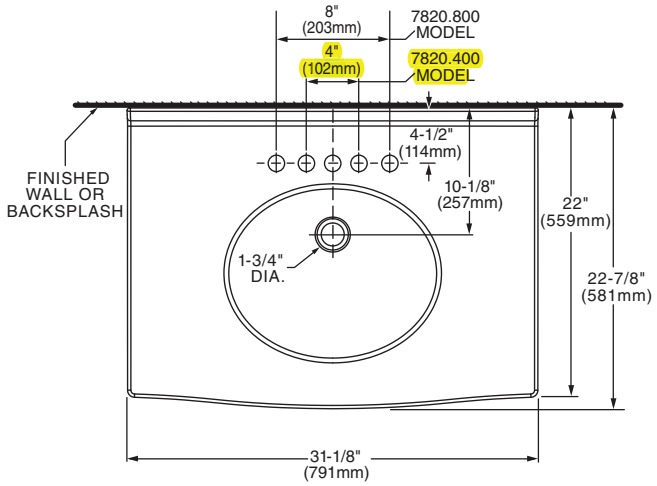
NEWBERN™ VANITY TOP
FINE FIRE CLAY

NEWBERN™ VANITY TOP

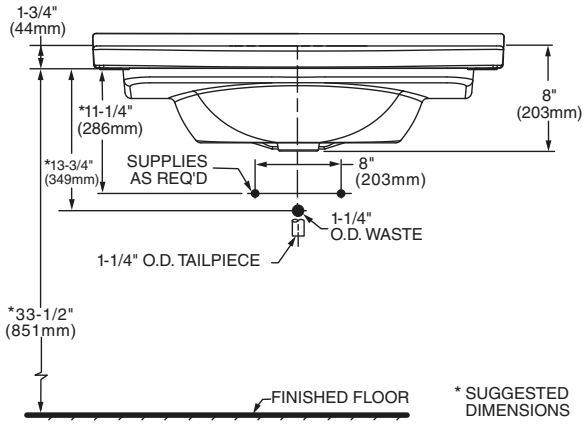
❑ **7820.400** Faucet holes on 4" centers
❑ **7820.800** Faucet holes on 8" centers

- Seamless one piece design made from Fine Fire Clay
- Interior Oval bowl design
- Includes 1" backsplash
- Fits most standard 30" vanities
- Pre-drilled for 4" and 8" faucet holes
- Includes safety overflow design

Nominal Dimensions:
31-1/8" x 22-7/8"
(791 x 581 mm)



Bowl sizes:
16" (406mm) wide
13" (330mm) front to back
6-1/2" (165mm) deep

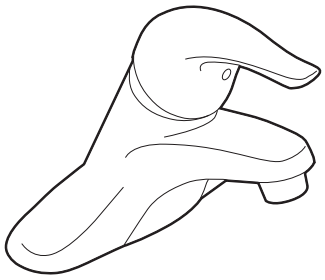


Compliance Certifications -
Meets or Exceeds the Following Specifications:
- ASME A112.19.9M for Non-Vitreous Ceramic Fixtures

To Be Specified
❑ Color: ❑ White
❑ Faucet:
❑ Faucet Finish:
❑ Supplies:
❑ Trap:

* See faucet section for additional models available

NOTES:
* DIMENSIONS SHOWN FOR LOCATION OF SUPPLIES AND "P" TRAP ARE SUGGESTED.
FITTINGS NOT INCLUDED WITH FIXTURE AND MUST BE ORDERED SEPARATELY.
FOR COUNTERTOP CUTOUT AND INSTALLATION INSTRUCTIONS USE TEMPLATE SUPPLIED WITH SINK.



IMPORTANT: Dimensions of fixtures are nominal and may vary within the range of tolerances established by ANSI Standard A112.19.9M. These measurements are subject to change or cancellation. No responsibility is assumed for use of superseded or voided pages.

Single-Handle Lavatory Faucet

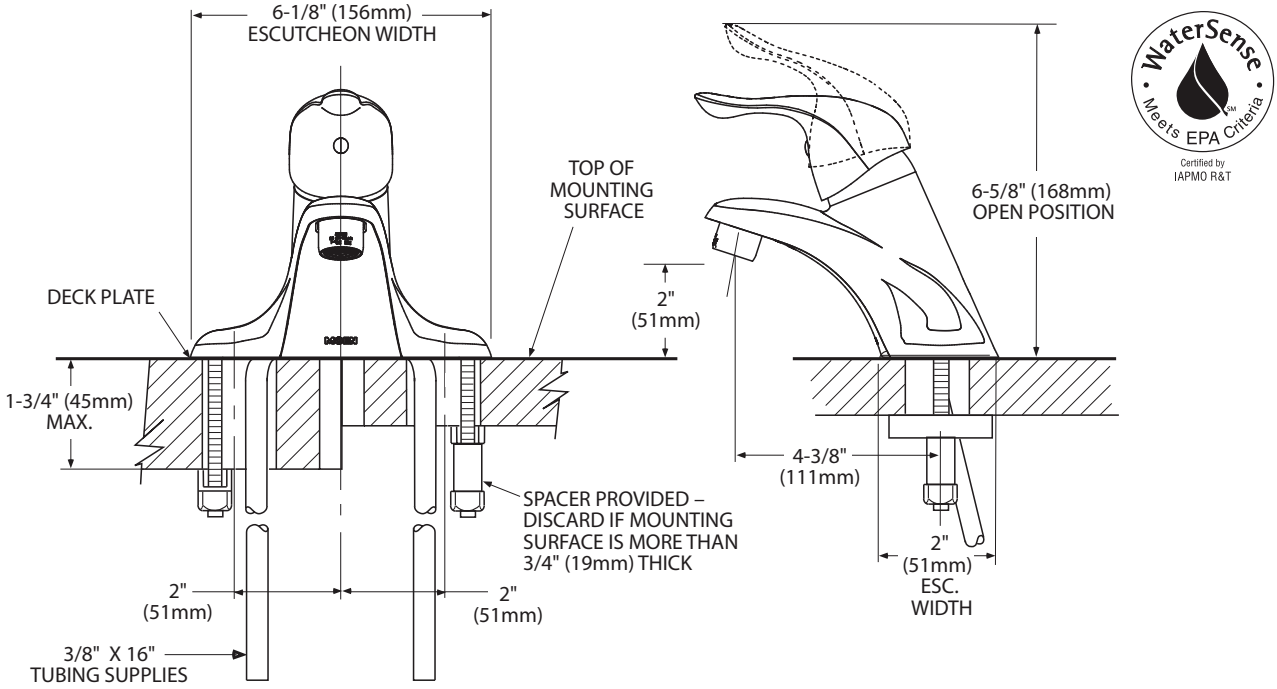
with Metal Waste Assembly
Model: L4625 series
L4631BC
Bulk Packed (12 per carton):
L64624 series

with 50/50 Waste Assembly
Bulk Packed (12 per carton):
L64625 series

Less Waste
Bulk Packed (12 per carton):
L64600 series

NOTE: THIS FAUCET IS DESIGNED TO BE INSTALLED THRU 3-1" DIA. HOLES, 2" ON CENTER

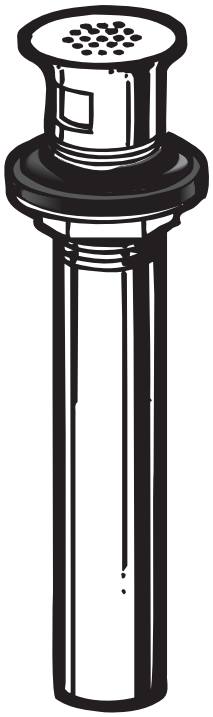
DESCRIPTION
- Metal construction with various finishes identified by suffix
- 16" long 3/8" tubing connections
- Includes metal or 50/50 pop-up type waste assembly where noted



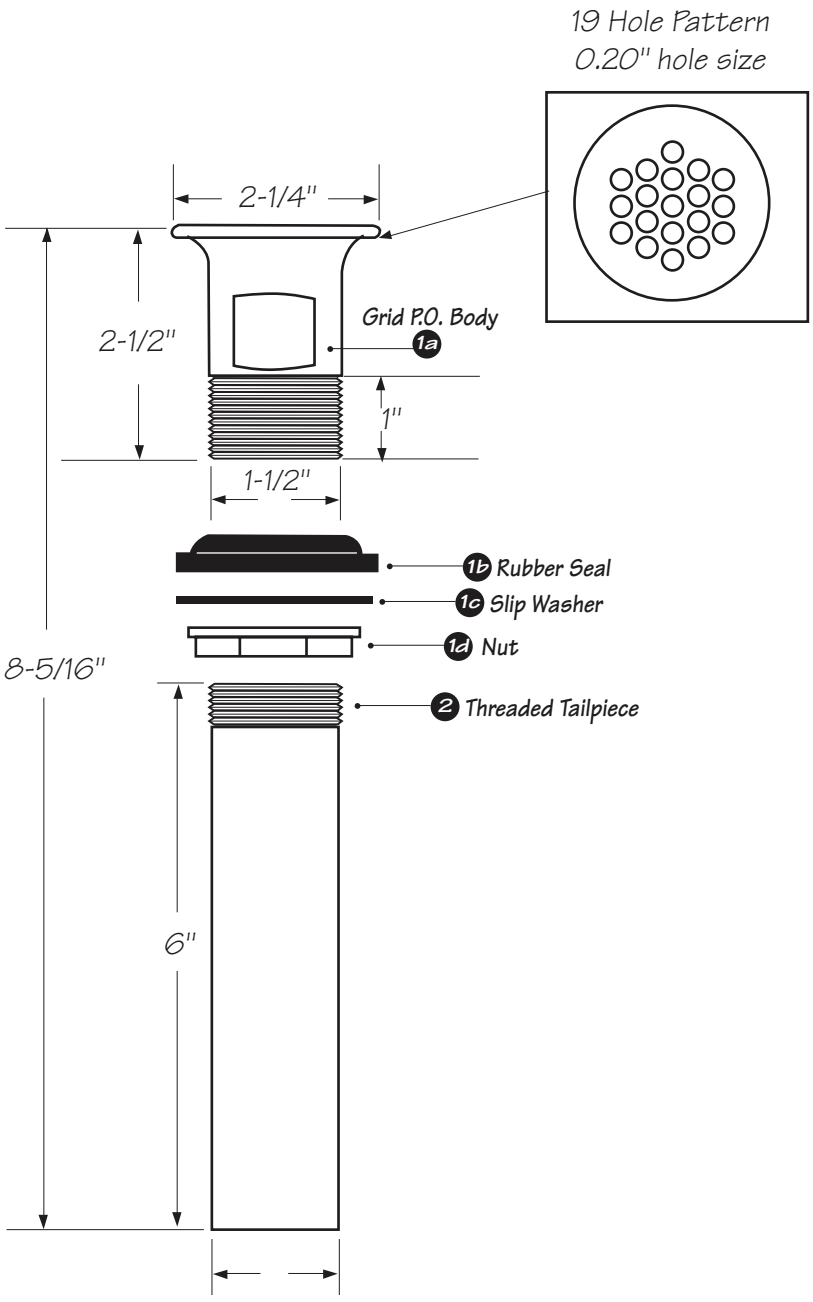
OPERATION
- Pivot action lever style handle
- Temperature controlled through 180˚ degree arc of handle travel

FLOW
- Flow is limited to 1.5 gpm max (5.7L/min) at 60 psi

CARTRIDGE
- 1225 cartridge design
- Nonmetallic/nonferrous and stainless steel material
- Can accommodate reversed piping and back to back installations



STANDARDS
- Third party certified to WaterSense,® CSA B-125.1, ASME A112.18.1 and all applicable requirements referenced therein including NSF61/9
- Complies with California Proposition 65 and with the Federal Safe Drinking Water Act
- **ADA** for lever handle



WARRANTY
- Lifetime limited warranty against leaks, drips and finish defects to the original consumer purchaser
- 5 year warranty if used in commercial installations

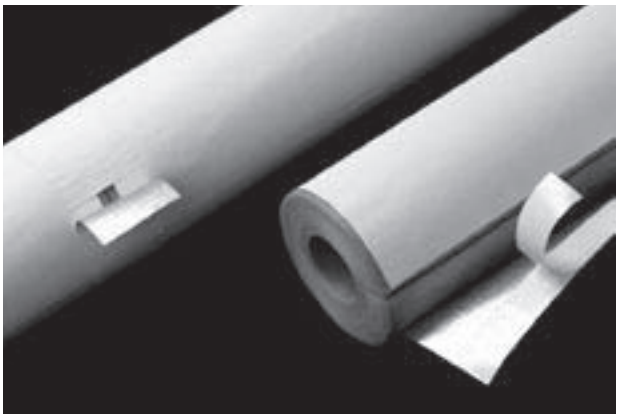
Micro-Lok®

Fiber Glass Pipe Insulation



Description

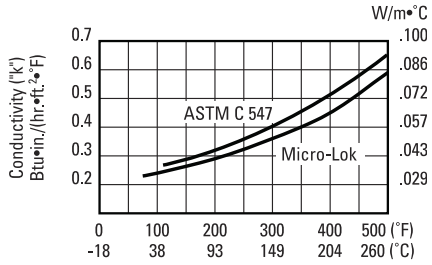
Micro-Lok fiber glass pipe insulation is made from glass fibers bonded with a thermosetting resin and produced in 36" (0.92 m) lengths. Jacketed with a reinforced vapor retarder facing and a factory-applied, longitudinal acrylic adhesive closure system, Micro-Lok is designed for application temperatures from 0°F to 850°F (-18°C to 454°C). Section joints are sealed with butt strips which are supplied from the factory. **Micro-Lok AP-T Plus** may be painted with a latex paint after installation.

The factory-installed tape system permits installation at ambient temperatures down to 15°F (-9°C), and will not soften or separate when exposed to high ambient temperatures and humidity.

Uses

Micro-Lok fiber glass pipe insulation is suitable for installation over hot, cold, concealed and exposed piping systems with operating temperatures up to 850°F (454°C). Weather-protective jacketing is required for outdoor applications. Pipes operating below ambient temperatures require all joints to be sealed with the factory-applied, self-seal lap and butt strips.

Operating Temperature Limits: 0°F to 850°F (-18°C to 454°C)



Specification Compliance

ASTM C 1136 (Jacketing) (Replaces HH-B-100B, Type I & II)
ASTM C 547 Type I (Replaces HH-I-558B, Form D, Type III, Class 12, Class 13 up to 850°F [454°C])
MIL-I-22344C
New York City MEA # 330-85-M
NFPA 90A & 90B, FHC 25/50

Physical Properties

Service Temp. Range	0°F to 850°F (-18°C to 454°C)
Moisture Sorption	<0.2% by volume
Alkalinity	<0.6% expressed as Na_2O
Corrosivity	Does not accelerate
Capillarity	Negligible (after 24 hours)
Shrinkage	None
Fungi & Bacteria Resistance	Does not breed or promote
Surface Burning Characteristics	Composite FHC 25/50 per ASTM E 84, UL 723, NFPA 255, CAN/ULC S102-M88
Limited Combustibility	NFPA 259
Jacketing	ASTM C 1136 (Type I)
Water Vapor Permeance (ASTM E 96 - Procedure A)	.02 perms max.
Beach Puncture (ASTM D 781)	50 oz. in./in. (58 SI) tear min.
Tensile Strength (ASTM D 828)	45 lbs./in. (7.9N/mm) width min. (MD) 30 lbs./in. (5.23N/mm) width min. (CD)

Thermal Conductivity ("k")

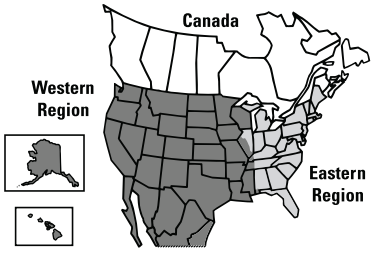
* Contact the nearest Regional Sales Office for availability.

Qualifications for use

A sufficient thickness of insulation must be used to keep the maximum surface temperature of Micro-Lok AP-T Plus below 150°F (66°C). In addition, at operating temperatures above 500°F (260°C), Micro-Lok pipe insulation must be applied in a thickness ranging from 2" (51 mm) minimum to 6" (152 mm) maximum.

During initial heat-up to operating temperatures above 350°F (177°C), an acrid odor and some smoke may be given off as the organic binders used in the fiber glass pipe insulation begin to decompose. When this occurs, caution should be exercised to ventilate the area well. This loss of binder does not directly affect the thermal performance of the pipe insulation, but the compressive strength and resiliency of the product are reduced. For applications with excessive physical abuse or vibration at high temperatures, consult your local Performance Materials Division territory manager for alternate material recommendations.



Application Recommendations.
AP-T Plus Jacket and Butt Strips.

1. Do not apply Micro-Lok insulation with AP-T Plus jacketing if air temperature is below 15°F (-9°C) or above 130°F (54°C) due to the effect of temperature on tape performance. We recommend stapling when application falls outside this temperature range.

2. If stored below 15°F (-9°C) or above 130°F (54°C), insulation cartons should stand within the recommended temperature range for 24 hours prior to application.

3. Once release paper is removed, both adhesive and lap must be kept free of dirt and water, and the lap sealed immediately.

4. When adhered, the lap and butt strips must be pressurized by rubbing firmly with a plastic squeegee or the back of a knife blade to assure positive closure.

Zeston 2000® Series White PVC Insulated Fitting Covers and Jacketing

Features

- Protect insulated or bare pipes
- Meets most requirements for federal, state and local fire-safety codes
- Accepted for commercial, institutional, industrial and residential projects in all parts of the US
- System is uncomplicated and easy to install
- UV-resistant for outdoor applications
- Long-lasting protection and an attractive finished appearance
- Available with Hi-Lo Temp fiber glass inserts

Applications

- Commercial, institutional and industrial applications

Construction

- Covering and jacketing manufactured from high-impact, gloss white, UV-resistant polyvinyl chloride jacketing

Application Recommendations

- Wrap the Hi-Lo Temp fiber glass insert completely around the pipe fitting without overly compressing it or leaving any voids
- Ensure that the insulation insert covers all exposed surfaces
- Install the Zeston PVC fitting cover over the pipe fitting and fiber glass insert by securing the throat of the Zeston PVC insert using either serrated tacks, Perma-Weld adhesive or Zeston Z-Tape
- If applied in an outdoor setting or exposed to the sun, precautions should be taken to account for expansion joints

Mechanical Insulations

Zeston 2000® Series White PVC Insulated Fitting Covers and Jacketing

Qualifications For Use

Hot Systems

- Use proper insulation thickness to ensure PVC covers are kept below 150°F (66°C)
- PVC covers should be kept away from contact with and/or exposure to sources of direct or radiated heat
- For fittings where operating temperatures exceed 250°F (121°C) or where pipe insulation thickness is greater than 1½" (38mm), two or more layers of Hi-Lo Temp insulation inserts are required beneath the fitting cover (refer to MECH-261 Zeston Hi-Lo Temp Inserts)

Cold Systems

- An approved vapor-barrier compatible with PVC must be applied between pipe insulation and fitting cover and on fitting cover throat overlap seal. Please refer to Insulspec MECH-261 on jm.com
- For fittings where operating temperature is below 45°F (7°C) or where the pipe insulation thickness is greater than 1½ " (38mm), two or more layers of Hi-Lo Temp insulation inserts are required beneath fitting cover (refer to MECH-261 Zeston Hi-Lo Temp Inserts)

Refrigerant Systems and Cold Systems In Severe Ambient Conditioning

- Mitered pipe insulation segments, fabricated or pre-molded insulation shapes may be used in lieu of Hi-Lo temp insulation inserts
- An intermediate vapor-barrier compatible with PVC is required to completely seaL the insulation prior to installing the Zeston 2000 PVC fitting cover
- Care should be taken to ensure the vapor barrier mastic is applied between the pipe insulation and the fitting cover and on the fitting cover throat overlap seam

Totally Sealed Systems (USDA Approval)

- 20 or 30 mil (0.5 mm or 0.8mm) Zeston PVC jacketing should be applied to pipe insulation in conjunction with Zeston PVC fitting covers
- Circumferential and longitudinal jacket and fitting cover seams should be sealed with Zeston Perma-Weld solvent welding adhesive
- Circumferential seams should be a minimum of 1" (25mm) overlap and longitudinal seams should be 1½"- 2" (38mm to 51mm) overlap
- Upon completion, all seams should visually be checked for seal and, if necessary, touched up
- Slip joints are periodically required between fixed supports and on continuous long runs of straight piping.
- To implement a slip joint, increase the circumferential overlap to 8" to 10" (203 mm to 254 mm) and apply a flexible white caulking in the overlap area to maintain a sealed system
- Refer to Zeston installation instructions CI-35 at www.jm.com

PVC FITTING COVERS, PRE-MOLDED, INSULATED
WHITE GLOSS FINISH — INDOOR OUTDOOR GRADE

SUBMITTAL SHEET DOES NOT SUPERCEDE WRITTEN SPECIFICATIONS OR OWNER AGREEMENT.

DESCRIPTION

The Proto Fitting Cover System consists of one piece and two piece pre-molded high impact LoSMOKE® PVC fitting covers with fiberglass inserts and accessories, which include elbows, tee/valves, end caps, mechanical line couplings, specialty fittings, white and indoor color jacketing, Protop® Tank End Panels, tack fasteners, tapes and specialty items.

APPLICATIONS

The Proto Fitting Cover System is used to insulate mechanical piping systems at fitting locations and provide a PVC jacketing for straight run piping. Both give a quality appearance and have excellent durability.

FEATURES AND BENEFITS

25/50 Rated. All Proto PVC Fittings are made of LoSMOKE® grade PVC. Roll Jacketing is available in either 25/50 rated or regular PVC Grade (not 25/50 rated). The 25/50 products meet fire and smoke safety requirements of federal, state and local building codes.

Excellent Appearance. Bright high-gloss white coloring adds a distinct quality appearance to the system. The standard line of Proto Fitting Covers are made in LoSMOKE® PVC designed for indoor and outdoor use. Virtually all sizes pass 25/50 when made of LoSMOKE® PVC. Colored PVC is manufactured from a LoSMOKE® formula that is suitable for indoor use only.

Easy To Clean. Due to the smooth, high gloss finish on Proto PVC Fittings, the product cleans easily with soap and water. This makes the system ideal for food and drug facilities.

Low Cost Installation. Significant cost savings vs. conventional cement, molded sections, and mitered sections.

Fast and Easy. At fitting locations, wrap the fiberglass insert around the pipe fitting, apply the Proto PVC Fitting over the insert and tack or tape in place. Do not use tacks where a vapor retarder is applied.

Wide Temperature Range. May be used for mechanical piping systems operating from -20°F to +140°F surface temperature of insulation. Variety: LoSMOKE®, Indoor/Outdoor, Exod®, Exotuff®. Proto products are also available in LoSMOKE® Indoor colors. Exod® is CPVC, GOOD TO 225° F.

Long Lasting. Can be used more than once on retrofit projects, general maintenance.

Excellent Thermal Value. K value of .26 at 75°F (.037 W/m °C at 24°C) of fiberglass insert, mean temperature assures better thermal efficiency than conventional cement fittings.

Resistance To Fungi and Bacteria. (ASTM G 21, ASTM G 22) Does not promote growth of fungi or bacteria.

U.V. Resistant. Can be used on indoor or outdoor applications, for both (White) LoSMOKE® PVC and Regular PVC. Extra thick fitting covers should be used outdoors. (All Std. Proto Fitting covers are made of LoSMOKE® PVC.)

	250° (121°C)	.44 (.063 W/m. °C)

APPLICATION AND SPECIFICATION GUIDELINES

A. STORAGE

Protect cartons from water damage or other abuse. Proto Fitting Cover cartons are not designed for outside storage.

B. PREPARATION

Proto Fitting Covers should be applied on clean, dry surfaces.

C. APPLICATION

1. **General:** The matching fiberglass insert shall be wrapped completely around the metal fitting leaving no voids. Loose wrappings of twine is helpful in shaping difficult surfaces. The Proto Fitting Cover shall then be applied over the fitting and insert, and the throat secured by either tack fastening or taping.

2. **Cold Pipe:** Fitting systems below ambient temperature must have a continuous vapor retarder or vapor retardant mastic as specified by the engineer. When using Proto PVC Tape, a 2" (51mm) minimum downward overlap is recommended for optimum performance. Care should be taken not to stretch the last 2" (51mm) of Proto PVC Tape, to avoid stretching or creeping.

3. **Hot Pipe:** Insulate as per General Instructions given above. Due to PVC softening point at approximately 159°F (70.6°C), care should be taken to ensure sufficient insulation thicknesses are applied.

For hot piping which requires Pipe Insulation over 1 1/2" (38 mm) wall thickness, an extra fiberglass insert shall be applied for each additional inch of pipe insulation wall thickness. Proto recommends the surface temperature of the Pipe Insulation and PVC to be no higher than 125°F (52°C). To complete application of Proto PVC Fittings on hot piping, the throat seam shall be tack fastened or taped. Seal all laps outdoors and in wash down areas.

CAUTION: During initial heat-up to operating temperatures above 350°F, (177°C) an acrid odor and some smoke may be given off as a portion of the bonding material used in the insulation begins to undergo a controlled decomposition. If natural convection is not adequate in confined areas, forced ventilation should be provided in order to protect against any harmful fumes and vapors that might be generated.

4. **Outdoor Pipe:** Insulate as per above instructions.

Minimum Proto PVC Jacketing thickness for outdoor applications should be .030" (.7 mm). Over 15" O.D., .040 is recommended. Under 3 1/8" O.D., .020 is permitted. The PVC Jacketing shall be overlapped a minimum of 2" (51 mm) on the down side so as to shed water. All long and round joints shall be completely weather sealed with caulk adhesive.

On all piping, insulation shall be of sufficient thickness to keep the surface temperature below 125°F (52°C). Additionally, a slip type expansion joint of 8" (202 mm) minimum width shall be applied at least every 25 lineal feet (6.1 lineal meters) and between fittings.

Painting: Painting must be done only after priming the PVC surface with a suitable primer, such as X-1-M 400W Primer, or a similar, approved product.

Outdoor Painting: Only over White Exotuff® 195°F deflection temp. (modified PVC) or EXOD™225°F deflection temp. CPVC after X-1-M primer, or a similar, approved product. Use PVC compatible paints without strong solvents. Test paint a section before proceeding.

5. **CAUTION:** Fiberglass may cause temporary skin irritation. Wear long-sleeved, loose-fitting clothing, head covering, gloves and eye protection when handling and applying material. Wash with soap and warm water after handling. Wash work clothes separately and rinse washer. A disposable mask designed for nuisance type dusts should be used where sensitivity to dust and airborne particles may cause irritation to the nose or throat.

D. HEAVY INDUSTRIAL APPLICATIONS OUTDOORS

Use .030" or higher PVC Jacketing. Use "heavy duty" two piece fitting covers made from minimum .030" thick to .050" thick PVC sheet depending on size of fitting cover. Jacketing to be cut and oven precurled

E. FIRE TEST RESULTS: PROTO LoSMOKE® — PVC

USA: E-84 25/50 Rated up to .035" thick (The Best Rated PVC)

CANADA: Conforms to CAN 4-S102.2

LoSMOKE® fitting covers conform to virtually all city, state and federal codes, for use in hotel, commercial and industrial buildings.

LoSMOKE® fitting covers will be labeled on the box "Passes ASTM E-84." Flame spread 25; smoke developed 50".

All E-84 ratings shown here were tested on flat sheets from which fitting covers are made.

Virtually all Proto LoSMOKE® fitting covers will pass E-84 25/50 flame spread and smoke development rating requirements.

SUGGESTIONS

Slide Joints: Do not apply PVC Jacketing too tightly. Slide joints plus PVC thickness must work together to prevent cracks and puckering.

Caulk/Adhesives:
Use: Celulon® (Red Devil Inc.) water base "Ultra Clear".
Service temp. -25°F to +175°F

PVC Cement: Avoid use if possible. Heavy application can cause puckering and cracks. Learn how to use it sparingly.

Vapor Retarder: A vapor retarder is required under all fitting covers for systems operating below ambient temperatures, such as chilled water lines, and is recommended for all outdoor applications. The fitting vapor retarder should provide a continuous seal with the adjacent pipe vapor retarder.

Outdoor Fitting Covers: Use extra thick, plastic heavy duty covers.

Outdoor and Indoor Washdown Areas: Use EXOD™ (CPVC) by Proto, for its higher deflection temperature (225°F). It is light grey.

PVC Outdoor Thickness (Reg. PVC Jacketing): Use .030" thick cut and oven precurled jacketing. Use "heavy duty" plastic fitting covers formed from minimum .030" to .050" thick PVC sheet depending on size of fitting cover. On pipe insulation larger than 15" O.D. use .040" thick PVC.

PVC Indoor Thickness: Use white or indoor color LoSMOKE® on piping. Use .020" thick with standard one piece fitting cover, .030" jacketing can also be used.

Vessels and Tank Tops: Use .050" or .060" thick tank panels for outdoor applications and .030" or .040" for indoor tanks. Use .050" thick Protop® segments for tank heads. (Only Proto Corp. has them.) Made of LoSMOKE® PVC.

Pipe Insulation End Caps: Use on all outdoor, indoor washdown areas, and all vapor sealed systems. End caps will be PVC, metal, or gasket materials appropriate for the metal pipe temperatures. Silicone rubber (500°F) can be applied (min. 1/16" thick) as an end cap outdoors.

Indoor hot piping need not be sealed to the end cap. Cap will be sealed or taped to the jacket.

Two-Ply Waterproofing System: Use .010" thick PVC with self-sealing long lap tape, as the first waterproof layer. Overlap ends 3" and PVC tape over. Caulk all openings with Celulon® or similar, approved product. The finished jacketing material should employ staggered joints with at least a .010 mil thick first layer. Recaulk again over last layer. Install slide joints every 25', caulk shut all other seams, openings, or end overlaps with PVC tape or caulk. Use vapor seal jacketing (instead of .010" thick PVC first layer) where a vapor seal system is required.

CPVC-High Chemical Resistance and High Deflection Temperature: Use "Exod®" CPVC jacketing and fitting covers for 225°F deflection temperature and maximum chemical resistance. Offered only by Proto Corp. as a substitute for stainless steel.

Regular PVC Jacketing Outdoors: Use regular PVC jacketing outdoors. It is less expensive, does the same job as LoSMOKE® PVC. Regular PVC has very good fire (self-extinguishing) properties — not as good as the LoSMOKE® PVC used in confined people areas (buildings), however much better than common plastics used outdoors.

Vessels with ends 24" O.D. or larger: Use .040" thick jacketing up to 48" O.D. On sides of vessels larger than 48" O.D. See Protop® brochure for instructions requiring a suspended band system, to hang panels from, (Gerrard & Company or equal). Use thick PVC panels on Outdoor Tanks not PVC Roll Jacketing. See Tank Tops above for end segments.

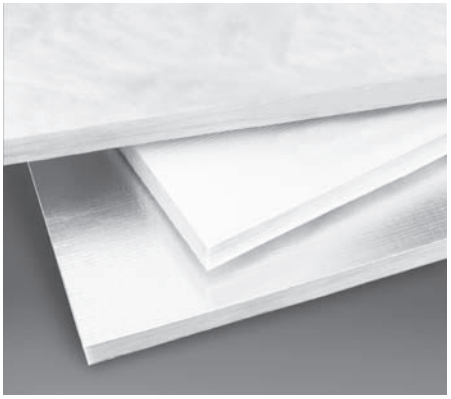
CertaPro™ Commercial Board

1. PRODUCT NAME

CertaPro™ Commercial Board

2. MANUFACTURER

CertainTeed Corporation
P.O. Box 860
Valley Forge, PA 19482-0105
Phone: 610-341-7000
800-233-8990
Fax: 610-341-7571
Website:
www.certainteed.com/insulation



3. PRODUCT DESCRIPTION

Basic Use: CertaPro Commercial Board is used where board stiffness properties are required and also functions as an exterior insulation when covered with a weather barrier. Commercial Board is used in exterior curtain walls, interior walls and floor/ceiling assemblies, and as an exterior insulation on HVAC ducts and plenums or in constructions where framing is not present. It is also used as thermal insulation on tanks and vessels.

All/Service/Jacket (ASJ facing) is not available in Type CB 150.
CB 110, 150 and 600 are not available in FSK, WMP or ASJ facings.

Benefits: CertaPro Commercial Board provides high sound absorption and excellent thermal performance. This product contains a minimum of 60% recycled content. The product is offered in a variety of stiffness properties from flexible to rigid and all can be easily cut, handled, fabricated and installed. The vapor retarder facing provides abuse resistance. The ASJ and FSK facings provide vapor retarder performance and a Class A surface that may be left exposed.

Composition and Materials: The product is composed of glass fibers bonded together with a thermoset binder. It is available unfaced or with a foil-scrim-kraft (FSK) or white kraft-scrim-foil (ASJ) facing adhered to the fiber glass board.

Limitations: Insulation should be kept clean and dry at all times.

Sizes: See table to the left. Contact CertainTeed for other sizes and minimum order quantities.

* Estimated sound absorption coefficents and NRC.
Sound absorption tested in accordance with ASTM C423 using Type A mounting per ASTM E795.

Curtain Walls – CertaPro Commercial Board is applied to spandrel and pre-cast concrete panels with approved adhesives or mechanical fasteners. Boards may also be installed using hat channels or Z studs. Where a vapor retarder is required, all joints, seams and penetrations must be sealed. Exterior applications require the insulation to be covered with appropriate weather barrier finish in addition to the factory-applied vapor retarder facing. Choice of finish depends on mechanical abuse, weather exposure and appearance requirements.

HVAC/Mechanical – All fabrication, application and installation steps should be in accordance with the requirements of the National Commercial and Industrial Installation Standards (current edition) published by the Midwest Insulation Contractors Association (MICA).

These installation recommendations are general in nature. Other methods are acceptable. Please consult your contractor for recommendations best suited to the application.

6. AVAILABILITY AND COST

Manufactured and sold throughout the United States and Canada. For availability and cost, contact your local contractor, distributor or call CertainTeed at 800-233-8990.

7. WARRANTY

Refer to CertainTeed Limited Warranty for Commercial Insulation (30-25-034). Inasmuch as CertainTeed has no control over the installation design, installation workmanship, accessory materials or conditions of application, CertainTeed does not warrant the performance or results of any installation containing its products.

8. MAINTENANCE

An inspection and preventative maintenance program for the insulation and vapor retarder system is recommended to ensure optimum performance.

9. TECHNICAL SERVICES

Technical assistance can be obtained either from the local CertainTeed sales representative, or by calling Sales Support Group at 800-233-8990.

10. FILING SYSTEMS

SoftTouch™ Duct Wrap Insulation

Product Name	CertainTeed SoftTouch™ Duct Wrap Insulation
Manufacturer	CertainTeed Corporation
Address	P.O. Box 860 Valley Forge, PA 19482-0105
Phone	610-341-7000 • 800-233-8990
Fax	610-341-7571
Website	www.certainteed.com/insulation

PRODUCT DESCRIPTION

Basic Use: SoftTouch™ Duct Wrap Insulation is used to insulate rectangular and round heating, ventilating and air conditioning ductwork.

Benefits: SoftTouch Duct Wrap Insulation provides thermal efficiency that reduces unwanted heat loss or gain from equipment and ductwork. When properly installed in the correct thickness, this product virtually eliminates condensation problems on cold duct surfaces.

Composition and Materials: SoftTouch Duct Wrap is a blanket-type insulation composed of tan, uniformly textured, inorganic fibrous glass formed with a formaldehyde-free plant-based binding agent. It is available unfaced or with FSK, gray PSK or white PSK vapor retarder facing. On faced products, a stapling/taping tab is provided on one edge.

Limitations: The product should be kept clean and dry from the time of manufacture through job site installation and system operation.

SoftTouch Duct Wrap is suitable for use with most heating, ventilating and air conditioning ductwork operating at temperatures from 35°F to 250°F (1.7°C to 121°C) for faced SoftTouch Duct Wrap, and from 35°F to 450°F (1.7°C to 232°C) for unfaced SoftTouch Duct Wrap.

Sizes: See table on back for available sizes. Contact CertainTeed for other sizes and minimum order quantities.

INSTALLATION

Sheet metal ducts must be clean, dry and sealed tightly prior to insulating with CertainTeed SoftTouch Duct Wrap.

To ensure installed thermal performance, CertainTeed SoftTouch Duct Wrap must be cut to "stretch-out" dimensions. This requires measurement of the duct perimeter, then cutting the duct wrap to the dimensions (perimeter + add-on) indicated in the stretch-out table on the other side. A 2" piece of insulation is removed from the facing at the end of the piece of insulation to form an overlapping stapling and taping flap.

CertainTeed SoftTouch Duct Wrap is installed by wrapping the insulation around the perimeter of the duct with the facing out. Adjacent sections of duct wrap are tightly butted with the 2" taping flap overlapping. Seams must be stapled with outward-clinching staples on approximately 6" centers. When a vapor retarder is required, all seams, joints, tears, punctures and/or other penetrations of the duct wrap must be sealed with a pressure sensitive vapor retarder tape that matches the facing, or a suitable mastic system.

Where rectangular ducts are 24" in width or greater, CertainTeed SoftTouch Duct Wrap must be additionally secured to the bottom of the duct with mechanical fasteners spaced 18" on center to prevent sagging.

For additional installation details, consult the National Commercial and Industrial Insulation Standards (current edition) published by the Midwest Insulation Contractors Association (MICA).

AVAILABILITY AND COST

Manufactured in U.S.A. Available in select Western U.S./Canada regions. For availability and cost contact your local distributor, or call CertainTeed Sales Support Group in Valley Forge, PA at 800-233-8990.

WARRANTY

Refer to CertainTeed's Limited One-Year Warranty for Fiber Glass Duct Wraps (30-29-047).

MAINTENANCE

An inspection and preventative maintenance program for the HVAC system is recommended to ensure optimum performance.

CONDENSATION CONTROL

This chart is based on indoor conditions so far as wind and other factors are concerned.

To determine thickness to prevent condensation, based on installed thickness at 75% of nominal (out-of-package) thickness and a duct internal air temperature of 55°F, refer to the condensation control chart.

To use: 1) Select maximum relative humidity (%) on lower axis; 2) Read up vertically until that line intersects the maximum ambient air temperature; 3) Select the thickness indicated at the point of intersection.

Tested in accordance with ASTM C518 and/or ASTM C177 at 75°F (24°C) mean temperature. R means resistance to heat flow. The higher the R-value, the greater the insulating power. The installed R-value and K-value based upon 25% compression of the product thickness during installation. To get the installed R-value, it is essential that this insulation be installed properly. If you do it yourself, follow the installation instructions carefully.

*pcf. is pounds per square foot

Venture Tape™ Aluminum Foil Tape 1521CW

Technical Data **April, 2015**

Product Description

3M™ Venture Tape™ Aluminum Foil Tape 1521CW is a high strength dead soft aluminum foil coated with a cold weather solvent acrylic pressure sensitive adhesive.

Product Construction

Backing	Adhesive	Color	Liner	Standard Roll Length
Aluminum Foil	Acrylic	Natural Aluminum	Release Liner	50 yds (45.7 m)

Features

- Excels in demanding temperature and humidity applications
- Conforms well to irregular surfaces
- Specifically designed for cold weather conditions
- Hand tearable

Typical Physical Properties

Note: The following technical information and data should be considered representative or typical only and should not be used for specification purposes.

Test	Typical Value	Typical Value (Metric)	Test Method
Product Thickness	2.7 mils	0.07 mm	PSTC-133
Peel Adhesion	40 oz/in	11.1 N/25 mm	PSTC-101
Shear Adhesion	>24 hrs @ 2.2 psi	>24 hrs @ 15.2 kPa	PSTC-107
Tensile Strength	16 lb/in	72.3 N/25 mm	PSTC-131
Elongation	5%	5%	PSTC-131
Service Temperature	-40° to 250°F	-40° to 121°C	

Application Ideas

- Applies easily to both fibrous and sheet metal ducts

Classifications

- UL723 Classified (5/10 Flame/Smoke Rating) [UL file #R10984]
- U.S. Coast Guard Approved (CGA #164.112/63/0)

3M™ Venture Tape™ Aluminum Foil Tape 1521CW

Storage

Store in a clean, dry place. Temperature of 40-80°F (4-26°C) and 40 to 50% relative humidity are recommended.

Shelf Life

To obtain best performance, use this product within 12 months from date of manufacture

Technical Information

The technical information, recommendations and other statements contained in this document are based upon tests or experience that 3M believes are reliable, but the accuracy or completeness of such information is not guaranteed.

Product Use

Many factors beyond 3M's control and uniquely within user's knowledge and control can affect the use and performance of a 3M product in a particular application. Given the variety of factors that can affect the use and performance of a 3M product, user is solely responsible for evaluating the 3M product and determining whether it is fit for a particular purpose and suitable for user's method of application.

Warranty, Limited Remedy, and Disclaimer

Unless an additional warranty is specifically stated on the applicable 3M product packaging or product literature, 3M warrants that each 3M product meets the applicable 3M product specification at the time 3M ships the product. 3M MAKES NO OTHER WARRANTIES OR CONDITIONS, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OR CONDITION OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY IMPLIED WARRANTY OR CONDITION ARISING OUT OF A COURSE OF DEALING, CUSTOM OR USAGE OF TRADE. If the 3M product does not conform to this warranty, then the sole and exclusive remedy is, at 3M's option, replacement of the 3M product or refund of the purchase price.

Limitation of Liability

Except where prohibited by law, 3M will not be liable for any loss or damage arising from the 3M product, whether direct, indirect, special, incidental or consequential, regardless of the legal theory asserted, including warranty, contract, negligence or strict liability.

ISO 9001

This Industrial Adhesives and Tapes Division product was manufactured under a 3M quality system registered to ISO 9001 standards.

Combination valve

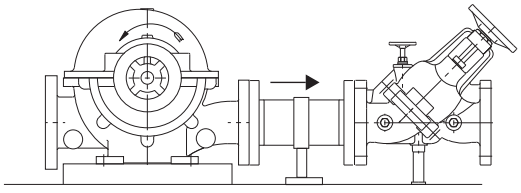
TM 04 7386 2010

Fig. 1 Combination valve

General information

A combination valve fitted between the discharge pipe and the discharge flange of a Grundfos pump gives the following advantages:

- The combination valve combines three valves in one: shut-off valve, balancing valve and check valve.
- The combination valve provides the feature of changing the flange orientation to allow 90 ° pipe connection.
- The combination valve makes it possible to reduce the overall system pressure drop since fewer individual components are needed when installing a pump.
- The combination valve is easy to dismantle and service. Internal parts, such as the disc can be easily removed and/or replaced.
- The combination valve has a built-in bypass valve allowing for drainage of water upstream of the check valve. (See Fig 3. and Fig 4.)
  The bypass valve MUST be CLOSED at all times in normal operation.
  The bypass valve should ONLY be used by authorized personel to drain water from the piping above.



Combination valve range

Combination valves are available with ANSI 125 flanges and ANSI 250 flanges, see technical data below, and a variety of sizes ranging from 2 inches to 14 inches suction and discharge ports, see dimensional table.

Technical data

	ANSI 125	ANSI 250
Pumped liquid	Water	Water

February 2011

Suction diffuser

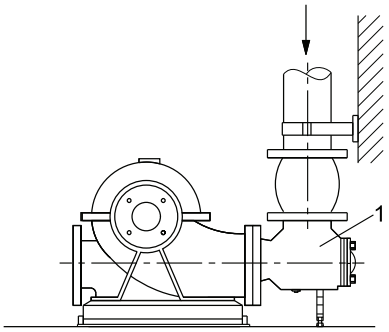
TM04 7049 1510

Fig. 1 Suction diffuser

General information

A suction diffuser fitted between the suction pipe and the suction flange of a Grundfos pump gives the following advantages:

- The suction diffuser provides and ensures a uniform flow pattern to the suction side of the pump. This ensures a stable NPSH.
- The suction diffuser makes it possible to install the pump in a very narrow spacing as no long bends are necessary.
  The suction diffuser may even save floor space - and thus money.
- The suction diffuser incorporates a cylindrical strainer preventing impurities from entering the pump.
- The suction diffuser comes with a disposable, fine mesh, stainless steel start-up screen for capture and removal of foreign particulates in system piping.
- The suction diffuser has an adjustable support for mounting.
- The suction diffuser is easy to dismantle and service. Internal parts such as strainer can be easily removed, cleaned and/or replaced.



Suction diffuser range

Suction diffusers are available in ANSI 125 flanges and ANSI 250 flanges, see technical data below, and a variety of sizes ranging from 1.5 x 2 inches to 12 x 12 inches suction and discharge ports, see dimensional table.

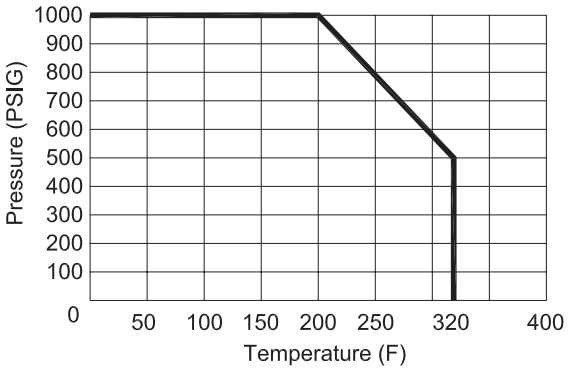
GAUGES & THERMOMETERS

FNW™

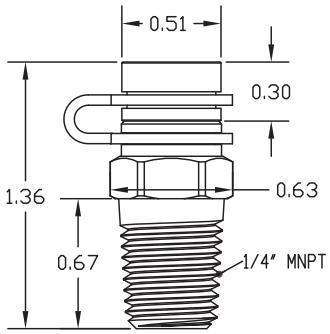
LOW LEAD COMPLIANT PRESSURE/TEMPERATURE TEST PLUG

The figure XPTT lead free brass pressure/temperature test plugs facilitate quick pressure and temperature readings at recommended test points without disturbing the process. They are widely used in the HVAC industry.

Features:



- 1,000 PSI Maximum Operating Pressure
- 1/4" or 1/2" MNPT End Process Connection
- Lead Free Brass Body
- Complies with Federal Lead-Free Law (Sec. 1417)
- EPDM Diaphragm/Core
- Plastic Cap Retainer
- 320°F (160°C) Process Temperature Limit



Low Lead Compliant: Referring to laws defining "Lead Free" as wetted surface of pipe, fittings and fixtures in potable water systems that have a weighted average lead content ≤ 0.25% per the Safe Drinking Water Act (Sec. 1417) amended 1-4-2011 as well as other state regulations.

PRODUCTS FOR GROOVED PIPING SYSTEM

The Gruvlok® System has been manufactured since the late 1960's. The Gruvlok product line has grown from standard couplings and fittings to today's extensive range of grooved product, plain-end product, butterfly valves, check valves, pump protection components, pipe preparation tools and various accessories.

Gruvlok is part of our overall commitment to provide today's piping industry with tomorrow's products.

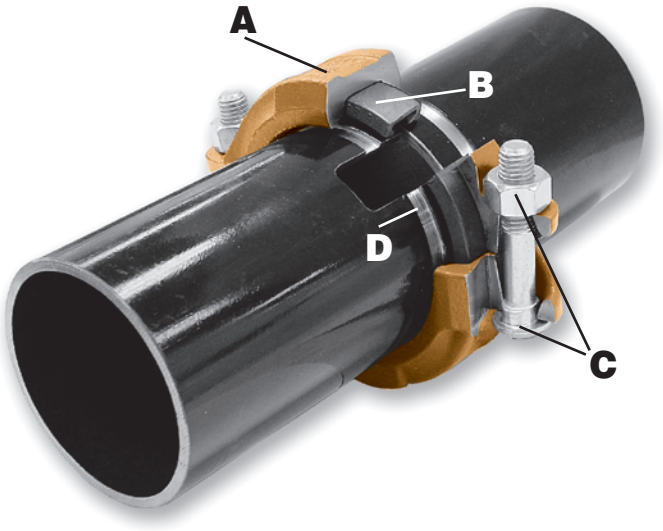
GRUVLOK® – THE ENGINEERED COUPLING



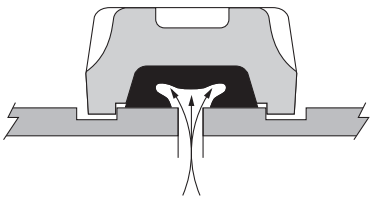
HOUSING (A) FLEXIBLE OR RIGID

The Gruvlok Coupling housing is designed to self-center around the pipe. The housing encircles and retains the gasket against the application of internal system pressure or vacuum.

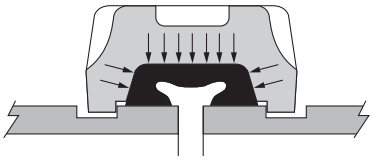
The housing key sections fit into and engage the pipe-end grooves around the entire pipe circumference, thus restraining the pipe ends from separation due to the application of internal pressure.

Flexible Couplings provide designed-in clearances between the housing key sections and the pipe grooves to permit both angular and longitudinal movement of the pipe. Rigid couplings grip the pipe and lock the joint into position.

All housings are coated with paint for general service applications. The paint serves to provide protection against normal atmospheric corrosion. However, for couplings used in corrosive environments, hot-dip galvanizing, and stainless steel are available.



GASKET (B)



The unique single piece "C" style design of the gasket has been engineered to provide a pressure responsive, leak-tight seal in both pressure and vacuum applications without the aid of external forces. The "lips" of the gasket are molded so that upon installation onto the pipe ends they provide compression against the pipe surface to establish the leak-tight seal.

The gasket cavity functions as a "pressure reservoir". Pressure within the pipe system is applied to the internal surfaces of the gasket which increases the sealing force and enhances the leak-tight seal. In vacuum systems, non-pressure-responsive seals tend to "lift off" the pipe, producing leak paths. However, the Gruvlok gasket reacts to the negative pressure (higher outside atmospheric pressure) as to improve the sealing capability of the gasket.

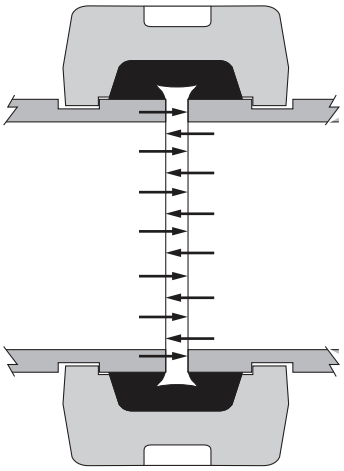
Gasket Reaction to Pressure

Gasket Reaction to Vacuum

BOLTS AND NUTS (C)

Heat treated oval neck track head bolts serve to connect and secure the housing segments together. The oval neck design prevents turning of the bolt while tightening the hex nut with a single wrench. The bolt size and corresponding wrench (or socket) size for the hex nuts are shown in the chart below.

ANSI



Bolt Size	3/8	1/2	5/8	3/4	7/8	1	1 1/4
Wrench Size	11/16	7/8	1 1/16	1 1/4	1 7/16	1 5/8	2

METRIC

Bolt Size	M10	M12	M16	M20	M22
Wrench Size	16	22	24	30	34

GROOVED PIPE ENDS (D)

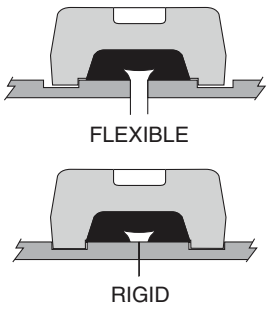
The ends of the pipe must have a groove in them which may be either cut grooved or roll grooved. The grooved pipe ends engage the coupling keys, thus, providing a self-restraining, mechanical joint capable of resisting the separation of the pipe ends due to the application of system pressure. The groove diameters must be dimensionally accurate to obtain the maximum benefit of the Gruvlok Coupling.

THE GRUVLOK® PIPING METHOD

Gruvlok couplings and grooved-end fittings are widely used for joining pipe in a wide variety of piping systems. Gruvlok couplings for grooved-end pipe are designed to provide a self-centering joint which accommodates the application of pressure, vacuum and other external forces, while limiting the burdensome need for special supports, expansion joints, etc.

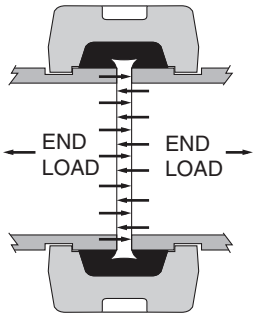
The Gruvlok piping method offers many mechanical design features which benefit the design engineer, the contractor, and the end user. Utilization of the functional characteristics of the Gruvlok coupling will aid in pipe system design and must be considered for proper installation, assembly and performance.

The design factors presented in the Gruvlok technical data section should always be referenced to when designing any grooved piping system to obtain the maximum benefit of the Gruvlok piping method.



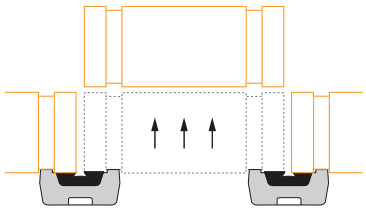
GRUVLOK FEATURES

RIGIDITY OR FLEXIBILITY



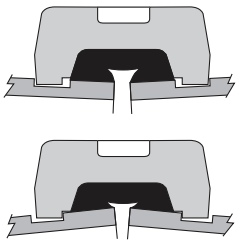
Couplings are available where rigid connections are required. Rigid couplings are clearly marked with an "X" for identification.

Couplings with flexible design allow for pipe expansion and contractions with temperature changes. The need for an expansion joint is minimized or eliminated.



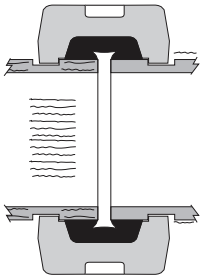
SELF RESTRAINED JOINT

The couplings engage the pipe around the entire circumference and restrain the pipe ends from separation due to pressure and other forces, up to the maximum coupling rated working pressure.



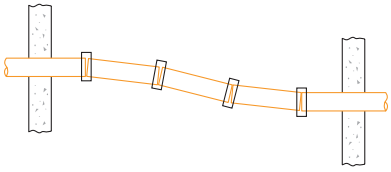
UNION AT EVERY JOINT

Gruvlok couplings can be disassembled easily permitting maintenance and servicing of the piping system. It will facilitate periodic rotation of pipe to distribute internal wear from slurries or other abrasive media.



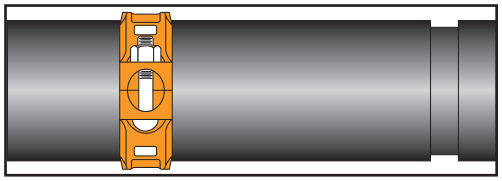
STRESS-FREE SYSTEM

Flexibility designed in the Gruvlok coupling absorbs and eliminates stress from settlement of buried pipe or those induced by seismic tremors.



MINIMIZES NOISE & VIBRATION

The resilient elastomeric gasket and pre-designed gap of the Gruvlok coupling help isolate and absorb noise and vibration, this minimizes vibration transmission.



ACCOMMODATES MISALIGNMENT AND JOINT DEFLECTION

The flexibility designed into the Gruvlok coupling will accommodate misalignments caused by imprecise location of pipe opening through walls and floors, will provide pitch for drainage piping systems and facilitate laying pipe on uneven terrain, thus permitting deflection in any direction.

GRUVLOK® COUPLINGS FOR GROOVED-END PIPE

Gruvlok couplings for grooved-end pipe are available in nominal pipe sizes 1" thru 60" and metric sizes. The variety of coupling designs provide a universal means for the connection of pipe, fittings and pipe system components. The wide assortment of Gruvlok couplings and gaskets permit selection of the most suitable combination for a specific application, thus providing the most versatile and economical pipe system installation.

MATERIAL SPECIFICATIONS

BOLTS:
SAE J429, Grade 5, Zinc Electroplated
ISO 898-1, Class 8.8, Zinc Electroplated followed by a Yellow Chromate Dip

HEAVY HEX NUTS:
ASTM A563, Grade A, Zinc Electroplated
ISO 898-2, Class 8.8, Zinc Electroplated followed by a Yellow Chromate Dip

STAINLESS STEEL BOLTS & NUTS:
Stainless steel bolts and nuts are available for the Fig. 7001, 7401, 7401-2, 7001-2, 7004, 7000 and 7400 couplings in standard 304SS, (316SS available as special order)

HOUSING:
Ductile Iron conforming to ASTM A 536, Grade 65-45-12

COATINGS:
Rust inhibiting paint Color: ORANGE (standard)
Hot Dipped Zinc Galvanized (optional)
Other Colors Available (IE: RAL3000 and RAL9000)
For other Coating requirements contact an Anvil Representative.

GASKETS: Materials
Properties as designated in accordance with ASTM D 2000

GRADE "EP" EPDM (Green/Red color code) NSF-61 Certified
-40°F to 250°F (Service Temperature Range)(-40°C to 121°C)
Recommended for water service, diluted acids, alkalies solutions, oil-free air and many other chemical services.
NOT FOR USE IN PETROLEUM APPLICATIONS.

GRADE "E" EPDM (Green color code) NSF-61 Certified
-40°F to 230°F (Service Temperature Range)(-40°C to 110°C)
Recommended for water service, diluted acids, alkalies solutions, oil-free air and many chemical services.
NOT FOR USE IN PETROLEUM APPLICATIONS.

GRADE "T" Nitrile (Orange color code)
-20°F to 180°F (Service Temperature Range)(-29°C to 82°C)
Recommended for petroleum applications. Air with oil vapors and vegetable and mineral oils.
NOT FOR USE IN HOT WATER OR HOT AIR

GRADE "O" Fluoro-Elastomer (Blue color code)
Size Range: 1" - 12" (C style only)
20°F to 300°F (Service Temperature Range)(-29°C to 149°C)
Recommended for high temperature resistance to oxidizing acids, petroleum oils, hydraulic fluids, halogenated hydrocarbons and lubricants

GRADE "L" Silicone (Red color code)
Size Range: 1" - 12" (C style only)
-40°F to 350°F (Service Temperature Range)(-40°C to 177°C)
Recommended for dry, hot air and some high temperature chemical services

GASKET TYPE:
Standard C Style
Flush Gap: 1" - 24"
End Guard: 1" - 12" (Fig. 7004 and 7377)
SlideLOK: 2" - 8"

LUBRICATION:
Standard Gruvlok
Gruvlok Xtreme™ (Do Not use with Grade "L")

WORKING PRESSURE, END LOAD, PIPE END SEPARATION & DEFLECTION FROM CENTER LINE:
Based on standard wall steel pipe with cut or roll grooves in accordance with Gruvlok specifications. Pressure ratings for light wall, stainless steel, aluminum, and ISO pipe available. See technical data section.

COUPLING DATA CHART NOTES

1 Gruvlok Couplings are identified by either the nominal ANSI pipe size in inches or pipe O.D. in millimeters (see column 2).

2 Nominal Outside Diameter of Pipe.

3 Maximum line pressure, including surge, to which a joint can be subjected. Working pressure ratings are based on standard wall steel pipe with standard cut or roll grooves in accordance with Gruvlok specifications. For Performance Data on other than standard wall pipe, refer to Technical data section. **NOTE: For one time field test only, the maximum joint working pressure may be increased to 1.5 times the figure shown unless otherwise noted.**

4 Maximum end load from all interior and/or exterior forces to which the joint can be subjected are based on standard wall steel pipe with standard cut or roll grooves in accordance with Gruvlok specifications.

5 Range of pipe end separation for roll grooved pipe, Double values shown when using cut groove pipe; see page 222 for details.

6 Maximum allowable angular deflection values from centerline when using standard roll grooved pipe; Double values shown when using cut groove pipe; see page 222 for details.

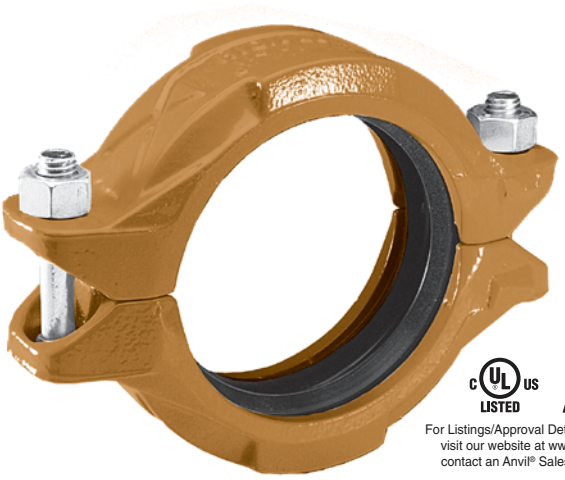
7 "X", "Y", and "Z" are external dimensions for reference purposes only.

8 The quantity of bolts per coupling.

9 Nuts must be tightened alternating and evenly to the specified bolt torque. See individual product installation instructions for additional important information.

10 Approximate weight for a fully assembled coupling with gasket, bolts, and nuts.

FIG. 7401



Rigidlok® Coupling

The Fig. 7401 Rigidlok Coupling is an ideal connector for service and applications that require a rigid connection.

The Fig. 7401 Rigidlok coupling utilizes a technologically advanced housing design that conforms to and grips the pipe.

Coupling installation is fast and easy, remove only one nut and swing the housing over the gasket and into the grooves. The exclusive Guidelok® feature automatically separates the grooved pipe ends and guides the coupling into position as the bolts are tightened. Precisely sized and oriented tines in the housing key section firmly grip the pipe. The combination of these designed in features produce a secure, rigid pipe joint connection.

The Fig. 7401 Rigidlok Coupling is designed for use with roll grooved or cut grooved standard weight and roll grooved lightweight pipe, as well as with grooved-end fittings and valves. The Rigidlok Coupling provides a rigid pipe connection allowing pipe hanging practices per ASME B31 pipe codes.

c UL us LISTED FM APPROVED

For Listings/Approval Details and Limitations, visit our website at www.anvilintl.com or contact an Anvil® Sales Representative.

The Fig. 7401 Rigidlok Coupling allows for a maximum working pressure of 750 psi (51.7 bar) when used on standard wall roll or cut grooved pipe.

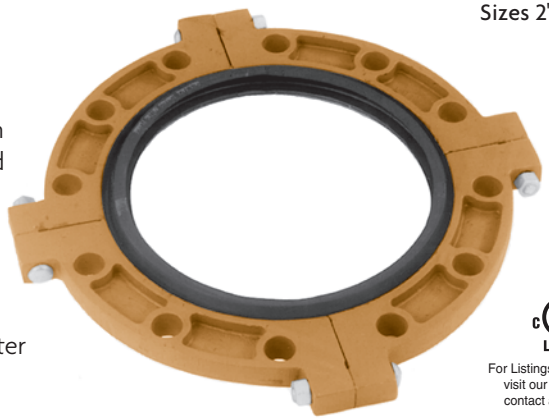
NOTE:

Range of Pipe End Seperation values are for roll grooved pipe and may be doubled for cut groove pipe.

†Maximum Working Pressure Rating is for schedule 40 steel pipe. For light wall, stainless steel, aluminum and ISO pipe pressure ratings, please refer to the technical data section.

For additional details see "Coupling Data Chart Notes" on page 17.
* Available in ANSI or metric bolt sizes only as indicated.
§ – For additional Bolt Torque information, see page 222.
See Installation & Assembly directions on page 183.
Not for use in copper systems.

FIG. 7012
Gruvlok Flanges



Sizes 2" - 12"

The Gruvlok® Fig. 7012 Flange allows direct connection of Class 125 or Class 150 flanged components to a grooved piping system. The two interlocking halves of the 2" thru 12" sizes of the Gruvlok Flange are hinged for ease of handling, and are drawn together by a latch bolt which eases assembly on the pipe. Precision machined bolt holes, key and mating surfaces assure concentricity and flatness to provide exact fit-up with flanged, lug, and wafer styles of pipe system equipment. A specially designed gasket provides a leak-tight seal on both the pipe and the mating flange face.

The 14" thru 24" sizes of the Gruvlok Fig. 7012 Flange are cast in four segments. A sleek profile gasket design allows quick and easy assembly of the Gruvlok Flange onto the pipe.

All Gruvlok Fig. 7012 Flanges have designed-in anti-rotation tines which bite into and grip the sides of the pipe grooves to provide a secure, rigid connection.

The Gruvlok Fig. 7012 Flange requires the use of a steel adapter insert when used against rubber faced surfaces, wafer/lug design valves and serrated or irregular sealing surfaces. In copper systems a phenolic adapter insert is required, in place of the steel adapter insert. (See Installation and Assembly Instructions Section or contact your Anvil Rep. for details.)

Sizes 14" - 24"

MATERIAL SPECIFICATIONS

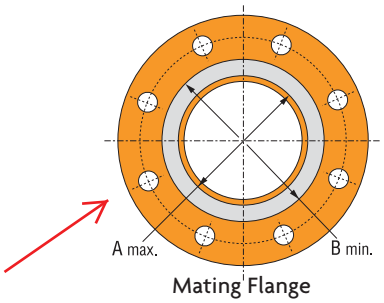
LATCH BOLT (2" - 12"), SEGMENT BOLT (14" - 24"):
SAE J429, Grade 5, Zinc Electroplated
ISO 898-1, Class 8.8, Zinc Electroplated followed by a Yellow Chromate Dip

LATCH NUT (2" - 12"), SEGMENT NUT (14" - 24"):
ASTM A563, Grade A, Zinc Electroplated
ISO 898-2, Class 8.8, Zinc Electroplated followed by a Yellow Chromate Dip

HOUSING:
Ductile Iron conforming to ASTM A 536, Grade 65-45-12.

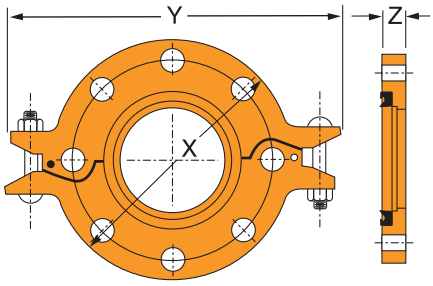
COATINGS:
Rust inhibiting paint – Color: ORANGE (standard), Red (optional)
Hot Dipped Zinc Galvanized (optional)
Other Colors Available (IE: RAL3000 and RAL9000)
For other Coating requirements contact an Anvil Representative.

GASKETS: Materials
Properties as designated in accordance with ASTM D 2000



Grade "E" EPDM (Green color code)
-40°F to 230°F (Service Temperature Range)(-40°C to 110°C)
Recommended for water service, diluted acids, alkalies solutions, oil-free air and many other chemical services.
NOT FOR USE IN PETROLEUM APPLICATIONS.

Grade "T" Nitrile (Orange color code)
-20°F to 180°F (Service Temperature Range)(-29°C to 82°C)
Recommended for petroleum applications. air with oil vapors and vegetable and mineral oils.
NOT FOR USE IN HOT WATER.



LUBRICATION:
Standard Gruvlok
Gruvlok Xtreme™ (Do Not use with Grade "L")

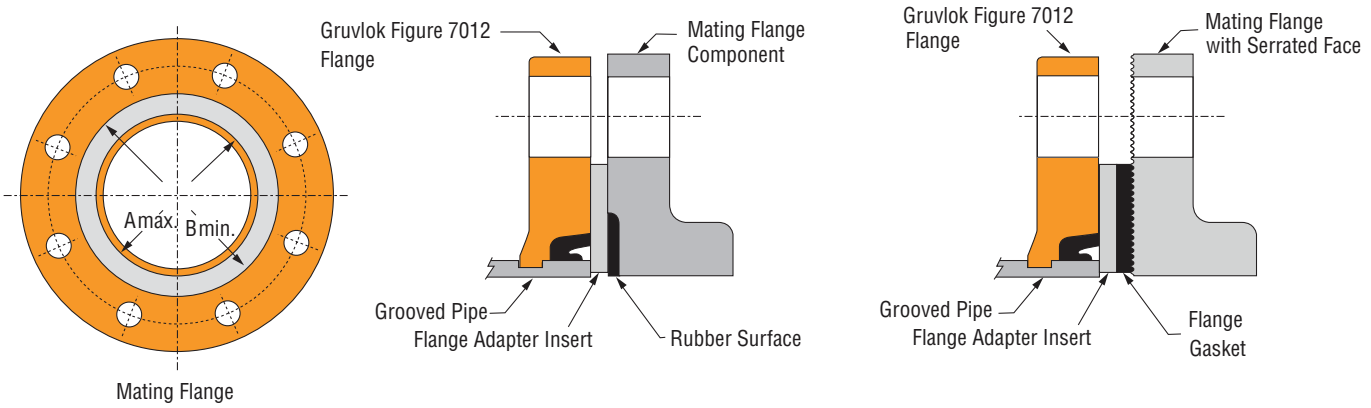
NOTES:

†Maximum Working Pressure Rating is for schedule 40 steel pipe. For light wall, stainless steel, aluminum and ISO pipe pressure ratings, please refer to the technical data section.



The Gruvlok Flange bolt hole pattern conforms to ANSI Class 150 and Class 125 flanges.

To avoid interference issues, flanges cannot be assembled directly to Series 7700 butterfly valve. Flange can be assembled to one side of series 7500 and 7600 valve only.

Mating flange bolts must be at least Intermediate Strength Bolting per ASME B16.5. Bolts with material properties equal or greater than SAE J429 Grade 5 are acceptable.

For additional details see "Coupling Data Chart Notes" on page 17.
+ PN 16 uses M24 x 90 (PN) Dimensions for bolt circle PN 10 & 16 Flange.
* Available in ANSI or metric bolt sizes only as indicated.
▼ Based on use with standard wall pipe.
§ – For additional Bolt Torque information, see page 222.
See Installation & Assembly directions on page 198-200.

FIG. 7012
Gruvlok Flanges

A. The sealing surfaces A Max. to B Min. of the mating flange must be free from gouges, undulations and deformities of any type to ensure proper sealing of the gasket.

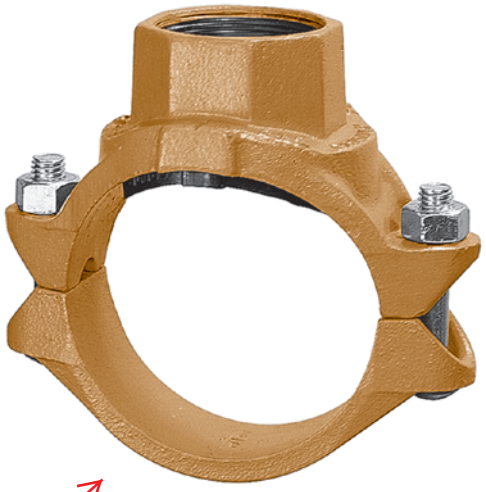
B. Gruvlok Flanges are to be assembled on butterfly valves so as not to interfere with actuator or handle operation.

C. Do not use Gruvlok Flanges within 90 degrees of one another on standard fittings because the outside dimensions may cause interference.

D. Gruvlok Flanges should not be used as anchor points for tierods across non-restrained joints.

E. Fig. 7012 Gruvlok Flange sealing gaskets require a hard flat surface for adequate sealing. The use of a Gruvlok Flange Adapter Insert is required for applications against rubber faced valves or other equipment. The Gruvlok Flange Adapter Insert is installed between the Gruvlok Flange sealing gasket and the mating flange or surface to provide a good sealing surface area.

F. Gruvlok Flanges are not recommended for use against formed rubber flanges.



G. Contact an Anvil Representative for Di-Electric Flange connections.

Applications which require a Gruvlok Flange Adapter Insert (page 49):

1. When mating to a wafer valve (lug valve), if the valve is rubber faced in the area designated by the sealing surface dimensions (A Max. to B Min.), place the Gruvlok Flange Adapter Insert between the valve and the Gruvlok flange.
2. When mating to a rubber-faced metal flange, the Gruvlok Flange Adapter Insert is placed between the Gruvlok Flange and the rubber-faced flange.
3. When mating to a serrated flange surface, a standard full-faced flange gasket is installed against the serrated flange face and the Gruvlok Flange Adapter Insert is placed between the Gruvlok Flange and the standard Flange gasket.
4. When mating to valves or other component equipment where the flange face has an insert, use procedure described in note 3.

FIG. 7045

Clamp-T, FPT Branch

c UL us LISTED FM APPROVED

For Listings/Approval Details and Limitations, visit our website at www.anvilintl.com or contact an Anvil® Sales Representative.

The Gruvlok Clamp-T provides a quick and easy outlet at any location along the pipe. A hole drilled or cut in the pipe to receive the locating collar of the Clamp-T is all that is required. The full, smooth outlet area provides for optimum flow characteristics.

The Clamp-T housing is specially engineered to conform to the pipe O.D. and the Clamp-T gasket providing a leak tight reliable seal in both positive pressure and vacuum conditions. The maximum working pressure for all sizes is 500 PSI (34.5 bar) when assembled on standard wall steel pipe.

The Gruvlok Clamp-T provides for a branch or cross connection in light wall or standard wall steel pipe.

The Fig. 7045 Clamp-T female pipe thread branch is available with NPT or ISO 7/1 connection and the Fig. 7046 Clamp-T has grooved-end branch connection.

Clamp-T cross connections are available in various sizes allowing greater versatility in piping design.

NOTE: Variable End Configurations are Possible — Thd x Thd and Gr. x Thd.
Sizes — 2" x 1/2" through 8" x 4"

ISO 898-2, Class 8.8, Zinc Electroplated followed by a Yellow Chromate Dip

U-BOLT:
Cold drawn steel and zinc plated.

HOUSING:
Ductile Iron conforming to ASTM A 536, Grade 65-45-12

COATINGS:
Rust inhibiting paint – Color: ORANGE (standard)
Hot Dipped Zinc Galvanized (optional)
Other Colors Available (IE: RAL3000 and RAL9000)
For other Coating requirements Contact an Anvil Representative for more information.

GASKETS: Materials
Properties as designated in accordance with ASTM D 2000

Grade "E" EPDM (Green color code)
-40°F to 230°F (Service Temperature Range)(-40°C to 110°C)
Recommended for water service, diluted acids, alkalies solutions, oil-free air and many other chemical services.
NOT FOR USE IN PETROLEUM APPLICATIONS.

Grade "T" Nitrile (Orange color code)
-20°F to 180°F (Service Temperature Range)(-29°C to 82°C)
Recommended for petroleum applications. air with oil vapors and vegetable and mineral oils.
NOT FOR USE IN HOT WATER OR HOT AIR.

LUBRICATION:
Standard Gruvlok
Gruvlok Xtreme™ (Do Not use with Grade "L")

NOTE:
2½", 5" and 6" Nom. Run pipe size Clamp-T may be used on 3" O.D., 5½" O.D. and 6½" O.D. pipe.

(Additional larger sizes on next page.)

▼ Based on use with standard wall pipe.
§ – For additional Bolt Torque information, see page 222.
See Installation & Assembly directions on page 202.
Not for use with copper systems.

FIG. 7046

Clamp-T, Grooved Branch

c UL us LISTED FM APPROVED

For Listings/Approval Details and Limitations, visit our website at www.anvilintl.com or contact an Anvil® Sales Representative.

The Gruvlok Clamp-T provides a quick and easy outlet at any location along the pipe. A hole drilled or cut in the pipe to receive the locating collar of the Clamp-T is all that is required. The full, smooth outlet area provides for optimum flow characteristics.

The Clamp-T housing is specially engineered to conform to the pipe O.D. and the Clamp-T gasket providing a leak-tight reliable seal in both positive pressure and vacuum conditions. The maximum working pressure for all sizes is 500 PSI (34.5 bar) when assembled on standard wall steel pipe.

The Gruvlok Clamp-T provides for a branch or cross connection in light wall or standard wall steel pipe.

Clamp-T cross connections are available in most sizes allowing greater versatility in piping design.

MATERIAL SPECIFICATIONS

BOLTS:
SAE J429, Grade 5, Zinc Electroplated
ISO 898-1, Class 8.8, Zinc Electroplated followed by a Yellow Chromate Dip

HEAVY HEX NUTS:
ASTM A563, Grade A, Zinc Electroplated
ISO 898-2, Class 8.8, Zinc Electroplated followed by a Yellow Chromate Dip

U-BOLT:
Cold drawn steel and zinc plated.

HOUSING:
Ductile Iron conforming to ASTM A 536, Grade 65-45-12

COATINGS:
Rust inhibiting paint – Color: ORANGE (standard)
Hot Dipped Zinc Galvanized (optional)
Other Colors Available (IE: RAL3000 and RAL9000)
For other Coating requirements contact an Anvil Representative for more information.

GASKETS: Materials
Properties as designated in accordance with ASTM D 2000

Grade "E" EPDM (Green color code)
-40°F to 230°F (Service Temperature Range)(-40°C to 110°C)
Recommended for water service, diluted acids, alkalies solutions, oil-free air and many other chemical services.
NOT FOR USE IN PETROLEUM APPLICATIONS.

Grade "T" Nitrile (Orange color code)
-20°F to 180°F (Service Temperature Range)(-29°C to 82°C)
Recommended for petroleum applications. air with oil vapors and vegetable and mineral oils.
NOT FOR USE IN HOT WATER OR HOT AIR.

LUBRICATION:
Standard Gruvlok
Gruvlok Xtreme™ (Do Not use with Grade "L")

NOTES:
2½", 5" and 6" Nom. Run pipe size Clamp-T may be used on 3" O.D., 5½" O.D. and 6½" O.D. pipe.
• Cannot be used in cross configuration.

▼ Based on use with standard wall pipe.
§ – For additional Bolt Torque information, see page 222.
See Installation & Assembly directions on page 202.
Not for use with copper systems.

GRUVLOK FITTINGS FOR GROOVED-END PIPE

Gruvlok fittings are available through 24" nominal pipe size in a variety of styles. Use the Fitting Size Table to convert nominal pipe size to corresponding pipe O.D.

These fittings are designed to provide minimum pressure drop and uniform strength.

Depending on styles and size, Gruvlok fittings are provided in various materials including ductile iron, forged steel or fabricated steel.

Pressure ratings of Gruvlok standard fittings conform to those of Fig. 7001 Gruvlok coupling.

Not for use in copper systems.

NSF/ANSI 61 UPC

Galvanized Gruvlok Fittings are NSF-61 and Low Lead Approved

For the reducing tee and branches, use the value that is corresponding to the branch size. For example: for 6" x 6" x 3" tee, the branch value of 3" is 12.8 ft (3.9).

MATERIAL SPECIFICATIONS

CAST FITTINGS:

~~Ductile iron conforming to ASTM A 536, Grade 65-45-12~~

Malleable iron conforming to ASTM A 47

FABRICATED FITTINGS:

1-12" Carbon steel, Schedule 40, conforming to ASTM A 53, Grade B

14-24" Carbon steel, 0.375 wall, conforming to ASTM A 53, Grade B

COATINGS:

Rust inhibiting paint – Color: ORANGE (standard)

Hot Dipped Zinc Galvanized conforming to ASTM A 153 (optional)

Other Colors Available (IE: RAL3000 and RAL9000)

MULTI-PURPOSE

MP MULTI-PURPOSE

FOR SEALING JOINTS AND SEAMS OF HEATING & VENTILATION DUCTWORK

MULTI-PURPOSE SEALANT
"One Sealant does it all."

EXCLUSIVE FEATURES

FLEXIBLE

NON TOXIC

FLAME RESISTANT

DEPENDABILITY

FIREPROOF

ULC S-102 LISTED
FILE CR 1207

SMOKE PROOF

BELOW FREEZING APPLICATION

EACH GALLON BEARS A U.L.C. LABEL

- Will always remain flexible - 600% Elongation Cured Film.
- Will resist up to 25" Static Pressure.
- Will adhere to most dirty surfaces without conventional cleaning measures.
- No dangerous smell causing -
  Oxygen starvation
  Increased pulsation
  Eliminates headaches
- Will not flash or burn in the wet or dry state.
- Does not require special storage
- Special precautions not necessary. No fear of explosions.
- You have now solved your sealing problems with Multi-Purpose - economically and certain of no leaks.

MULTI-PURPOSE®

FLAME RESISTANT DUCT SEALANT

For High, Medium, or Low Velocity Connections

Technical Data And Characteristics

Solid Content: 55%
Viscosity: 1,000,000 cps
Storage life: 1 years
Flexibility: excellent
Cured film: 600% elongation
Application temperature: 5°C to 28°C / 40°F to 82°F
Service temperature range: -30°C to 65°C / -22°F to 150°F
Freeze/thaw stability: passes 5 cycles
Color: grey
Coverage: up to 600 lineal feet per gallon
Static pressure: up to 25 inch
Drying time: 24-72 hours (ambient)
Clean up: warm water
Toxicity: Non toxic. No dangerous smell causing oxygen starvation. No increased pulsation, eliminates headaches.

Tested in accordance with U.L.I. 723 and U.L.C. S-102	
Flame Spread Classification	7
Smoke Developed	0
Fuel contributed	0
Flash Point (Open Cup)	Nil

"The longer it's on, the stronger it gets!"

Advantages

Testing under normal conditions. Seals upon contact. Not necessary to seal the inside of ducts and joints. Will adhere to most dirty surfaces without conventional cleaning measures. Time saving application method. Once cured no possibility of leaks through drying or moisture reaction. Cleans up in moments with water, no solvents are necessary. Application of sealer after ducts are installed.

Specification

Seal all joints with a water based sealant which shall be non-toxic, non-combustible and flame resistant in a wet or dry state and in order for acceptance it shall be tested in accordance with U.L.C. S-102 / U.L.I. 723 surface burning tests. Flame spread shall not exceed 25, and smoke developed shall not exceed 50. Flash point (open cup) shall be nil. Conforms to National Building Code standard 6.2.4.6.(2).

Standard of Acceptance: Multi-Purpose® as provided by Trans Continental Equipment Ltd, Montreal, Oshawa.

240 Cordova Road, Oshawa, On, Canada L1J 1N9 Tel.: 905 579-0878 Toll Free: 800 314-9845 Fax: 905 579-2589

ChimneyFLEXible, ClipCap, ClipFlashing, ClipTee, Drop-In, Drop-Up and Quadralock are registered and/or trademarks of Trans Continental Equipment Ltd. ClipCap/ClipFlashing locking system is patented U.S. Pat No. 6145258 and Can. Pat. No. 2276674. ClipSnoutTee Patent Pending
Prices subject to inadvertent error or change without notice.

TESTED APPLICATIONS

a) High and Low Velocity Ducts, Chambers and Plenums. Sealing of all beads & joints. All types of flexible hoses.
b) Galvanized, Steel, Copper, Aluminum, PVC, Plastic, Lead, Asbestos cement, Chipboard fiber and Fibreglass ductwork and Plenums.
c) All types of insulating materials.
d) Repair of leaks on systems which are operating.
e) Repair of pipe insulation, magnesium, asbestos, fibreglass and cork.

ADVANTAGES OVER CONVENTIONAL SEALERS

1) Installation in temperatures below freezing.
2) Testing under normal conditions.
3) Seals upon contact.
4) Not necessary to seal the inside of ducts and joints.
5) Will adhere to most dirty surfaces without conventional cleaning methods.
6) Time saving application method.
7) Once cured no possibility of leaks through dryout or moisture reaction.
8) Clean up in moments with water, no solvents are necessary.
9) Application of sealer after ducts are installed.

METHOD OF APPLICATION

a) Apply a liberal coat of MP Sealant over the area to be sealed. Let dry and test up to 6" Static Pressure (S.P.)
b) Over 6" S.P. follow step #a, then wrap our special open weave tape over the area to be sealed. Overlap 2", pull tightly and then apply a second liberal coat covering all the weave tape.Let dry and test up to 25" S.P.
c) You now have a sealed joint which will be ready for testing in 24 - 72 hours.

TECHNICAL DATA

MP Sealer is a specially prepared sealant which adheres to almost anything. Once dry it is no longer soluble.
When necessary, the combination of Multi-Purpose sealer and Multi-Purpose open weave tape sets into a flexible air tight seal, which is exceptionally durable. Multi-Purpose is not intended for use as an insulating material and has no K factor.

TEMPERATURE RANGE

TEMPERATURE RANGE -	4° to 300°F / -15° to 150°C
STATIC PRESSURE -	up to 25" S.P.
FLEXIBILITY -	excellent (cured film 600% elongation)
WATER RESISTANCE -	very good
DRYING TIME -	24 - 72 hours
STORAGE LIFE -	24 months
COVERAGE -	600 Linear ft. per gal x 3" wide
COLOR -	green

SPECIFICATIONS:

FOR HIGH OR LOW VELOCITY

LOOK FOR THE LABEL

Seal all joints with a water based sealant which shall be non-toxic, non-combustible and flame resistant in a wet or dry state and in order for acceptance shall be tested in accordance with U.L.C. (S-102) (M-1980). Flame spread shall not exceed 25, and smoke developed shall not exceed 50. Flash point (open cup) - Nil. Conforms to National Building Code standard (see paragraph 6.2.4.6.(2). Each gallon shall bear a U.L.C. label.

Standard of acceptance -

MULTI-PURPOSE®

OPEN WEAVE TAPE

For H.V.A.C. Systems operating at 6"+ Static pressure

MULTI-PURPOSE® NEW OPEN WEAVE TAPE

This new tape has the following advanced properties:

a) is made of a cotton/poly or fiberglass material.
b) more open area perforation, allows Multi-Purpose® sealant to flow through the pores and homogenize with both layers.
c) this allows quicker drying time because the outside air can get to the inner layer much quicker.
d) gives a stronger and even more flexible joint.
e) Our 3" permascreen tape is one inch wider than normal permascreen tape and instead of supplying a 50 yard roll, it comes in a 100 yard roll which means you don't have to wrap around the duct joint twice, therefore you save on cutting and installation or wrapping time.

PLEASE NOTE

One gallon of MULTI-PURPOSE® sealant covers 300 linear feet x 3 inches wide (2 coats), and one roll of MULTI-PURPOSE® NEW OPEN WEAVE TAPE also covers 300 lineal feet x 3 inches wide.

With our NEW Open Weave tape, inter-action with the sealant takes place resulting in a **STRONGER** and more **FLEXIBLE** joint. This results in **ONE COMPLETE FLEXIBLE BOND.**

MULTI-PURPOSE®

DUCT SEALANT

Bulletin
Workplace Hazardous Material Information System (W.H.M.I.S.)

The new Canadian legislation and regulations concerning worker's right-to-know come into effect on October 31,1988. This system has as its key elements cautionary labelling of containers of hazardous materials, provision of Material Safety Data Sheets(MSDS's) and provision of worker's education.

Because of the difficulty of meeting the October 31, 1988 implementation date, Secondary Suppliers (users of chemical raw materials) have been granted an extention to March 15, 1989 for implementation. Reference:
Canada Gazette, Part 1, August 27, 1988.

Prior to the March 15, 1989 implementation date, to assist you in your compliance with W.H.M.I.S., Trans Continental Equipment Ltd. will apply a classified "workplace" label to all controlled products (where applicable) that we supply you with. (See note).

Also prior to March 15, 1989 you can refer to existing Trans Continental Equipment Ltd. MSDS's for precautionary and first aid measures.

NOTE: Product used by you: MULTI-PURPOSE® DUCT SEALER (GREEN or GREY).
This product does not fall under the ingredients disclosure list of over one thousand seven hundred (1700) ingredients and subsequently does not require any "workplace" label. Congratulations on using the **safest duct sealer**. Your men will be grateful knowing that special precautionary measures need not be applied when using or storing Multi-Purpose®.

May 1991.

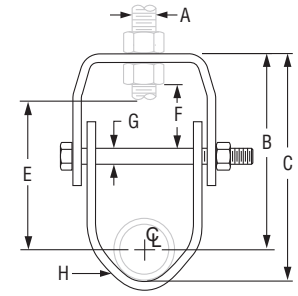
BY Brendan Zrum, P.Eng

Fig. 260 (Formerly Afcon Fig. 371) Adjustable Clevis Hanger

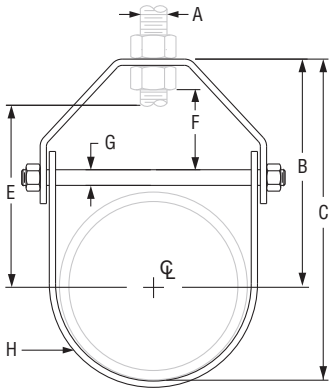
Size Range: 1/2" through 30"
Material: Carbon steel
Finish: ☐ Plain, ☑ 8" & Smaller: Zinc Plated (Hot-Dip Galvanized optional), 10" & Larger: Hot-Dip Galvanized with Zinc Plated Bolts & Nuts, or ❑ Primed, also available in ☐ Plastic or ☐ Epoxy Coated.
Service: Recommended for the suspension of stationary pipe lines.
Maximum Temperature: Plain 650° F, Galvanized and Epoxy 450° F
Approvals: Complies with Federal Specification A-A-1192A (Type 1), *WW-H-171-E (Type 1)*, ANSI/MSS SP-69 and MSS SP-58 (Type 1). FM Approved (Sizes 3/4" through 8"), UL and ULC Listed (Sizes 1/2" through 8")
Installation: Hanger load nut *above* clevis must be tightened securely to assure proper hanger performance.
Adjustment: Vertical adjustment without removing pipe may be made from 3/8" through 5 1/8", varying with the size of clevis. Tighten upper nut after adjustment.
Features:

- Design has yoke on outside of lower U-strap so yoke cannot slide toward center of bolt, thus bending of bolt is minimized.
- Sizes 5" and up have rod and two nuts instead of bolt and nut; thread length on clevis rod is such that the thread locks the nuts in place, and threads are not in shear plane.



Ordering: Specify pipe size, figure number, name and finish.
Notes:

- Punched forming holes may be present on certain sizes of this clevis hanger. These holes are solely for the purpose of manufacturing, and do not effect the structural integrity or load carrying capacities of these hangers.
- For insulated line options without shields, see Figures 260 ISS and Figure 300. For insulated line options with shields, see Figures 167 and 168. For ductile iron pipe sizes, see Figure 590.
- Fig. 260F (Felt lined) – available for use for suspension of copper (or other material) so as to prevent electrolysis between the dissimilar metals of the hanger and the pipe, tube or conduit.



Caution: When an oversize clevis is used, a pipe spacer or multispacer should be placed over clevis bolt to ensure that the lower U-strap will not move in on the bolt.

"Span" represents the maximum recommended distance between hangers on a continuous and straight run of horizontal standard weight steel pipe filled with water. In all cases, verify that chosen location of hangers does not subject hangers to a load greater than the maximum recommended load shown above. *Indicates that span represents the maximum span for water filled pipe.

* The 24" pipe size assembly includes a 1 1/4" SCH 40 pipe spacer over the 7/8" threaded rod.

** 30" pipe size: When assembled, the U-strap sits outside of the yoke.

Fig. 181

Adjustable Steel Yoke Pipe Roll

Size Range: 2 1/2" through 24"

Material: Cast iron roll; carbon steel yoke, roll rod and hex nuts

Finish: ☐ Plain, ☑ Hot-Dip Galvanized Yoke with Zinc Plated Parts or ❑ Resilient Coated

Service: For suspension of pipe from a single rod where longitudinal movement may occur because of expansion or contraction.

Maximum Temperature: 400° F at roller, 300° F at resilient coated roller.

Approvals: Complies with Federal Specification A-A-1192A (Type 43), *WW-H-171-E (Type 44)*, ANSI/MSS SP-69 and MSS SP-58 (Type 43).

Features: Advantages of pipe rollers with a protective resilient coated covering.

- Non conductive pipe rollers - prevent the passing of current from pipeline to structure.
- Corrosion resistant - for protection against severe weather conditions, moderate corrosive conditions such as marine atmospheres and weather resistant to ultra-violet radiation.
- Low coefficient of friction between pipe and resilient coated pipe roller.

How to size: If the roll is to support bare pipe, select the size directly from nominal pipe size (see below). If used with pipe covering protection saddle, see Figure 160 to 166A for size of pipe roll to be used.

Ordering: Specify pipe roll size, figure number, name and finish. Be certain to order oversized rolls when insulation and protection saddles are required.

Pipe Covering Protection Saddle

For Nominal Thickness of Covering Shown

☐ Fig. 160: 1"
☑ Fig. 161: 1½"
☐ Fig. 162: 2"
☐ Fig. 163: 2½"
☐ Fig. 164: 3"
☐ Fig. 165: 4"
☐ Fig. 165A: 4" (Alloy)
☐ Fig. 166A: 5½" (Alloy)

Size Range: ¾" through 36"

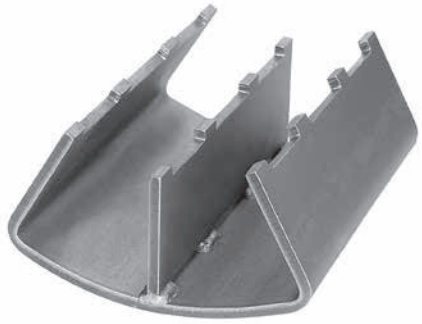
Material:

- Figs. 160, 161, 162, 163, 164, and 165 are curved carbon steel plate.
- Figs. 165A and 166A are alloy steel manufactured from ASTM A 387 Grade 22 Chrome Molybdenum steel plate.
- Figs. 165A and 166A have a welded-in center plate in all sizes.
- All other saddles have a welded-in center plate for pipe sizes 12" and larger.
- All saddles are 12" long with side edges turned up.

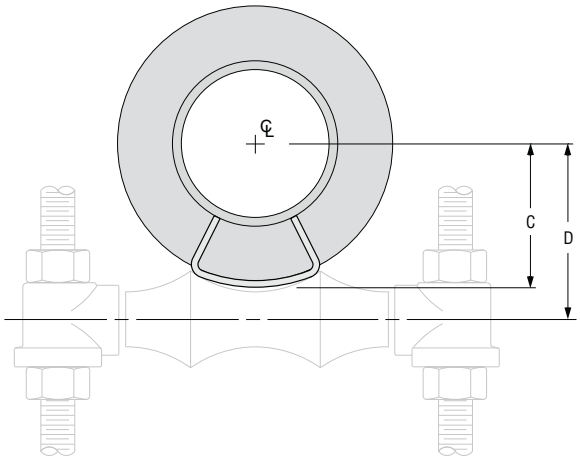
Finish: Plain

Service: Designed for use on insulated high temperature systems where heat losses are to be kept to a minimum and to protect insulation against damage.

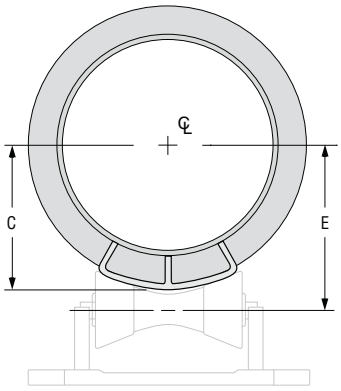
Maximum Temperature: 650° F carbon steel, 950° F alloy steel.



Approvals: Complies with Federal Specification A-A-1192A (Type 39A & 39B), *WW-H-171-E (Type 40A & 40B)*, ANSI/MSS SP-69 and MSS SP-58 (Type 39A & 39B).



Features: Permits finished, weather tight covering at all points of pipe support.



Ordering: Specify pipe size, figure number and name. Data for 42" size available on request.

Installation: It is recommended that saddle be welded to the pipe.

■ Maximum recommended loads are applicable only when saddle is used on a flat bearing surface or roller hangers and tack welded to pipe. When saddle is used with a pipe roll, the maximum load for the assembly is the smaller of the two loads.

• Saddles may require notching when used with a U-bolt.

REVIEWED by MV

Fig. 261 (Formerly Afcon Fig. 400) Extension Pipe or Riser Clamp

Size Range: 3/4" through 24"
Material: Carbon steel
Finish: ☐ Plain, ☐ Hot-Dip Galvanized with Zinc Plated Bolts & Nuts, ☑ Epoxy Coated or ☐ Painted.
Service: For support of stationary steel pipe risers, cast iron pipe or conduit. This product is not intended for use with hanger rods. For this application refer to Fig. 40 Riser Clamp, page 49.
Maximum Temperature: Plain 650° F, Galvanized and Epoxy 450° F
Approvals: Complies with Federal Specification A-A-1192A (Type 8) *WW-H-171-E (Type 8)*, ANSI/MSS SP-69 and MSS SP-58 (Type 8). UL, ULC Listed (Sizes 1 1/2" - 8").
Installation: Clamp is fitted and bolted preferably below a coupling, hub or welded lugs on steel pipe. Bolt torques should be per industry standards (see page 248). Clamp is designed for standard steel pipe O.D. and this must be considered in sizing the riser for other types of piping.
Ordering: Specify pipe size, figure number, name and finish.

Note: Refer to Technical Data Section of the Pipe Hanger Catalog for cast iron soil pipe data.

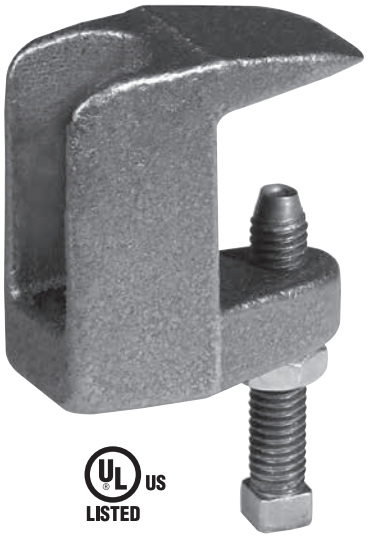

Fig. 94

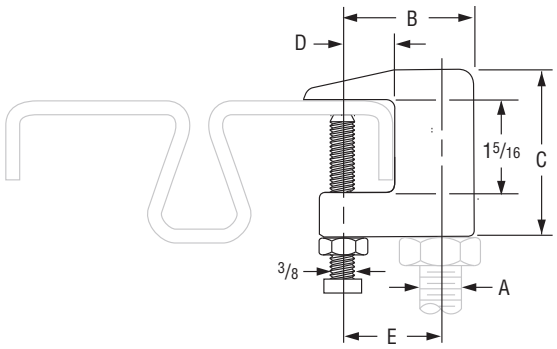
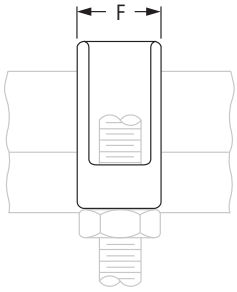
Wide Throat Top Beam C-Clamp



Size Range: 5/8" and 3/4"
Material: Ductile iron body, hardened steel cup point set screw and locknut.
Finish: ☐ Plain or ☑ Zinc Plated (Hot-Dip Galvanized optional)
Service: Recommended for use under roof installations with bar joist type construction, or for attachment to the top flange of structural shapes where the vertical hanger rod is required to be offset from the edge of the flange and where the thickness of joists or flange does not exceed 1 5/16".
Approvals: Complies with Federal Specification A-A-1192A (Type 19) *WW-H-171-E (Type 19)*, ANSI/MSS SP-69 and MSS SP-58 (Type 19), UL Listed.
How to size: Size of clamp is determined by size of rod to be used.
Installation: Follow maximum recommended set screw torque values per MSS-SP-69.
Features:



- Provides clamping to bar joists which are directly under roof installations.
- Provides for vertical hanger rod installed offset from the edge of the beam flange.
- Malleable iron body assures full thread engagement of rod.

Ordering: Specify rod size, figure number, name of clamp and finish.

PART 1: HEATING AND PLUMBING SUSPENDED PIPING

GENERAL NOTES FOR SUSPENDED PIPING

1- For individual supports, seismic restraints are required if the distance between the top of the pipe and it's attachment to the structure measures 12'' or more.

2- For suspended trapezes, seismic restraints are required if the length of the threaded rods measures 12'' or more.

3- Outside of a mechanical room, seismic restraints are required for pipes with a diameter of 2 ½'' or more.

4- Inside of a mechanical room, seismic restraints are required for pipes with a diameter of 1 ¼'' or more.

5- For natural gas, compressed air, medical gases and all other dangerous, explosive, flammable or life safety components, Seismic restraints are required regardless of the pipes diameter.

6- Each straight run with 2 or more supports requires a minimum of 2 transversal restraints and 1 longitudinal restraint.

7- The position, spacing and methods for seismic restraints have to be decided by Gestion Sismique Inc. engineers only.

8- Once decided, seismic restraints must always be installed on or next to an existing support with a threaded rod in place at maximum 4'' allowing a rod stiffener to be efficient.

9- There are flexible restraints and rigid restraints. It is forbidden to mix both of them on the same straight run.

10- For a system, it is forbidden to have restraints on two different part of a building, like anchoring to a wall and a ceiling.

RECOMMENDED SEISMIC ANCHORS FOR THREADED RODS

KWIK HUS-EZ I (KH-EZ I) Carbon Steel Screw Anchor 3.3.7

3.3.7.1 Product description

KWIK HUS-EZ I (KH-EZ I) anchors are comprised of a body with an internally threaded hex washer head. The anchor is manufactured from carbon steel and is heat treated. It has a minimum 0.0003 inch (8 µm) zinc coating in accordance with DIN EN ISO 4042. The internally threaded head is larger than the diameter of the anchor and is formed with serrations on the underside. The anchor body is formed with threads running most of the length of the anchor body. The anchor is installed in a predrilled hole with a powered impact wrench or torque wrench. The anchor threads cut into the concrete on the sides of the hole and interlock with the base material during installation. Applicable base materials include normal-weight concrete, structural lightweight concrete and lightweight concrete over metal deck.

Guide specifications

Screw anchors shall be KWIK HUS-EZ I as supplied by Hilti, Inc. Anchors shall be manufactured from heat treated carbon steel material, zinc plated to a minimum thickness of 8 µm. Anchors shall be installed using a drill bit of same nominal diameter as anchor.

Product features

- Suitable for cracked and uncracked normal-weight and lightweight concrete, and lightweight concrete over metal deck.
- Suitable for seismic and nonseismic loads.
- Quick and easy to install
- Thread design enables quality setting and exceptional load values in wide variety of base material strengths.
- Anchor is fully removable
- Anchor size is same as drill bit size.
- Suitable for reduced edge distances and spacing.

3.3.7.2 Material specifications

KWIK HUS-EZ I anchors are manufactured from carbon steel. The anchors are bright zinc plated to a minimum thickness of 8 µm.

3.3.7.3 Technical data

3.3.7.3.1 ACI 318-14 Chapter 17 design

The technical data contained in this section are Hilti Simplified Design Tables. The load values were developed using the design parameters and variables of ESR 3027 and the equations of ACI 318-14 Chapter 17. For a detailed explanation of the Hilti Simplified Design Tables, refer to section 3.1.8. Data tables from ESR 3027 are not contained in this section, but can be found at www.icc-es.org or at www.hilti.com.

PART 2: SUSPENDED HVAC DUCTS

GENERAL NOTES FOR SUSPENDED HVAC DUCTS

1- For suspended trapezes with hvac ducts, seismic restraints are required if the length of the threaded rods measures 12'' or more.

2- Seismic restraints are required on rectangular ducts with 6 square feet or more of diameter.

3- Seismic restraints are required on circular ducts with 28 inches or more of diameter.

4- Chimneys and systems with hazardous or toxic gas, needs to be restrained regardless of its diameter.

5- When installing restraints on hvac ducts, the duct needs to be squeezed with a support over and under the duct and the supports needs to be secured with metal screws every 12 inches.

6- Each straight run with 2 or more supports requires a minimum of 2 transversal restraints and 1 longitudinal restraint.

7- The position, spacing and methods for seismic restraints have to be decided by Gestion Sismique Inc. engineers only.

8- Once decided, seismic restraints must always be installed on or next to an existing support with a threaded rod in place at maximum 4'' allowing a rod stiffener to be efficient.

9- There are flexible restraints and rigid restraints. It is forbidden to mix both of them on the same straight run.

10- For a system, it is forbidden to have restraints on two different part of a building, like anchoring to a wall and a ceiling.

PART 3: SUSPENDED AND GROUND UNITS

B) Anchorages

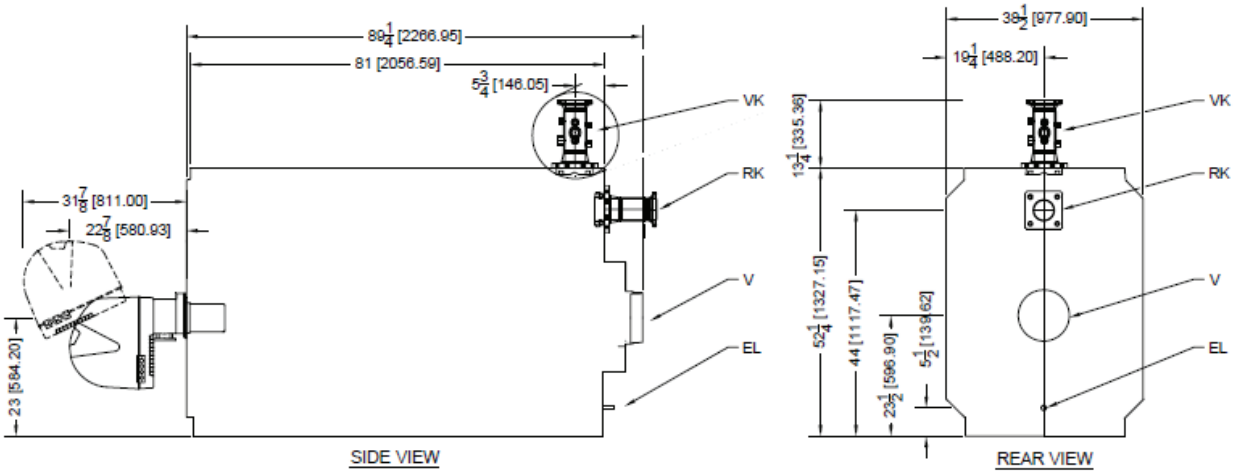
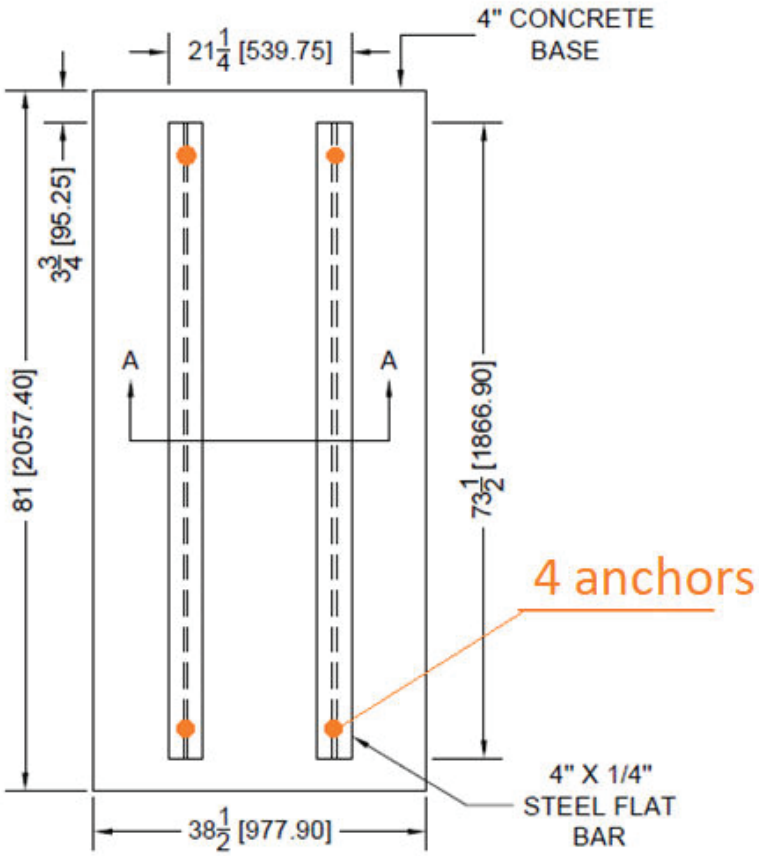
CONCLUSION:

3 seismic anchors of 3/8'' diameter X 2-1/2'' embedment.
Minimum thickness of floor: 4''
Minimum edge distance: 4''

6. Heating Boiler B.1 and B.2 (5074 pound)



A) Coefficient of the Lateral Seismic Force (CLS) and Seismic Force:



Equipment: ***Heating Boiler***
Mass (pound): ***5074***
Location: ***Mechanical room***

Equipment: ***Standard***
Element or Component Category: ***11B***
Element or Component Seismic Coefficient, Cp: ***1***
Response Amplification Factor, Ar: ***2,5***
Height Coefficient, Ax: ***1***
Element or Component Response Modification Coefficient, Rp: ***2,5***
Modification Factor, Sp: ***1***
Coefficient of the Lateral Seismic Force (CLS): ***0.031***

- Seismic Force:
Lateral Seismic Force = CLS* mass = **265** pound
- Lateral Seismic Force per support point (4 support points):
Tensile force = **0** pound
Shear force = **66** pound

B) Anchorages

IMPORTANT: BUDERUS REQUEST A FLAT SURFACE FOR THE BOILER ASSEMBLY

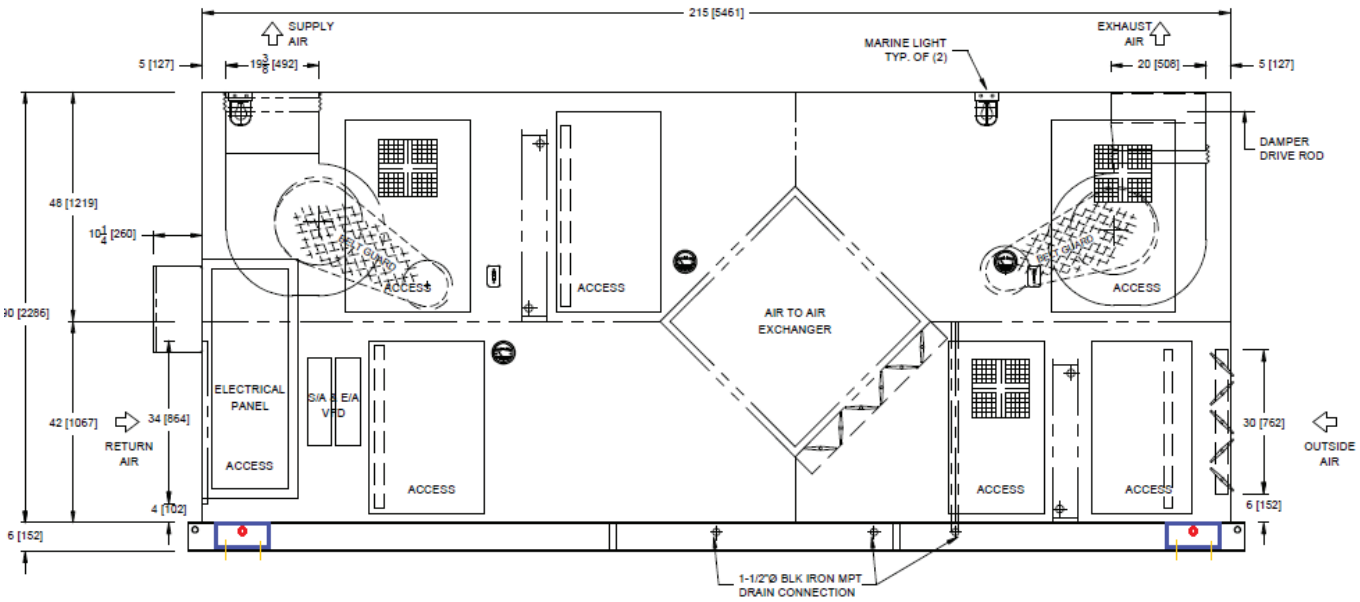
VIEW A-A

FLAT BAR INSTALLATION FOR FIELD ASSEMBLY ON AN EXISTING CONCRETE BASE

CONCLUSION :

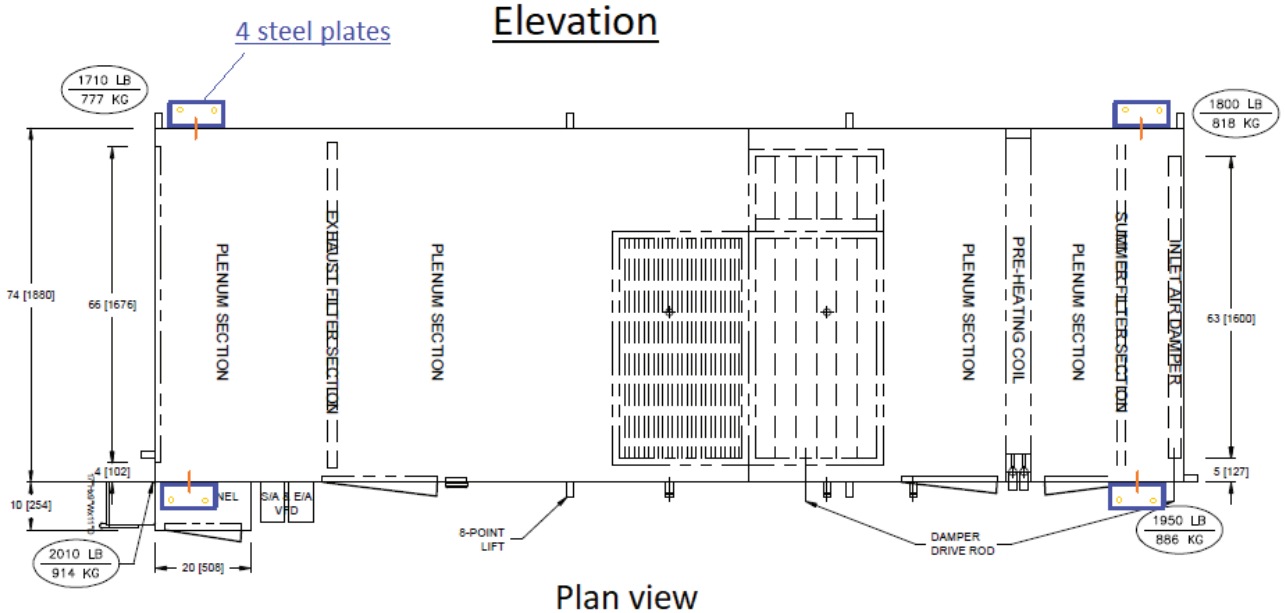
4 seismic anchors of 1/2'' diameter X 2-1/2'' embedment.
Minimum thickness of floor: 4''
Minimum edge distance: 4''

7. Air handling unit AHU-2



A) Coefficient of the Lateral Seismic Force (CLS) and Seismic Force:

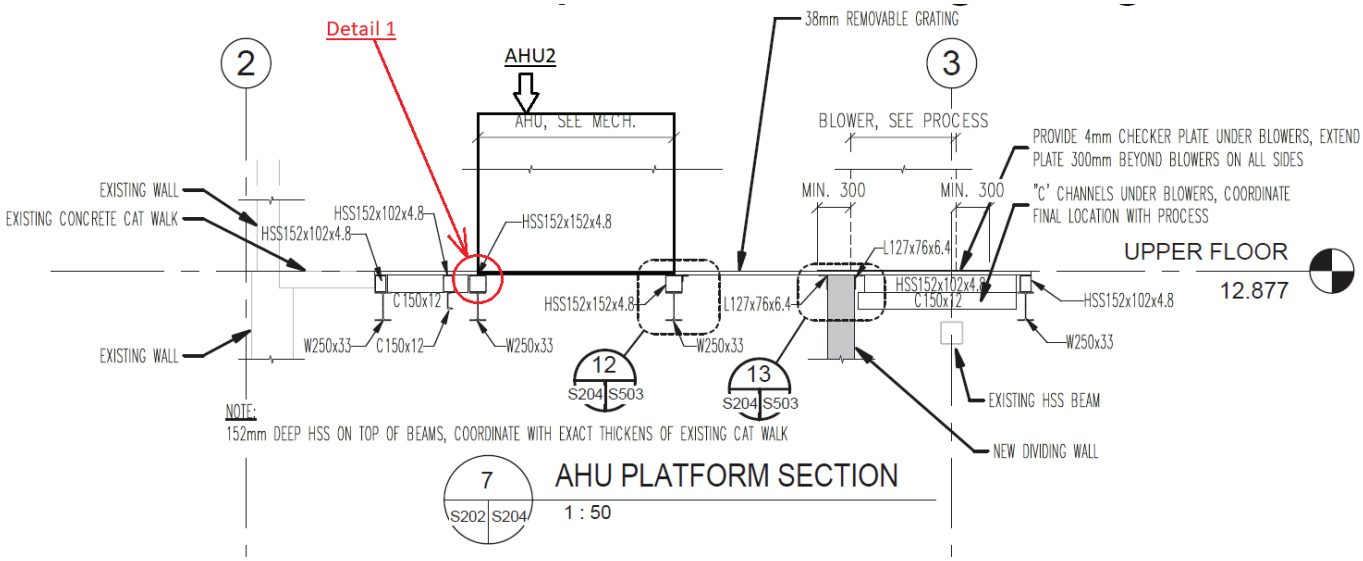
Equipment: ***AHU-2***
Mass (pound): ***7370***
Location: ***Upper floor***



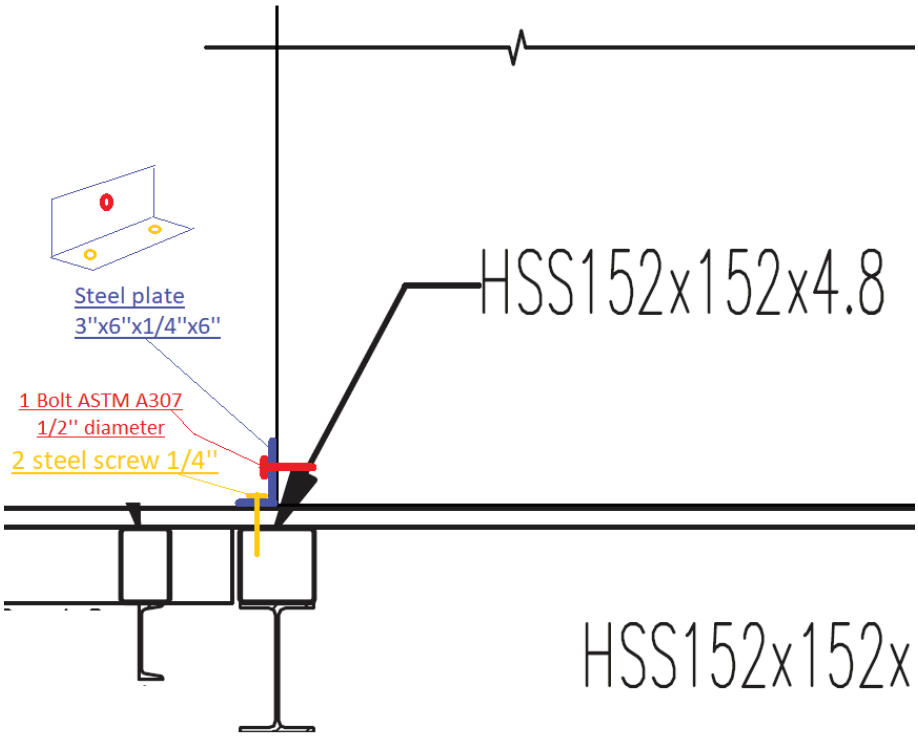
Equipment: ***Standard***
Element or Component Category: ***11B***
Element or Component Seismic Coefficient, Cp: ***1***
Response Amplification Factor, Ar: ***2,5***
Height Coefficient, Ax: ***2***
Element or Component Response Modification Coefficient, Rp: ***2,5***
Modification Factor, Sp: ***2***
Coefficient of the Lateral Seismic Force (CLS): ***0,063***

- Seismic Force:
Lateral Seismic Force = CLS* mass = **462** pound
- Lateral Seismic Force per support point (8 support points):
Tensile force = **0** pound
Shear force = **57** pound

B) Anchorages

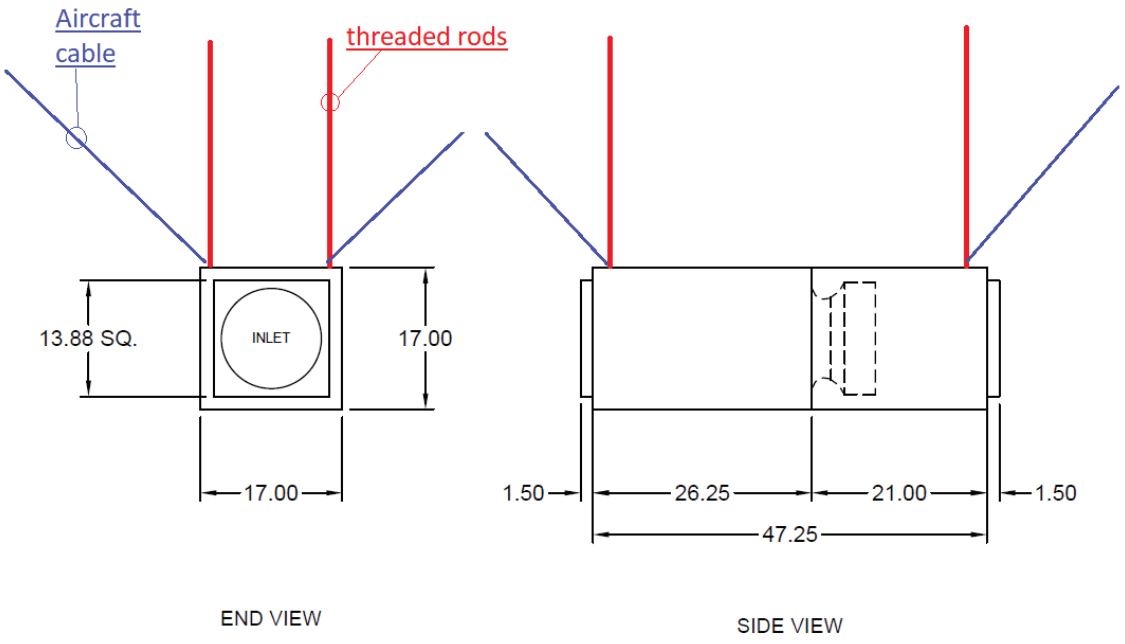


Elevation



Plan view

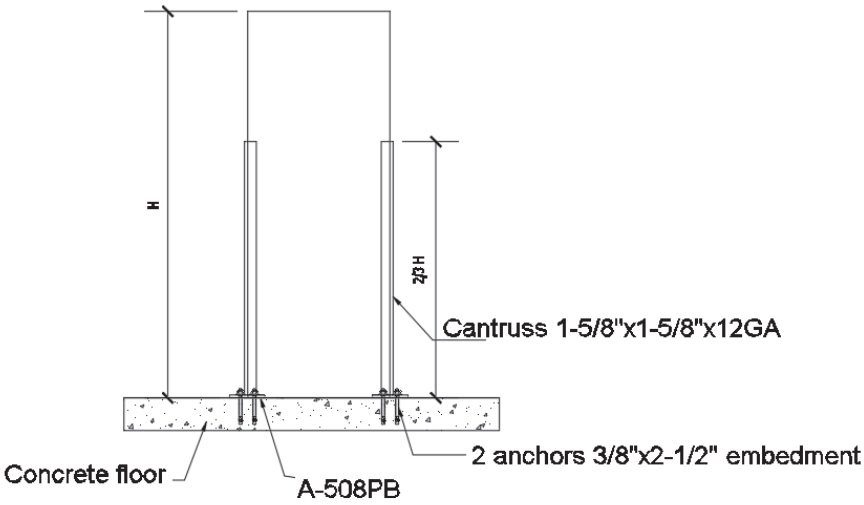
- The AHU2 is to be installed on an existing steel structure.



- Detail 1:

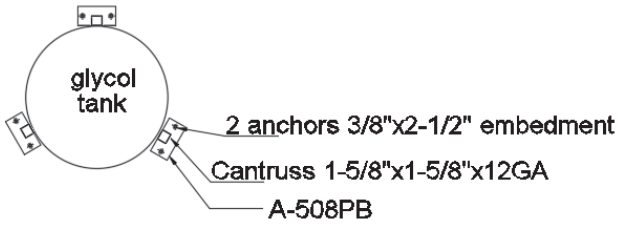
8. Fans CF-1 et CF-2; CFS=0.211; Maximum mass: 79 pound

Suspension system:
The fans need to be attached to the steel structure:
+ 4 threaded rods 3/8'' with rod stiffeners
+ 4 aircraft cables in 45 degrees 7x19 of 1/8'' diameter



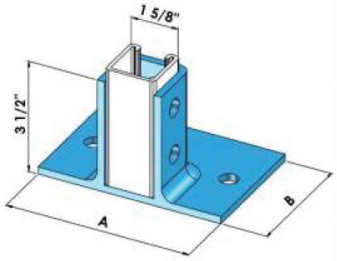
9. Heat recovery ventilator HRV-1; CLS=0.094; maximum mass: 65 pound
Seismic installation is not required. Follow the manufacturer's recommendations for installation.

10. Oil pumps P-4.1 and P-4.2; CLS=0.094; maximum mass: 100 pound (to be confirmed by contractor)
Secure the pump to the wall (in the metal studs) with 4 metal screws of 1/4'' diameter.



11. Brazed plate heat exchanger HEX-3.1 and HEX-3.2; CLS=0.094; maximum mass: 42 pound
Seismic installation is not required. Follow the manufacturer's recommendations for installation.

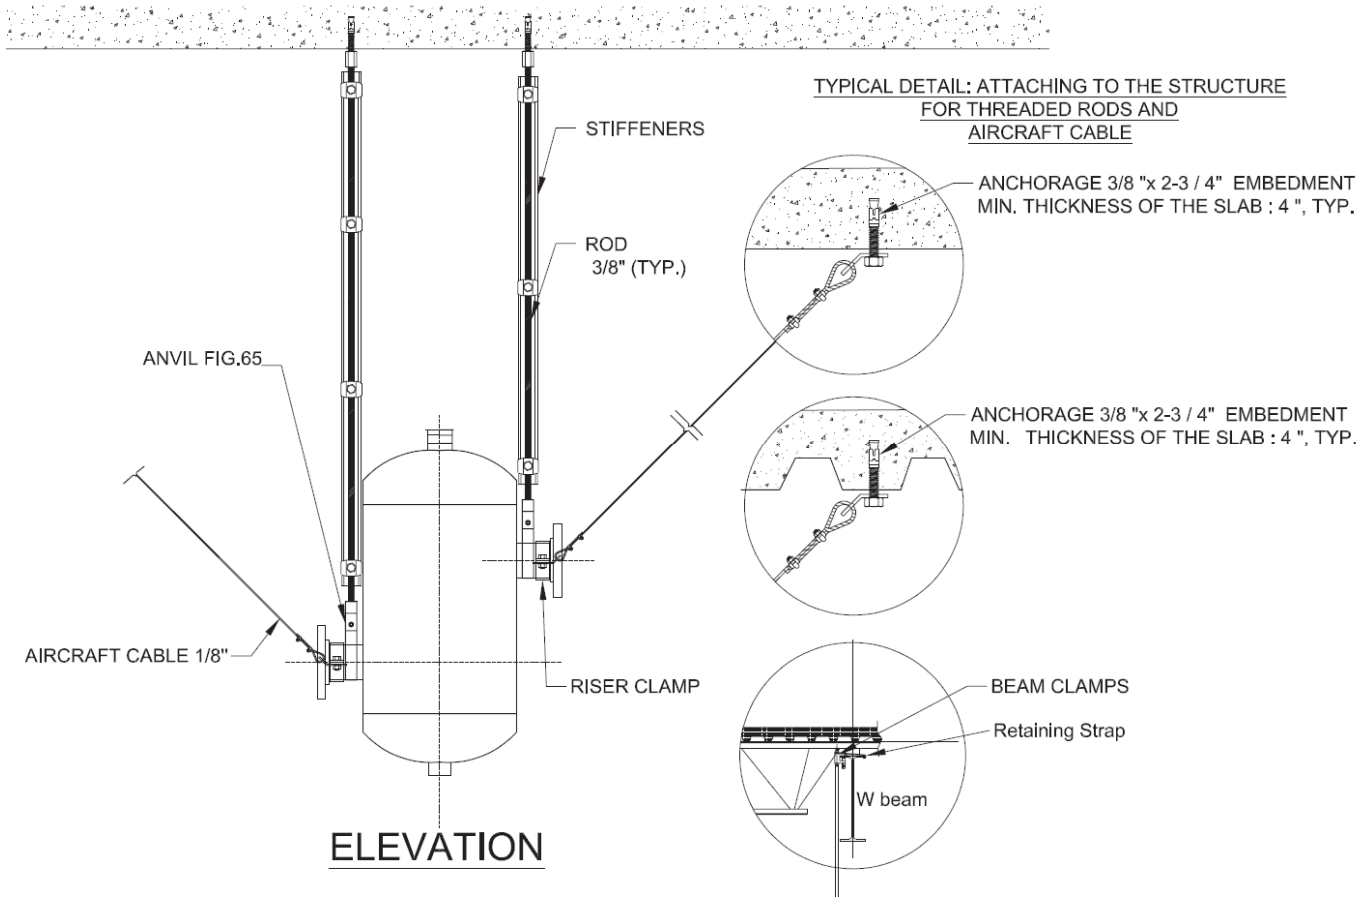
12. Tank of HVAC water treament systems; CLS=0.094; maximum mass: 460 pound



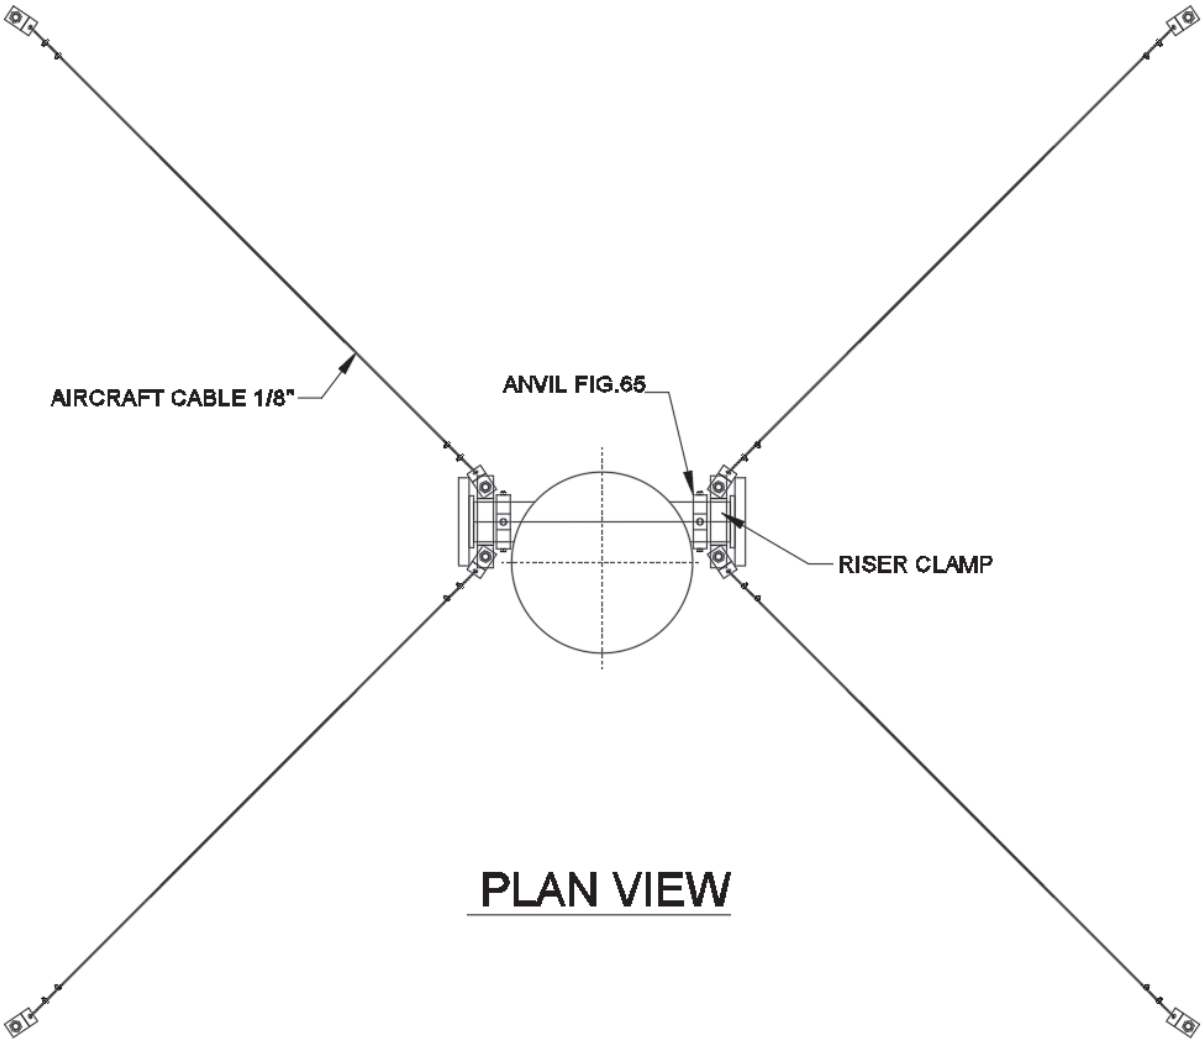
Diameter: 24'' ; Hight: 49'' ; Capacity: 208 Liters

AIMCO INTERNATIONAL GROUP

SINGLE POST BASE OPEN



Part #	A (in.)	B (in.)	Approx. Wt. (lbs.)
A-508PB	6	4	3.00
A-PB200	8	3	3.10



Specification Data	
Hole Dia. (in.)	9/16
Hole Spacing from End (in.)	13/16
Hole Spacing on Center (in.)	1 7/8
Width (in.)	1 5/8
Thickness (in.)	1/4

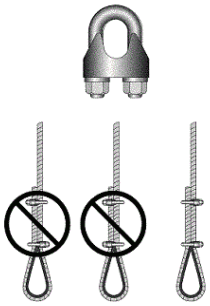
13. Suspended air seperator; CLS=0.094; maximum mass: 121 pound

Suspension system:

The unit needs to be attached to the steel structure:
+ 2 threaded rods 3/8'' with rod stiffeners
+ 4 aircraft cables in 45 degrees 7x19 of 1/8'' diameter

PLAN VIEW

PART 4: GENERAL NOTES FOR CABLE AND ROD STIFFENER INSTALLATION



1. *Plates and cable installation*

Type of steel: 44W

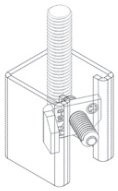
- Cable plates must be bended in 45 degrees.
- Cable plates must have a minimum of ¼ '' of thickness.
- Cable plates must be installed in the beginning of the threaded rods for seismic restraint and also installed to the concrete slab for restraint and anchorage.

2. *Cable U-bolts required installation*

2 serres-câbles minimum par câbles par extrémités et doivent être installé de la façon suivante :

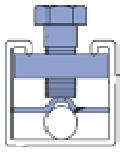
- A minimum of 2 u-bolts are required and must be installed as per above image

3. *Cable protectors*



- Cable protectors must be installed every time a cable passes through a cable plate

4. Notes on rod stiffeners

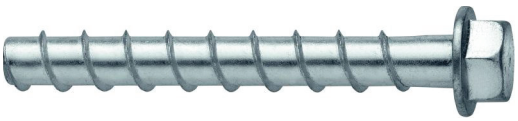


Attachment type 1:

Attachment type 2:

- Rod stiffeners must be installed on threaded rods only where seismic restraints are required and when rod length is 16'' or more for a 3/8'' rod.
- Rod stiffeners are made of a strut channel 1'' 5/8 X 1'' 5/8
- A minimum of 3 attachment are required in a rod stiffener even if the rod length is only 16''
- The first and the last attachment must begin at 2'' of the bottom and the top of the strut channel
- The spacing between attachments for a 3/8'' rod is 13''

Type of bolts: ASTM A307



PART 5: SEISMIC ANCHORS

1. ***Seismic Anchor list***

1- Simpson Strong-Tie model : Strong-bolt 2 ou Titen HD.
2- Powers Fasteners model : Power-Stud + SD2 ou Wedge-Bolt +.
3- Hilti model : Kwik Bolt TZ ou Kwik HUS-EZ mâle.
4- ITW Red-Head model : Trubolt +
5- Wej-it fastening systems Systems model : ANKR-Tite CCAT.

** Please contact us before using any other seismic anchor for verification and validation.

Seismic male screw anchor :

Seismic female screw anchor for threaded rod only:

Seismic expansion anchor :

DOWFROST HD

Inhibited Propylene Glycol-based Heat Transfer Fluid

DOWFROST* HD heat transfer fluid is a formulation of 94.0 percent propylene glycol and a specially designed package of industrial corrosion inhibitors. The fluid is dyed bright yellow to aid in leak detection. Solutions in water provide freeze protection to below -50°C (-60°F) and burst protection to below -73°C (-100°F).

Recommended use temperature range: -45°C (-50°F) to 160°C (325°F)

Suitable applications: single fluid process heating and cooling, closed-loop, water-based HVAC applications where propylene glycol solutions are preferred or required.

For health and safety information for this product, contact your Dow sales representative or call the number for your area on the second page of this sheet for a Material Safety Data Sheet (MSDS).

Typical Concentrations of DOWFROST HD Fluid Required to Provide Freeze and Burst Protection at Various Temperatures

Temperature °C (°F)	Percent DOWFROST HD Fluid Concentration Required	
	For Freeze Protection Volume %	For Burst Protection Volume %
-7 (20)	18	12
-12 (10)	29	20
-18 (0)	36	24
-23 (-10)	42	28
-29 (-20)	46	30
-34 (-30)	50	33
-40 (-40)	54	35
-46 (-50)	57	35
-51 (-60)	60	35

NOTE: These figures are examples only and may not be appropriate to your situation. Generally, for an extended margin of protection, you should select a temperature in this table that is at least 3°C (5°F) lower than the expected lowest ambient temperature. Inhibitor levels should be adjusted for solutions of less than 20% glycol. Contact Dow for information on specific cases or further assistance.
ATTENTION: These are typical numbers only and are not to be regarded as specifications. As use conditions are not within its control, Dow does not guarantee results from use of the information or products herein; and gives no warranty, express or implied.

95.0	95.0	a	a	b	154.4 (310)	52.8	1.4315

† Typical properties, not to be construed as specifications.

†† Degree Brix is a measure of the sugar concentration in a fluid and is important in fermentation and syrups applications. Although there is no sugar present in DOWFROST heat transfer fluids, the glycol affects the refractive index of the fluid in a similar fashion.

[a] Propylene glycol concentrations greater than 94% are not attainable with DOWFROST HD fluid.

[b] Freezing points are below -50°C (-60°F).

NOTE: Generally, for an extended margin of protection, you should select a temperature in this table that is at least 3°C (5°F) lower than the expected lowest ambient temperature. Inhibitor levels should be adjusted for solutions of less than 20% glycol. Contact Dow for information on specific cases or further assistance.

Phone: 418-681-7958

Contract Number: **8N0Y-0079**

Drawing Number: **002.001**

SEQUENCE OF OPERATION:

GENERAL:
BUILDING HEATING WATER SYSTEM INCLUDES TWO MODULATING OIL FIRED HYDRONIC HEATING WATER BOILERS, PRIMARY RECIRCULATION PUMPS, PACKAGED GLYCOL FILL SYSTEM AND SECONDARY HEATING WATER PUMPS.
THE PRIMARY HEATING SYSTEM CONSISTS OF 2 GLYCOL BOILERS B-1 AND B-2 EACH COMPLETE WITH A CIRCULATION PUMP P-1.1 AND P-1.2 RESPECTIVELY.
EACH BOILER IS SUPPLIED WITH A DIGITAL UNIVERSAL CONTROLLER. THE BOILER BURNER INCLUDES LOCAL BURNER MANAGEMENT CONTROLS THAT CONTROL BOILER FIRING. BMS WILL PROVIDE BOILER STAGING, BOILER CIRCULATION PUMP CONTROL AND BOILER SETPOINT RESET AND ALL SAFETY OR OPERATIONAL INTERLOCKS TO THE BOILER BURNER AS REQUIRED.

PRIMARY HW SYSTEM & BOILER CONTROL (B-1, B-2, P1.1, P1.2):
1. THE PRIMARY HEATING SYSTEM IS TO BE ENABLED WHEN THE OUTDOOR AIR TEMPERATURE (OA-T) IS BELOW 16 DEG C. AN ANTI SHORT CYCLE TIME DELAY IS TO BE PROVIDED.
2 THE HEATING BOILERS (B-1 & B-2) WILL OPERATE IN CASCADE SEQUENCE AND ROTATE WHILE MAINTAINING MODULATION OF EACH BOILER AS FOLLOWS:
3. ONCE THE LEAD BOILER FIRING RATE IS GREATER THAN 95% FOR A PERTICULAR DELAY (TIME TO BE DETERMINED DURING COMMISSIONING), THE LAG BOILER CIRCULATION PUMP AND ASSOCIATED BOILER WILL BE ENABLED.
THE BOILERS WILL BE UNLOADED IN REVERSE ORDER WHEN THEIR FIRING RATE IS LESS THAN MINIMUM FIRING RATE FOR A PERTICULAR DELAY (TIME TO BE DETERMINED DURING COMMISSIONING).
4. PROVIDE A DEAD BAND BETWEEN ENABLING AND DISABLING OF THE BOILER. DEAD BAND TO BE DETERMINED DURING COMMISSIONING TO PREVENT EXCESSIVE CYCLING.
5. ONLY AFTER THE PUMP STATUS (P1.1 & P1.2) IS PROVEN CAN THE ASSOCIATED BOILER BE ENABLED.
6. WHEN A BOILER IS DISABLED, ITS CIRCULATION PUMP WILL CONTINUE TO OPERATE FOR 5 MINUTES TO DISSIPATE ANY RESIDUAL HEAT IN THE BOILER.
7. IF THE RUNNING BOILER OR CIRCULATION PUMP FAIL, THE OTHER BOILER AND PUMP WILL BE ENABLED AND THE PREVIOUS BOILER CIRCULATION PUMP AND BOILER WILL BE DISABLED. UPON A FAILURE OF THE PUMP OR ASSOCIATED BOILER, AN ALARM WILL BE GENERATED AT THE OWS.
8. THE LEAD BOILER IS TO ROTATE ON A DUTY RUN TIME EVERY WEEK.
9. BOILER BURNERS TO OPERATE USING PACKAGED BOILER OPERATING CONTROLS. PACKAGED CONTROLS MODULATE BURNER TO SATISFY HWST SETPOINT.
10. THE RESET RATIO AND SET POINTS ARE TO BE ADJUSTABLE BY GRAPHIC OPERATOR INTERFACE AT THE OWS RATHER THAN AT THE BOILER CONTROLLER. THE HWS TEMPERATURE IS TO RESET BASED ON O/A TEMP. INITIAL HWS RESET SCHEDULE SETPOINTS:

AT OAT < -30 DEG C HWS = 82 DEG.C
AT OAT > +16 DEG C HWS = 60 DEG C

11. WHEN LEAD BOILER ENERGIZED, ASSOCIATED BOILER PRIMARY CIRCULATION PUMP ENERGIZED. PRIMARY PUMP STATUS BY PUMP CURRENT. ON FAILURE OF PUMP, INDICATE ALARM AT OWS. BOILER CONTROLLER TO SEQUENCE TO NEXT SCHEDULED BOILER.
12. LOW WATER CUTOFF (LWCO) TO DISABLE BOILER IN EVENT OF LOW HEATING WATER LEVEL.
13. HIGH LIMIT CONTROLLER WITH MANUAL RESET TO DISABLE BOILER IN EVENT OF HIGH HEATING WATER TEMPERATURE. SETPOINT = 93 DEG C.
14. INDICATE BOILER INLET AND OUTLET WATER TEMPERATURES, TEMPERATURE DIFFERENTIAL, SET POINT TEMPERATURES, SET POINT DIFFERENTIAL, OUTDOOR AIR TEMPERATURE, AND RESET TEMPERATURES AT OWS.
15. INDICATE TROUBLE AT OWS IN EVENT THAT HWS TEMPERATURE IS 10 DEG C LESS THAN HWST SETPOINT FOR PERIOD GREATER THAN 10 MINUTES.

SECONDARY HW SYSTEM (P1.3, P1.4):
1. THE SECONDARY HEATING SYSTEM CONSISTS OF TWO PUMPS P1.3 & P1.4 SIZED FOR 100% OF THEIR RESPECTIVE LOAD. THE PUMP SPEEDS ARE CONTROLLED BY VARIABLE FREQUENCY DRIVE COMPLETE WITH BACNET CARDS (ALLOW FOR 5 MAPPED POINTS) AND ARE NORMALLY ACTIVATED VIA THE CONTROL SYSTEM WHEN THE PRIMARY HEATING SYSTEM IS ENABLED.
2. SECONDARY HW PUMPS TO OPERATE LEAD/STANDBY. LEAD SECONDARY PUMP TO START WHEN PRIMARY HW ENABLED. LEAD SECONDARY PUMPS TO ALTERNATE ON TOTAL RUN TIME DUTY CYCLE. ALTERNATE MAIN PUMP AFTER 168 HRS OPERATION. INDICATE TRANSFER.
3. ON PUMP START LEAD SECONDARY HW PUMP TO START AT 30% FLOW CONDITION. MODULATE PUMP SPEED TO MAINTAIN SECONDARY HWST AT RESET HW SUPPLY TEMPERATURE AND SECONDARY HWRT AT MAXIMUM 16.7 DEG C. TEMPERATURE DIFFERENTIAL TO MAXIMUM PUMP SPEED 1800 RPM. IN EVENT OF LEAD HW PUMP FAILURE AUTO-CHANGE TO STANDBY PUMP AND INDICATE FAILURE.
4. IN EVENT OF LEAD PUMP AND STANDBY PUMP FAILURE OR FAILURE OF EITHER PUMP. WHEN BOTH PUMPS TO BE OPERATING INDICATE FAILURE AND SEND SIGNAL TO STATION PROCESS CONTROL PLC.
5. IN EVENT OF LEAD PUMP FAILURE AS SENSED BY CURRENT SENSOR, ALARM LEAD PUMP FAILURE AT PUMP SEQUENCER AND ENERGIZE STANDBY PUMP.
6. PUMPS RUN CONTINUOUS UNTIL OUTDOOR AIR TEMPERATURE GREATER THAN 16 DEG C FOR 2 HOURS. MINIMUM DEADBAND = 3 DEG C.

MONITORING POINTS FROM BAS:

I. BOILER SUPPLY TEMPERATURES (BxHWS-T)
II.BOILER RETURN TEMPERATURES (BxHWR-T)
III.HW SYSTEM PRESSURE (HWS-P)
IV.BOILER-1 ALARM
V.BOILER-2 ALARM
VI.PUMP P-1.3 VFD ALARM
VII.PUMP P-1.4 VFD ALARM
VIII. SECONDARY SUPPLY TEMPERATURE (HWS-T)
IX. SECONDARY RETURN TEMPERATURE (HWR-T).

SEQUENCE OF OPERATION:

1.WATER SUPPLY & RECIRCULATION SYSTEM:
1. A NEW PIPED POTABLE WATER SYSTEM WILL BE PROVIDED FOR THE WWTP. THE WWTP WATER SUPPLY SYSTEM INCLUDES TWO DOMESTIC WATER RECIRCULATION PUMPS AND A HYDRONIC INDIRECT HEAT INJECTION SYSTEM.

2. WATER SUPPLY RECIRCULATION (P3.1 & P3.2):
1. WATER RECIRCULATION PUMPS ARE ENERGIZED AND RUN CONTINUOUSLY DURING THE WINTER MONTHS AND SHOULDER SEASONS. RECIRCULATION PUMPS ARE NOT REQUIRED WHEN MONTH EQUALS JUNE, JULY OR AUGUST.
2. PUMPS P-3.1 AND PUMP P-3.2 OPERATE AS DUTY/STANDBY PUMPS. ONLY ONE (1) PUMP OPERATES AT ANY TIME.
3. DUTY PUMP ALTERNATES EVERY 168 HOURS.
4. PUMP STATUS WILL BE INDICATED AT OPERATOR WORK STATION.
5. IN EVENT OF DUTY PUMP FAILURE AS SENSED BY CT CURRENT SENSOR, EMCS TO ENERGIZE STANDBY PUMP AND ALARM TROUBLE AT OWS.
6. ENTERING WATER TEMPERATURE (WSR-T) AND LEAVING WATER TEMPERATURE (WS-T) WILL BE INDICATED AT OWS.
7. IN EVENT THAT LEAVING WATER TEMPERATURE LESS THAN 3 DEG C (USER ADJUSTABLE AT OWS), ALARM AT OWS.

3. WATER SUPPLY RECIRCULATION HEAT INJECTION SYSTEM (HEX-3.2, P3.4 & P3.5):
1. THE HEAT INJECTION SYSTEM INCLUDES A DOUBLE WALLED STAINLESS STEEL PLATE HEAT EXCHANGER DESIGNATED HEX-3.2 AND TWO (2) INJECTION PUMPS P-3.4 AND P-3.5. THE INTENT IS TO SIDE STREAM AND HEAT RECIRCULATION WATER THAT IS THEN BLENDED WITH RECIRCULATION WATER TO ENSURE THAT RECIRCULATION LINES DOES NOT FREEZE. THE HEAT INJECTION PUMPS ARE INTERLOCKED WITH PUMPS P-3.1 AND P-3.2.
2. PUMPS P-3.4 AND P-3.5 OPERATE AS DUTY/STANDBY PUMPS. ONLY ONE (1) PUMP OPERATES AT ANY TIME.
3. DUTY PUMP ALTERNATES EVERY 168 HOURS.
4. PUMP STATUS WILL BE INDICATED AT OWS
5. IN EVENT OF DUTY PUMP FAILURE AS SENSED BY CT CURRENT SENSOR, EMCS TO ENERGIZE STANDBY PUMP AND ALARM TROUBLE AT OWS.
6. 2-WAY MODULATING CONTROL VALVE (HX3.2V-O) INSTALLED ON HOT SIDE OF HEX-3.2 MODULATES HW FLOW THROUGH HEX-3.2 TO MAINTAIN WATER SUPPLY RECIRCULATION TEMPERATURE. INITIAL SET POINT = 5 DEG C.
7. ALARM TROUBLE WILL BE INDICATED AT OWS IF WATER SUPPLY RETURN TEMPERATURE LESS THAN 3 DEG C.

NOTE:

1 REFER PANEL DETAILS ON DWG 012.001.

PUMP SCHEDULE

SR NO	TAG	LEVEL	LOCATION	CAPACITY (L/S)	MOTOR HP	ELECTRICAL (V/Ph/HZ)	MECH DWG.
1	PUMP P-3.3	UPPER LEVEL	MECH ROOM	0.10	0.65A	115/1/60	M603

SEQUENCE OF OPERATION:

1. DOMESTIC HOT WATER (DHWH-1,P3.3):
1. PACKAGED CONTROLS ON OIL FIRED DOMESTIC HOT WATER HEATER TO CYCLE BURNER TO SATISFY DHWH SET POINT. INITIAL SET POINT = 60 DEG C.
2. DHW TANK SUPPLY TEMPERATURE WILL BE INDICATED AT OWS
3. DHWR PUMP P-3.3 WILL BE COMMANDED FROM BAS AND RUN CONTINUOUSLY.
4.DHWH PUMP STATUS WILL BE INDICATED AT OWS. IN EVENT OF P-3.3 FAILURE AS SENSED BY CT SENSOR, FAILURE WILL BE INDICATED AT OWS
5 ALARM TROUBLE WILL BE GENERATED AT OWS IF DHW SUPPLY TEMPERATURE OVER 65 DEGC FOR 20 MINUTES.
6 DHWH WILL BE LOCKED OUT AND ALARM TROUBLE WILL BE GENERATED AT OWS IF DHWH TEMPERATURE ABOVE 70 DEG C FOR 5 MINUTES

2.DHW BOOSTER (HEX-3.1):
1. HEX-3.1 IS INSTALLED TO BOOST THE DHW TEMPERATURE TO THE PRIMARY FILTERS. THE SYSTEM INCLUDES A FLOW SWITCH, NORMAL CLOSED MODULATING TWO-WAY CONTROL VALVE AND A TEMPERATURE TRANSMITTER.
2. ON CALL FOR PRIMARY FILTER DHW BY PLC, FLOW SWITCH INSTALLED ON DHW SUPPLY PROVES DHW FLOW TO FILTERS. ON PROOF OF FLOW, NORMAL CLOSED CONTROL VALVE ENERGIZED AND MODULATES HW FLOW THROUGH HOT SIDE OF HEAT EXCHANGER TO ACHIEVE DHW SUPPLY TEMPERATURE TO PRIMARY FILTER. INITIAL SET POINT = 80 DEG C.
3. CONTROL VALVE POSITION AND DHW BOOST TEMPERATURE WILL BE INDICATED AT OWS.

NOTES:

1. DHWH AQUASTAT T7 IS PROVIDED BY OTHERS AND INTERLOCKED WITH DHWH-1 TANK.
2. REFER PANEL DETAILS ON DWG 012.001.
3. REFER PANEL DETAILS ON DWG 012.005.

IN CONSIDERATION OF THE RECEIPT OF THIS DOCUMENT, THE RECIPIENT AGREES NOT TO REPRODUCE, COPY, USE OR TRANSMIT THIS DOCUMENT AND/OR THE INFORMATION THEREIN CONTAINED, IN WHOLE OR IN PART, OR TO SUFFER SUCH ACTION BY OTHERS, FOR ANY PURPOSE, EXCEPT WITH THE ADVANCE WRITTEN PERMISSION OF JOHNSON CONTROLS, INC. DETAIL F131 TEMPERATURE SENSOR INPUT

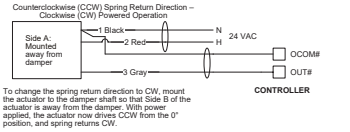
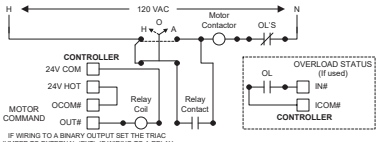
DETAIL F301 BINARY INPUT (DRY CONTACT)



DETAIL F501 24 VAC BINARY OUTPUT (Switch High, EXT Sourced)

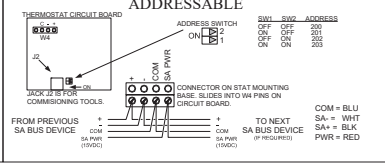


SET TRIAC JUMPER TO EXTERNALLY SOURCED (EXT) FOR ASSOCIATED BINARY OUTPUT(S).

DETAIL F267 0-10VDC OUTPUT to M92xx-GGx and HGx or VA92xx-GGx and HGx

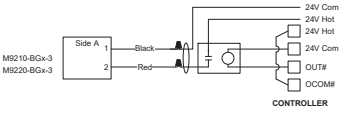
To change the spring return direction to CW, mount the actuator to the damper shaft so that Side B of the actuator is away from the damper. With power applied, the actuator now drives CCW from the 0° position, and spring returns CW.

DETAIL F1015 Starter without Safeties Wiring



IF WIRING TO A BINARY OUTPUT SET THE TRIAC JUMPER TO EXTERNAL (EXT). IF WIRING TO A RELAY OUTPUT TERMINAL OUT# = OUT# NO.

DETAIL F168 M92xx-GGx-x/HGx-x and VA92xx-GGx-x/HGx-x VOLTAGE FEEDBACK



DETAIL NS102 NET STAT WITH TERMINALS ADDRESSABLE

COM = BLU
SA- = WHT
SA+ = BLK
PWR = RED

DETAIL F978 ON-OFF CONTROL to M92xx-BGx-x and VA92xx-BGx-x (Switch High, EXT Sourced)

NOTE:

NOTES:
1. LL-A TO BE SET AT 25% OF TANK VOLUME.
2. HL-A TO BE SET AT 95% OF TANK VOLUME.
3. HLC-A TO BE SET AT 90% OF TANK VOLUME.
4. LLL-A TO BE SET AT 50% OF TANK VOLUME.
5. LM TO BE SET AT 30% OF TANK VOLUME.

ZONE CLASSIFICATION AREA: LOWER LEVEL, NORMAL AREA

PUMP SCHEDULE

SR NO	TAG	LEVEL	LOCATION	CAPACITY (L/S)	MOTOR HP	ELECTRICAL (V/Ph/HZ)	MECH DWG.
1	PUMP P-4.1	LOWER LEVEL	GRID B: 5-6	3.4	1/2	115/1/60	M604
2	PUMP P-4.2	LOWER LEVEL	GRID B: 5-6	0.21	1/2	115/1/60	M604

SEQUENCE OF OPERATION: (4)

1. FUEL OIL FOR THE WWTP HEATING PLANT AND THE GENERATOR IS TRANSFERRED FROM A SINGLE ABOVE GROUND PRIMARY FUEL OIL TANK VIA TWO (2) FUEL OIL TRANSFER PUMPS P-4.1 AND P-4.2 TO TWO (2) FUEL OIL AUXILIARY DAY TANKS (TK-4.2 & TK-4.3) ONE FOR HEATING PLANT AND SECOND TANK FOR THE GENERATOR. TRANSFER PUMPS P-4.1 AND P-4.2 WILL BE CONTROLLED BY ITS OWN CONTROL PANEL.
2. THE SYSTEM WILL CYCLE BASED ON FUEL DEMAND OF EITHER OF THE TWO FUEL OIL DAY TANKS. UPON SYSTEM START UP, THE ANTI-SIPHON VALVE AND RESPECTIVE TANK FUEL LINE SOLENOID VALVES OPEN. *THE LEAD PUMP WILL OPERATE CONTINUOUSLY WITH AUTO TRANSFER ON LEAD PUMP FAILURE BY TRANSFER PUMP CONTROL PANEL. IF FUEL DEMAND CANNOT BE MET AFTER MORE THAN 15 MIN, CONTROL PANEL WILL ENABLE THE SECOND FUEL OIL PUMP.* ONCE THE FUEL LOAD IS MET, *DISABLE THE PUMPS* & CLOSE ANTI-SIPHON VALVE AND TANK FUEL LINE SOLENOID VALVES.
3. *THE FUEL OIL TRANSFER PUMPS OPERATE AS LEAD/LAG WITH THE PUMPS ALTERNATING AFTER EACH DUTY CYCLE.*
4. THE FUEL OIL PUMP STATUS IS TO BE MONITORED ON THE BAS AND IN EVENT OF LEAD PUMP FAILURE AUTOCHANGE TO THE LAG PUMP AND ALARM FAILURE TO THE OWS.
5. IF BOTH THE LEAD AND LAG PUMPS FAIL (INIDCATED BY STATUS), ALARM WILL BE GENERATED TO THE OWS AND ALARM WILL BE SENT TO PROCESS CONTROL PLC.
6. IF THE SECOND TANK LEVEL CONTROL CALLS FOR FUEL WHILE THE LEAD PUMP IS ALREADY ON, DELAY SECOND TANK FILL OPERATION UNTIL FIRST TANK FILL COMPLETE. FUEL OIL TRANSFER PUMP OFF WHEN ALL THE TANK LEVELS SATISFIED.
7. ON HIGH FUEL OIL LEVEL AT ANY DAY TANK, A HARDWIRED OVERRIDE WILL SHUT THE TRANSFER PUMPS OFF. THE PUMPS WILL NOT RESTART UNTIL THE HIGH LIMIT CONDITION IS CORRECTED.
8. ON LOW OR HIGH FUEL OIL LEVEL A CRITICAL ALARM WILL BE GENERATED. ALARM CONDITIONS WILL BE MONITORED BY THE PROCESS CONTROL PLC.
9. IN EVENT OF FUEL LEAK AT EITHER AUXILIARY DAY TANK AS SENSED BY LEAK DETECTION DEVICE, ALARM TROUBLE AT OWS.

MONITORING POINTS FROM BAS:
I. TRANSFER PUMPS STATUS (Px-S)
II. FO PUMP HIGH PRESSURE SWITCH (FOPRESS-HI)
III. FO PUMP LOW PRESSURE SWITCH (FOPRESS-LO)
IV. LEAK DETECTION ALARM SIGNAL FOR TANK TK-4.2
V. LEAK DETECTION ALARM SIGNAL FOR TANK TK-4.3
VI. LEA DETECTION ALARM SIGNALL FOR DUPLEX SYSTEM.

NOTES:

(1) FUEL TANK LEVEL SWITCHES ARE PROVIDED BY OTHERS, BAS WILL MONITOR THE STATUS THROUGH LEVEL SWITCH DRY CONTACT.

(2) REFER PANEL DETAILS ON DWG 012.002.

(3) FUEL OIL TRANSFER PUMP WILL BE CONTROLLED BY ITS OWN CONTROL PANEL (I.E. DUPLEX CONTROL PANEL). BAS WILL ONLY MONITOR THE STATUS OF THE TRANSFER PUMPS. AND ALARMS

(4) SEQUENCE PROVIDED IN ITALIC IS CONTROLLED BY UNIT CONTROL PANEL.

IN CONSIDERATION OF THE RECEIPT OF THIS DOCUMENT, THE RECIPIENT AGREES NOT TO REPRODUCE, COPY, USE OR TRANSMIT THIS DOCUMENT AND/OR THE INFORMATION THEREIN CONTAINED, IN WHOLE OR IN PART, OR TO SUFFER SUCH ACTION BY OTHERS, FOR ANY PURPOSE, EXCEPT WITH THE ADVANCE WRITTEN PERMISSION OF JOHNSON CONTROLS, INC. Johnson Controls

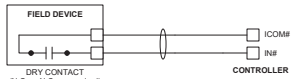
Branch Information
Johnson Controls Ltd.
1375 Rue Frank-Carrel
Ville de Québec, QC G1N 2E7
Phone: 418-681-7958



Contract Number: **8N0Y-0079**

Drawing Number: **006.001**

SEQUENCE OF OPERATION:

GENERAL:
AHU-2 IS CUSTOM BUILT 100% OUTDOOR AIR UNIT COMPLETE WITH TWO (2) VFD TYPE FANS, AN AIR-TO-AIR FIXED PLATE HEAT EXCHANGER, FACE AND BYPASS DAMPERS, PREHEAT AND REHEAT HYDRONIC HEATING COILS AND EXHAUST AND OUTDOOR AIR DAMPERS. THE UNIT IS INSTALLED IN ABOVE THE MBBR CELLS AND PROVIDES FRESH AIR TO THE UNCLASSIFIED AREAS INCLUDING THE MBBR AND UPPER DAF TANK AREA, UPPER LEVEL MEZZANINE, BELT FILTER PRESS AREA, POLYMER MIZING AREA, PROCESS BLOWER AREA, LOWER DAF TANK AREA, AND THE SLUDGE TRAILER ROOM.

SUPPLY & EXHAUST FAN CONTROL (SF,EF):
1. AHU-2 AIR SYSTEM OPERATES CONTINUOUSLY. AHU-2 WILL NORMALLY OPERATE WITH THE SUPPLY FANS AND EXHAUST FAN AT 50% SPEED TO PROVIDE A MINIMUM OF 3 ACH OF CONTINUOUS VENTILATION.
2. WHEN THE INTRUSION DETECTION SYSTEM IS DISABLED DETECTED BY "INTRDET-S" CONTACT (I.E. WHEN BUILDING IS OCCUPIED) OR WHEN THE GAS DETECTION SYSTEM IS ACTIVATED OR WHEN THE OUTSIDE AIR TEMPERATURE (OA-T) IS ABOVE 10 DEG C, THE SUPPLY AND EXHAUST AIR FANS WILL BE RAMPED UP TO 100% TO PROVIDE 6 ACH OF CONTINUOUS VENTILATION. FINAL FAN SPEEDS (SF-O, EF-O) TO BE DETERMINED DURING COMMISSIONING.
3. PRELIMINARY CALCULATIONS INDICATE THAT THERE MAY BE CONDENSATION ISSUES AT LOWER AIR CHANGE RATES. IN THE EVENT THAT CONDENSATION IS A PROBLEM AT 3 ACH, CONTRACTOR TO RAMP UP LOWER FAN SPEED SO THAT CONDENSATION IS AVOIDED.
4. *GAS DETECTION BY PLC CONTRACTOR.* PLC I/O WILL BE INTERLOCKED WITH DDC AHU CONTROLS.
5 UNIT ON/OFF WILL BE PROVIDED BY BAS. *UPON SYSTEM ENABLE, THE UNIT OUTDOOR AIR (OAD) AND EXHAUST AIR (EAD) DAMPERS WILL BE ENERGIZED OPEN BY UNIT CONTROL PANEL.* ONCE THE DAMPERS END SWITCHES INDICATES THAT THE DAMPERS ARE OPEN SUPPLY AND EXHAUST FANS WILL BE ENABLED BY UNIT CONTROL PANEL. THE BAS WILL RUN THE SUPPLY FAN & EXHAUST FAN TO 3 ACH/ 50% AIRFLOW (SF-O, EF-O). FAN CONTROL 0-10 VDC SIGNAL IS PROVIDED BY BAS TO UNIT CONTROLLER.
6. THE BAS SYSTEM WILL MODULATE THE EXHAUST FAN (EF-O) AS REQUIRED TO MAINTAIN THE SPACE PRESSURE (UPPER-P,LOWER-P) UNDER POSITIVE PRESSURE OF 25 PA (FIELD ADJUSTABLE) RELATIVE TO AMBIENT. FINAL FAN SPEED TO BE DETERMINED DURING COMISSIONING.
7. IN EVENT OF EITHER SUPPLY FAN FAILURE (SF-A) OR EXHAUST FAN FAILURE (EF-A), ALARM TROUBLE AT OWS.
8. FAN STATUS (SF-S,EF-S) WILL BE SHOWN ON OPERATOR WORKSTATION.
9. AIR CHANGE PER HOUR (ACH) RATE WILL BE SHOWN ON OPERATOR WORKSTATION.
10. RELATIVE SPACE PRESSURE (UPPER-P,LOWER-P) WILL BE SHOWN ON OPERATOR WORKSTATION..
11. VARIOUS AIR FILTER DP (PFILT-DP,FFILT-DP,RAFILT-DP) VALUES WILL BE SHOWN ON OPERATOR WORKSTATION.

PREHEAT COIL:
1. PRE-HEAT COIL RECIRCULATION PUMP P-1.6 WILL BE ON (P1.6-C) WHEN OAT LESS THAN 5 DEC C.
2. BAS WILL MODULATE TWO WAY CONTROL VALVE (PH-O) TO MAINTAIN MINIMUM DAT SETPOINT AFTER HEAT TRANSFER CORE (HRSA-T). INITAL SETPOINT = -10C.

REHEAT COIL:
1. BAS WILL MODULATE TWO WAY CONTROL VALVE (RH-O) TO MAINTAIN SUPPLY AIR TEMPERATURE SETPOINT (DAT-SP) TO SPACE. INITAL SETPOINT = +10C.
2. LOW SUPPLY AIR TEMPERATURE ALARM: IN EVENT THAT SAT TEMPERATURE(DA-T) IS LESS THAN 5 DEG C AS SENSED BY DUCT MOUNTED TEMPERATURE SENSOR, ALARM TROUBLE AT OWS.

HRA FACE/BYPASS DAMPER CONTROL:
AHU HEAT TRANSFER CORE BYPASS DAMPERS ARE NORMALLY CLOSED (FULL HEAT RECOVERY MODE). *UNIT CONTROLLER* TO OPEN DAMPERS FULLY WHEN OAT GREATER THAN 5 DEG C (PARTIAL HEAT RECOVERY). WHEN OAT GREATER THAN 10 DEG C, CLOSE HEAT CORE FACE DAMPERS (NO HEAT RECOVERY). PROVIDE ANTI SHORT-CYCLE TIME DELAY. *UNIT CONTROL PANEL WILL MODULATE THE BYPASS DAMPER FULLY OPEN WHEN ECONOMIZER CONTACTS ARE CLOSED. ECONOMIZER CONTACTS WILL BE CLOSED BY A BAS CONTROLLER BASED ON OA-T CONDITIONS MENTIONED ABOVE.*

UNIT PROTECTION: (1)
1. DISCHARGE AIR HIGH STATIC SWITCH WILL BE MONITORED AT BAS. ALSO IT WILL BE CONNECTED TO UNIT CONTROLLER IN ORDER TO DISABLE THE SUPPLY AND EXHAUST FANS ONCE HI STATIC PRESSURE IS DETECTED. (SETPOINT DETERMINED BY TEST & BALANCE CONTRACTOR).
2. LOW TEMPERATURE ALARM (LT-A) - WHEN IN "ALARM", THE CONTROL SEQUENCE WILL STOP RUNNING, THE VALVE(S) WILL OPEN AND THE FAN(S) WILL BE DISABLED VIA A HARD WIRED SHUTDOWN CIRCUIT.
3. FIRE ALARM CONTACT WILL BE USED TO DISABLE THE FANS VIA UNIT CONTROL PANEL.

MONITORING POINTS FROM BAS:
1. OUTDOOR AIR TEMPERATURE (OA-T)
2. PRE-HEAT SUPPLY AIR TEMPERATURE (PH-T).
3. HR EXHAUST AIR TEMPERATURE (HREA-T) (MONITORING ONLY)
4. RETURN AIR TEMPERATURE (RA-T)
5. SUPPLY AIR FLOW (DA-VP)
6. EXHAUST AIR FLOW (EA-VP)
7. LOW TEMPERATURE ALARM (LT-A)
8. SUPPLY AIR TEMPERATURE (DA-T)

CONTROL PROVIDED BY UNIT CONTROL PANEL:
-ONCE BOTH THE FIRE ALARM CONTACT AND DUCT HIGH PRESSURE LIMIT ALARM CONTACTS CLOSED, SF & EF FAULT CONTACTS CLOSED, UNIT WILL BE READY FOR THE OPERATION. (1)
-ONCE UNIT IS ENABLED BY BAS, THE UNIT OUTDOOR AIR (OAD) AND EXHAUST AIR (EAD) DAMPERS WILL BE ENERGIZED OPEN BY UNIT CONTROL PANEL. ONCE THE DAMPERS END SWITCHES INDICATES THAT THE DAMPERS ARE OPEN, THE AHU CONTROL PANEL WILL ENABLE THE SUPPLY AND EXHAUST FANS TO RUN CONTINUOULSY. SUPPLY AND EXHAUST FAN SPEED SIGNALS WILL BE PROVIDED BY BAS TO UNIT CONTROL PANEL. FAN VFDS WILL OPERATE ACCORDINGLY VIA UNIT CONTROL PANEL.
-THE UNIT CONTROL PANEL WILL MODULATE HRA FACE & BYPASS DAMPERS TO MAINTAIN THE HEAT EXCHANGER EXHAUST AIR LEAVING TEMPERATURE (HREA1-T) ABOVE 34 DEG F (1.1°C). IF EC ONOMIZER CONTACT 'CLOSED', HRA FACE & BP DAMPERS OPEN TO 100% BP POSITION.
-AHU HEAT TRANSFER CORE BYPASS DAMPERS ARE NORMALLY CLOSED. UNIT CONTROL PANEL WILL MODULATE THE BYPASS DAMPERS FULLY OPEN WHEN ECONOMIZER CONTACTS ARE CLOSED.

NOTES:
(1) ITALIC SEQUENCE OF OPERATION IS PROVIDED BY JCI. FIELD TO VERIFY SEQUENCE BEFORE PROGRAMMING.

IN CONSIDERATION OF THE RECEIPT OF THIS DOCUMENT, THE RECIPIENT AGREES NOT TO REPRODUCE, COPY, USE OR TRANSMIT THIS DOCUMENT AND/OR THE INFORMATION THEREIN CONTAINED, IN WHOLE OR IN PART, OR TO SUFFER SUCH ACTION BY OTHERS, FOR ANY PURPOSE, EXCEPT WITH THE ADVANCE WRITTEN PERMISSION OF JOHNSON CONTROLS, INC. AND FURTHER AGREES TO SURRENDER SAME TO JOHNSON CONTROLS, INC. UPON DEMAND.

	1	ZS-260	EXPLOSION PROOF HOUSING

NOTES:
1. REFER PANEL EN-5 DETAILS ON DWG 012.005.
2. REFER DWG 006007 FOR SAFETY WIRING DETAILS.
3. REFER DWG 006007 FOR XFILT-DP AND HEAD-P SENSOR WIRING DETAILS.
4. BELOW ARE THE DEVICES THAT WILL BE PANEL MOUNTED. EXPLOSION PROOF DEVICES ARE NOT CONSIDERED FOR THEM AS THESE ARE PANEL MOUNTED. EA-VP, SA-VP, EF-HISPD, EF-LOSPD, SF-HISPD, SF-LOSPD, SDR-1, SAFETY RELAY RB-1.

GAS DETECTION SYSTEM

ZONE CLASSIFICATION AREA: UPPER LEVEL, CLASS-1, ZONE-2, CATEGORY-1 AREA

NOTES:
1. DAMPERS & ACTUATORS ARE EXISTING & TO BE REUSED. FIELD TO CHECK IF EXISTING ACTUATORS NEEDS EXPLOSION PROOF HOUSING. PRESENTLY WE HAVE NOT CONSIDER ANY EXPLOSION PROOF HOUSING FOR EXISTING ACTUATORS.

2. SUPPLY AND EXHAUST FAN STATUS SWITCH (SF-S, EF-S) WILL BE MOUNTED INSIDE STARTER ENCLOSURE. HENCE NO EXPLOSION PROOF DEVICE SELECTED FOR THESE DEVICES.

③ AIR HANDLING UNIT SCHEDULE

SR. NO.	SYSTEM NAME	SERVICE	S/A AIRFLOW (L/s)	E/A AIRFLOW (L/s)	SUPPLY FAN ESP (Pa)	SF HP	EXHAUST FAN ESP (Pa)	EF HP	ELEC V/PH/HZ
1	AHU-3 (EXISTING)	EXISTING HEADWORKS RM-101, 102	2740	3040	500	5	438	5	575/3/60

NOTES:
1. DAMPER & ACTUATOR ARE EXISTING AND WILL BE RE-USED. OA & EA DAMPER WILL BE COMMANDED FROM BAS.
2. DEVICES SHOWN IN GRAY ARE EXISTING AND WILL BE REUSED.
3. AHU-3 IS EXISTING UNIT INSTALLED ON THE MAIN FLOOR OF EXISTING HEADWORKS. AHU-3 CONTROL WILL BE MIGRATED TO NEW DDC.
4. DRY CONTACT "INTRDET-S" PROVIDED BY OTHERS WILL BE MONITORED ON BAS TO DETERMINE BUILDING OCCUPANCY.
5. INTERNAL AUXILIARY SWITCH OF AN EXISTING DAMPER ACTUATOR WILL BE USED FOR DAMPER STATUS MONITORING. FIELD TO VERIFY THE AVAILABILITY OF INTERNAL AUXILIARY SWITCH.
6. FIELD TO VERIFY EXACT LOCATION TO INSTALL LT-A.
7. FIRE ALARM (NO) CONTACT WILL PROVIDED BY FAS CONTRACTORS.

IN CONSIDERATION OF THE RECEIPT OF THIS DOCUMENT, THE RECIPIENT AGREES NOT TO REPRODUCE, COPY, USE OR TRANSMIT THIS DOCUMENT AND/OR THE INFORMATION THEREIN CONTAINED, IN WHOLE OR IN PART, OR TO SUFFER SUCH ACTION BY OTHERS, FOR ANY PURPOSE, EXCEPT WITH THE ADVANCE WRITTEN PERMISSION OF JOHNSON CONTROLS, INC. AND FURTHER AGREES TO SURRENDER SAME TO JOHNSON CONTROLS, INC. UPON DEMAND.

Johnson Controls Ltd.
1375 Rue Frank-Carrel
Ville de Québec, QC G1N 2E7
Phone: 418-681-7958

Contract Number: **8N0Y-0079**

Drawing Number: **006.006**

H:\8N0Y0079\Drawings\AHU-3 Flow Layout.vsd

SEQUENCE OF OPERATION:

GENERAL:
AHU-3 IS AN EXISTING CUSTOM BUILT 100% OUTDOOR AIR UNIT COMPLETE WITH TWO (2) TWO-SPEED FANS, AN AIR-TO-AIR FIXED PLATE HEAT EXCHANGER, DEFROST BYPASS DAMPERS, A REHEAT HYDRONIC HEATING COIL AND EXHAUST AND OUTDOOR AIR DAMPERS. THE UNIT IS INSTALLED ON THE MAIN FLOOR OF THE EXISTING HEADWORKS BUILDING AND SERVICES THE EXISTING HEADWORKS ROOM.

SUPPLY & EXHAUST FAN CONTROL (SF, EF):
1. EXISTING AHU-3 CONSISTS OF A TWO SPEED SUPPLY AND EXHAUST AIR FAN, REHEAT COIL, DEFROST BYPASS, HEAT RECOVERY SECTION AND FILTER SECTION.

2. AHU-3 AIR SYSTEM TO OPERATES CONTINUOUSLY. AHU-3 WILL NORMALLY OPERATE WITH THE SUPPLY FANS AND EXHAUST FAN AT 50% SPEED TO PROVIDE 6 ACH OF CONTINUOUS VENTILATION.

3. WHEN INTRUSION DETECTION SYSTEM IS DISABLED DETECTED BY "INTRDET-S" (I.E. WHEN BUILDING IS OCCUPIED) OR WHEN THE GAS DETECTION SYSTEM IS ACTIVATED, OR WHEN THE OUTSIDE AIR TEMPERATURE IS ABOVE 10 DEG C, THE SUPPLY FAN AND EXHAUST FAN WILL SWITCH TO SPEED 2 (100% SPEED) TO PROVIDE 12 ACH OF CONTINUOUS VENTILATION. FINAL FAN SPEEDS TO BE DETERMINED DURING COMMISSIONING.

4. GAS DETECTION BY PLC CONTRACTOR. INTERLOCK PLC I/O WITH DDC AHU CONTROLS.

5. IN EVENT OF EITHER SUPPLY FAN FAILURE OR EXHAUST FAN FAILURE, ALARM TROUBLE AT OWS.

6. FAN STATUS AT OPERATOR WORKSTATION WILL BE SHOWN.

7. AIR CHANGE PER HOUR (ACH) RATE AT OPERATOR WORKSTATION WILL BE SHOWN.

8. RELATIVE SPACE PRESSURE AT OPERATOR WORKSTATION WILL BE SHOWN.

9. AIR FILTER DP AT OPERATOR WORKSTATION WILL BE SHOWN.

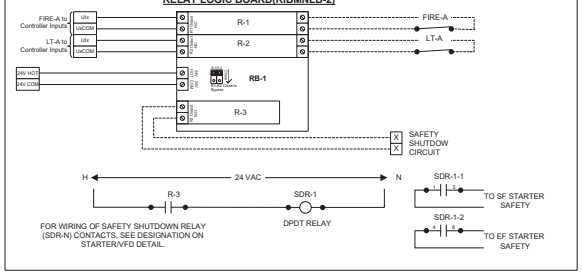
10. AHU-3 HEAT TRANSFER CORE "DEFROST MODE" BYPASS DAMPERS ARE NORMALLY CLOSED (FULL AIR FLOW THROUGH HEAT EXCHANGER). BAS TO SWITCH AHU-3 TO DEFROST MODE WHEN SUPPLY AIR TEMPERATURE DOWNSTREAM OF HEX AND UPSTREAM OF REHEAT COIL IS LESS 5 DEG C AS SENSED BY AVERAGING TYPE DUCT TEMPERATURE SENSOR. IN "DEFROST MODE", BAS MODULATES AHU-3 FACE AND BYPASS DAMPERS TO MAINTAIN EXHAUST AIR TEMPERATURE ABOVE 2 DEG C.

REHEAT COIL:
1. NEW 3-WAY CONTROL VALVE FOR AHU-3 IS PROVIDED.

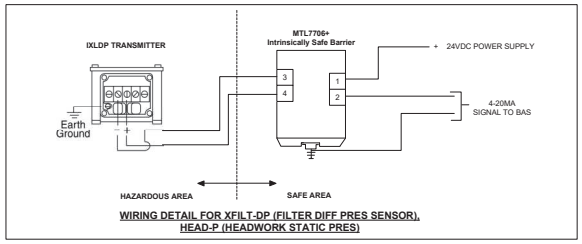
2. BAS WILL MODULATE AHU-3 REHEAT COIL 3-WAY CONTROL VALVE TO SATISFY SUPPLY AIR TEMPERATURE (DA-T) SETPOINT. INITIAL SETPOINT = 10 DEG C.

IN EVENT THAT SAT TEMPERATURE IS LESS THAN 5 DEG C AS SENSED BY DUCT MOUNTED AVERAGING TYPE TEMPERATURE SENSOR, ALARM TROUBLE AT OWS.

SAFETY INTERLOCK:
1 *1. OUTSIDE AIR AND EXHAUST AIR DAMPER STATUS WILL BE MONITORED AT BAS. SUPPLY FAN AND EXHAUST FAN WILL BE ENABLED ONCE BOTH OUTSIDE AIR AND EXHAUST AIR DAMPER OPEN STATUS IS PROVEN AT BAS.*



2. LOW TEMPERATURE ALARM (LT-A) - WHEN IN "ALARM", THE CONTROL SEQUENCE WILL STOP RUNNING, THE VALVE(S) WILL OPEN AND THE FAN(S) WILL BE DISABLED VIA A HARD WIRED SHUTDOWN CIRCUIT.



3. FIRE ALARM CONTACT WILL BE HARDWIRED INTERLOCKED WITH SUPPLY FAN AND EXHAUST FAN STARTER I.E. WHEN IN ALARM, FANS WILL GET SHUT-DOWN.

MONITORING POINTS FROM BAS:
1. OUTDOOR AIR TEMPERATURE (OA-T)
2. HR EXHAUST AIR TEMPERATURE (HREA-T)
3. RETURN AIR TEMPERATURE (RA-T)
4. SUPPLY AIR FLOW (DA-VP)
5. EXHAUST AIR FLOW (EA-VP)
6. LOW TEMPERATURE ALARM (LT-A)
7. SUPPLY AIR TEMPERATURE (DA-T).

AHU-3 SAFETY WIRING DETAILS

RELAY LOGIC BOARD(RIBMNLB-2)

WIRING DETAIL FOR XFILT-DP (FILTER DIFF PRES SENSOR), HEAD-P (HEADWORK STATIC PRES)

Notes:
1 SEQUENCE OF OPERATION IN ITALIC IS BE PROPOSED BY JCI. PROPOSED SEQUENCE TO BE VERIFIED BY FIELD BEFORE PROGRAMMING.

IN CONSIDERATION OF THE RECEIPT OF THIS DOCUMENT, THE RECIPIENT AGREES NOT TO REPRODUCE, COPY, USE OR TRANSMIT THIS DOCUMENT AND/OR THE INFORMATION THEREIN CONTAINED, IN WHOLE OR IN PART, OR TO SUFFER SUCH ACTION BY OTHERS, FOR ANY PURPOSE, EXCEPT WITH THE ADVANCE WRITTEN PERMISSION OF JOHNSON CONTROLS, INC. SUPPLY FAN ECM MOTOR WIRING

SR. NO.	SYSTEM NAME	SERVICE	LOCATION	S/A AIRFLOW (L/s)	SUPPLY FAN ESP (Pa)	SF HP	ELEC V/PH/HZ
1	CF-1	COOLING	MECH ROOM GRID B-C:4	635	125	1/4	115/1/60

SEQUENCE OF OPERATION:

GENERAL:

1. THE AIR SYSTEM PROVIDES ECONOMIZER FREE COOLING TO MECHANICAL ROOM.

2. WHEN ROOM TEMPERATURE IS ABOVE THERMOSTAT COOLING SETPOINT, INTIALLY SET AT 24 DEG C (USER ADJUSTABLE), ENERGIZE COOLING SYSTEM.

3. ON CALL FOR COOLING, ENERGIZE COOLING FAN (SF-O VIA 10V SIGNAL), MODULATE RETURN AIR AND OUTDOOR AIR DAMPERS TO SATISFY ZN-T SETPOINT. COOLING FAN WILL BE STARTED BY BAS (SF-O) TO PROVIDE CONSTANT SPEED DETERMINED BY TEST & BALANCE CONTRACTOR.

4. IF THE DISCHARGE AIR TEMP IS LESS THAN 5 DEG C FOR GREATER THAN FIVE (5) MINUTES, LOCK OUT THE COOLING FAN, DE-ENERGIZE DAMPERS AND ALARM AT OWS. THE ALARM SUPPRESSION TIME IS TO BE ADJUSTABLE AT THE OWS.

5. IF THE MECHANICAL ROOM TEMPERATURE EXCEEDS 38 DEG C (USER ADJUSTABLE) FOR LONGER THAN 15 MIN, ALARM TO THE OWS.

6. ON A HIGH-PRESSURE DROP AT THE FILTERS ALARM TO THE OWS. SET POINT TO BE FIELD DETERMINED AND ADJUSTABLE AT OWS.

MECHANICAL ROOM HEATING COIL (HC-1.3): (ONLY APPLICABLE FOR CF-1 SERVING TO MECHANICAL ROOM)

1. NORMALLY CLOSED MODULATING ZONE VALVE CYCLES OPENS WHEN ROOM TEMPERATURE BELOW 10 DEG C.
2. WHEN ROOM TEMPERATURE IS BELOW THERMOSTAT HEATING SETPOINT, INTIALLY SET AT 10 DEG C, ENERGIZE MECHANICAL ROOM COOLING.
-ENERGIZE MECHANICAL ROOM COOLING FAN.
-DAMPERS WILL REMAIN IN FULL CIRCULATION MODE (I.E. RAD OPEN AND OAD CLOSED).
-BAS WILL MODULATE NORMALLY CLOSED TWO WAY CONTROL VALVE TO MAINTAIN MINIMUM DA-T SETPOINT. INITAL SETPOINT = 10 DEG C.

NOTES:

1. FIELD TO VERIFY EXACT LOCATION TO INSTALL LT-A.
2. DEVICES IN GRAY PROVIDED BY OTHERS.
3. DAMPERS ARE PROVIDED WITH THE UNIT BY UNIT MANUFACTURER.
4. REFER PANEL DETAILS ON DWG 012.004.
5. 0-10V SIGNAL PROVIDED BY BAS TO ECM PANEL. 0 V SIGNAL WILL INDICATE FAN-OFF COMMAND AND 10V SIGNAL WILL INDICATE FAN ON COMMAND. FAN SPEED WILL BE MANUALLY SET BY TEST AND BALANCE CONTRACTORS.

IN CONSIDERATION OF THE RECEIPT OF THIS DOCUMENT, THE RECIPIENT AGREES NOT TO REPRODUCE, COPY, USE OR TRANSMIT THIS DOCUMENT AND/OR THE INFORMATION THEREIN CONTAINED, IN WHOLE OR IN PART, OR TO SUFFER SUCH ACTION BY OTHERS, FOR ANY PURPOSE, EXCEPT WITH THE ADVANCE WRITTEN PERMISSION OF JOHNSON CONTROLS, INC. SUPPLY FAN ECM MOTOR WIRING

SR. NO.	SYSTEM NAME	SERVICE	LOCATION	S/A AIRFLOW (L/s)	SUPPLY FAN ESP (Pa)	SF HP	ELEC V/PH/HZ
1	CF-2	COOLING	ELEC ROOM GRID F:6	400	125	1/4	115/1/60

SEQUENCE OF OPERATION:

GENERAL:

1. THE AIR SYSTEM PROVIDES ECONOMIZER FREE COOLING TO ELECTRICAL ROOM.

2. WHEN ROOM TEMPERATURE (ZN-T) IS ABOVE THERMOSTAT COOLING SETPOINT, INTIALLY SET AT 24 DEG C (USER ADJUSTABLE), ENERGIZE COOLING SYSTEM.

3. ON CALL FOR COOLING, ENERGIZE COOLING FAN (SF-O), MODULATE THE RETURN AIR, RELIEF AIR AND OUTDOOR AIR DAMPERS TO SATISFY ZN-T SETPOINT. COOLING FAN WILL BE STARTED BY BAS (SF-O) TO PROVIDE CONSTANT SPEED DETERMINED BY TEST & BALANCE CONTRACTOR.

4. IF THE DISCHARGE AIR TEMP IS LESS THAN 5 DEG C FOR GREATER THAN FIVE (5) MINUTES, LOCK OUT THE COOLING FAN, DE-ENERGIZE DAMPERS AND ALARM AT OWS. THE ALARM SUPPRESSION TIME IS TO BE ADJUSTABLE AT THE OWS.

5. IF THE ELECTRICAL ROOM TEMPERATURE EXCEEDS 38 DEG C (USER ADJUSTABLE) FOR LONGER THAN 15 MIN, ALARM TO THE OWS.

6. ON A HIGH-PRESSURE DROP AT THE FILTERS ALARM TO THE OWS. SET POINT TO BE FIELD DETERMINED AND ADJUSTABLE AT OWS.

NOTES:

1. FIELD TO VERIFY EXACT LOCATION TO INSTALL LT-A.
2. DEVICES IN GRAY PROVIDED BY OTHERS.
3. DAMPERS ARE PROVIDED WITH THE UNIT BY UNIT MANUFACTURER.
4. REFER PANEL DETAILS ON DWG 012.006.
5. 0-10V SIGNAL PROVIDED BY BAS TO ECM PANEL. 0 V SIGNAL WILL INDICATE FAN-OFF COMMAND AND 10V SIGNAL WILL INDICATE FAN ON COMMAND. FAN SPEED WILL BE MANUALLY SET BY TEST AND BALANCE CONTRACTORS.

IN CONSIDERATION OF THE RECEIPT OF THIS DOCUMENT, THE RECIPIENT AGREES NOT TO REPRODUCE, COPY, USE OR TRANSMIT THIS DOCUMENT AND/OR THE INFORMATION THEREIN CONTAINED, IN WHOLE OR IN PART, OR TO SUFFER SUCH ACTION BY OTHERS, FOR ANY PURPOSE, EXCEPT WITH THE ADVANCE WRITTEN PERMISSION OF JOHNSON CONTROLS, INC. ZONE CLASSIFICATION AREA: LOWER LEVEL, ~~CATEGORY 1, WET AREA~~
NORMAL AREA

SEQUENCE OF OPERATION:

GENERATOR COOLING:

1. THE ELECTRONIC GENERATOR HAS BEEN PROVIDED WITH A VENTILATION SYSTEM TO PROVIDE ECONOMIZER FREE COOLING WHILE THE GENERATOR IS OPERATING AND THE UH PROVIDES HEATING WHILE THE GENERATOR IS OFF. WHEN THE GENERATOR STARTS. THE UH IS TO BE LOCKED OUT (BASED ON THE LINE T-STAT SETPOINT) AND THE TWO POSITION COMBUSTION AIR DAMPER (CAD-C) OPENS FULLY. IF THE DAMPER DOES NOT OPEN ALARM TO THE OWS AND OPEN THE MAIN O/A DAMPERS (OAD-O) TO MINIMUM 15% OPEN.
2. WHILE THE GENERATOR IS OPERATING, THE O/A (OAD-O), R/A (RAD-O) AND E/A (EAD-O) DAMPERS ARE TO MODULATE IN ECONOMIZER MIXING MODE TO MAINTAIN THE SPACE TEMPERATURE (ZN-T) AT SET POINT.
3. IF THE GENERATOR IS ON AND THE SPACE TEMP (ZN-T) IS ABOVE 38 DEG C, ALARM WILL BE GENERATED AT THE OWS AND SIGNAL WILL BE SENT TO PLC CONTROLLER.
4. AFTER THE GENERATOR IS STAGED OFF, IF THE SPACE TEMPERATURE (ZN-T) IS LESS THAN 30 DEG C, DAMPERS TO NORMAL POSITIONS. IF THE SPACE TEMPERATURE (ZN-T) IS GREATER THAN 30 DEG C, CONTINUE TO ENABLE AND MODULATE THE ECONOMIZER DAMPERS TO MAINTAIN SPACE TEMPERATURE (ZN-T) AT A MAXIMUM 30DEGC. AFTER COOL DOWN IS COMPLETED DAMPERS TO NORMAL POSITION.

MONITORING POINTS BY BMS:

1.GENERATOR STATUS (GEN-S)

NOTES:

1. DAMPERS PROVIDED BY OTHERS & DAMPER ACTUATORS ARE PROVIDED BY JCI.
2. REFER DWG. 010.001 FOR UNIT HEATER CONTROL AND WIRING DETAILS.
3. REFER PANEL DETAILS ON DWG 012.002.
4. MS-FAC2611-0 REAL TIME CONTROLLER PROVIDED FOR GENERATOR IS CAPABLE OF PROVIDING INTENDED OPERATION IN CASE OF COMMUNICATION FAILURE.

IN CONSIDERATION OF THE RECEIPT OF THIS DOCUMENT, THE RECIPIENT AGREES NOT TO REPRODUCE, COPY, USE OR TRANSMIT THIS DOCUMENT AND/OR THE INFORMATION THEREIN CONTAINED, IN WHOLE OR IN PART, OR TO SUFFER SUCH ACTION BY OTHERS, FOR ANY PURPOSE, EXCEPT WITH THE ADVANCE WRITTEN PERMISSION OF JOHNSON CONTROLS, INC. SEQUENCE OF OPERATION:

GENERAL:
1. HRV PROVIDES FRESH AIR AND EXHAUST AIR FOR THE NORMALLY OCCUPIED AREA OF THE WWTP INCLUDING THE OFFICE, WASHROOM AND LABORATORY. THE HRV SYSTEM INCLUDES THE HRV, OUTDOOR AIR 2-POSITION NORMAL CLOSED DAMPER, HYDRONIC PRE-HEAT HEATING COIL AND HYDRONIC RE-HEAT HEATING COIL.
2.0-6 HOUR SPRING RETURN TIMER WILL PROVIDE LOCAL OVERRIDE (TIMER-S). TIMER WILL ENABLE HRV-1 UNIT WHEN NOT IN THE OFF POSITION.

TIME SCHEDULE:
1.SCHEDULE TO BE FULLY ADJUSTABLE AT THE OWS. HRV-1 OPERATES BASED ON A 365 DAY TIME BASED SCHEDULE. INITIAL TIME-BASED SETPOINT (CONFIRM WITH OWNER):
- HRV-1 ON: MON-FRI @ 07.30 HRS
- HRV-1 OFF: MON-FRI @ 17.00 HRS
2. ON START-UP, HRV OUTDOOR AIR DAMPER (OAD-C) OPENS FULLY. WHEN DAMPER POSITION PROVEN BY END-SWITCH(OAD-ES), ENERGIZE HRV (HRV-C).

PREHEAT COIL:
1. EMCS TO MODULATE TWO WAY CONTROL VALVE (PH-O) TO MAINTAIN MINIMUM SAT (PH-T) SETPOINT INTO HEAT TRANSFER CORE. INITAL SETPOINT = -10 DEG C.

REHEAT COIL:
1. EMCS TO MODULATE TWO WAY CONTROL VALVE (RH-O) TO MAINTAIN MINIMUM SAT (DA-T) SETPOINT. INITAL SETPOINT = 18 DEG C.

TEMPERATURE CONTROL:
IN EVENT THAT SAT TEMPERATURE (DA-T) IS LESS THAN 10 DEG C AS SENSED BY DUCT MOUNTED AVERAGING TYPE TEMPERATURE SENSOR, ALARM TROUBLE AT OWS.

MONITORING POINTS BY BMS:
1.HRV1 STATUS (HRV1-S)

NOTES:
1. LOCAL OVERRIDE SWITCH WILL BE PROVIDED BY OTHERS AND MONITORED ON BAS.
2. DAMPER PROVIDED WITH THE UNIT BY UNIT MANUFACTURER.
3. REFER PANEL DETAILS ON DWG 012.003.

DETAIL F578 ON-OFF CONTROL to M92xx-BGx-x and VA92xx-BGx-x (Switch High, EXT Sourced)

SET TRIAC JUMPER TO EXTERNALLY SOURCED (EXT) FOR ASSOCIATED BINARY OUTPUT(S).

DETAIL F267 0-10VDC OUTPUT to M92xx-GGx and HGx or VA92xx-GGx and HGx

To change the spring return direction to CW, mount the actuator to the damper shaft so that Side B of the actuator is away from the damper. With power applied, the actuator now drives CCW from the 0° position, and spring returns CW.

NOTE:

UH WIRING DETAILS

CUH WIRING DETAILS

SEQUENCE OF OPERATION :

UNIT HEATERS
1. LINE VOLTAGE THERMOSTAT CYCLES BLOWER TO SATISFY THERMOSTAT SETPOINT.
2. INITIAL SETPOINT = 10 DEG C.

CABINET UNIT HEATERS
1. LINE VOLTAGE THERMOSTAT CYCLES BLOWER TO SATISFY THERMOSTAT SETPOINT.
(2) *2. HEATING VALVE IS ENABLED VIA LINE VOLTAGE THERMOSTAT.*
3. INITIAL SETPOINT = 10 DEG C.

NOTES:
(1) EXISTING UNIT HEATER WILL BE RE-USED. EXISTING THERMOSTAT ASSOCIATED WITH THESE UNIT HEATERS WILL BE RETAINED. EXISTING UNIT HEATERS WILL BE RETAGGED AS PER THE SCHEDULE PROVIDED.
(2) CUH-1.1 HEATING VALVE SEQUENCE IS PROPOSED PROVIDED IN ITALIC. FIELD TO VERIFY THE SEQUENCE BEFORE PROGRAMMING.
(3) NEW T-STAT PROVIDED FOR EXISTING UNIT HEATERS UH1.5 & UH2.5.

IN CONSIDERATION OF THE RECEIPT OF THIS DOCUMENT, THE RECIPIENT AGREES NOT TO REPRODUCE, COPY, USE OR TRANSMIT THIS DOCUMENT AND/OR THE INFORMATION THEREIN CONTAINED, IN WHOLE OR IN PART, OR TO SUFFER SUCH ACTION BY OTHERS, FOR ANY PURPOSE, EXCEPT WITH THE ADVANCE WRITTEN PERMISSION OF JOHNSON CONTROLS, INC. UH2.8-CTRL	1	MS-FEC2611-0	FEC2611-0,FEC17
Other Devices:			
PBUHCV-O	1	VALVE	REFER VALVE SCHEDULE

SEQUENCE OF OPERATION :

UNIT HEATER:
UNIT HEATER UH-2.8 PROVIDES TEMPERING OF ADDITIONAL MAKE-UP FOR PROCESS BLOWERS SERVING TO PRIMARY FILTERS AND PROCESS AREATION. IN ADDITION TO UNIT HEATER SYSTEM INCLUDES AN OUTDOOR AIR 2 POSITION NORMALLY CLOSE DAMPER, 2 WAY MODULATING HEATING CONTROL VALVE AND AN AVERAGING SUPPLY AIR TEMPERATURE SENSOR.

CONTROL DAMPER:
CONTROL DAMPER WILL BE INTERLOCKED WITH ALL THE PROCESS BLOWERS. CONTROL DAMPER WILL OPEN FULLY IF ANY PROCESS BLOWER IS OPERATING.

UNIT HEATER ENABLE:
UNIT HEATER WILL BE ENABLED BY BAS WHEN ANY PROCESS BLOWER IS OPERATING AND OUTDOOR AIR TEMPERATURE IS EQUAL TO OR BELOW -15 DEG C (ADJUSTABLE).
BAS WILL MODULATE THE 2-WAY CONTROL VALVE TO MAINTAIN PROCESS BLOWER SUPPLY AIR TEMPERATURE (PBSA-T) SETPOINT. INITIAL SETPOINT IS SET TO -15 DEG C (ADJUSTABLE).

ALARM:
IN THE EVENT SUPPLY AIR TEMPERATURE IS LESS THAN -20 DEG C AS SENSED BY THE PBSA-T, AN ALARM WILL BE GENERATED AT OWS.

NEW UNIT HEATER

TANK VENT HEAT TRACE

LOCATION: UPPER LEVEL, GRID C/2

SEQUENCE OF OPERATION:

RADIATION PANEL:

1. LOW VOLTAGE THERMOSTAT CYCLES NORMALLY OPEN TWO POSITION ZONE VALVE TO SATISFY THERMOSTAT SETPOINT.
2. RADIATION VALVE WILL BE NORMALLY OPEN WHEN THERE IS NO POWER.
3. VALVE WILL CLOSE ONCE THERE IS POWER.
4. VALVE WILL OPEN WHEN THERE IS POWER AND A CALL FOR HEAT.
2. INITIAL SETPOINT = 20 DEG C.

TWAS TANK HEAT VENT TRACE :

1. NORMALLY OPEN TWO-POSITION ZONE VALVE CYCLES OPENS WHEN OUTDOOR AIR TEMP LESS THAN 1 DEG C. AN ANTI SHORT CYCLE TIME DELAY IS TO BE PROVIDED.

NOTE:

1. BASEBOARD RADIATORS E-WF-1 (QTY-2) ARE EXISTING. EXISTING THERMOSTAT WILL REMAIN AS IS. NEW CONTROLS AND CONTROL VALVE IS PROVIDED BY JCI. FIELD TO VERIFY.
2. 24VAC POWER SUPPLY TO THE RADIATOR VALVE IS PROVIDED BY TRANSFORMER TX-x.
3. CONTROL POINT "HTVENT-VLV" IS MAPPED INTO HEX 3.1 CONTROL PANEL (EN-5). REFER DEG. 004.002. PROVIDED IS 2-POSITION CONTROL SIGNAL. FIELD TO VERIFY.

IN CONSIDERATION OF THE RECEIPT OF THIS DOCUMENT, THE RECIPIENT AGREES NOT TO REPRODUCE, COPY, USE OR TRANSMIT THIS DOCUMENT AND/OR THE INFORMATION THEREIN CONTAINED, IN WHOLE OR IN PART, OR TO SUFFER SUCH ACTION BY OTHERS, FOR ANY PURPOSE, EXCEPT WITH THE ADVANCE WRITTEN PERMISSION OF JOHNSON CONTROLS, INC. AND FURTHER AGREES TO SURRENDER SAME TO JOHNSON CONTROLS, INC. UPON DEMAND.

NOTES:

1. LINE SIZE IS NOT AVAILABLE IN MECHANICAL DRAWINGS. FIELD TO VERIFY LINE SIZE. VALVE IS SELECTED BASED ON FLOW DATA. FIELD TO VERIFY VALVE SELECTION BEFORE MATERIAL ORDERING.
2. FLOW (L/S) VALUE IS NOT PROVIDED IN MECHANICAL DRAWINGS. 2-POSITION VALVE IS SELECTED BASED ON AVAILBLE LINE SIZE. FIELD TO VERIFY VALVE FLOW AND LINE SIZE DATA BEFORE ORDERING.
3. FLOW VALUES PROVIDED FOR HRV-1 VALVES PH-O AND RH-O ARE VERY SMALL. 1/2" VALVES ARE SELECTED FOR THESE APPLICATION. AUTHORITY VALUES FOR 1/2" VALVES ARE NOT COMING WITHIN THE ACCEPTABLE RANGE FOR PROPER CONTROL. FIELD TO VERIFY FLOW DATA AND VALVE SELECTION BEFORE ORDERING THE VALVES.
4. FIELD TO VERIFY SIGNAL FOR HEAT VENT VALVE (HTVENT-VLV) BEFORE MATERIAL ORDERING. PROVIDED IS 2-POSITION VALVE WITH 24VAC ON/OFF SIGNAL.
5. FLOW VALUE PROVIDED FOR HEATING COIL HC1.3 IS VERY SMALL. 1/2" VALVE IS SELECTED FOR THIS APPLICATION WHICH PROVIDES BETTER VALVE AUTHORITY FOR PROPER CONTROL. FIELD TO DETERMINE LIZE SIZE, FLOW DATA FOR THE HEATING COIL HC1.3 AND VALVE SELECTION TO BE VERIFIED BEOFRE MATERIAL ORDERING.
6. NEW CONTROL VALVE IS PROVIDED FOR RADIATORS IN UPPER LEVEL (RAD-1 & RAD-2). FIELD TO VERIFY IF NEW VALVE IS REQUIRED OR EXISTING TO BE REUSED.

Line sizes listed incorrect for majority of valves. Review M602 for lines sizes.

Revise and resubmit accordingly.

A70 Series Four-Wire, Two-Circuit Temperature Control Catalog Page

Description

The A70 Series Temperature Control incorporates a vapor-charged sensing element. The A70G, A70H, and A70K have a four-wire, two-circuit contact block that contains two isolated sets of contacts.

The contacts are designed so that when the main contact opens, the auxiliary contact closes.

Refer to the *A70, A72 Series Temperature Controls for Refrigeration and Heating Product Bulletin (LIT-125155)* for important product application information.

A70 Series Action Diagram

A70GA-1 Temperature Control

Features

- long-life, snap-acting contacts
- automatic or manual reset models

Applications

Typical applications include energizing an indicator light after a low temperature cutout on a ventilating system.

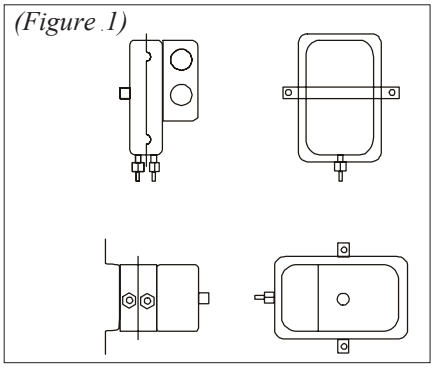
CLEVELAND CONTROLS

Model AFS–460–DSS

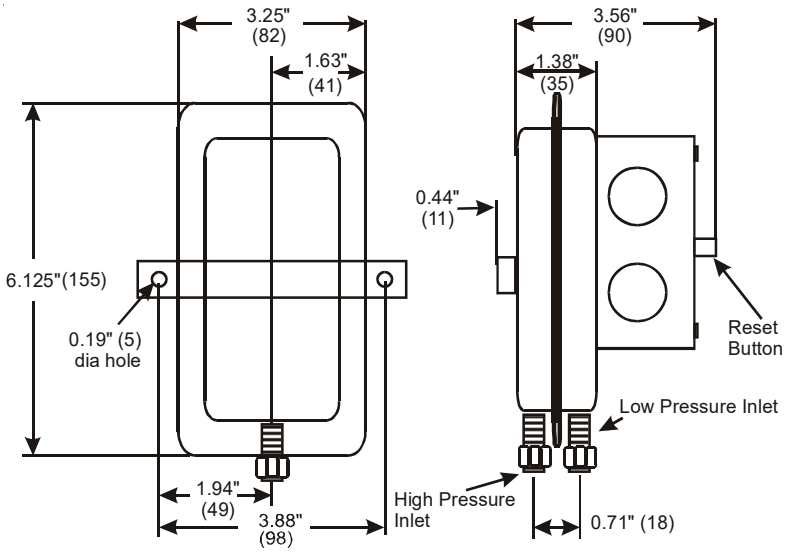
Air Pressure Sensing Switch with Dual Snap Acting Switches & Manual Reset

Application

The **Model AFS-460–DSS** is a general purpose airflow proving switch designed for 120 VAC HVAC and Energy Management applications where dual manual reset switches with SPST contacts are needed. It may be used to sense positive, negative, or differential air pressure.



General Description & Operation

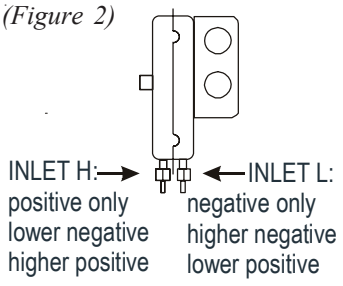


The plated housing contains a diaphragm, a calibration spring, and 2 snap-acting switches with a single manual reset button.

The sample connections located on each side of the diaphragm accept .25" (6.35 mm) OD tubing via the integral compression ferrule and nut.

An enclosure cover guards against accidental contact with the live switch terminal screws and the set point adjusting screw. The enclosure cover accepts two 0.5" (12.7 mm) conduit connections. The manual reset button is located on the top surface of the enclosure cover.

(Figure 1)



Mounting (see Figure 1)

Select a mounting location which is free from vibration. The **AFS-460–DSS** must be mounted with the diaphragm in any vertical plane in order to obtain the lowest specified operating set point. Avoid mounting with the sample line connections in the "up" position. Surface mount via the two $^{3}/_{16}$" (4.75 mm) diameter holes in the integral mounting bracket. The mounting holes are 3-$^{7}/_{8}$" (98.4 mm) apart.

Air Sampling Connection (see Figure 2)

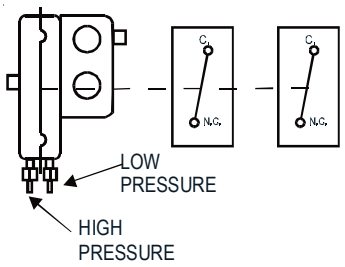
The **AFS-460–DSS** is designed to accept firm-wall sample lines of ¼" (6.35 mm) OD tubing by means of ferrule and nut compression connections. An optional ¼" (6.35 mm) adapter, suitable for slip-on flexible tubing is available. For sample lines of up to 10 feet (3.05 metres), ¼" (6.35 mm) OD tubing is acceptable. For lines up to 20 feet (6.1 metres), use ¼" (6.35 mm) ID tubing. For lines up to 60 feet (18.3 metres), use ½" (12.7 mm) ID tubing. Locate the sampling probe a minimum of 1.5 duct diameters downstream from the air source. Install the sampling probe as close to the center of the airstream as possible. Refer to **Figure 2** to identify the high pressure inlet (H), and the low pressure inlet (L). Select one of the five application options listed below, and connect the sample lines as recommended.

(Figure 2)

Distributed by:

Cleveland Controls
Division of UniControl Inc.
1111Brookpark Road • Cleveland OH 44109
Tel: (216) 398-0330 • Fax: (216) 398-8558
www.clevelandcontrols.com
email: saleshvac@unicontrolinc.com

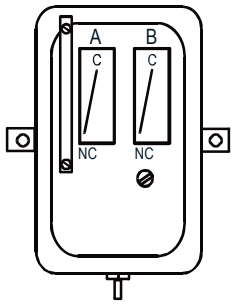
POSITIVE PRESSURE ONLY: Connect the sample line to inlet H; inlet L remains open to the atmosphere.



NEGATIVE PRESSURE ONLY: Connect the sample line to inlet L; inlet H remains open to the atmosphere.

TWO NEGATIVE SAMPLES: Connect the higher negative sample to inlet L. Connect the lower negative sample to inlet H.

TWO POSITIVE SAMPLES: Connect the higher positive sample to inlet H. Connect the lower positive sample to inlet L.



ONE POSITIVE AND ONE NEGATIVE SAMPLE: Connect the positive sample to inlet H. Connect the negative sample to inlet L.

(Figure3)

(Figure4)

To Prove Excessive or Insufficient Air Flow or Pressure:

A: Lead Snap Switch (Control)
B: Lag Snap Switch (Alarm)

Pressure Conversion Table

1" H_2O = .0361 lbs./sq. in. or .0735 in. mercury
(25.4 mm w.c. or .249 kPa)
1" Hg. = .491 lbs./sq. in. or 13.6 in. water
(345 mm w.c or 3.39 kPa)
1 psi = 27.7 in. water or 2.036 in. mercury
(703 mm w.c. or 6.89 kPa)

Electrical Connections (see Figure 3)

Before pressure is applied to the diaphragm, the snap switch contacts will be in the normally closed (NC) position as shown in **Figure 3**.

The snap switches have screw top terminals with cup washers. Wire alarm and control applications as shown in **Figure 4**.

Field Adjustment: Lead & Lag Snap Switches (see Fig. 4)

The **AFS-460-DSS** Manual Reset Air Switch has a **lead** snap switch adjustment of **1.25" w.c. to 12.0" w.c**. (31.8 mm w.c. to 305 mm w.c.) The set point adjusting screw is used to adjust the set point of the **lead** snap switch **(Switch A, in Fig. 4)**. The **lag** snap switch **(Switch B, in Fig. 4)** operates after the **lead** snap switch at progressively increasing set point as indicated in **Table 1**, below. **Note**: if **simultaneous** operation of Switch A and Switch B is required, refer to **Descriptive Bulletin AFS-460-136.0x** or **AFS-460-137.0x.**

To adjust the set point of Switch A: Turn the adjusting screw counterclockwise until motion has stopped. Next, turn the adjusting screw **four** complete turns in a clockwise direction to engage the spring. From this point, the next **ten** turns will be used for the actual calibration. **Each full turn represents approximately 1.0" w.c. (25.4 mm w.c.). Please note:** To properly calibrate an air switch, a digital manometer or other measuring device should be used to confirm the actual set point.

Specifications

Model AFS-460-DSS Air Pressure Sensing Switch with Manual Reset and Dual SPST-NC Contact Arrangement

Sample Media: Air or combustion products that do not degrade silicone.
Mounting Position (in order to meet lowest operating specifications): Diaphragm in any vertical plane.
Field Adjustable Range: 1.25" ± 0.06" w.c. to 12.0" w.c. (31.8mm ±1.52mm w.c. to 305 mm w.c.)
Switch Differential: Progressive, increasing from approximately 0.06± 0.01"w.c.(1.52 ± .254mm w.c.)at minimum set point, to approximately 0.8" w.c.(20.3mm w.c.) at maximum set point.
Maximum Pressure: 0.5 psi (0.03 bar, 3.45 kPa)
Operating Temperature Range: -40 to 180F (-40.0 to 82.2C)
Life: Exceeds UL-recognized mechanical endurance test of 6,000 cycles minimum at 0.5 psi (0.03 bar, 3.45 kPa) maximum pressure each cycle and at maximum electrical load.
Electrical Rating: @ 60 Hz.
15 amp 125, 250, or 277 v AC
¼ hp 125 v AC, ½ amp 125 v DC,
¼ amp 250 v DC . 0.5 VA @ 24 v AC, 50/60 Hz.
Contact Arrangement:
2 SPST–NC(manual reset).
Electrical Connections: Screw top terminals with cup washers.
Sample Line Connections: Ferrule and nut compression type connectors will accept ¼" (6.35mm) OD rigid tubing.
Shipping Weight: 1.2 lbs. (.54 kg)
Agency Approvals & Recognitions: UL and CSA approved, CE pending.

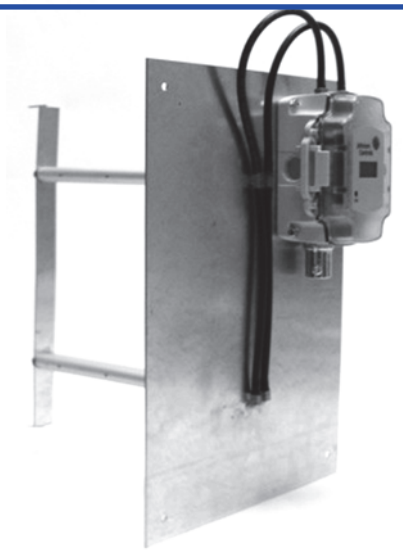
AD-1251 Probe with Differential Pressure Transducer

AHU-2 DA & EA DUCT (downstraem of SF)



Description

The AD-1251 Probe with Differential Pressure Transducer (DPT) is designed to provide accurate and economical flow monitoring at all times. The probe is a differential pressure air measuring device that is designed to measure flow in duct applications. The device is intended for retrofit projects. You may install the AD-1251 in a straight duct or one duct diameter upstream from an unvaned elbow, or five duct diameters downstream from an unvaned elbow. The probes are tested per Air Movement and Control Association (AMCA) 610.93 setup.

This probe measures and reports differential pressure, effectively monitoring airflow from 400 to 5,000 Feet Per Minute (fpm) (122 to 1,524 Meters per Minute [mpm]) within ±5% accuracy. When used with the Pressure Across Measuring System (PAMS) chart accompanying the probe (or in the product literature), precise airflow is easy to determine.

The probe can be used in either a horizontal or vertical application. When ordered with an air straightener, the probe is automatically positioned in a vertical application. The 9 inch (229 mm) deep probe with air straightener allows for installation in tight space requirements where dampers are already installed, or where dampers are also required.

Refer to the *AD-1251 Probe with Differential Pressure Transducer Product Bulletin (LIT-12011473)* for important product information.

AD-1251 Probe with Differential Pressure Transducer

Features

- Slip Fit Mounting
- Horizontal or Vertical Anodized Aluminum Sensing Probes
- Factory-Piped DPT with Display

Repair Information

If the AD-1251 Probe with Differential Pressure Transducer fails to operate within its specifications, replace the unit. For a replacement AD-1251 Probe with Differential Pressure Transducer, contact the nearest Johnson Controls® representative.

All Johnson Controls AD-1251 Probes with Differential Pressure Transducers are built to order and cannot be returned due to ordering errors. All AD-1251 Probes with Differential Pressure Transducers are backed by a 3-year warranty, which covers defects in materials or workmanship. Refer to terms and conditions of sale for specifics.

Selection Charts.

Dimensions

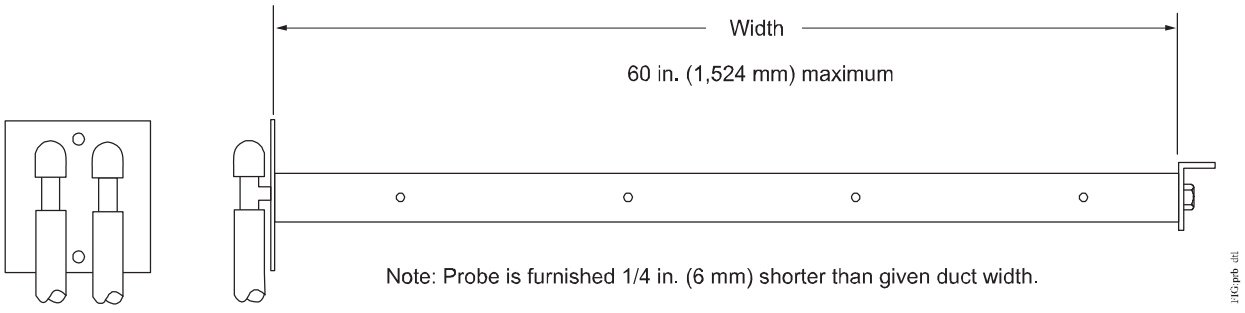
Single and Multiple Panel Dimensions[1]	Width x Height, in. (mm)
Minimum Single Probe	6 x 6 (152 x 152)
Maximum Three Probes	60 x 42 (1,524 x 1,069)
Maximum (with Air Straightener)	Unlimited

1. Actual size is 1/4 inch less than nominal

Use the following to select the product:

1. Determine required size from drawings.
2. Select the part number required.
3. Enter width and height of duct.

www = width of duct (in inches)



hhh = height of duct (in inches)

4. Add W to the end of the code number to add the air straightener option.

Note: Actual probe size is 1/4 inch (6 mm) less than nominal. Example: ASENN-020x020W is an airflow measuring probe comprised of an aluminum air straightener, flow pickup station and DPT. Its dimensions are 20 inches (51 mm) wide x 20 inches (51 mm) high, and enclosed in a 9 inch (229 mm) long sleeve without flanges for a slip fit.

CSDSC Current Switch Devices

Description

The Current Switch Devices Self-Calibrating (CSDSC) Series of Current Switch Devices provide reliable verification of electrical equipment operation in a variety of applications, including fans and pumps. CSDSC current switch devices use a single-turn dial to select motor full load amps, eliminating the need for live calibration and significantly reducing installation time compared to traditional current switches.

CSDSC switches use full load amps instead of horsepower, eliminating the need for separate part numbers as a function of line voltage. CSDSC current switches are installed when the panel is de-energized. The ability to preset the sensor eliminates the need for Personal Protective Equipment (PPE) that is required by OSHA when working with a live panel.

Refer to the *CSDSC and CSDECM Current Switch Devices Product Bulletin (LIT-12012403)* for important product application information.

Features

- **Split and Solid Core Models with Mini-Sized Variants—**Fit in tight enclosures.
- **Monitored Load**—Supplies power without a power supply.
- **Optional N.O. Relay—**Adds 10 A at 125 VAC switching power with a choice of 24 or 12 V coil.
- **Polarity Insensitive Output—**Provides easier wiring.
- **Low Turn on Current—**Extends use to sub-fractional HP motors.
- **LED Indication of Switch Status—**Allows you to easily check the switch's on/off status.

Model DPT 209 Transducer

Gauge Pressure

Range: 0 to 1 psig up to 0 to 10,000 psig

Now Available!

COMPOUND & VACUUM RANGES

Setra Systems Model 209 pressure transducers have been designed specifically for industrial applications with demanding price and performance requirements. The 209 offers exceptional reliability in typical industrial grade environments. Standard features tailor the Model 209 for applications with more extreme environmental conditions or more stringent performance needs. The Model 209 offers unparalleled performance in a configurable transducer designed specifically for the budget conscious OEM.

NOTE: Setra quality standards are based on ANSI-Z540-1. The calibration of this product is NIST traceable.

Setra's proven center mount electrode configuration is the heart of this simple, yet industrialized, design. A 17-4 PH stainless steel sensor and a rigid stainless steel electrode form the variable capacitor.

Setra 209 transducers are packaged in rugged stainless steel/Valox housings, which are small and lightweight for optimum compatibility with system designs. As a totally self - contained electronic package, the 209 stainless steel capacitance sensing element, coupled with a high level output IC-based circuit, assures excellent accuracy and long term stability.

HEATING WATER SYSTEM: SUPPLY WATER PRESSURE

Applications

- Industrial OEM Equipment
- Hydraulic Systems
- Compressor Control
- HVAC/R Equipment
- Industrial Engines
- Process & Containerized Refrigeration Systems

Benefits

- Unparalleled Price/ Performance
- Rugged Design Survives Harsh Environments
- Operates Over a Wide Temperature Band
- Compatible with Wide Range of Gases & Liquids
- Operates on Low Cost Unregulated DC Power
- Suitable for High Shock & Vibration Applications
- No Seals or "O" Rings to Cause Leakage
- No Brazed Joints Susceptible to Corrosion Problems
- 3 to 5 Day Shipment for Small Quantities, Standard Configurations

ISO 9001 Certified

Model DPT 264

Very Low Differential Pressure Transducer

Unidirectional Ranges: 0 - 0.1 to 0 - 100 in. W.C.
Bidirectional Ranges: 0 - ±0.5 to 0 - ±50 in. W.C.
Air or Non-Conducting Gas

Setra Systems 264 pressure transducers sense differential or gauge (static) pressure and convert this pressure difference to a proportional electrical output for either unidirectional or bidirectional pressure ranges. The 264 Series is offered with a high level analog 0 to 5 VDC or 4 to 20 mA output.

Used in Building Energy Management Systems, these transducers are capable of measuring pressures and flows with the accuracy necessary for proper building pressurization and air flow control.

The 264 Series transducers are available for air pressure ranges as low as 0.1 in. W.C. full scale to 100 in. W.C. full scale. Static standard accuracy is ±1.0% full scale in normal ambient temperature environments, but higher accuracies are available. The units are temperature compensated to 0.033% FS/°F thermal error over the temperature range of 0°F to +150°F.

The Model 264 utilizes an improved all stainless steel micro-tig welded sensor. The tensioned stainless steel diaphragm and insulated stainless steel electrode, positioned close to the diaphragm, form a variable capacitor. Positive pressure moves the diaphragm toward the electrode, increasing the capacitance. A decrease in pressure moves the diaphragm away from the electrode, decreasing the capacitance. The change in capacita
converted to a linear DC electrical signal by Setra's unique electronic circuit.

The tensioned sensor allows up to 10 PSI overpressure (range dependent) with no damage to the unit. In addition, the parts that make up the sensor have thermally matched coefficients, which promote improved temperature performance and excellent long term stability.

AHU-2: BUILDING STATIC PRESSURE
CF-1, CF-2: ACROSS PREFILTER DP

NOTE: Setra quality standards are based on ANSI-Z540-1. The calibration of this product is NIST traceable.

U.S. Patent nos. 6019002; 6014800

Applications

- Heating, Ventilating and Air Conditioning (HVAC)
- Energy Management Systems
- Variable Air Volume and Fan Control (VAV)
- Environmental Pollution Control
- Lab and Fume Hood Control
- Oven Pressurization and Furnace Draft Controls

Features

- Installation Time Minimized with Snap Track Mounting and Easy- To-Access Pressure Ports and Electrical Connections
- 0 to 5 VDC or 2-wire 4 to 20 mA Analog Outputs Are Compatible with Energy Management Systems
- Reverse Wiring Protection
- Internal Regulation Permits Use with Unregulated DC Power Supplies
- Fire Retardent Case (UL 94 V-0 Approved)
- Meets CE Conformance Standards

When it comes to a product to rely on - choose the Model 264. When it comes to a company to trust - choose Setra.

F261 Series Fluid Flow Switches

FUEL TANK SYSTEM: DOWNSTREAM OF PUMPS P4.1& P4.2 SUPPLY FUEL LINE

Description

The F261 Series Flow Switches respond to fluid flow in lines carrying water, ethylene glycol, or other nonhazardous fluids. These models also work in applications with swimming pool water and lubricating oils.

F261 Series Standard Flow Switches use a variety of paddle sizes to respond to fluid flow rates in applications with pipe sizes greater than 1 inch trade size.

Refer to the *F261 Series Fluid Flow Switches Product Bulletin (LIT-12011987)* for important product application information.

Features

- Type 3R (NEMA) or Type 4 (NEMA) enclosure allows use in indoor or outdoor applications.
- Viton® diaphragms allow use in fluid lines carrying chlorinated water, treated water, or other nonhazardous fluids.
- low-flow operation on low-flow models actuates switch with less than 1.0 GPM (3.8 L/min) flow for water applications or 9.0 GPM (34.1 L/min) flow for steam applications.
- maximum fluid pressure of 290 psig (20 bar) permits use in a wide range of pressure flow conditions.

F261 Flow Switch

Repair Information

If the F261 Series Flow Switch fails to operate within its specifications, replace the unit. For a replacement F261 Series Flow Switch, contact the nearest Johnson Controls® representative.

Fuel oil pumps don't require flow switch

Selection Chart

F261 Series Standard Model Flow Switches

Product Code Number	Description
F261KAH-V01C	Standard model flow switch with Type 3R (NEMA) enclosure; 1 in., 2 in., 3 in., and 6 in. stainless steel paddles, lock-tooth washer, and stainless steel paddle screw supplied uninstalled
F261MAH-V01C	Standard model flow switch with Type 4 (NEMA) enclosure; 1 in., 2 in., 3 in., and 6 in. stainless steel paddles, lock-tooth washer, and stainless steel paddle screw supplied uninstalled
F261MAL-V01C	Standard model flow switch with Type 4 (NEMA) enclosure; 1 in., 2 in., 3 in., and 6 in. stainless steel paddles, lock-tooth washer, and stainless steel paddle supplied uninstalled.

F261 Series Low-Flow Model Flow Switches

Product Code Number	Description
F261KEH-V01C	Low-flow model flow switch with Type 3R (NEMA) enclosure; 1/2 in. x 1/2 in. External NPTF inlet and outlet
F261KFH-V01C	Low-flow model flow switch with Type 3R (NEMA) enclosure; 3/4 in. x 3/4 in. External NPTF inlet and outlet
F261KFH-V02C	Low-flow model flow switch with Type 3R (NEMA) enclosure; 3/4 in. x 3/4 in. External NPTF inlet and outlet
F261MEH-V01C	Low-flow model flow switch with Type 4 (NEMA) enclosure; 1/2 in. x 1/2 in. External NPTF inlet and outlet
F261MFH-V01C	Low-flow model flow switch with Type 4 (NEMA) enclosure; 3/4 in x 3/4 in. External NPTF inlet and outlet

Replacement Paddle Parts

Product Code Number	Description
KIT21A-600	Stainless steel three-piece paddle (3 in., 2 in., and 1 in. segments)
KIT21A-601	Stainless steel 6 in. paddle
PLT52A-600R	Stainless steel three-piece paddle (3 in., 2 in., and 1 in. segments) and Stainless steel 6 in. paddle

F261 Series Fluid Flow Switches (Continued)

UL Conformity Declaration Information

Information	Description
Purpose of Control	F261 Fluid Flow Switch
Construction of Control	Electronic independently mounted control
Number of Cycles	100,000 cycles
Method of Mounting Control	Mounting to sensed media vessel/orientation
Type 1 or Type 2 Action	Type 1.C (Microinterruption)
External Pollution Situation	Pollution degree 4
Internal Pollution Situation	Pollution degree 2
Rated Impulse Voltage	4,000 VAC
Ball Pressure Temperature	Enclosure: 266°F (130°C) Switch Component: 252°F (122°C)
Control Adjustment Instruction	-
Field Wiring Rating	**Wire/Cord Temperature Ratings:** 140°F (60°C) only permitted when ambient air and media are less than 113°F (45°C) 167°F (75°C) only permitted when ambient air and media are less than 140°F (60°C) 194°F (90°C) only permitted when ambient air is less than 140°F (60°C) and media is less than 167°F (75°C) 302°F (150°C) permitted when ambient air is less than 140°F (60°C) and media is less than 249°F (121°C)
Vessel Pressure	F261 Fluid Flow Switch: 290 psi (20 Bar)

F261 Series Fluid Flow Switches	
Switch	Single-Pole, Double-Throw (SPDT)
Enclosure	UL: Type 3R or Type 4 CE: IP43 (IP23 with drain hole plug removed) or IP67
Wiring Connections	Three color-coded screw terminals and one ground terminal
Conduit Connection	One 7/8 in. (22 mm) hole for 1/2 in. trade size (or PG16) conduit
Pipe Connector	Standard: 1 in. 11-1/2 NPT Threads
Maximum Fluid Pressure	290 psi (20 bar)
Minimum Fluid Temperature[1]	-20°F (-29°C)
Maximum Fluid Temperature[2]	250°F (121°C)
Ambient Conditions	-40 to 140°F (-40 to 60°C)
Compliance CE	**North America:** cULus Listed; UL 60730, File E6688; FCC Compliant to CFR47, Part 15, Subpart B, Class B Industry Canada (IC) Compliant to Canadian ICES-003, Class B limits
	Europe: CE Mark – Johnson Controls, Inc. declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive and the Low Voltage Directive.
	Australia/New Zealand Mark: RCM Compliant

1. Ensure that the low liquid temperature combined with the low ambient temperature does not lead to the freezing the liquid inside the body (or bellows, where appropriate). Please observe the liquid freezing point.
2. At higher ambient temperatures, the maximum allowed liquid temperature becomes lower. The temperature of the electrical switch inside should not exceed 158°F (70°C).

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls, Inc. shall not be liable for damages resulting from misapplication or misuse of its products. © 2015 Johnson Controls, Inc.

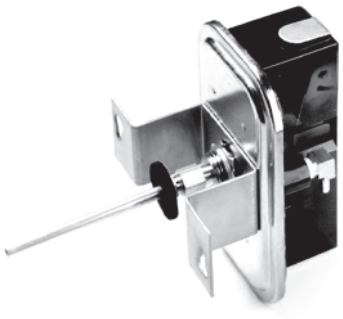
P32 Series Sensitive Pressure Switch Catalog Page

Description

This differential pressure switch is used to sense pressure/air flow in ducts.

Refer to the *P32 Series Sensitive Differential Pressure Switch Product Bulletin (LIT-125435)* for important product application information.



P28 Action Diagram

Features

- easy-to-read setpoint scale
- versatile mounting options

Applications

- pressure/air flow proving with electric duct heaters, humidifiers, and other equipment
- maximum pressure/air flow control for variable volume systems
- reheat duct powered systems
- clogged filter detection
- detection of icing of air conditioning coils and initiation of defrost cycle
- sensitive pressure settings
- dust-tight snap switch

P32 Sensitive Pressure Switch

Repair Information

If the P32 Series Sensitive Pressure Switch fails to operate within its specifications, replace the unit. For a replacement switch, contact the nearest Johnson Controls® representative.

AHU-2: REMOTE PROBDE FOR DA HIGH PRESS SW (DOWNSTREAM OF SF) CF-1 & CF-2 PRE-FILTER

M9208-xxx-x Series Electric Spring-Return Actuators

Description

The M9208-xxx-x Series Electric Spring-Return Actuators provide control of dampers in HVAC systems. All actuators in this series provide 70 lb·in (8 N·m) rated torque. A mechanical spring-return system provides rated torque with and without power applied to the actuator. The series includes the following control options:

- On/Off, 24 V, 120 VAC, 230 VAC power
- On/Off and Floating Point, 24 V power
- Proportional, 24 V power, for 0(2) to 10 VDC or 0(4) to 20 mA Control Signal

These actuators are configured for direct mounting and do not require a damper linkage. Actuators can be mounted directly to a damper shaft from 5/16 to 5/8 in. (8 to 16 mm) diameter with a universal clamp. For shafts up to 3/4 in. (19 mm) diameter, use the accessory Large Shaft Coupler Kit M9208-600. An accessory crankarm and remote mounting kit are available for applications where the actuator cannot be direct coupled to the damper shaft. Optional line voltage auxiliary switches indicate an end-stop position or perform switching functions within the selected rotation range.

Refer to the *M9208-xxx-x Series Electric Spring-Return Actuators Product Bulletin (LIT-12011480)* for important product application and single point of contact information.

Features

- 70 lb·in (8 N·m) rated torque
- direct-coupled design
- reversible mounting
- electronic stall detection
- double-insulated construction
- microprocessor-controlled brushless DC motor (-AGx and -GGx types)
- external mode selection switch (-AGx and -GGx types)
- locking manual override with auto release and crank storage
- integral cables with colored and numbered conductors
- integral connectors for 3/8 in. (10 mm) Flexible Metal Conduit (FMC)
- optional integrated auxiliary switches
- UL, CE, and C-Tick compliance
- manufactured under International Standards Organization (ISO) 9001 quality control standards
- 5-year warranty

M9208-xxx-x Series Electric Spring-Return Actuator

Accessories and Replacement Parts

Code Number	Description
DMPR-KC003	7 in. (178 mm) Blade Pin Extension (without Bracket) for Johnson Controls Direct-Mount Damper Applications (Quantity 1) **Note:** Available with damper and may be ordered separately.
M9000-322	Weather Shield Kit for Damper Application of M9203, M9208, VA9104, and VA9308/9310 Series Electric Spring-Return Actuators (Quantity 1)
M9000-400	Jackshaft Linkage Kit. Open-Ended Design Enables Clamping onto a Jackshaft without Requiring Access to the Ends of the Jackshaft. (Quantity 1)
M9000-560	Ball Valve Linkage Kit for applying M9203 and M9208 Series Electric Spring-Return Actuators to VG1000 Series Valves (Quantity 1)
M9000-604	Replacement Anti-Rotation Bracket Kit for M9208, M9210, and M9220 Series Electric Spring-Return Actuators (Quantity 1)
M9000-606	Position Indicator for Damper Applications of M9203 and M9208 Series Actuators (Quantity 5)
M9200-100	Threaded Conduit Adapter, 1/2 NPSM, for M9210(20) and M(VA)9208 Series Actuators (Quantity 5)
M9208-100	Remote Mounting Kit, Including Mounting Bracket, M9208-150 Crankarm, Ball Joint, and Mounting Fasteners (Quantity 1)
M9208-150	Crankarm Adapter Kit (Quantity 1)
M9208-600	Large Shaft Coupler Kit (with Locking Clip) for Mounting M9208 Series Electric Spring-Return Actuators on Dampers with Round Shafts from 1/2 to 3/4 in. (12 to 19 mm) or Square Shafts from 3/8 to 9/16 in. (10 to 14 mm) (Quantity 1)
M9208-601	Replacement Standard Coupler Kit (with Locking Clip) for Mounting M9208 Series Electric Spring-Return Actuators on Dampers with Round Shafts from 5/16 to 5/8 in. (8 to 16 mm) or Square Shafts from 1/4 to 1/2 in. (6 to 12 mm) (Quantity 1)
M9208-602	Replacement Locking Clips for M9208 Series Electric Spring-Return Actuators (Quantity 5)
M9208-603	Adjustable Stop Kit for M9208 Series Electric Spring-Return Actuators (Quantity 1)
M9220-604	Replacement Manual Override Cranks for M9208 Series Electric Spring-Return Actuators with Long Crank Radius: 2.83 in. (72 mm) (Quantity 5)
M9208-605	Replacement Manual Override Cranks for M9208 Series Electric Spring-Return Actuators with Short Crank Radius: 1.83 in. (46.5 mm) (Quantity 5)

M9208-GGx-x Series Proportional Electric Spring-Return Actuator (Part 2 of 2)		
Compliance	**United States**	UL Listed, CCN XAPX, File E27734; to UL 60730-1A: 2003-08, Ed. 3.1, Automatic Electrical Controls for Household and Similar Use; and UL 60730-2-14: 2002-02, Ed. 1, Part 2, Particular Requirements for Electric Actuators. (Models: All)
	Canada	UL Listed, CCN XAPX7, File E27734; to UL 60730-1:02-CAN/CSA: July 2002, 3rd Ed., Automatic Electrical Controls for Household and Similar Use; and CSA C22.2 No. 24-93 Temperature Indicating and Regulating Equipment (Models: All).
CE	**Europe**	CE Mark – Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive and Low Voltage Directive.
	Australia and New Zealand	RCM Mark, Australia/NZ Emissions Compliant (Models: All)
Shipping Weight		Models: -GGA: 3.43 lb (1.6 kg) Models: -GGC: 3.8 lb (1.7 kg)

M9208-AGx-x Series On/Off and Floating Point Control Electric Spring-Return Actuator (Part 1 of 2)		
Power Requirements	**-AGx Models**	AC 24 V (AC 19.2 V to 28.8 V) at 50/60 Hz: Class 2 (North America) or Safety Extra-Low Voltage (SELV) (Europe), 7.9 VA Running, 5.5 VA Holding Position DC 24 V (DC 21.6 V to 28.8 V): Class 2 (North America) or SELV (Europe), 3.5 W Running, 1.9 W Holding Position Minimum Transformer Size: 8 VA per Actuator
Input Signal	**-AGx Models**	AC 19.2 to 28.8 V at 50/60 Hz or DC 24 V +20%/-10%, Class 2 (North America) or SELV (Europe) Minimum Pulse Width: 500 ms
Control Input Impedance	**-AGx Models**	3,000 Ohm Control Inputs
Auxiliary Switch Rating	**-xxC Models**	Two SPDT, Double-Insulated Switches with Gold over Silver Contacts: AC 24 V, 50 VA Pilot Duty AC 120 V, 5.8 A Resistive, 1/4 hp, 275 VA Pilot Duty AC 240 V, 5.0 A Resistive, 1/4 hp, 275 VA Pilot Duty
Spring Return		Direction is Selectable with Mounting Position of Actuator: Actuator Face Labeled A is away from Damper or Valve: CCW Spring Return Actuator Face Labeled B is away from Damper or Valve: CW Spring Return
Rated Torque	**Power On (Running)**	70 lb·in (8 N·m) All Operating Temperatures
	Power Off (Spring Returning)	70 lb·in (8 N·m) All Operating Temperatures
Rotation Range		Maximum Full Stroke: 95° Adjustable Stop: 35 to 95° Maximum Position
Rotation Time for 90 Degrees of Travel	**Power On (Running)**	150 Seconds Constant for 0 to 70 lb·in (8·N m) Load, At All Operating Conditions
	Power Off (Spring Returning)	17 to 25 Seconds for 0 to 70 lb·in (8 N·m) Load, at Room Temperature 22 Seconds Nominal at Full Rated Load 94 Seconds Maximum with 70 lb·in (8 N·m) Load, at -40°F (-40°C)
Life Cycles		60,000 Full Stroke Cycles with 70 lb·in (8 N·m) Load 1,500,000 Repositions with 70 lb·in (8 N·m) Load
Audible Noise Rating	**Power On (Running)**	< 35 dBA at 70 lb·in (8 N·m) Load, at a Distance of 39-13/32 in. (1 m)
	Power On (Holding)	< 20 dBA at a Distance of 39-13/32 in. (1 m)
	Power Off (Spring Returning)	< 52 dBA at 70 lb·in (8 N·m) Load, at a Distance of 39-13/32 in. (1 m)
Electrical Connections	**Models: AGx-3**	48 in. (1.2 m) UL 758 Type AWM Halogen-Free Cable with 18 AWG (0.85 mm²) Conductors and 0.25 in. (6 mm) Ferrule Ends
	Models: AGA-2	120 in. (3.05 m) UL 444 Type CMP Plenum Rated Cable with 19 AWG (0.75 mm²) Conductors and 0.25 in. (6 mm) Ferrule Ends
	Auxiliary Switches (-xxC Models)	48 in. (1.2 m) UL 758 Type AWM Halogen-Free Cable with 18 AWG (0.85 mm²) Conductors and 0.25 in. (6 mm) Ferrule Ends
Conduit Connections		Integral Connectors for 3/8 in. (10 mm) Flexible Metal Conduit
Mechanical Connections	**Round Shafts**	Range of Sizes: 5/16 to 5/8 in. (8 to 16 mm)
	Square Shafts	Range of Sizes: 1/4 to 1/2 in. (6 to 12 mm)
Enclosure Rating		NEMA 2 (IP54) for All Mounting Directions

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Issued October 2017

M9220 Series Electric Spring-Return Actuators

Description

The M9220-xxx-3 actuators are direct-mount, spring-return electric actuators that operate with these available power options:

- AC 24 V at 50/60 Hz or DC 24 V (AGx, BGx, GGx, HGx)
- AC 120 V at 60 Hz (BAx)
- AC 230 V at 50/60 Hz (BDx)

These bidirectional actuators do not require a damper linkage, and are easily installed on dampers with 1/2 to 3/4 in. or 12 to 19 mm round shafts, or 3/8 and 1/2 in. or 10, 12, and 14 mm square shafts using the standard shaft clamp included with the actuator. An optional M9220-600 Jackshaft Coupler Kit is available for 3/4 to 1-1/16 in. or 19 to 27 mm round shafts, or 5/8 and 3/4 in. or 16, 18, and 19 mm square shafts.

A single M9220-xxx-3 Electric Spring-Return Actuator provides a running and spring-return torque of 177 lb·in (20 N·m). Two or three models mounted in tandem deliver twice or triple the torque. Integral line voltage auxiliary switches are available on the -xxC models to indicate end-stop position or to perform switching functions within the selected rotation range.

Refer to the *M9220-xxx-3 Electric Spring-Return Actuators Product Bulletin (LIT-12011057)* for important product application information and single point of contact information.

Features

- Available torques of 177 lb·in (20 N·m) for single actuators, 354 lb·in (40 N·m) for two models, and 531 lb·in (60 N·m) for three models mounted in tandem—offer a selection that is most suitable for the application.
- Reversible mounting design—simplifies installation and enables the actuator to spring return in either direction.
- Electronic stall detection throughout entire rotation range—extends the life of the actuator by deactivating the actuator motor when an overload condition is detected.
- Removable coupler—adapts to a shorter damper shaft.
- Integral 48 in. (1.2 m) halogen-free cables with colored and numbered conductors—simplify field wiring.
- Integral auxiliary switches (xxC Models)—provide one fixed and one adjustable switch point with line voltage capability.
- NEMA 2 (IP54) rated aluminum enclosure—protects the internal components of the actuator from dirt and moisture.
- Easy-to-use locking manual override with auto release and crank storage—allows for manual positioning of the actuator hub.
- Integral connectors for 3/8 in. flexible metal conduit—simplify installation and field wiring.
- Microprocessor-controlled brushless DC motor (-AGx, -GGx, and -HGx types)—provides constant run-time independent of torque.

M9220 Series Electric Spring-Return Actuator

Applications

The M9220-xxx-3 Electric Spring-Return Actuators provide reliable control of dampers and valves in HVAC systems. The M9220-xxx-3 Actuators are available for use with on/off, floating, and proportional controllers.

Repair Information

If the M9220 Series Electric Actuator fails to operate within its specifications, replace the unit. For a replacement actuator, contact the nearest Johnson Controls® representative.

Selection Chart

Code Number	Control Type	Auxiliary Switches	Power Requirements
M9220-AGA-3	Floating	None	AC 24 V at 50/60 Hz or DC 24 V
M9220-AGC-3	Floating	Two	AC 24 V at 50/60 Hz or DC 24 V
M9220-BAA-3	On/Off	None	AC 120 V at 60 Hz
M9220-BAC-3	On/Off	Two	AC 120 V at 60 Hz
M9220-BDA-3	On/Off	None	AC 230 V at 50/60 Hz
M9220-BDC-3	On/Off	Two	AC 230 V at 50/60 Hz
M9220-BGA-3	On/Off	None	AC 24 V at 50/60 Hz or DC 24 V
M9220-BGC-3	On/Off	Two	AC 24 V at 50/60 Hz or DC 24 V
M9220-GGA-3	Proportional	None	AC 24 V at 50/60 Hz or DC 24 V
M9220-GGC-3	Proportional	Two	AC 24 V at 50/60 Hz or DC 24 V
M9220-HGA-3	Proportional with Adjustable Zero and Span	None	AC 24 V at 50/60 Hz or DC 24 V
M9220-HGC-3	Proportional with Adjustable Zero and Span	Two	AC 24 V at 50/60 Hz or DC 24 V

GENERATOR: CAD, EAD, OAD DAMPER ACTUATOR
HRV-1: OA DAMPER ACTUATOR
CF-1 HEATING COIL VALVE ACT

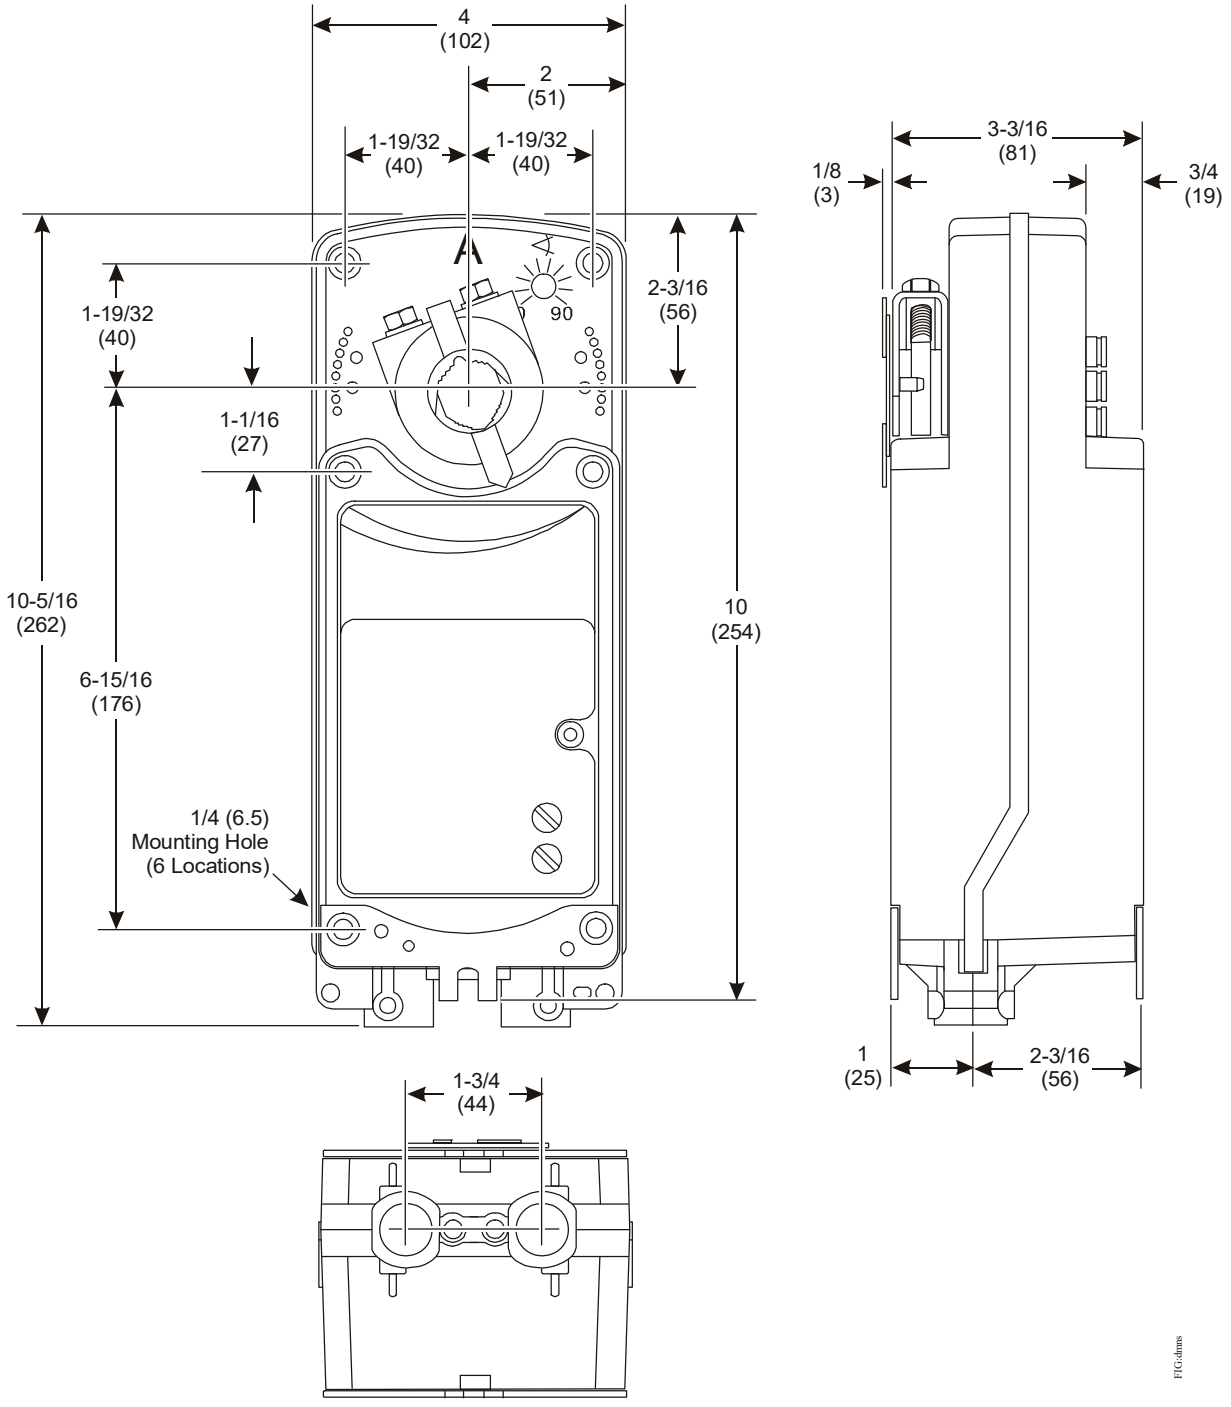
M9220 Series Electric Spring-Return Actuators (Continued)



Accessories

Code Number	Description
DMPR-KC003	7 in. (178 mm) blade pin extension (without bracket) for Johnson Controls direct-mount damper applications (quantity 5) **Note:** Available with damper and may be ordered separately
M9000-153	Crankarm (quantity 1)
M9000-158	Tandem Mounting Kit used to mount two models of M9220-xxx-3 Series Proportional Electric Spring-Return Actuators (quantity 1)
M9000-170	Remote Mounting Kit, horizontal. Kit includes mounting bracket, M9000-153 crankarm, ball joint, and mounting bolts (quantity 1)
M9000-171	Remote Mounting Kit, Vertical. Kit Includes mounting bracket, M9000-153 crankarm, ball joint, and mounting bolts (quantity 1)
M9000-320	Weather Shield Enclosure - NEMA 3R enclosure for protecting a single M9210/20 Actuator from rain, sleet, or snow (quantity 1)
M9000-400	Jackshaft Linkage Kit. Open-ended design enables clamping onto a jackshaft without requiring access to the ends of the jackshaft (quantity 1)
M9000-519	Valve linkage for mounting M9220 actuator to 2-1/2 to 6 in. flanged ball valves
M9000-604	Replacement Anti-Rotation Bracket Kit (with Screws) for M9220-xxx-3 Series Proportional Electric Spring-Return Actuators (quantity 1)
M9200-100	Threaded Conduit Adapter, 1/2 NPSM, for M9210(20) and M(VA)9208 Series Actuators (quantity 5)
M9220-600	1 in. (25 mm) Jackshaft Coupler Kit (with locking clip) for mounting M9220-xxx-3 Proportional Electric Spring-Return Actuators on dampers with 3/4 to 1-1/16 in. or 19 to 27 mm round shafts, or 5/8 and 3/4 in. or 16, 18, and 19 mm square shafts (quantity 1)
M9220-601	Replacement Coupler Kit (with locking clip) for mounting M9220-xxx-3 Proportional Electric Spring-Return Actuators on dampers with 1/2 to 3/4 in. or 12 to 19 mm round shafts, or 3/8 and 1/2 in. or 10, 12, and 14 mm square shafts (quantity 1)
M9220-602	Replacement Locking Clips for M9220-xxx-3 Proportional Electric Spring-Return Actuators (five per bag)
M9220-603	Adjustable Stop Kit for M9220-xxx-3 Proportional Electric Spring-Return Actuators (quantity 1)
M9220-604	Replacement Manual Override Cranks for M9220-xxx-3 Proportional Electric Spring-Return Actuators (five per bag)
M9220-610	Replacement Shaft Gripper, 10 mm square shaft with locking clip (quantity 1)
M9220-612	Replacement Shaft Gripper, 12 mm square shaft with locking clip (quantity 1)
M9220-614	Replacement Shaft Gripper, 14 mm square shaft with locking clip (quantity 1)

M9220 Series Electric Spring-Return Actuators (Continued)

Technical Specifications

M9220 Series Electric Spring-Return Actuators (Part 1 of 2)		
Product Codes		M9220-AGx-3 Models: Floating M9220-Bxx-3 Models: On/Off M9220-GGx-3 Models: Proportional M9220-HGx-3 Models: Proportional Adjustable
Power Requirements	**AGx, HGx, GGx Models**	AC 24 V (19.2 to 30 V) at 50/60 Hz: Class 2, 15.5 VA running, 7.7 VA holding position; DC 24 V (21.6 to 26.4 V): Class 2, 6.7 W running, 2.9 W holding position
	BAx Models	AC 120 V (AC 102 to 132 V) at 60 Hz: 0.25 A running, 0.13 A holding position
	BDx Models	AC 230 V (AC 198 to 264 V) at 50/60 Hz: 0.15 A running, 0.09 A holding position
	BGx Models	AC 24 V (19.2 to 30 V) at 50/60 Hz: Class 2, 24.6 VA running, 7.7 VA holding position; DC 24 V (21.6 to 26.4 V): Class 2, 17.6 W running, 2.8 W holding position
Transformer Sizing Requirements	**AGx, HGx, GGx Models**	20 VA minimum per actuator
	Bxx Models	25 VA minimum per actuator
Input Signal/Adjustments	**AGx Models**	DC 0 (2) to 10 V or 0 (4) to 20 mA with field furnished 500 Ohm resistor; Switch selectable direct or reverse action with signal increase, 500 ms minimum pulse width
	GGx Models	Factory set DC 0 to 10 V, CW Rotation with signal increase; Selectable DC 0 (2) to 10 V or 0 (4) to 20 mA with field furnished 500 Ohm, 0.25 W minimum resistor; switch selectable direct or reverse action with signal increase
	HGx Models	Factory set DC 0 to 10 V, CW rotation with signal increase; Selectable DC 0 to 10 V or 0 to 20 mA with field furnished 500 Ohm, 0.25 W minimum resistor; Start point programmable DC 0 to 10 V; Span programmable DC 2 to 10 V; Switch selectable direct or reverse action with signal increase
Control Input Impedance	**GGx, HGx Models**	Voltage Input: 200,000 Ohms; Current Input: 500 Ohms with field furnished 500 Ohm resistor
Feedback Signal	**GGx Models**	0 (2) to 10 VDC for desired rotation range up to 90°; Corresponds to rotation limits, 1 mA maximum
	HGx Models	0 to 10 VDC for desired rotation range up to 90°; Corresponds to rotation limits, 1 mA maximum
Auxiliary Switch Rating	**xxC Models**	Two Single-Pole, Double-Throw (SPDT), double-insulated switches with gold flash contacts: AC 24 V, 50 VA Pilot Duty; AC 120 V, 5.8 A resistive, 1/4 hp, 275 VA Pilot Duty; AC 240 V, 5.0 A resistive, 1/4 hp, 275 VA Pilot Duty
Spring Return		Direction is selectable with mounting position of actuator: Side A, actuator face away from Damper for CCW spring return; Side B, actuator face away from Damper for CW spring return
Running and Spring Return Torque		177 lb·in (20 N·m) for a single actuator; 354 lb·in (40 N·m) for two models mounted in tandem 531 lb·in (60 N·m) for three models mounted in tandem
Valid Tandem Combinations		Two M9220-Bxx-3 Three M9220-AGx-3 One M9220-HGx-3 master with one or two M9220-GGX-3 slaves One M9220-GGx-3 master with one or two M9220-GGX-3 slaves
Rotation Range		Adjustable from 30 to 90° CW or CCW with optional M9220-603 Adjustable Stop Kit; mechanically limited to 90°
Rotation Time Power On (Running)	**AGx, HGx, GGx Models**	150 seconds for 0 to 177 lb·in (0 to 20 N·m) at all operating conditions; independent of load
	BGx Models	24 to 57 seconds for 0 to 177 lb·in (0 to 20 N·m) at all operating conditions; 35 seconds nominal at full rated load
Rotation Time Power Off (Spring Returning)	**AGx, HGx, GGx Models**	20 seconds for 0 to 177 lb·in (0 to 20 N·m) at room temperature
	BGx Models	11 to 15 seconds for 0 to 177 lb·in (0 to 20 N·m) at room temperature; 35 seconds maximum for 0 to 177 lb·in (0 to 20 N·m) at -22°F (-30°C) 130 seconds maximum for 0 to 177 lb·in (0 to 20 N·m) at -40°F (-40°C)
Cycles		60,000 full stroke cycles; 1,500,000 repositions
Audible Noise Rating (AGx, HGx, GGx Models)	**Power On (Running)**	< 40 dBA at 39-13/32 in. (1 m)
	Power On (Holding)	< 20 dBA at 39-13/32 in. (1 m)
	Power Off (Spring Returning)	< 55 dBA at 39-13/32 in. (1 m)

M9220 Series Electric Spring-Return Actuators (Continued)

M9220 Series Electric Spring-Return Actuators (Part 2 of 2)		
Audible Noise Rating (BGx Models)	**Power On (Running)**	< 66 dBA at 39-13/32 in. (1 m)
	Power On (Holding)	< 18 dBA at 39-13/32 in. (1 m)
	Power Off (Spring Returning)	< 66 dBA at 39-13/32 in. (1 m)
Electrical Connections	**Actuator (All Models)**	48 in. (1.2 m) halogen-free cable with 18 AWG (0.75 mm^2) wire leads
	Auxiliary Switches (xxC Models)	48 in. (1.2 m) halogen-free cable with 18 AWG (0.75 mm^2) wire leads
Conduit Connections		Integral connectors for 3/8 in. (10 mm) flexible metal conduit
Mechanical Connections	**Standard Shaft Clamp Included with Actuator**	1/2 to 3/4 in. or 12 to 19 mm diameter round shafts, or 3/8 and 1/2 in. or 10, 12, and 14 mm square shafts
	Optional M9220-600 Jackshaft Coupler Kit	3/4 to 1-1/16 in. or 19 to 27 mm diameter round shafts, or 5/8 and 3/4 in. or 16, 18, and 19 mm square shafts
Aluminum Enclosure		NEMA 2 (IP54) for all mounting orientations
Ambient Conditions	**Operating**	-40 to 131°F (-40 to 55°C); 90% RH maximum, noncondensing
	Storage	-85 to 185°F (-65 to 85°C); 95% RH maximum, noncondensing
Dimensions		See *Dimensions*.
Compliance	**United States**	UL Listed, CCN XAPX, File E27734; to UL 60730-1, Automatic Controls for Household and Similar Use and UL 60730-2-14 Part 2, Particular Requirements for Electric Actuators (Models: All)
	Canada	UL Listed, CCN XAPX7,File E27734; to CAN/CSA E60730-1, Automatic Controls for Household and Similar Use: and CAN/CSA E60730-2-14 Part 2, Particular Requirements for Electric Actuators (Models: All)
CE	**Europe**	CE Mark - Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive and Low Voltage Directive.
	Australia and New Zealand	RCM Mark, Australia/NZ Emission Compliant (Models: All M9220-xGx and M9220-xDx)
Shipping Weight	**xGx Models**	6.4 lb (2.9 kg)
	BAx and BDx Models	7.6 lb (3.5 kg)

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls, Inc. shall not be liable for damages resulting from misapplication or misuse of its products. © 2017 Johnson Controls

Field Equipment Controller (FEC) Series Catalog Page

Code No. LIT-1900346
Issued June 2018

Refer to the QuickLIT website for the most up-to-date version of this document.

The Field Equipment Controller (FEC) Series products are programmable controllers that can be switched between BACnet® MS/TP and N2 communications protocols. When they are used as BACnet MS/TP devices, they are BACnet Application Specific Controllers (B-ASCs) with integral MS/TP communications. In N2 mode, they can be used to modernize sites with legacy Johnson Controls® controllers.

FECs feature 32-bit microprocessor architecture, patented continuous tuning adaptive control, and peer-to-peer communications, and are available with an optional built-in LCD screen local UI.

A full range of FEC models combined with the Input/Output Module (IOM) models can be applied to a wide variety of building applications ranging from simple fan coil or heat pump control to advanced central plant management. All FEC Series Controllers configured for BACnet support wireless communications using the ZFR System accessories.

Important:	You cannot purchase a similar third-party device and install it in a UL/cUL Listed smoke control system. Doing so voids the UL/cUL Smoke Control Listing. Third-party devices must be provided and labeled by the factory as described in the UL/cUL Smoke Control Listing.

Important:	Only those Johnson Controls products identified for use in smoke control applications have been tested and listed by UL for use in a *Metasys* system UL/cUL 864 10th Edition UUKL/ORD-C100-13 UUKLC Smoke Control System. Installation of a product that is not UL/cUL Listed and labeled for this application prevents the entire system from being UL/cUL Listed for smoke control.

Refer to the *Metasys® System Field Equipment Controllers and Related Products Product Bulletin (LIT-12011042)* for product application details.

If the product fails to operate within its specifications, replace the product. For a replacement product, contact the nearest Johnson Controls® representative.

Features

- **Switchable Communications Protocols**—Provides flexibility with a choice between BACnet MS/TP and N2 communication
- **Standard BACnet® Protocol**—Provides interoperability with other Building Automation System (BAS) products that use the widely accepted BACnet standard.
- **Standard Hardware and Software Platform**—Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows. Also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.
- **ZFR Wireless Field Controller (FC) or Sensor/Actuator (SA) Bus Interface**—Provides a wireless alternative to hard-wired *Metasys*® system counterparts with either the ZFR1800 Series Wireless Bus or the WNC1800/ZFR182x Pro Series Wireless Field Bus (ZFR Pro), offering application flexibility and mobility with minimal disruption to building occupants.

Figure 1: Field Equipment Controllers

- **Bluetooth® Wireless Commissioning**—Provides an easy-to-use connection to the configuration and commissioning tool.
- **Auto-Tuned Control Loops**—Reduce commissioning time, eliminate change-of-season re-commissioning, and reduce wear and tear on mechanical devices.
- **Universal Inputs, Configurable Outputs, and Point Expansion Modules**—Allows multiple signal options to provide input/output flexibility.
- **Optional Local User Interface Display** —Allows convenient monitoring and adjusting capabilities at the local device.
- **BACnet® Testing Laboratories (BTL) Listed**—Ensures interoperability with other BTL-listed devices. BTL is a third-party agency, which validates that BAS vendor products meet the BACnet industry-standard protocol.
- **32-bit Microprocessor**—Ensures optimum performance and meets industry specifications.
- **BACnet Automatic Discovery**—Supports easy controller integration into a *Metasys* BAS.
- **End-of-Line (EOL) Switch in MS/TP Field Controllers** — Enables field controllers to be terminating devices on the communications bus.
- **Pluggable Communications Bus and Supply Power Terminal Blocks**—Expedites installation and troubleshooting.
- **Patented proportional adaptive control (P-Adaptive) and Pattern Recognition Adaptive Control (PRAC) technologies**—Provide continuous loop tuning.
- **Wireless Connectivity through the ZFR1800 Series or the WNC1800/ZFR182x Pro Series Wireless Field Bus Systems in MS/TP Controllers**—Enables wireless mesh connectivity to supervisory controllers, facilitating easy initial location and relocation.
- **Writable Flash Memory**—Allows standard or customized applications to be downloaded from the Controller Configuration Tool (CCT) and enables persistent application data.
- **Large Product Family**—Provides a wide range of point mix to meet application requirements and allows for the addition of one or more Input/Output Module (IOM) and Network Sensors to provide even more I/O capacity.
- **User-Friendly Graphic Theme and Clear Pushbutton Identification**—Facilitate easy navigation of the integral or optional UI/display.

Table 1: FEC Series Model Information (Including Point Type Counts)

		FEC2511[1]	FEC16	FEC26
Communication Protocol		BACnet MS/TP, N2		
Engines		All Model types. Some NIE models support MS/TP and N2 devices. Refer to the *Network Engines Product Bulletin (LIT-12012138)* for details.		
Modular Jacks		6-pin SA Bus Modular Port supports one communicating sensor. **Or** you can wire up to four communicating sensors to the SA Bus Terminal Block. They cannot be used at the same time.		
			6-pin FC Bus for tool support	
Point Types	**Signals Accepted**			
Universal Input (UI)	Analog Input, Voltage Mode, 0–10 VDC Analog Input, Current Mode, 4–20 mA[2] Analog Input, Resistive Mode, 0–2k ohm, resistance temperature detector (RTD) (1k NI [Johnson Controls], 1k PT, A99B SI), negative temperature coefficient (NTC) (10k Type L, 2.252k Type 2) Binary Input, Dry Contact Maintained Mode	4 (Does not support Current Mode)	2	6
Binary Input (BI)	Dry Contact Maintained Mode Pulse Counter/Accumulator Mode (High Speed), 100 Hz	6	1	2
Analog Output (AO)	Analog Output, Voltage Mode, 0–10 VDC Analog Output, Current Mode, 4–20 mA	2 (Does not support Current Mode)		2
Binary Output (BO)	24 VAC Triac	2 (External Power Only)	3	3
Configurable Output (CO)	Analog Output, Voltage Mode, 0–10 VDC Binary Output Mode, 24 VAC Triac	2	4	4

1 The FEC2511 is currently only available in Europe. Contact your local Johnson Controls representative for more information.
2 Analog Input, Current Mode is set by hardware for the FEC26, and by software for the FEC16.

Table 2: FEC Series Ordering Information

Product Code Number	Description
MS-FEC1611-1	10-Point Field Equipment Controller with 2 UI, 1 BI, 3 BO, and 4 CO; 24 VAC; FC and SA Bus Support
MS-FEC1611-1ET	10-Point Field Equipment Controller Extended Temperature controller for rooftop applications. Supports Operational Temperature Range of -40 to 70°C (-40 to 158°F).
MS-FEC1621-1	10-Point Field Equipment Controller with 2 UI, 1 BI, 3 BO, and 4 CO; 24 VAC; FC and SA Bus Support; Integral Display and 6-Button Navigation Touchpad
MS-FEC2511-0[1]	16-Point Field Equipment Controller with 4 UI, 6 BI, 2 AO, 2 BO, and 2 CO; 24 VAC; FC and SA Bus Support. The FEC2511 model does not support current mode.
MS-FEC2611-0	17-Point Field Equipment Controller with 6 UI, 2 BI, 3 BO, 2 AO, and 4 CO; 24 VAC; FC and SA Bus Support
MS-FEC2611-0ET	FEC2611 Extended Temperature controller for rooftop applications. Supports Operational Temperature Range of -40 to 70°C (-40 to 158°F).
MS-FEC2621-0	17-Point Field Equipment Controller with 6 UI, 2 BI, 3 BO, 2 AO, and 4 CO; 24 VAC; FC and SA Bus Support; Integral Display and 6-Button Navigation Touchpad

1 This model is currently only available in Europe. Contact your local Johnson Controls representative for more information.

Table 3: FEC Series for Smoke Control Ordering Information

Product Code Number[1,2]	Description
MS-FEC1611-1U	10-Point Field Equipment Controller with 2 UI, 1 BI, 3 BO, and 4 CO; 24 VAC, FC and SA Bus, with Mounting Base
MS-FEU1610-0U	10-Point Field Equipment Controller with 2 UI, 1 BI, 3 BO, and 4 CO; 24 VAC; FC and SA Bus Support; with Mounting Base
MS-FEC2611-0U	17-Point Field Equipment Controller with 6 UI, 2 BI, 3 BO, 2 AO, and 4 CO; 24 VAC, FC and SA Bus, with Mounting Base

Table 3: FEC Series for Smoke Control Ordering Information

Product Code Number[1,2]	Description
MS-FEC2621-0U	17-Point Field Equipment Controller with 6 UI, 2 BI, 3 BO, 2 AO, and 4 CO; 24 VAC; FC and SA Bus Support; Integral Display and 6-Button Navigation Touchpad
MS-FEU2610-0U	17-Point Field Equipment Controller with 6 UI, 2 BI, 3 BO, 2 AO, and 4 CO; 24 VAC; FC and SA Bus Support; with Mounting Base

1 These devices are UL/ULC 864 Listed, File S4977, 10th Edition UUKL/ORD-C100-13 UUKLC Smoke Control System. These devices must be ordered in a Smoke Control UUKL listing.

2 All field controllers in a smoke control system must be mounted in Johnson Controls custom or standard UL 864 panels or in panels that are ordered from Johnson Controls. If these field controllers are used with panels that are not supplied by Johnson Controls, they are not compliant with the UL 864 10th Edition UUKL/ORD-C100-13 UUKLC Smoke Control System listing.

Accessories

Table 4: FEC Accessories

Product Code Number	Description
Mobile Access portal (MAP) Gateway[1]	Refer to the *Mobile Access Portal Gateway Catalog Page (LIT-1900869)* to identify the appropriate product for your region.
MS-DIS1710-0	Local Controller Display: Refer to *Local Controller Display Product Bulletin (LIT-12011273)* for more information.
MS-BTCVT-1[1]	Wireless Commissioning Converter with Bluetooth Technology
MS-BTCVTCBL-700[1]	Cable Replacement Set for the MS-BTCVT-1 or the NS-ATV7003-0; Includes One 5 ft (1.5 m) Retractable Cable
WRZ Series Wireless Room Sensors[1]	Refer to the *WRZ Series Wireless Room Sensors Product Bulletin (LIT-12011653)* for specific sensor model descriptions.
ZFR1800 Series Wireless Field Bus System[1]	This system is used for installations that only support BACnet MS/TP. Refer to the *WNC1800/ZFR182x Pro Series Wireless Field Bus System Product Bulletin (LIT-12012320)* for a list of available products.
NS Series Network Sensors	Refer to the *NS Series Network Sensors Product Bulletin (LIT-12011574)* for specific sensor model descriptions.
Y64T15-0[1]	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 92 VA, Foot Mount, 30 in. Primary Leads and 30 in. Secondary Leads, Class 2
Y65A13-0[1]	Transformer, 120 VAC Primary to 24 VAC Secondary, 40 VA, Foot Mount (Y65AS), 8 in. Primary Leads and 30 in. Secondary Leads, Class 2
Y65T42-0	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 40 VA, Hub Mount (Y65SP+), 8 in. Primary Leads and Secondary Screw Terminals, Class 2
Y65T31-0[1]	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 40 VA, Foot Mount (Y65AR+), 8 in. Primary Leads and Secondary Screw Terminals, Class 2
AP-TBK4SA-0	Replacement MS/TP SA Bus Terminal, 4-Position Connector, Brown (Bulk Pack of 10)
AP-TBK4FC-0	Replacement MS/TP FC Bus Terminal, 4-Position Connector (Bulk Pack of 10)
AP-TBK3PW-0	Replacement Power Terminal, 3-Position Connector, Gray (Bulk Pack of 10)
AS-CBLTSTAT-0	Cable adapter that provides a connection between 8-pin TE-6700 Series sensors and field controllers that do not have a 8-pin sensor connection.
ZFR-USBHA-0[1]	ZFR USB Dongle provides a wireless connection through CCT to allow wireless commissioning of the wirelessly enabled FEC, Advanced Application Field Equipment Controller (FAC), IOM, and VMA16 controllers. Also allows use of the ZFR Checkout Tool (ZCT) in CCT. **Note:** The ZFR-USBHA-0 replaces the IA OEM DAUBI_2400 ZigBee® USB dongle. For additional information on the ZFR-USBHA-0 ZigBee dongle, refer to the *ZFR1800 Series Wireless Field Bus System Technical Bulletin (LIT-12011295)* or *ZFR1800 Series Wireless Field Bus System Quick Reference Guide (LIT-12011630)*.
TL-BRTRP-0[1]	Portable BACnet IP to MS/TP Router

1 This accessory is not qualified for use with a UL 864 UUKL/UUKLC 10th Edition Listed Smoke Control system.

Table 5: FEC Series Technical Specifications

Product Code Numbers	**MS-FEC1611-1:**10-Point FEC **MS-FEC1611-1ET:** FEC1611 Extended Temperature controller for rooftop applications. Supports Operational Temperature Range of -40 to 70°C (-40 to 158°F). **MS-FEC1621-1:** 10-Point FEC with Integral Display and Pushbutton User Interface **MS-FEC2511-0**[1]**:** 16-Point FEC, only available in Europe **MS-FEC2611-0:** 17-Point FEC **MS-FEC2611-0ET:** FEC2611 Extended Temperature controller for rooftop applications. Supports Operational Temperature Range of -40 to 70°C (-40 to 158°F). **MS-FEC2621-0:** 17-Point FEC with Integral Display and Push Button User Interface
	Smoke Control Models: **MS-FEC1611-0U:** 10-Point FEC **MS-FEU1610-0U:** 10-Point FEC **MS-FEC2611-0U:** 17-Point FEC **MS-FEU2610-0U:** 17-Point FEC
Supply Voltage	**MS-FEC1611-x, MS-FEC1611-1ET, MS-FEC2511-0**[1]**, MS-FEC2611-0, MS-FEC2611-0ET, MS-FECx611-0U, and MS-FEUx610-0U:** 24 VAC (nominal, 20 VAC minimum/30 VAC maximum), 50/60 Hz, Power Supply Class 2 (North America), Safety, Extra-Low Voltage (SELV) (Europe)
Power Consumption	**MS-FEC2511-0**[1] **:** 14 VA maximum (no integral display) **MS-FEC1621-1 and MS-FEC2621-0 (with integral display):** 20VA maximum **Note:** VA ratings do not include any power supplied to the peripheral devices connected to Binary Outputs (BOs) or Configurable Outputs (COs), which can consume up to 12 VA for each BO or CO, for a possible total consumption of an additional 84 VA (maximum).
Ambient Conditions	**Operating:** 0 to 50°C (32 to 122°F); 10 to 90% RH noncondensing **Storage:** -40 to 80°C (-40 to 176°F); 5 to 95% RH noncondensing **Note:** FEC models with an -xET suffix have an operating temperature range of -40 to 70°C (-40 to 158°F).
Controller Addressing	**For BACnet-configured controllers:** DIP switch set; valid field controller device addresses 4–127 (device addresses 0–3 and 128-255 are reserved) **For N2-configured controllers:** DIP switch set; valid control device addresses 1–255
Communications Bus[2]	RS-485, field selectable between BACnet MS/TP and N2 communications: 3-wire FC Bus between the supervisory controller and field controllers 4-wire SA Bus between field controller, network sensors, and other sensor/actuator devices, includes a lead to source 15 VDC supply power (from field controller) to bus devices
Processor	**MS-FEC16, MS-FEC26, MS-FEU16, and MS-FEU26 models:** H8SX/166xR Renesas® 32-bit microcontroller **MS-FEC2511-0**[1]**:** RX631 Renesas, 32-bit microcontroller
Memory	**MS-FEC16, MS-FEC26, MS-FEU16, and MS-FEU26 models:** 1 MB Flash Memory and 512 KB RAM **MS-FEC2511-0**[1]**:** 4 MB Flash Memory and 8 MB SDRAM

Table 5: FEC Series Technical Specifications

Input and Output Capabilities	**MS-FEC16 Models:** 2 - Universal Inputs: Defined as 0–10 VDC, 4–20 mA, 0–600k ohm, or Binary Dry Contact 1 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/Accumulator Mode 3 - Binary Outputs: Defined as 24 VAC Triac (selectable internal or external source power) 4 - Configurable Outputs: Defined as 0–10 VDC or 24 VAC Triac BO **MS-FEC2511-0[1] Models:** 4 - Universal Inputs: Defined as 0–10 VDC, 0–600k ohm, or Binary Dry Contact 6 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/Accumulator Mode 2 - Binary Outputs: Does not have internal 24 VAC source, external power is required 2 - Configurable Outputs: Defined as 0–10 VDC or 24 VAC Triac BO 2 - Analog Outputs: Defined as 0–10 VDC **MS-FEC26 Models:** 6 - Universal Inputs: Defined as 0–10 VDC, 4–20 mA, 0–600k ohm, or Binary Dry Contact 2 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/Accumulator Mode 3 - Binary Outputs: Defined as 24 VAC Triac (selectable internal or external source power) 4 - Configurable Outputs: Defined as 0–10 VDC or 24 VAC Triac BO 2 - Analog Outputs: Defined as 0–10 VDC or 4–20 mA
Analog Input/Analog Output Resolution and Accuracy	**MS-FEC16, MS-FEC26, MS-FEU16, and MS-FEU26 models:** Analog Input: 16-bit resolution Analog Output: 16-bit resolution and ±200 mV in 0–10 VDC applications **MS-FEC2511-0[1]:** Analog Input: 15-bit resolution
Terminations	**MS-FEC16 and MS-FEC26 models:** Input/Output: Fixed Screw Terminal Blocks FC Bus, SA Bus, and Supply Power: 3-wire and 4-wire Pluggable Screw Terminal Blocks FC Bus and SA Bus Port: RJ-12 6-pin Modular Jacks **MS-FEC2511-0[1]:** Input/Output: Fixed Screw Terminal Blocks FC Bus, SA Bus, and Supply Power: 3-wire and 4-wire Pluggable Screw Terminal Blocks SA Bus Port: RJ-12 6-pin Modular Jack
Mounting	Horizontal on single 35 mm DIN rail mount (preferred), or screw mount on flat surface with three integral mounting clips on controller
Housing	**MS-FEC16 and MS-FEC26 models:** Enclosure material: ABS and polycarbonate UL94 5VB; self-extinguishing; Plenum-rated protection class: IP20 (IEC529) **MS-FEC2511-0[1]:** Enclosure material: ABS and polycarbonate, Rating V0 minimum Protection Class: IP20 (IEC529)
Dimensions (Height x Width x Depth)	**MS-FEC16 Models:** 150 x 164 x 53 mm (5-7/8 x 6-7/16 x 2-1/8 in.) including terminals and mounting clips **MS-FEC2511-0[1]:** 150 x 164 x 48 mm (5-7/8 x 6-7/16 x 1-7/8 in.) including terminals and mounting clips **MS-FEC26 Models:** 150 x 190 x 53 mm (5-7/8 x 7-1/2 x 2-1/8 in.) including terminals and mounting clips **Note:** Mounting space for all field controllers requires an additional 50 mm (2 in.) space on top, bottom, and front face of controller for easy cover removal, ventilation, and wire terminations.
Weight	**MS-FEC16 Models:** 0.4 kg (0.9 lb) **MS-FEC25 and MS-FEC26 Models:** 0.5 kg (1.1 lb)

Table 5: FEC Series Technical Specifications

Compliance CE	**United States:** UL Listed, File E107041, CCN PAZX, UL 916, Energy Management Equipment; FCC Compliant to CFR47, Part 15, Subpart B, Class A UL Listed, File S4977, UL 864 UUKL/UUKLC 10th Edition Listed, Smoke Control Units and Accessories for Fire Alarm Systems Equipment (models with **U** product code suffix only)
	Canada: UL Listed, File E107041, CCN PAZX7, CAN/CSA C22.2 No. 205, Signal Equipment; Industry Canada Compliant, ICES-003 UL Listed, File S4977, UL 864 UUKL/ORD-C100-13 10th Edition Listed, Smoke Control Units and Accessories for Fire Alarm Systems (models with **U** product code suffix only)
	Europe: CE Mark – Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive.
	Australia and New Zealand: RCM Mark, Australia/NZ Emissions Compliant
	BACnet International: **MS-FEC16 and MS-FEC26 Models:** BACnet Testing Laboratories (BTL) Protocol Revision 4 Listed BACnet Application Specific Controller (B-ASC) **MS-FEC2511-0**[1]**:** BACnet Testing Laboratories Protocol Revision 9 Listed BACnet Application Specific Controller (B-ASC)

1 MS-FEC2511-0 is currently only available in Europe. Contact your local Johnson Controls representative for more information.
2 For more information, refer to the *MS/TP Communications Bus Technical Bulletin (LIT-12011034)*.

The performance specifications are nominal and conform to acceptable industry standards. For application at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls shall not be liable for damages resulting from misapplication or misuse of its products.

Input/Output Module (IOM) Series Controllers Catalog Page

Code No. LIT-1900349
Issued June 2018

Refer to the QuickLIT website for the most up-to-date version of this document.

The Input/Output Module (IOM) Series expansion I/O modules have integral RS-485 MS/TP communications and integrate into the web-based *Metasys*® system. IOMs can serve in one of two capacities, depending on where they are installed in the *Metasys* system. When installed on the Sensor/Actuator (SA) Bus of an Advanced Application Field Equipment Controller (FAC), Field Equipment Controller (FEC), or VAV Modular Assembly (VMA) controller, the IOM expands the point count of these controllers. When installed on the Field Controller (FC) Bus, IOMs can be used as I/O point multiplexors to support monitoring and control from an Network Automation Engine (NAE) or Network Control Engine (NCE). The point multiplexor can also be useful for sharing points between other field controllers on the FC Bus using peer-to-peer connectivity.

Note: At CCT Release 10.1 and later, FACs, FECs, and VMAs can communicate by using either the BACnet or the N2 field bus networking protocol. The operation of the IOM Input/Output Module is not affected by the selection of the BACnet or the N2 protocol in the host controller.

All IOM expansion modules are BACnet® Testing Laboratory (BTL) listed. Refer to the *IOM Series Technical Specifications Table* for details.

Important:	You cannot purchase a similar third-party device and install it in a UL/ULC Listed smoke control system. Doing so voids the UL/ULC Smoke Control Listing. Third-party devices must be provided and labeled by the factory as described in the UL/ULC Smoke Control Listing.

Important:	Only those Johnson Controls products identified for use in smoke control applications have been tested and listed by UL for use in a *Metasys* System UL 864 10th Edition UUKL/ORD-C100-13 UUKLC Smoke Control System. Installation of a product that is not UL/ULC Listed and labeled for this application prevents the entire system from being UL/ULC Listed for smoke control.

Refer to the *Metasys® System Field Equipment Controllers and Related Products Product Bulletin (LIT-12011042)* for product application details.

If the product fails to operate within its specifications, replace the product. For a replacement product, contact the nearest Johnson Controls® representative.

WATER SYPPLY RECIRC SYSTEM, FUEL OIL, AHU-2, AHU-3,HWS

Figure 1: Input/Output Modules (IOM)

Features

- **Standard BACnet® Protocol**——Provides interoperability with other Building Automation System (BAS) products that use the widely accepted BACnet standard.
- **BACnet® Testing Laboratories (BTL) Listed**——Ensures interoperability with other BTL-listed devices. BTL is a third-party agency, which validates that BAS vendor products meet the BACnet industry-standard protocol.
- **Standard Hardware and Software Platform**——Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows. Also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.
- **Universal Inputs, Configurable Outputs, and Point Expansion Modules**——Allows multiple signal options to provide input/output flexibility.
- **Optional Local User Interface Display**— —Allows convenient monitoring and adjusting capabilities at the local device.
- **32-bit Microprocessor**—Ensures optimum performance and meets industry specifications.
- **BACnet Automatic Discovery**—Supports easy controller integration into a *Metasys* BAS.
- **Pluggable Communications Bus and Supply Power Terminal Blocks**—Expedites installation and troubleshooting.
- **Wireless Connectivity through the ZFR1800 Series or the WNC1800/ZFR182x Pro Series Wireless Field Bus Systems in MS/TP Controllers**—Enables wireless mesh connectivity to supervisory controllers, facilitating easy initial location and relocation.
- **Bluetooth® Wireless Commissioning**——Provides an easy-to-use connection to the configuration and commissioning tool.
- **End-of-Line (EOL) Switch in MS/TP Field Controllers** — Enables field controllers to be terminating devices on the communications bus.

Point Types	**Signals Accepted**										
Universal Input (UI)	Analog Input, Voltage Mode, 0–10 VDC Analog Input, Current Mode, 4–20 mA Analog Input, Resistive Mode, 0–2 kOhm, RTD (1k NI [Johnson Controls], 1k PT, A99B SI), NTC (10k Type L, 2.252k Type 2) Binary Input, Dry Contact Maintained Mode		2	8	4			6	8		
Binary Input (BI)	Dry Contact Maintained Mode Pulse Counter/Accumulator Mode (High Speed), 100 Hz	4				16	8	2		16	8
Analog Output (AO)	Analog Output, Voltage Mode, 0–10 VDC Analog Output, Current Mode, 4–20 mA			2				2	2		
Binary Output (BO)[2]	24 VAC Triac						8	3			8
Universal Output (UO)	Analog Output, Voltage Mode, 0–10 VDC Binary Output Mode, 24 VAC/DC Field-Effect Transistor (FET) Analog Output, Current Mode, 4–20 mA		2		4						
Configurable Output (CO)	Analog Output, Voltage Mode, 0–10 VDC Binary Output Mode, 24 VAC Triac							4			
Relay Output (RO) (-0 models only)	120/240 VAC		2		4						
Relay Output (RO) (-2 models only)	240 VAC		2		4						

1 This model is only available in certain regions. Contact your local Johnson Controls representative for more information.
2 The BOs on the MS-IOM3733-0 model requires an external low-voltage power source.

Table 2: IOM Series Ordering Information

Product Code Number	Description	UL and cUL (Canada)	CE Marked
MS-IOM1711-0	4-Point IOM with 4 BI, FC Bus and SA Bus Support	X	X
MS-IOM2711-0	6-Point IOM with 2 UI, 2 UO, 2 BO, FC Bus, and SA Bus Support. Relays are rated for 120/240 VAC.	X	
MS-IOM2711-2	6-Point IOM with 2 UI, 2 UO, 2 BO, FC Bus, and SA Bus Support. Relays are rated for 240 VAC.		X
MS-IOM2721-0	10-Point IOM with 8 UI, 2 AO, FC Bus, and SA Bus Support	X	X
MS-IOM2723-0[1]	10-Point IOM with 8 UI, 2 AO, FC Bus, and SA Bus Support	X	X

Table 2: IOM Series Ordering Information

Product Code Number	Description	UL and cUL (Canada)	CE Marked
MS-IOM3711-0	12-Point IOM with 4 UI, 4 UO, 4 BO, FC Bus, and SA Bus Support. Relays are rated for 120/240 VAC.	X	
MS-IOM3711-2	12-Point IOM with 4 UI, 4 UO, 4 BO, FC Bus, and SA Bus Support. Relays are rated for 240 VAC.		X
MS-IOM3721-0	16-Point IOM with 16 BI, FC Bus, and SA Bus Support	X	X
MS-IOM3723-0[1]	16-Point IOM with 16 BI, FC Bus, and SA Bus Support	X	X
MS-IOM3731-0	16-Point IOM with 8 BI, 8 BO, FC Bus, and SA Bus Support	X	X
MS-IOM3733-0[1]	16-Point IOM with 8 BI, 8 BO, FC Bus, and SA Bus Support Binary Outputs (BOs) on MS-IOM3733 controllers do not supply power for the outputs; the BOs require external low-voltage (<30 VAC) power sources.	X	X
MS-IOM4711-0	17-Point IOM with 6 UI, 2 BI, 3 BO, 2 AO, 4 CO, FC and SA Bus Support	X	X

1 This model is only available in certain regions. Contact your local Johnson Controls representative for more information.

Table 3: IOM Series for Smoke Control Ordering Information

Product Code Number[1,2]	Description
MS-IOM1710-0U	4-Point IOM with 4 BI; 24 VAC; FC Bus and SA Bus Support
MS-IOM1711-0U	4-Point IOM with 4 BI; 24 VAC; FC Bus and SA Bus Support
MS-IOM2710-0U	6-Point IOM with 2 UI, 2 UO, 2 BO; 24 VAC; FC Bus and SA Bus Support
MS-IOM2711-0U	6-Point IOM with 2 UI, 2 UO, 2 BO; 24 VAC; FC Bus and SA Bus Support
MS-IOM3710-0U	12-Point IOM with 4 UI, 4 UO, 4 BO; 24 VAC; FC Bus and SA Bus Support
MS-IOM3711-0U	12-Point IOM with 4 UI, 4 UO, 4 BO; 24 VAC; FC Bus and SA Bus Support
MS-IOU4710-0U	17-Point IOM with 6 UI, 2 BI, 3 BO, 2 AO, 4 CO; 24 VAC; FC Bus and SA Bus Support with Mounting Base
MS-IOM4711-0U	17-Point IOM with 6 UI, 2 BI, 3 BO, 2 AO, 4 CO; 24 VAC; FC Bus and SA Bus Support with Mounting Base

1 These devices are UL/ULC 864 Listed, File S4977, 10th Edition UUKL/ORD-C100-13 UUKLC Smoke Control System. These devices must be ordered in a Smoke Control UUKL listing.

2 All field controllers in a smoke control system must be mounted in Johnson Controls custom or standard UL 864 panels or in panels that are ordered from Johnson Controls. If these field controllers are used with panels that are not supplied by Johnson Controls, they are not compliant with the UL 864 10th Edition UUKL/ORD-C100-13 UUKLC Smoke Control System listing.

Accessories

Table 4: IOM Accessories

Product Code Number	Description
Mobile Access portal (MAP) Gateway[1]	Refer to the *Mobile Access Portal Gateway Catalog Page (LIT-1900869)* to identify the appropriate product for your region.
MS-BTCVT-1[1]	Wireless Commissioning Converter with Bluetooth Technology
MS-BTCVTCBL-700[1]	Cable Replacement Set for the MS-BTCVT-1 or the NS-ATV7003-0; Includes One 5 ft (1.5 m) Retractable Cable
ZFR1800 Series Wireless Field Bus System[1]	This system is used for installations that support BACnet/IP but can also coexist with the ZFR1800 Series when installed under the same supervisor (i.e., network engine). Refer to the *WNC1800/ZFR182x Pro Series Wireless Field Bus System Product Bulletin (LIT-12012320)* for a list of available products.
ZFR-USBHA-0[1]	ZFR USB Dongle provides a wireless connection through CCT to allow wireless commissioning of the wirelessly enabled FEC, Advanced Application Field Equipment Controller (FAC), IOM, and VMA16 controllers. Also allows use of the ZFR Checkout Tool (ZCT) in CCT.
Y64T15-0[1]	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 92 VA, Foot Mount, 30 in. Primary Leads and 30 in. Secondary Leads, Class 2
Y65A13-0[1]	Transformer, 120 VAC Primary to 24 VAC Secondary, 40 VA, Foot Mount (Y65AS), 8 in. Primary Leads and 30 in. Secondary Leads, Class 2
Y65T42-0[1]	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 40 VA, Hub Mount (Y65SP+), 8 in. Primary Leads and Secondary Screw Terminals, Class 2
Y65T31-0[1]	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 40 VA, Foot Mount (Y65AR+), 8 in. Primary Leads and Secondary Screw Terminals, Class 2
AP-TBK4SA-0	Replacement MS/TP SA Bus Terminal, 4-Position Connector, Brown (Bulk Pack of 10)
AP-TBK4FC-0	Replacement MS/TP FC Bus Terminal, 4-Position Connector (Bulk Pack of 10)
AP-TBK3PW-0	Replacement Power Terminal, 3-Position Connector, Gray (Bulk Pack of 10)
AS-CBLTSTAT-0	Cable adapter for connection to 8-pin TE-6700 Series sensors
TL-BRTRP-0[1]	Portable BACnet/IP to MS/TP Router

1 This accessory is not qualified for use with a UL 864 UUKL/UUKLC 10th Edition Listed Smoke Control system.

Product Code Numbers	**MS-IOM1711-0:** 4-Point IOM with 4 BI, FC Bus and SA Bus Support **MS-IOM2711-0:** 6-Point IOM with 2 UI, 2 UO, 2 BO, FC Bus, and SA Bus Support. Relays are rated for 120/240 VAC **MS-IOM2711-2:** 6-Point IOM with 2 UI, 2 UO, 2 BO, FC Bus, and SA Bus Support. Relays are rated for 240 VAC. **MS-IOM2721-0:** 10-Point IOM with 8 UI, 2 AO, FC Bus, and SA Bus Support **MS-IOM2723-0**[1]**:** 10-Point IOM with 8 UI, 2 AO, FC Bus, and SA Bus Support **MS-IOM3711-0:** 12-Point IOM with 4 UI, 4 UO, 4 BO, FC Bus, and SA Bus Support. Relays are rated for 120/240 VAC **MS-IOM3711-2:** 12-Point IOM with 4 UI, 4 UO, 4 BO, FC Bus, and SA Bus Support. Relays are rated for 240 VAC **MS-IOM3721-0:** 16-Point IOM with 16 BI, FC Bus, and SA Bus Support **MS-IOM3723-0**[1]**:** 16-Point IOM with 16 BI, FC Bus, and SA Bus Support **MS-IOM3731-0:** 16-Point IOM with 8 BI, 8 BO, FC Bus, and SA Bus Support **MS-IOM3733-0**[1]**:** 16-Point IOM with 8 BI, 8 BO, FC Bus, and SA Bus Support **MS-IOM4711-0:** 17-Point IOM with 6 UI, 2 BI, 3 BO, 2 AO, 4 CO, FC and SA Bus Support
	Smoke Control Models: **MS-IOM1710-0U:** 4-Point IOM with 4 BI, FC Bus and SA Bus Support **MS-IOM1711-0U:** 4-Point IOM with 4 BI, FC Bus and SA Bus Support **MS-IOM2710-0U:** 6-Point IOM with 2 UI, 2 UO, 2 BO, FC Bus, and SA Bus Support **MS-IOM2711-0U:** 6-Point IOM with 2 UI, 2 UO, 2 BO, FC Bus, and SA Bus Support **MS-IOM3710-0U:** 12-Point IOM with 4 UI, 4 UO, 4 BO, FC Bus, and SA Bus Support **MS-IOM3711-0U:** 12-Point IOM with 4 UI, 4 UO, 4 BO, FC Bus, and SA Bus Support **MS-IOU4710-0U:** 17-Point IOM with 6 UI, 2 BI, 3 BO, 2 AO, 4 CO, FC Bus and SA Bus Support with Mounting **MS-IOM4711-0U:** 17-Point IOM with 6 UI, 2 BI, 3 BO, 2 AO, 4 CO, FC Bus and SA Bus Support with Mounting
Supply Voltage	24 VAC (nominal, 20 VAC minimum/30 VAC maximum), 50/60 Hz, Power Supply Class 2 (North America), Safety Extra-Low Voltage (SELV) Europe
Power Consumption	14 VA maximum **Note:** VA ratings do not include any power supplied to the peripheral devices connected to Binary Outputs (BOs) or Configurable Outputs (COs), which can consume up to 12 VA for each BO or CO, for a possible total consumption of an additional 84 VA (maximum), depending on the IOM model.
Ambient Conditions	**Operating:** 0 to 50°C (32 to 122°F); 10 to 90% RH noncondensing **Storage:** -40 to 80°C (-40 to 176°F); 5 to 95% RH noncondensing
Addressing	DIP switch set; valid field controller device addresses 4–127 (Device addresses 0–3 and 128–255 are reserved and not valid IOM addresses).
Communications Bus[2]	BACnet MS/TP, RS-485 3-wire FC Bus between the supervisory controller and field devices 4-wire SA Bus between field controller, network sensors, and other sensor/actuator devices. Includes a lead source 15 VDC supply power (from field controller) to bus devices.
Processor	**MS-IOM1711-0, MS-IOM2711-0, MS-IOM2711-2, MS-IOM2721-0, MS-IOM3711-0, MS-IOM3711-2, MS-IOM3731-0, and MS-IOM4711-0**: H8SX/166xR Renesas® 32-bit microcontroller **MS-IOM2723-0**[1]**, MS-IOM3723-0**[1]**, and MS-IOM3733-0**[1]: RX631 32-bit Renesas microcontroller
Memory	**MS-IOM1711-0, MS-IOM2711-0, MS-IOM2711-2, MS-IOM2721-0, MS-IOM3711-0, MS-IOM3711-2, MS-IOM3731-0, and MS-IOM4711-0:** 512 KB Flash Memory and 128 KB RAM **MS-IOM2723-0**[1]**, MS-IOM3723-0**[1]**, and MS-IOM3733-0**[1]**:** 4 MB External Serial Flash Memory

Table 5: IOM Series

Input and Output Capabilities	**MS-IOM1711-0:** 4 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/ Accumulator Mode
	MS-IOM2711-x: 2 - Universal Inputs: Defined as 0–10 VDC, 4–20 mA, 0–600k ohm, or Binary Dry Contact 2 - Universal Outputs: Analog Output: Voltage Mode, 0-10 VDC; Binary Output Mode: 24 VAC/DC FET; Analog Output: Current Mode, 4-20 mA 2 - Relay Outputs: (Single-Pole, Double-Throw) **UL 916** (-0 model only): 1/4 hp 120 VAC, 1/2 hp 240 VAC; 360 VA Pilot Duty at 120/240 VAC (B300); 3 A Non-inductive 24-240 VAC **EN 60730** (-2 model only): 6 (4) A N.O. or N.C. only, 240 VAC
	MS-IOM2721-0 and MS-IOM2723-0[1]: 8 - Universal Inputs: Defined as 0–10 VDC, 4–20 mA, 0–600k ohm, or Binary Dry Contact 2 - Analog Outputs: Defined as 0–10 VDC or 4–20 mA
	MS-IOM3711-x: 4 - Universal Inputs: Defined as 0–10 VDC, 4–20 mA, 0–600k ohm, or Binary Dry Contact 4 - Universal Outputs: Analog Output: Voltage Mode, 0-10 VDC; Binary Output Mode: 24 VAC/DC FET; Analog Output: Current Mode, 4-20 mA 4 - Relay Outputs: (Single-Pole, Double-Throw) **UL 916** (-0 model only): 1/4 hp 120 VAC, 1/2 hp 240 VAC; 360 VA Pilot Duty at 120/240 VAC (B300); 3 A Non-inductive 24-240 VAC **EN 60730** (-2 model only): 6 (4) A N.O. or N.C. only, 240 VAC
	MS-IOM3721-0 and MS-IOM3723-0[1]: 16 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/Accumulator Mode
	MS-IOM3731-0 and MS-IOM3733-0[1]: 8 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/Accumulator Mode 8 - Binary Outputs: Defined as 24 VAC Triac (Require external low-voltage power source) **Note:** Binary Outputs (BOs) on MS-IOM3733-0 models do not supply power for the outputs; the BOs require external low-voltage (< 30 VAC) power sources.
	MS-IOM4711-0: 6 - Universal Inputs: Defined as 0–10 VDC, 4–20 mA, 0–600k ohm, or Binary Dry Contact 2 - Binary Inputs: Defined as Dry Contact Maintained or Pulse/Counter Accumulator Mode 3 - Binary Outputs: Defined as 24 VAC Triac (selectable internal or external source power) 4 - Configurable Outputs: Defined as 0–10 VDC or 24 VAC Triac BO 2 - Analog Outputs: Defined as 0–10 VDC or 4–20 mA
Analog Input/Analog Output Resolution and Accuracy	**MS-IOM1711-0, MS-IOM2711-0, MS-IOM2711-2, MS-IOM2721-0, MS-IOM3711-0, MS-IOM3711-2, MS-IOM3731-0, and MS-IOM4711-0:** **Analog Input:** 16-bit resolution **Analog Output:** 16-bit resolution and ±200 mV in 0–10 VDC applications **MS-IOM2723-0[1], MS-IOM3723-0[1], and MS-IOM3733-0[1]:** **Analog Input:** 15-bit resolution **Analog Output:** ±200 mV in 0–10 VDC applications

Table 5: IOM Series

Terminations	**MS-IOM1711-0, MS-IOM2711-0, MS-IOM2711-2, MS-IOM2721-0, MS-IOM3711-0, MS-IOM3711-2, MS-IOM3731-0, and MS-IOM4711-0:** Input/Output: Fixed Screw Terminal Blocks SA/FC Bus and Supply Power: 4-wire and 3-wire Pluggable Screw Terminal Blocks SA/FC Bus Port: RJ-12 6-Pin Modular Jacks **MS-IOM2723-0[1], MS-IOM3723-0[1], and MS-IOM3733-0[1]:** Input/Output: Fixed Screw Terminal Blocks **Note:** There are no labels on I/O terminal blocks. The labels are above/below the terminal blocks on the IOM packaging. SA/FC Bus and Supply Power: 4-wire and 3-wire Pluggable Screw Terminal Blocks
Mounting	Horizontal on single 35 mm DIN rail mount (preferred), or screw mount on flat surface with three integral mounting clips on controller
Housing	Enclosure material: ABS and polycarbonate UL94 5VB; self-extinguishing, Plenum-rated protection class: IP20 (IEC529)
Dimensions (Height x Width x Depth)	**MS-IOM1711 and MS-IOM2711 Models:** 150 x 120 x 53 mm (5-7/8 x 4-3/4 x 2-1/8 in.) including terminals and mounting clips **MS-IOM2721-0, MS-IOM2723-0[1], MS-IOM3721-0, MS-IOM3723-0[1], MS-IOM3731-0, and MS-IOM3733-0[1] models:** 150 x 164 x 53 mm (5-7/8 x 6-7/16 x 2-1/8 in.) including terminals and mounting clips **MS-IOM3711-0 and MS-IOM4711-0 Models:** 150 x 190 x 53 mm (5-7/8 x 7-1/2 x 2-1/8 in.) including terminals and mounting clips **Note:** Mounting space for all field controllers requires an additional 50 mm (2 in.) space on top, bottom, and front face of controller for easy cover removal, ventilation, and wire terminations.
Weight	0.5 kg (1.1 lb) maximum
Compliance	**United States:** UL Listed, File E107041, CCN PAZX, UL 916, Energy Management Equipment; FCC Compliant to CFR47, Part 15, Subpart B, Class A UL Listed, File S4977, UL 864 UUKL/UUKLC 10th Edition Listed, Smoke Control Units and Accessories for Fire Alarm Systems Equipment (models with **U** product code suffix only) **Note:** Except MS-IOM2711-2 and MS-IOM3711-2
CE	**Canada:** UL Listed, File E107041, CCN PAZX7, CAN/CSA C22.2 No. 205, Signal Equipment; Industry Canada Compliant, ICES-003 UL Listed, File S4977, UL 864 UUKL/ORD-C100-13 10th Edition Listed, Smoke Control Units and Accessories for Fire Alarm Systems (models with U product code suffix only) **Note:** Except MS-IOM2711-2 and MS-IOM3711-2
	Europe: CE Mark – Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive. Declared as Independently Mounted, Intended for Panel Mounting, Operating Control Type 1.B, 4kV rated impulse voltage, 100.7°C ball pressure test. **Note:** Except MS-IOM2711-0 and MS-IOM3711-0
	Australia and New Zealand: RCM Mark, Australia/NZ Emissions Compliant **Note:** Except MS-IOM2711-0 and MS-IOM3711-0
	BACnet International: **MS-IOM1711-0, MS-IOM2711-0, MS-IOM2711-2, MS-IOM2721-0, MS-IOM3711-0, MS-IOM3711-2, MS-IOM3731-0, and MS-IOM4711-0:** BACnet Testing Laboratories (BTL) Protocol Revision 4 Listed BACnet Application Specific Controller (B-ASC) **MS-IOM2723-0[1], MS-IOM3723-0[1], and MS-IOM3733-0[1]:** BACnet Testing Laboratories (BTL) Protocol Revision 12 Listed BACnet Smart Actuator (B-SA)

1 This model is only available in certain regions. Contact your local Johnson Controls representative for more information.
2 For more information, refer to the *MS/TP Communications Bus Technical Bulletin (LIT-12011034)*.

The performance specifications are nominal and conform to acceptable industry standards. For application at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls shall not be liable for damages resulting from misapplication or misuse of its products.

Issued February 2017

NS Series Network Sensors Catalog Page

Description

The NS Series Network Sensor offering includes NS Series Network Zone Sensors and NS Series Network Discharge Air Sensors. The NS Series Network Sensors are designed to function directly with *Metasys*® system Field Equipment Controllers (FECs), Input/Output Modules (IOMs), VAV Modular Assembly (VMA16) Controllers, and Facility Explorer FX-PC Series Programmable Controllers (FX-PCGs, FX-PCVs, and FX-PCXs). The sensors are also compatible with Verasys™ and Johnson Controls Smart Equipment.

The majority of NS Series Network Zone Sensors monitor room temperature; however, options are available to also monitor zone humidity, carbon dioxide (CO_2), local temperature setpoint adjustments, and other variables. These data are transmitted to a controller on the Sensor Actuator (SA) Bus.

Some models of NS Series Network Zone Sensors include an onboard passive infrared (PIR) occupancy sensor that detects motion to determine if a space is occupied. This feature maximizes up to 30% energy savings in high-energy usage environments such as schools, dormitories, offices, hospitals, and hotels by adjusting the temperature of the space based on the occupancy status. In addition, the PIR occupancy sensor facilitates trending of floor space usage in these environments.

The NS Series Network Zone Sensors include models with either a temperature setpoint dial or setpoint pushbuttons and LCD that allows occupants to view the zone temperature, Relative Humidity (RH), and view and adjust the zone temperature setpoint. Some temperature and humidity models include an RH pushbutton to toggle between temperature and RH on the display. These models also have the capability to set the default display to either temperature or RH. Some models also include an °F/°C pushbutton to toggle between degrees Fahrenheit (F) and degrees Celsius (C).

A fan mode pushbutton is included to set the desired fan speed (AUTO-OFF-low-medium-high). An occupancy override function allows the user to signal to the controller that the zone is occupied to override the scheduled mode. Some models have DIP switches to set a unique address for applications that require multiple sensors.

For communication wiring flexibility, the wires connecting the network zone sensor to a controller can be terminated using a modular jack or screw terminals.

Note: Mixing of phone jack and screw terminal devices on the same SA bus segment must be avoided.

Each network sensor includes an SA Bus access port to allow accessories to access the SA Bus. This plug allows accessories to service or commission the connected controller or gain access to any other controller on the same Field Controller (FC) Bus.

The NS Series Network Zone Sensor offering includes models that can be surface mounted, vertical wallbox mounted, or flush mounted to meet the requirements of the specific application. Some NS Series Sensor models are designed to assist with the California Energy Code (Title 24). Select models offer stylish black enclosures to suit specific architectural and interior design needs.

The NS Series Network Discharge Air Sensors monitor the duct temperature, typically at the discharge of the VAV box, and transmit this data to a local controller on the SA Bus using the 10 ft (305 cm) wiring lead included with the unit. The 10 ft (305 cm) wiring lead consists of four 22 AWG (0.6 mm) trade-size, color-coded wires encased in a plenum-rated jacket. Each of the wires is stripped and tinned for easy connection to the SA Bus screw terminal block.

The NS Series Network Discharge Air Sensors are available with either a 4- or 8-in. (102 or 203 mm) temperature probe. All models include DIP switches for applications requiring multiple discharge air sensors, each with a unique DIP switch configurable address.

NS Series Network Sensors

Refer to the *NS Series Network Sensors Product Bulletin (LIT-12011574)* for important product application and single point of contact information.

Features

- BACnet® Master-Slave/Token-Passing (MS/TP) protocol communication—Provides compatibility with *Metasys* system field controllers and Facility Explorer programmable controllers in a proven communication network.
- Backlit LCD available on some models—Provides real-time status of the environment with backlighting activated during user interaction.
- Simple temperature setpoint adjustment available on some models—Enables you to change the setpoint with the turn of a dial or press of a button.
- Onboard PIR occupancy sensor available on some models—Maximizes up to 30% energy savings in high-energy usage environments, and facilitates trending of floor space usage.
- Temporary occupancy available on some models—Provides a timed override command, which temporarily initiates an alternate mode.
- Field-selectable default display setting on some models—Allows you to toggle between temperature and RH on the display, and set the desired default for continuous viewing.
- Fahrenheit/Celsius (°F/°C) button available on some models—Toggles the display temperature between degrees Celsius and degrees Fahrenheit.

Note: Since some NS Series Network Sensor features are not supported in previous releases of *Metasys* or Facility Explorer system software, it is recommended that the system software be kept up to date.

Repair Information

If the NS Series Network Zone Sensor or the NS Series Network Discharge Air Sensor fails to operate within its specifications, replace the unit. For a replacement sensor, contact the nearest Johnson Controls® representative.

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls shall not be liable for damages resulting from misapplication or misuse of its products. © 2017 Johnson Controls.

1. Use the setpoint dial or pushbuttons to adjust the absolute temperature setpoint.
2. An Occupancy Override button is available on NS-xxP and NS-xxL models. Other models allow Occupancy Override through the setpoint adjustment interface.
3. This model is currently only available in Asia. Contact your Johnson Controls representative for more information.
4. These models feature a black enclosure.
5. In the VAV balancing models, the fan control button is replaced by a light bulb button used in the VAV balancing process.

NS Sensors with Fault Code Capability Error Codes

The fault indication comes through the Network Sensor Bus when a Network Sensor is used in the Zone. The LCD indicates the code number for all the required state of California Title 24 economizer fault conditions.

Display Text	California Title 24 Economizer Fault Condition	Possible Problem
EF1	Air temperature sensor failure/fault	Problem with one of the air temperature sensors. Check Outdoor Air, Return Air, or Supply Air sensors.
EF5	Not economizing when it should	The economizer is not using outdoor air when it should.
EF6	Economizing when it should	The economizer is allowing outdoor air inside when the conditions are not suitable for economizer operation.
EF8	Damper not modulating	The economizer damper is not able to modulate properly. Check damper, linkage to actuator, or the actuator.
EF9	Excess outdoor air	The economizer is allowing excess outdoor air inside.

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. NS Series Network Sensors Catalog Page (Continued)

Technical Specifications

NS Series Network Zone Sensors—Temperature Only Models and Temperature and Humidity Models		
Supply Voltage		9.8 to 16.5 VDC; 15 VDC nominal (from SA bus)
Current Consumption		**Temperature only models with LCD display:** 21 mA maximum (non-transmitting)
		Temperature only models without LCD display: 13 mA maximum (non-transmitting)
		Temperature and humidity models with LCD display: 25 mA maximum (non-transmitting)
		Temperature and humidity models without LCD display: 17 mA maximum (non-transmitting)
Terminations		Modular jack or screw terminal block
Sensor Addressing		**NS-AHx7x0x-x, NS-AHx7003-0, NS-APx7x0x-0, NS-APB7003-0, NS-ATx7003-0, NS-ATB7F03-x, NS-BCN7004-x, NS-BHx7x0x-0, NS-BHx7003-0, NS-BPx700x-0, NS-BPB7003-0, NS-BTB7F03-x, NS-BTB7003-0, NS-BTN7003-0, and NS-BTP7003-0 Models:** DIP switch set from 200 to 203; factory set at 203
		All other models: Fixed address of 199
Wire Size		**Modular jack models:** 24 AWG or 26 AWG (0.5 or 0.4 mm diameter) recommended; three twisted pair (six conductors)
		Screw terminal block models: 18 to 22 AWG (1.0 to 0.6 mm diameter); 22 AWG (0.6 mm diameter) recommended
Communication Rate		**Auto-detect:** 9.6k, 19.2k, 38.4k, or 76.8k bps
Mounting		**Surface-mounted:** 80 x 80 mm
		Surface-mounted or vertical wallbox-mounted: 120 x 80 mm
Temperature Measurement Range		32.0°F/0.0°C to 104.0°F/40.0°C
Humidity Measurement Range		**Full range:** 0 to 100% RH
		Calibrated range: 10 to 90% RH
Temperature Sensor Type		Local 1k ohm Platinum Resistance Temperature Detector (RTD); Class A per IEC 60751
Humidity Sensor Type		Thin film capacitive sensor
Temperature Resolution (Models with LCD)		±0.5F°/±0.5C°
Temperature Accuracy		**NS Series Network Zone Sensor:** ±1.0F°/±0.6C°
		Temperature element only: 0.35F° at 70°F (0.2C° at 21°C)
Humidity Element Accuracy		**NS-APx700x-0 and NS-BPB700x-0 models:** ±2% RH for 20 to 80% RH; ±4% RH for 10 to 20% and 80 to 90% RH
		NS-AHx700x-x, NS-BHx700x-0, and NS-MHx700x-x models: ±3% RH for 20 to 80% RH; ±6% RH for 10 to 20% and 80 to 90% RH
Time Constant		10 minutes nominal at 10 fpm airflow
Default Temperature Setpoint Adjustment Range		**With LCD display:** 50.0°F/10.0°C to 86.0°F/30.0°C in 0.5° increments
		Without LCD display: ±5.0F°/±3.0C°
PIR Occupancy Sensor Motion Detection (Models with PIR Occupancy Sensor)		Minimum 94 angular degrees up to a distance of 15 ft (4.6 m); based on a clear line of sight
Ambient Conditions		**Operating:** 32 to 104°F (0 to 40°C); 10 to 90% RH, noncondensing; 85°F (29°C) maximum dew point
		Storage with LCD display: -4 to 140°F (-20 to 60°C); 5 to 95% RH, noncondensing
		Storage without LCD display: -40 to 158°F (-40 to 70°C); 5 to 95% RH, noncondensing
Compliance	**BACnet International**	BACnet Testing Laboratories™ (BTL) 135-2004 Listed BACnet Smart Sensor (B-SS) Note: Excludes the NS-ATV700x-0 and NS-BTV700x-0 models.
	United States	UL Listed, File E107041, CCN PAZX, Under UL 916, Energy Management Equipment; FCC Compliant to CFR 47, Part 15, Subpart B, Class A Note: Excludes the NS-ATA7001-0A and NS-ATA7002-0A models (Asia Only)
	Canada	UL Listed, File E107041, CCN PAZX7, Under CAN/CSA C22.2 No. 205, Signal Equipment; Industry Canada, ICES-003 Note: Excludes the NS-ATA7001-0A and NS-ATA7002-0A models (Asia Only)
CE	**Europe**	CE Mark – Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive 2004/108/EC.
	Australia and New Zealand	RCM Mark, Australia/NZ Emissions Compliant
Accessory (Order Separately)		**NS-WALLPLATE-0:** adapts an 80 x 80 mm NS Series Network Zone Sensor to a standard 80 x 120 mm wallbox
Shipping Weight		0.20 lb (0.09 kg)

NS Series Network Zone Sensors—Motion Detection Only Models (No Temperature or Humidity Sensing) (Part 1 of 2)	
Supply Voltage	9.8 to 16.5 VDC; 15 VDC nominal (from SA bus)
Current Consumption	13 mA maximum (non-transmitting)
Terminations	Modular jack or screw terminal block
Sensor Addressing (NS-MNN7003-0 Model)	DIP switch set from 200 to 203; factory set at 203

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls shall not be liable for damages resulting from misapplication or misuse of its products. © 2017 Johnson Controls.

NS Series Network Sensors Catalog Page (Continued)

NS Series Network Zone Sensors—Motion Detection Only Models (No Temperature or Humidity Sensing) (Part 2 of 2)		
Wire Size		**Modular jack model:** 24 AWG or 26 AWG (0.5 or 0.4 mm diameter) recommended; three twisted pair (six conductors)
		Screw terminal block model: 18 to 22 AWG (1.0 to 0.6 mm diameter); 22 AWG (0.6 mm diameter) recommended
Communication Rate		**Auto-detect:** 9.6k, 19.2k, 38.4k, or 76.8k bps
Mounting		**Surface-mounted or vertical wallbox-mounted:** 120 x 80 mm
PIR Occupancy Sensor Motion Detection		Minimum 94 angular degrees up to a distance of 15 ft (4.6 m); based on a clear line of sight
Ambient Conditions		**Operating:** 32 to 104°F (0 to 40°C); 10 to 90% RH, noncondensing; 85°F (29°C) maximum dew point
		Storage: -40 to 158°F (-40 to 70°C); 5 to 95% RH, noncondensing
Compliance	**BACnet International**	BACnet Testing Laboratories™ (BTL) 135-2004 Listed BACnet Smart Sensor (B-SS)
	United States	UL Listed, File E107041, CCN PAZX, Under UL 916, Energy Management Equipment; FCC Compliant to CFR 47, Part 15, Subpart B, Class A
	Canada	UL Listed, File E107041, CCN PAZX7, Under CAN/CSA C22.2 No. 205, Signal Equipment; Industry Canada, ICES-003
CE	**Europe**	CE Mark – Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive 2004/108/EC.
	Australia and New Zealand	RCM Mark, Australia/NZ Emissions Compliant
Shipping Weight		0.24 lb (0.11 kg)

NS Series Network Zone Sensor—CO_2 Models		
Supply Voltage		**Non-isolated:** 20 to 30 VAC (18 to 30 VDC), Class 2 or Safety Extra-Low Voltage (SELV)
		Isolated: 9.8 to 16.5 VDC; 15 VDC nominal (from SA bus)
Current Consumption		**Non-isolated:** 22 mA average at 24 VAC; 28 mA average at 24 VDC
		Isolated: 5 mA maximum, non-transmitting (from SA bus)
Power Consumption		**Non-isolated:** less than 0.7 W average
Terminations		**Non-isolated supply:** screw terminal block
		SA bus: modular jack or screw terminal block
Sensor Addressing		DIP switch set from 212 to 219; factory set at 212
Wire Size		**Modular jack:** 24 AWG or 26 AWG (0.5 or 0.4 mm diameter) recommended; three twisted pair (six conductors)
		Screw terminal block: 18 to 22 AWG (1.0 to 0.6 mm diameter); 22 AWG (0.6 mm diameter) recommended
Communication Rate		**Auto-detect:** 9.6k, 19.2k, 38.4k, or 76.8k bps
CO_2 Measurement Range		0 to 2,000 ppm
CO_2 Sensing Accuracy		Plus or minus the sum of 40 ppm and 2.0% of the CO_2 reading at 77°F (25°C) and 978 hPa or an altitude of 1,000 ft/300 m Note: All accuracy specifications reflect the testing of the device using high-grade certified gases. This device is intended for an altitude range of 0 ft/0 m to 2,000 ft/600 m above sea level without compensation.
		Temperature dependence of output: -0.35% of the CO_2 reading per 1.8F°/1C° typical
		Pressure dependence of output: +0.15% of the CO_2 reading per 1 hPa typical
CO_2 Sensing Resolution		1 ppm
CO_2 Sensing Response Time		1 minute (0 to 90%)
CO_2 Sensing Warm-Up Time		Less than 1 minute; less than 10 minutes for full accuracy
CO_2 Sensing Long-Term Stability		Less than ±100 ppm over 5 years
Mounting		**Surface-mounted or vertical wallbox-mounted:** 120 x 80 mm
Ambient Conditions		**Operating:** 32 to 104°F (0 to 40°C); 10 to 90% RH, noncondensing; 85°F (29°C) maximum dew point; 700 to 1,200 hPa
		Storage: -40 to 158°F (-40 to 70°C); 0 to 95% RH, noncondensing
Compliance	**BACnet International**	BACnet Testing Laboratories™ (BTL) 135-2004 Listed BACnet Smart Sensor (B-SS)
	United States	UL Listed, File E107041 CCN PAZX, Under UL 916, Energy Management Equipment; FCC Compliant to CFR 47, Part 15, Subpart B, Class A
	Canada	UL Listed, File E107041, CCN PAZX7, Under CAN/CSA C22.2 No. 205, Signal Equipment; Industry Canada, ICES-003
CE	**Europe**	CE Mark – Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive 2004/108/EC.
	Australia and New Zealand	RCM Mark, Australia/NZ Emissions Compliant
Shipping Weight		0.35 lb (0.16 kg)

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. NS Series Network Zone Sensor—Flush-Mount Temperature Only Models		
Supply Voltage		9.8 to 16.5 VDC; 15 VDC Nominal (from SA bus)
Current Consumption		12 mA maximum (non-transmitting) per flush-mount network sensor
Terminations		Screw terminal block Note: Wire leads are field supplied and are not tinned.
Sensor Addressing		DIP switch set from 200 to 203; factory set at 203
Wire Size		18 to 22 AWG (1.0 to 0.6 mm diameter); 22 AWG (0.6 mm diameter) recommended; 10 ft (304.8 cm) wiring lead Included with the unit
Communication Rate		**Auto-detect:** 9.6k, 19.2k, 38.4k, or 76.8k bps
Temperature Measurement Range		32.0°F/0.0°C to 104.0°F/40.0°C
Temperature Sensor Type		Local 1k ohm Platinum Resistance Temperature Detector (RTD); Class A per IEC 60751
Temperature Accuracy		**NS Series Network Zone Sensor:** ±1.0F°/±0.6C°
		Temperature Element Only: 0.35F° at 70°F (0.2C° at 21°C)
Ambient Conditions		**Operating:** 32 to 104°F (0 to 40°C); 10 to 90% RH, noncondensing; 85°F (29°C) Maximum Dew Point
		Storage: -40 to 158°F (-40 to 70°C); 5 to 95% RH, noncondensing
Compliance	**BACnet International**	BACnet Testing Laboratories™ (BTL) 135-2004 Listed BACnet Smart Sensor (B-SS)
	United States	UL Listed, File E107041, CCN PAZX, Under UL 916, Energy Management Equipment; FCC Compliant to CFR 47, Part 15, Subpart B, Class A

Shipping Weight		0.25 lb (0.11 kg)

NS Series Network Discharge Air Sensors		
Supply Voltage		9.8 to 16.5 VDC; 15 VDC nominal
Current Consumption		12 mA maximum (non-transmitting) per discharge air sensor
Terminations		Four color-coded wiring leads, stripped and tinned; factory-installed at the discharge air sensor screw terminal block
Sensor Addressing		DIP switch set from 204 to 211; factory set at 204
Wire Size		18 to 22 AWG (1.0 to 0.6 mm diameter); 22 AWG (0.6 mm diameter) recommended; 10 ft (305 cm) wiring lead included with the unit
Communication Rate		**Auto-detect:** 9.6k, 19.2k, 38.4k, or 76.8k bps
Mounting		**Duct-mounted:** 4 or 8 in. (102 or 203 mm) temperature probe length
Temperature Measurement Range		14°F/-10°C to 140°F/60°C
Temperature Sensor Type		Local 1k ohm Platinum Resistance Temperature Detector (RTD); Class A per IEC 60751
Temperature Accuracy		**NS Series Network Discharge Air Sensor:** ±1.0F°/±0.6C°
		Temperature element only: 0.35F° at 70°F (0.2C° at 21°C)
Ambient Conditions		**Operating:** 14 to 140°F (-10 to 60°C); 10 to 90% RH, noncondensing; 85°F (29°C) Maximum Dew Point
		Storage: -40 to 158°F (-40 to 70°C); 5 to 95% RH, noncondensing
Compliance	**BACnet International**	BACnet Testing Laboratories™ (BTL) 135-2004 Listed BACnet Smart Sensor (B-SS)

PAGx00001FC0 NAE Standard Control Panel Assembly Mounted in a 16 in. x 20 in. Enclosure

Description

The PAGx00001FC0 is a prewired, preassembled standard control panel and enclosure that contains the Metasys® Network Automation Engine (NAE). These Web-based network controllers communicate using Information Technology (IT) and Internet languages while incorporating the communication technology of the building automation industry, including the BACnet® protocol, LONWORKS® network, and the N2 Bus.

The PAGx00001FC0 Control Panel is shipped complete, mounted in a 16 in. W x 20 in. H steel enclosure. In addition to the NAE, the assembly also contains a 5-port Ethernet switch and a power supply incorporating a 5 A circuit breaker, a 96 VA 120/24 VAC transformer, and two 120 VAC outlets.

Features

- consistent layout for all standard control panel solutions simplifies installation and commissioning
- panel prebuilt, pre-wired, and retested in an ISO-9002 manufacturing facility provides products of consistently high quality
- power supply with resettable circuit breaker and transformer provides high and low voltage protection
- 5-port switch simplifies installation and commissioning
- Network Automation Engine (NAE) speaks IT and internet language to web browsers and remote operations centers
- Network Automation Engine (NAE) monitors and supervises Heating, Ventilating, and Air Conditioning (HVAC) equipment; lighting; fire systems; security; and access control system

PAGx00001FC0 NAE Standard Control Panel Assembly Mounted in a 16 in. x 20 in. Enclosure

- Web Browser-Based User Interface allows access to system data in the NAE from any standard Web browser device connected to the network, including remote users connected by dial-up telephone or an Internet Service Provider (ISP)
- California Office of Statewide Health Planning and Development (OSHPD) Special Seismic Certification Preapproved control panel assembly meets standards for rigid and flexible mounting conditions to account for unit-mounted and remote-mounted application
- UL 508A Rated Control Panel and UL 50 Rated, Canadian Standards Association (CSA) Approved Enclosure meets local and national code requirements for US and Canada (cULus listed)

Ordering Information

Basic Control Panel Bill of Material

Quantity	Description
1	Enclosure: 16 in. W x 20 in. H x 6-5/8 in. D (406 mm W x 508 mm H x 168 mm D), Type 1, with keyed lock
1	MS-NAE45xx-2 or MS-NAE35xx-2: Network Automation Engine (NAE)
1	96 VA 120/24 VAC power supply with 5 A primary circuit protection and two 120 VAC outlets
1	5-Port Ethernet switch

Product Code Numbers

PAGx00001FC0 NAE Standard Control Panel Assembly Mounted in a 16 in. x 20 in. Enclosure (Continued)

Technical Specifications

Product	PAGx00001FC0 NAE standard control panel mounted in a 16 in. x 20 in. enclosure
Wiring	24 VAC pre-wired from transformer secondary to NAE
Wire Size	Ground wire: 14 AWG; 24 VAC controller wires: 16 AWG
Enclosure Rating	Type 1
Finish	ANSI 61 gray polyester powder coating (inside and outside over phosphatized surfaces)
Ambient Operating Condition	32–122°F (0–50°C) 10–90% RH
Dimensions (Width x Height x Depth)	16 in. x 20 in. x 6-5/8 in. (406 mm x 508 mm x 168 mm)
Weight	40 lb (18.1 kg)
Ambient Storage Condition	-40–158°F (-40–70°C) 5–95% RH
Agency Compliance	Control panel: UL 508A rated (cULus); Enclosure: UL 50 rated, CSA approved OSHPD Special Seismic Certification Preapproval: OSP-0140-10 California Building Code (CBC) - 2010, International Building Code (IBC) - 2009 Seismic Performance Characteristics: $S_{DS}(g) = 2.26$, $z/h = 1.0$, $I_p = 1.5$

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. RIB24P

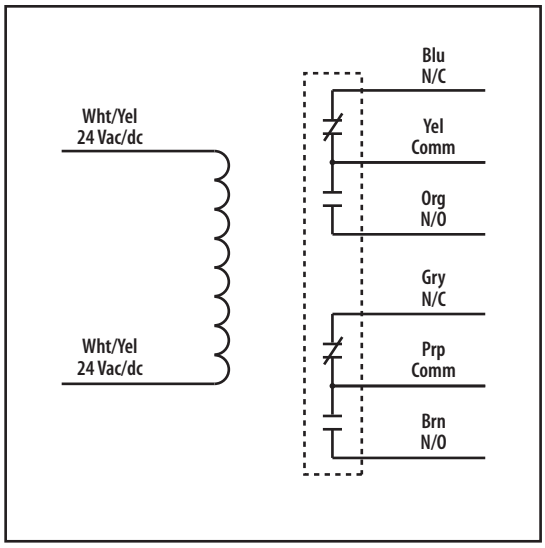
Enclosed Relay 20 Amp DPDT with 24 Vac/dc Coil

Functional Devices, Inc. A600D 2006

LISTED



MADE IN USA

 # Relays & Contact Type: One (1) DPDT Continuous Duty Coil
Expected Relay Life: 10 million cycles minimum mechanical
Operating Temperature: -30 to 140° F
Operate Time: 18mS
Relay Status: LED On = Activated
Dimensions: 2.30" x 3.20" x 1.80" with .50" NPT Nipple
Wires: 16", 600V Rated
Approvals: UL Listed, UL916, UL864, C-UL
California State Fire Marshal, CE
Housing Rating: Plenum, NEMA 1
Gold Flash: Yes
Override Switch: No

Contact Ratings:
20 Amp Resistive @ 300 Vac
20 Amp Resistive @ 28 Vdc
20 Amp Ballast @ 277-480 Vac
15 Amp Resistive @ 600 Vac
770 VA Pilot Duty @ 120 Vac
1158 VA Pilot Duty @ 240 Vac
1110 VA Pilot Duty @ 277 Vac
1640 VA Pilot Duty @ 480 Vac
3 HP @ 480-600 Vac
2 HP @ 240-277 Vac
1 HP @ 120 Vac

Coil Current:
100 mA @ 20 Vac
125 mA @ 24 Vac
50 mA @ 20 Vdc
50 mA @ 24 Vdc
70 mA @ 30 Vdc

Coil Voltage Input:
24 Vac/dc ; 50-60 Hz
Drop Out = 3 Vac / 3.8 Vdc
Pull In = 20 Vac / 20 Vdc

IDEC RELAY SOCKETS
SH, SJ, SR SERIES

IDEC

DESCRIPTION

The **SH** and **SR Series** of IDEC relay sockets are for use with the IDEC **RH / RR Series** relays and **RTE Series** timers. The **SH** and **SR Series** include both blade and pin style sockets and are available for one, two, three and four pole relays. The **SH** and **SR** sockets can be DIN rail or surface mounted. The **SJ Series** of IDEC relay sockets are for use with the IDEC **RJ1S** and **RJ2S Series** relays. They can be DIN rail or surface mounted.

SJ1S, SJ2S

SH1B-05

FEATURES

- ***Use with IDEC RH / RR / RJ relays and RTE timers***
- ***Screw terminals with captive wire clamp***
- ***Surface or DIN rail mount***
- ***UL recognized, CSA certified and CE approved***

T22/T25/T26 Series Line Voltage Wall Thermostat (Heating, Cooling, or Heating and Cooling) Catalog Page

Description

For line voltage control of residential, commercial, or industrial heating or year-round air conditioning. Heat or cold anticipators are not required. The liquid-charged temperature sensing element and highly efficient diaphragm and leverage provide close temperature control.

Refer to the following documents for important product application information:

- *T22 Series Line Voltage Thermostats with Selector Switch Product Bulletin (LIT-125630)*
- *T25 Two-Stage Room Thermostat Product Bulletin (LIT-125640)*
- *T26 Series Line Voltage Thermostats Product Bulletin (LIT-125645)*

T22 Series Line Voltage Wall Thermostat

T25 Series Line Voltage Wall Thermostat

T25 Series Line Voltage Wall Thermostat

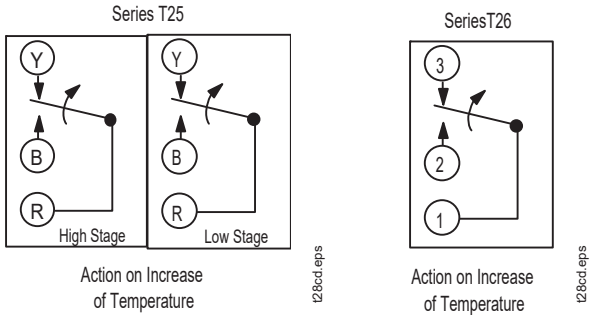
Features

- attractive beige colored, high-impact plastic enclosure (T26 Series)
- close differential without the need for anticipators
- bi-metal thermometer supplied as standard except where indicated
- equipped with adjustable dial stops (T26 Series)

Specifications

Temperature range is 40 to 90°F (5 to 30°C), except energy conservation models.

Accessories



- replacement knobs and faceplates
- for double trim plate for mounting two T22s or T26s

Repair Information

If the T22/T25/T26 Series Line Voltage Wall Thermostat (Heating, Cooling, or Heating and Cooling) fails to operate within its specifications, replace the unit. For a replacement thermostat, contact the nearest Johnson Controls representative.

Applications

Use for line voltage control of heating and cooling equipment.

TE-6001 Series

Hardware Assemblies for TE-6000 Sensors

Description

TE-6001 hardware assemblies are used in conjunction with the TE-6000 Series elements in a wide variety of temperature-sensing applications.

Repair Information

If the TE-6001 Series Hardware Assemblies for TE-6000 Sensors fail to operate within their specifications, replace the unit. For replacement assemblies, contact the nearest Johnson Controls® representative.

Applications

The TE-6001 assemblies used in conjunction with the TE-6000 sensors cover a wide range of sensing applications including:

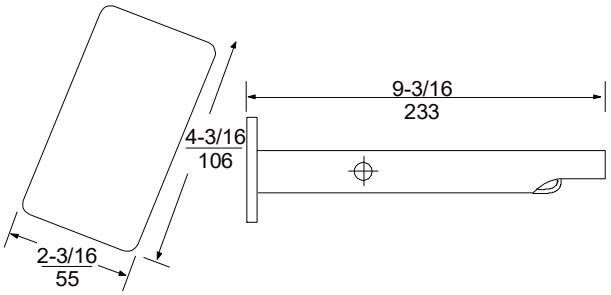
- duct
- immersion
- dew point
- outside air
- room

There are also two additional TE-6001 assemblies (TE-6001-961 and TE-6001-962), which are available for auxiliary pushbutton and toggle switch applications.

Selection Chart

Code Number	Description
TE-6001-1	Duct temperature element holder with handi-box
TE-6001-2	Housing for outside air temperature sensing element
TE-6001-3	Packing nut and fittings for use with WZ-1000 wells in immersion well applications
TE-6001-4	Single/dual element holder for TE-6000 elements in room temperature sensing applications
TE-6001-5	Dew point sensor kit
TE-6001-6	10 adhesive mounting pads for use with T-4100, T-4110
TE-6001-7	10 clips for use with T-4002/4003 and H-4100/5100
TE-6001-8	Mounting bracket for use with TE-6100 and TE-6300 averaging sensors
TE-6001-11	Duct temperature and humidity element holder (without the handi-box)
TE-6001-961	Momentary pushbutton switch
TE-6001-962	Maintained toggle switch

Accessories (T-4000 Plastic Covers For TE-6001-4)



Code Number	Description	
T-4000-2139	Horizontal	Without setpoint window or thermometer, with JCI logo, silver faceplate
T-4000-2140		Without setpoint window, with F/C thermometer and JCI logo, silver faceplate
T-4000-2639		Concealed setpoint, without thermometer, with JCI logo, gold faceplate
T-4000-2640		Concealed setpoint, with thermometer and JCI logo, gold faceplate
T-4000-2138	Horizontal or Vertical	Without setpoint window, thermometer, or JCI logo, with silver faceplate
T-4000-2144	Vertical	Without setpoint window or thermometer, with JCI logo and silver faceplate

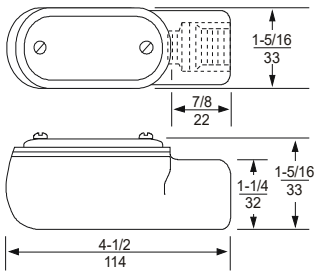
TE-6001-1 Description

The TE-6001-1 duct temperature element holder is used with TE-6000 elements in duct insertion applications. The TE-6001-1 is designed to hold one or two temperature sensors. A handi-box is supplied with the element holder.

TE-6001-1 Duct Temperature Element Holder

TE-6001-1 Duct Temperature Element Holder Dimensions, (in./mm)

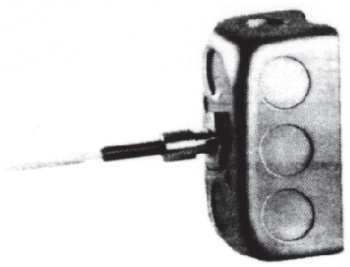
The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls, Inc. shall not be liable for damages resulting from misapplication or misuse of its products. © 2012 Johnson Controls, Inc.



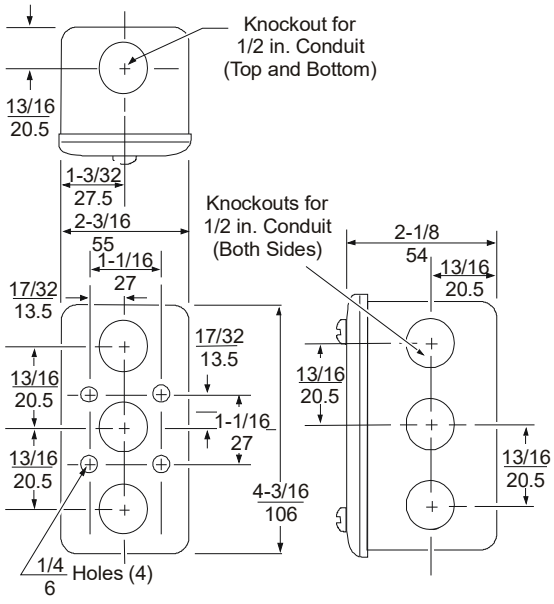
Hardware Assemblies for TE-6000 Sensors (Continued)

TE-6001-2 Description

The TE-6001-2 is a metal housing used with the TE-6000 temperature element in applications requiring outside air temperature sensing. A factory-mounted plastic clip is provided to hold the TE-6000 sensor in place.



TE-6001-2 Metal Housing

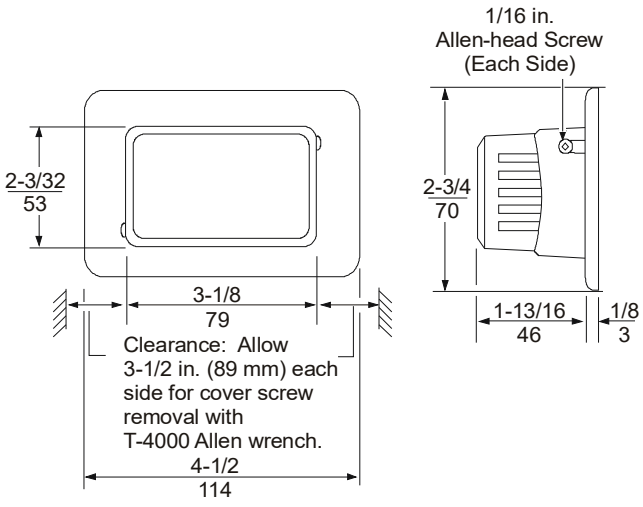


TE-6001-2 Metal Housing Dimensions, (in./mm)

TE-6001-3 Description

The TE-6001-3 packing nut, fittings, and handi-box are used with WZ-1000-2, -4 and -5 immersion wells to house TE-6000 elements in well insertion applications.

TE-6001-3 Kit

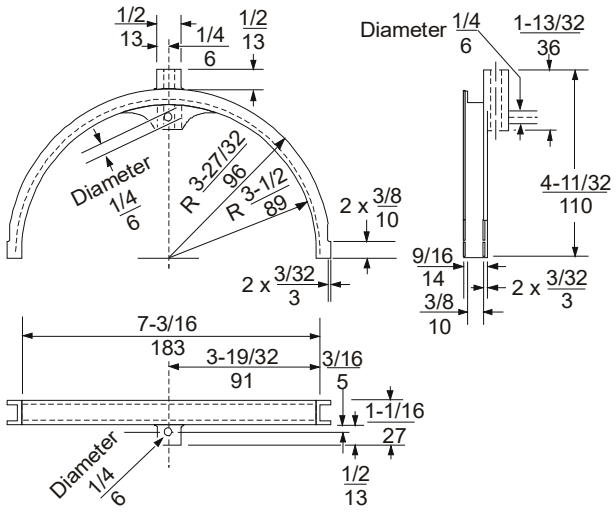


TE-6001-3 Kit Dimensions, (in./mm)

TE-6001-4 Description

The TE-6001-4 temperature element holder is used with TE-6000 sensors in room-sensing applications. The TE-6001-4 can hold up to two temperature sensors. A mounting bracket and wallplate adapter are supplied. A T-4000 cover is required and must be ordered separately. See the *Accessories* table.

TE-6001-4 Temperature Element Holder



TE-6001-4 Temperature Element Holder Dimensions, (in./mm)

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Hardware Assemblies for TE-6000 Sensors (Continued)

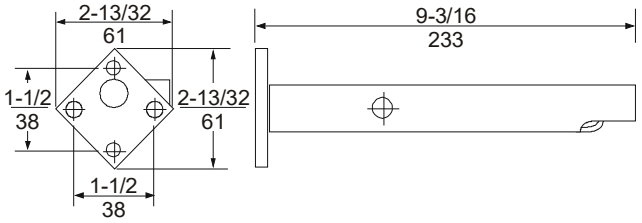
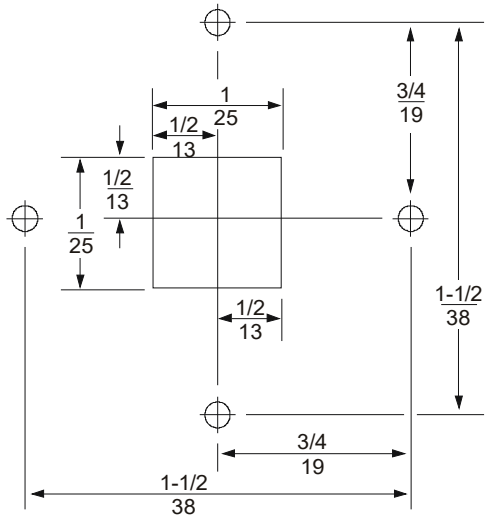
TE-6001-8 Mounting Bracket Description

The TE-6001-8 Mounting Bracket is used with the TE-6100 and TE-6300 averaging sensors to maintain the minimum bend radius recommended for these sensors. It mounts to duct work with a single sheet metal screw.



TE-6001-8 Mounting Bracket Dimensions, (in./mm)

TE-6001-11 Description



The TE-6001-11 duct temperature holder is used with the TE-6000 sensors. It has a rigid aluminum support that extends into the duct to hold one or two TE-6000 temperature sensing elements.

TE-6011-1 Duct Temperature Holder

TE-6001-11 Duct Temperature Holder Dimensions, (in./mm)

Installing the TE-6001-1 and TE-6001-11 Products

TE-6300 Series Temperature Sensors Catalog Page

Description

The TE-6300 Temperature Sensor line provides economical solutions for a wide variety of temperature sensing needs, including wall-mount, outdoor-air, duct, strap-mount, well-insertion, duct-averaging, and VAV Modular Assembly (VMA) flange-mount duct-probe applications. The TE-6300 line offers both a metal and a plastic enclosure for the most popular models.

Sensors are available in the following types:

- 1k ohm thin-film nickel
- 1k ohm nickel averaging
- 1k ohm thin-film platinum
- 100 ohm platinum equivalent averaging
- 1k ohm platinum equivalent averaging
- 2.2k (2,252) ohm thermistor
- 10k ohm thermistor, Johnson Controls® Type II

Refer to the TE-6300 Series Temperature Sensors Product Bulletin (LIT-216320) for important product application information.

Features and Benefits

Each sensor is packaged with the necessary mounting accessories to maximize ordering and installation ease and to reduce both commissioning time and cost.

- **Full Line of Versatile Sensors—**Supports all your temperature sensing needs from a single supplier: wall-mount, outdoor-air, duct, duct-averaging, strap-mount, well-insertion, and flange-mount duct-probe.
- **Single Assembly Ordering—**Simplifies ordering; provides a complete assembly in one box.
- **Models Featuring an Integral National Pipe Thread (NPT) Adaptor—I**ncrease sensor connection strength, which eliminates the need for a special adaptor.
- **Models with a Stainless Steel Sensor Probe—**Protect the sensor while increasing corrosion resistance.
- **Metal Enclosure (TE-63xxE, TE-63xxM, and TE-63xxV Models)—**Meets plenum requirements.
- **Models Featuring a Retainer for the Sensor Holder—**Allow you to lock the sensor holder into the conduit box.
- **Brushed Stainless Steel Mounting Plate—**Offers a durable, aesthetically pleasing design.
- **Low Profile Flush Mount Design (TE-63xxF Models)—**Provides a tamper-proof installation ideally suited for schools, sporting complexes, retailers, prisons, and more.

All TE-6300 Series Temperature Sensors are two-wire, passive, resistance-output devices.

TE-63xxA Models

The TE-63xxA (adjustable length) models:

- provide a thermoplastic mounting flange and gland nut to adjust the length of the probe
- include two hex-head self-drilling screws for mounting
- come equipped with a 10 ft (3 m) plenum-rated cable with 1/4 in. (6.35 mm) internal thread insulated quick-connect terminations on leads

TE-63xxE Models

The TE-63xxE (economizer mount) models:

- provide a stainless steel mounting flange
- include two hex-head self-drilling screws for mounting
- meet UL 1995 plenum use requirements

TE-63xxF Models

The TE-63xxF (flush mount) models:

- provide a low profile when installed in an electrical box
- thermally isolate sensor from the wall with a foam pad
- offer a rugged stainless steel cover
- provide 22 AWG (0.6 mm diameter) lead wires with low voltage installation

TE-63xxM Models

The TE-63xxM (metal enclosure) models:

- come with a corrosion-protected steel enclosure with a 0.88 in. (22 mm) hole for a 1/2 in. (12.7 mm) conduit fitting
- include two hex-head self-drilling screws for mounting the duct and duct-averaging models
- offer either a direct-mount or 1/2-14 NPT threaded well sensor holder for mounting in TE-6300W Series Thermowells (well models; order the thermowell separately)
- provide optional well sensor holders (order separately) to mount duct models in thermowells
- meet UL 1995 plenum use requirements
- offer optional accessory kit (order separately) to replace plastic hole plug and wiring bushing to meet International Mechanical Code (IMC) requirements

TE-63xxP Models

The TE-63xxP (plastic enclosure) models:

- provide a thermoplastic conduit box with 1/2-14 internal NPT for connecting to conduit
- provide aluminum mounting plate and 1/2-14 internal NPT hub mounting options for the duct and duct-averaging models
- use the 1/2-14 internal NPT to mount the outdoor air models directly to rigid conduit
- include sensor holders to mount duct models in thermowells (order thermowell separately)
- offer an optional accessory metal cover and gasket kit (order separately) to replace the plastic cover to meet UL 1995 plenum use requirements
- include a replaceable sensing probe on duct-probe, outdoor-air, and well-insertion models

TE-6300 Series Temperature Sensors

TE-63x4P Wall Mount Models

The TE-63x4P (plastic enclosure) models:

- come with a white thermoplastic ventilated cover with a brushed aluminum face plate and a steel mounting plate for surface mounting
- include faceplates for both horizontal and vertical mounting
- offer an accessory mounting kit for mounting to a standard electrical box
- offer optional covers

TE-63xS Models

The TE-63xS (strap-mount) models:

- provide a 1/4 in. (6.35 mm) diameter stainless steel probe without an enclosure
- include three cable ties for mounting to pipe up to 2-5/8 in. (67 mm) in diameter
- come equipped with a 10 ft (3 m) plenum-rated cable
- meet UL 1995 plenum use requirements
- offer an accessory mounting kit for mounting to a pipe up to 11 in. (280 mm) in diameter

TE-63xxV Models

The TE-63xxV (VAV flange mount) models:

- provide a stainless steel mounting flange with two hex-head self-drilling mounting screws
- come equipped with a 10 ft (3 m) plenum-rated cable with 1/4 in. (6.35 mm) internal thread insulated quick-connect terminations on leads
- meet UL 1995 plenum use requirements

Repair Information

If the TE-6300 Series Temperature Sensor fails to operate within its specifications, replace the unit. For information on replacement temperature sensors and replacement sensor probes, refer to the TE-6300 Series Temperature Sensors Product Bulletin (LIT-216320).

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls shall not be liable for damages resulting from misapplication or misuse of its products. © 2017 Johnson Controls.

Optional Accessories (Part 2 of 2)

Product Code Number	Description
TE-6300-606	8 in. (203 mm) 2.2k ohm thermistor probe
TE-6300-607	3 in. (76 mm) 2.2k ohm thermistor probe
TE-6300-611	1/2-14 NPT threaded brass sensor holder/well adaptor (order in multiples of ten)
TE-6300-612	Threadless brass sensor holder/well adaptor (order in multiples of ten)
TE-6300-613	IMC kit with metal plugs and clamp connector (order in multiples of ten)
TE-6300-614	Cable tie mounting kit, 0.50 to 2.625 in. (12.7 to 66.7 mm) bundle diameter (order in multiples of ten)
TE-6300-615	Cable tie mounting kit, 11 in. (280 mm) maximum bundle diameter
TE-6300-616	8 in. (203 mm) 1k ohm platinum Class A probe
TE-6300-617	3 in. (76 mm) 1k ohm platinum Class A probe
TQ-6000-1	4 to 20 mA output transmitter for use with the 100 ohm platinum sensor
TE-6300W-101[2]	Thermowell, brass with copper bulb, 2.38 in. (60.5 mm) immersion depth, with thermal grease, direct mount, no adaptor required, for use with 6 in. (150 mm) probe model TE-63xAM-2
TE-6300W-102[2]	Thermowell, stainless steel, 2.38 in. (60.5 mm) immersion depth, without thermal grease, direct mount, no adaptor required, for use with 6 in. (150 mm) probe model TE-63xAM-2
TE-6300W-103	Thermowell, brass with copper bulb, 2.38 in. (60.5 mm) immersion depth, with thermal grease, threadless adaptor required, for use with 6 in. (150 mm) probe models TE-63xAM-1 (adaptor included) and TE-63xAP-1 (adaptor included)
TE-6300W-110	Thermowell, stainless steel, 4.50 in. (114.3 mm) immersion depth, without thermal grease, 1/2-14 NPT adaptor required, for use with 8 in. (200 mm) probe models TE-63x2M-1 (adaptor included) and TE-63x2P-1 (adaptor included)

1. Cut 12 in. (305 mm) probes to a minimum of 3 in. (76 mm).
2. Direct-mount thermowells TE-6300W-101 and TE-6300W-102 can be used only with the TE-6300M Sensors.

Technical Specifications

TE-6300 Series Temperature Sensors (Part 1 of 2)		
Sensor Reference Resistance	**1k ohm nickel**	1k ohms at 70°F (21°C)
	1k ohm nickel averaging	
	1k ohm platinum	1k ohms at 32°F (0°C)
	100 ohm platinum averaging	100 ohms at 32°F (0°C)
	1k ohm platinum averaging	1k ohms at 32°F (0°C)
	2.2k ohm thermistor	2,252 ohms at 77°F (25°C)
	10k ohm thermistor	10.0k ohms at 77°F (25°C)
Sensor Accuracy	**1k ohm nickel**	±0.34F° at 70°F (±0.19C° at 21°C)
	1k ohm nickel averaging	±3.4F° at 70°F (±1.9C° at 21°C)
	1k ohm platinum Class A (TE-635xx)	EN 60751 Class A, ± [0.15 + 0.002 * | T °C |], ±0.19C° at 21°C (±0.35F° at 70°F)
	100 ohm platinum Class A	
	1k ohm platinum Class B (TE-632xx)	EN 60751 Class B, ± [0.30 + 0.005 * | T °C |], ±0.41C° at 21°C (±0.73F° at 70°F)
	100 ohm platinum averaging	±1.0F°at 70°F (± 0.58C° at 21°C)
	1k ohm platinum averaging	
	2.2k ohm thermistor	±0.36F° (±0.2C°) in the range: 32 to 158°F (0 to 70°C)
	10k ohm thermistor	±0.9F° (±0.5C°) in the range: 32 to 158°F (0 to 70°C)
Sensor Temperature Coefficient	**1k ohm nickel**	Approximately 3 ohms/F° (5.4 ohms/C°)
	1k ohm nickel averaging	
	1k ohm platinum	Approximately 2 ohms/F° (3.9 ohms/C°) 3,850 ppm/K
	100 ohm platinum averaging	Approximately 0.2 ohms/F° (0.39 ohms/C°)
	1k ohm platinum averaging	Approximately 2 ohms/F° (3.9 ohms/C°)
	2.2k ohm thermistor	Nonlinear, negative temperature coefficient (NTC)
	10k ohm thermistor	Nonlinear NTC, Johnson Controls Type II
Electrical Connection	**TE-63xxE**	22 AWG (0.6 mm diameter) x 6 in. (152 mm) long
	TE-63xxM	
	TE-63xxP	
	TE-63xxF	22 AWG (0.6 mm diameter) x 12 ft (3 m) braided-copper wires, low voltage insulation, half-stripped ends
	TE-63xxP nickel averaging	18 AWG (1.0 mm diameter) x 6 in. (152 mm) long
	TE-63xS	22 AWG (0.6 mm diameter) x 10 ft (3 m) long plenum-rated cable
	TE-63xxA	22 AWG (0.6 mm diameter) x 10 ft (3 m) long plenum-rated cable, with 2-position plug terminal block for 1/4 in. (6.35 mm) external tab terminals on 0.197 in. (5 mm) centers
	TE-63xxV	
Materials	**Probes**	Nickel averaging: 0.094 in. (2.4 mm) outside diameter (O.D.) copper tubing Nickel averaging adaptor: 0.25 in. (6.35 mm) O.D. brass Platinum averaging probe: 0.19 in. (4.8 mm) aluminum tubing All others: 0.25 in. (6.35 mm) O.D. stainless steel
	TE-63xxA	Mounting adaptor plate and gland: thermoplastic
	TE-63xxF	Flush mount: stainless steel
	TE-63xxM	Enclosure: corrosion-protected steel Well sensor holder: 0.875 in. (22.2 mm) hex brass
	TE-63xxP	Conduit box and shield: rigid thermoplastic Mounting plate: aluminum Sensor holder: rigid thermoplastic Wall mount base plate: corrosion-protected steel Wall mount cover: rigid thermoplastic (white) Wall mount face plate: brushed aluminum
	TE-63xxE	Mounting flange: stainless steel
	TE-63xxV	
Operating Conditions	**TE-63xxA**	-50 to 140°F (-46 to 60°C)
	TE-63xxF	32 to 104°F (0 to 40°C)
	TE-63xxE	-50 to 220°F (-46 to 104°C)
	TE-63xxM	
	TE-63xxP	Enclosure: -50 to 122°F (-46 to 50°C) Sensor probe: -50 to 220°F (-46 to 104°C)
	TE-63xS	Sensor probe: -50 to 220°F (-46 to 104°C) Wire harness: -50 to 122°F (-46 to 50°C)
	TE-63xxV

Code No. LIT-1900222
Issued January 6, 2015

VG1000 Series Two-Way, Stainless Steel Trim, NPT End Connections Ball Valves with Spring-Return Electric Actuators without Switches

Description

VG1000 Series Ball Valves are designed to regulate the flow of hot or chilled water and, for some models, low pressure steam in response to the demand of a controller in HVAC systems. Available in sizes 1/2 through 2 in. (DN15 through DN50), this family of two- and three-way forged brass valves is factory or field mounted to Johnson Controls® VA9104, M9106, M9109, and M9100 Series Non-Spring-Return and VA9203 and VA9208 Series Spring-Return Electric Actuators for on/off, floating, or proportional control.

Refer to the *VG1000 Series Forged Brass Ball Valves Product Bulletin (LIT-977132)* for important product application information.

AHU-2: PH-O, RH-O
~~AHU-3: RH-O~~
CF-1, HRV-1, CUH-1.1, UH-2.8, RAD-1,2, WF-1, HEAT VENT: HEATING COIL VALVES
HEAT EXCHANGER HEX3.1,3.2

Features

- Forged Brass Body — provides 580 psig static pressure rating.
- 200 psi Closeoff Pressure Rating — provides tight shutoff.
- Graphite-Reinforced Polytetrafluoroethylene (PTFE) Seats — include 15% graphite-reinforced ball seals, providing better wear resistance.
- 300 Series Stainless Steel Ball and Stem Assembly — tolerates high-temperature water or 15 psi saturated steam with fluid temperatures of -22 to 284°F (-30 to 140°C) or where a higher degree of corrosion protection is desired.
- 500:1 Rangeability — provides accurate control under all load conditions.

Repair Information

If the VG1000 Series Ball Valve fails to operate within its specifications, replace the valve body, actuator, or entire assembly. For replacement parts, contact the nearest Johnson Controls representative.

VG1000 Series Two-Way, Spring-Return, Stainless Steel Ball and Stem Ball Valve Assemblies without End Switches

VG1000 Series Two-Way, Stainless Steel Trim, NPT End Connections Ball Valves with Spring-Return Electric Actuators without Switches (Continued)

Technical Specifications

VG1000 Series Two-Way, Stainless Steel Trim, NPT End Connections Ball Valves with Spring-Return Electric Actuators without Switches		
Service[1]		Hot Water, Chilled Water, 50/50 Glycol Solutions, and 15 psig (103 kPa) Saturated Steam for HVAC Systems
Fluid Temperature Limits	**Water**	-22 to 284°F (-30 to 140°C)
	Steam	15 psig (103 kPa) at 250°F (121°C)
Maximum Actuator Fluid Temperature Limit	**212°F (100°C)**	VA9203 Series VA9208 Series
	284°F (140°C)	VA9203 Series with M9000-561 Thermal Barrier VA9208 Series with M9000-561 Thermal Barrier
Valve Body Pressure Rating	**Water**	580 psig (4,000 kPa) at 203°F (95°C) (PN40) 464 psig (3,196 kPa) at 284°F (140°C) (PN40)
	Steam	15 psig (103 kPa) Saturated Steam (Applies to VA9203 Series or VA9208 Series Actuators with M9000-561 Thermal Barrier Installed)
Maximum Closeoff Pressure		200 psid (1,378 kPa)
Maximum Recommended Operating Pressure Drop		50 psid (340 kPa)
Flow Characteristics	**Two-Way**	Equal Percentage
Rangeability[2]		Greater than 500:1
Minimum Ambient Operating Temperature	**-22°F (-30°C)**	VA9203 Series Spring-Return Actuators
	-40°F (-40°C)	VA9208 Series Spring-Return Actuators
Maximum Ambient Operating Temperature[3] **(Limited by the Actuator and Linkage)**	**Direct Mount**	140°F (60°C): VA9203 or VA9208 Series Spring-Return Actuators
Leakage		0.01% of Maximum Flow per ANSI/FCI 70-2, Class 4
		1% of Maximum Flow for Three-Way Bypass Port
End Connections		National Pipe Thread (NPT)
Materials	**Body**	Forged Brass
	Ball	300 Series Stainless Steel
	Blowout-Proof Stem	300 Series Stainless Steel
	Seats	Graphite-Reinforced PTFE with Ethylene Propylene Diene Monomer (EPDM) O-Ring Backing
	Stem Seals	EPDM Double O-Rings
	Characterizing Disk	Amodel® AS-1145HS Polyphthalamide Resin
Compliance CRN		0C16910.5C

1. Proper water treatment is recommended; refer to the VDI 2035 Guideline.
2. Rangeability is defined as the ratio of maximum controllable flow to minimum controllable flow.
3. In steam applications, install the valve with the stem horizontal to the piping and wrap the valve and piping with insulation.

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls, Inc. shall not be liable for damages resulting from misapplication or misuse of its products. © 2015 Johnson Controls, Inc.

Code No. LIT-1900221
Issued October 2016

VG1000 Series Two-Way, Stainless Steel Trim, NPT End Connections Ball Valves with Spring-Return Electric Actuators with Switches

Description

VG1000 Series Ball Valves are designed to regulate the flow of hot or chilled water and, for some models, low-pressure steam in response to the demand of a controller in HVAC systems. Available in sizes 1/2 through 2 in. (DN15 through DN50), this family of two- and three-way forged brass valves is factory or field mounted to Johnson Controls® VA9104, VA9109, and M9100 Series Non-Spring Return and VA9203 and VA9208 Series Spring Return Electric Actuators for on/off, floating, or proportional control.

Refer to the *VG1000 Series Forged Brass Ball Valves Product Bulletin (LIT-977132)* for important product application information.

Features

- Forged Brass Body — provides 580 psig static pressure rating.
- Graphite-Reinforced Polytetrafluoroethylene (PTFE) Seats — include 15% graphite-reinforced ball seals, providing better wear resistance.
- 500:1 Rangeability — provides accurate control under all load conditions.
- Maintenance-Free Design — performs without failure in excess of 200,000 full stroke cycles in iron-oxide contaminated water.

Repair Information

If the VG1000 Series Ball Valve fails to operate within its specifications, replace the valve body, actuator, or entire assembly. For replacement parts, contact the nearest Johnson Controls representative.

VG1000 Series Two-Way, Spring-Return, Stainless Steel Ball and Stem Ball Valve Assemblies with End Switches

VG1000 Series Two-Way, Stainless Steel Trim, NPT End Connections Ball Valves with Spring-Return Electric Actuators with Switches (Continued)

Technical Specifications

VG1000 Series Two-Way, Stainless Steel Trim, NPT End Connections Ball Valves with Spring-Return Electric Actuators with Switches		
Service[1]		Hot Water, Chilled Water, 50/50 Glycol Solutions, and 15 psig (103 kPa) Saturated Steam for HVAC Systems (Select Models)
Fluid Temperature Limits	**Water**	-22 to 284°F (-30 to 140°C)
	Steam	15 psig (103 kPa) at 250°F (121°C)
Maximum Actuator Fluid Temperature Limit	**212°F (100°C)**	VA9203 VA9208
	284°F (140°C)	VA9203 with M9000-561 Thermal Barrier VA9208 with M9000-561 Thermal Barrier
Valve Body Pressure Rating	**Water**	580 psig (4,000 kPa) at 203°F (95°C) 464 psig (3,199 kPa) at 284°F (140°C) (PN40)
	Steam	15 psig (103 kPa) Saturated Steam (Only with VA9203 or VA9208 Series Actuator with M900-561 Thermal Barrier)
Maximum Closeoff Pressure		200 psid (1,378 kPa)
Maximum Recommended Operating Pressure Drop		50 psid (340 kPa)
Flow Characteristics	**Two-Way**	Equal Percentage
Rangeability[2]		Greater than 500:1
Minimum Ambient Operating Temperature	**-22°F (-30°C)**	VA9203 Series Spring-Return Actuators
	-40°F (-40°C)	VA9208 Series Spring-Return Actuators
Maximum Ambient Operating Temperature[3] **(Limited by the Actuator)**	**Direct Mount**	140°F (60°C): VA9203 or VA9208 Series Spring-Return Actuators
Leakage		0.01% of Maximum Flow per ANSI/FCI 70-2, Class 4
		1% of Maximum Flow for Three-Way Bypass Port
End Connections		National Pipe Thread (NPT)
Materials	**Body**	Forged Brass
	Ball	300 Series Stainless Steel
	Blowout-Proof Stem	300 Series Stainless Steel
	Seats	Graphite-Reinforced PTFE with Ethylene Propylene Diene Monomer (EPDM) O-Ring Backing
	Stem Seals	EPDM Double O-Rings
	Characterizing Disk	Amodel® AS-1145HS Polyphthalamide Resin
Compliance CRN		0C16910.5C

1. Proper water treatment is recommended; refer to the VDI 2035 Guideline.
2. Rangeability is defined as the ratio of maximum controllable flow to minimum controllable flow.
3. In steam applications, install the valve with the stem horizontal to the piping and wrap the valve and piping with insulation.

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls, Inc. shall not be liable for damages resulting from misapplication or misuse of its products. © 2016 Johnson Controls, Inc.

Code No. LIT-1900418
Issued July 2018

VG1000 Series Flanged Ball Valves Catalog Page

Description

The VG1000 Series Flanged Ball Valves are primarily designed to regulate the flow of hot water, chilled water, and 50/50 glycol solutions to the demand of a controller in HVAC systems. The valves come in sizes of 2-1/2, 3, 4, 5, and 6 in. These American Society of Mechanical Engineers (ASME) Class 150 flanged valves come in both two- and three-way configurations. Johnson Controls offers valve, linkage, and actuator assemblies for factory or field mounting with either spring return or non-spring return actuators.

Refer to the *VG1000 Series Flanged Ball Valves Product Bulletin (LIT-12011228)* for important product application information and single point of contact information.

Features

- Closeoff Pressure Rating: 100 psi for Two-Way Valves; 50 psi for Three-Way Valves — provides tight shutoff.
- 300 Stainless Steel Ball and Stem Assembly — applies to systems with high-temperature water (0 to 284°F [-18 to 140°C]) or 25 psi saturated steam.
- 500:1 Rangeability — provides accurate control under all load conditions.
- Amodel® Flow Characterizing Disk — provides equal percentage flow characteristics for best temperature control; available in a wide array of Cv ranges to cover a broad variety of applications.
- Ethylene Propylene Diene Monomer (EPDM) Double O-Ring Stem Seal — offers tested leak-free operation for 200,000 cycles in iron-oxide contaminated water.
- Graphite-Reinforced Polytetrafluoroethylene (PTFE) Seats — include 15% graphite-reinforced ball seals that last twice as long in iron-oxide contaminated water when compared to virgin Teflon® ball seats.
- PTFE Thermal Spacer — provides thermal isolation between the actuator and the valve.
- Seats Backed with EPDM O-Rings — maintain a constant seating force that compensates for expansion, contraction, and seat wear without increasing operating torque.
- Maintenance-Free Design — performs without failure in excess of 200,000 full stroke cycles in iron-oxide contaminated water.
- Available with Factory-Mounted VA9320 or M9220 Series Electric Actuators — reduces field installation time and cost.

VG1000 Series Ball Valves Shown with Field Mounted VA9320 and M9220 Series Actuators

- Weather Shields Available for Field Installation — protect the actuator from corrosion, rain, freezing rain, sleet, and snow.

Repair Information

If the VG1000 Series Ball Valve fails to operate within its specifications, replace the valve body, actuator, or entire assembly. For replacement parts, contact the nearest Johnson Controls® representative.

VG1000 Series Flanged Ball Valves Catalog Page (Continued)

Technical Specifications

VG1000 Series Flanged Ball Valves		
Service[1]		Hot water, chilled water, 50/50 Glycol solutions, and 25 psig (172 kPa) saturated steam for HVAC systems
Valve Fluid Temperature Limits		0 to 284°F (-18 to 140°C)
Valve Body Pressure/Temperature Rating	**Water**	ASME Class 150 250 psi at -20 to 100°F (29 to 38°C) 235 psi at 200°F(93°C) 218 psi at 284°F(140°C)
	Steam	25 psig (172 kPa) saturated steam for HVAC systems
Maximum Closeoff Pressure	**Two-Way**	100 psi (689 kPa)
	Three-Way	50 psi (345 kPa)
Maximum Recommended Operating Pressure Drop		30 psi (207 kPa) for quiet service
Flow Characteristics	**Two-Way**	Equal Percentage
	Three-Way	Equal Percentage Flow Characteristics of In-Line Port or Linear Percentage Flow Characteristics of Angle Port
Rangeability[2]		Greater than 500:1
Minimum Ambient Operating Temperature	**-4°F (-20°C)**	VA9320 Series Non-Spring Return Actuators
	-40°F (-40°C)	M9220 Series Spring Return Actuators
Maximum Ambient Operating Temperature[3]	**122°F (50°C)**	VA9320 Series Non-Spring Return Actuators
	131°F (55°C)	M9220 Series Spring Return Actuators
Leakage	**Two- or Three-Way**	0.01% of Maximum Flow, Control Port, ANSI/FCI 70-2, Class 4
	Three-Way	1% of Maximum Flow, Bypass Port
End Connections		ASME Class 150 Flange
Materials	**Body**	Brass
	Flanges	Ductile Iron
	Ball	300 Series Stainless Steel
	Stem	300 Series Stainless Steel
	Seats	Graphite Reinforced PTFE with EPDM O-Ring Backing
	Stem Seals	EPDM O-Rings
	Flow Control Disk	Amodel AS-1145HS Polyphthalamide Resin
Compliance CE	**Europe**	CE Mark - Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the Pressure Equipment Directive (PED).

1. Refer to the VDI 2035 Guideline for proper water treatment.
2. Rangeability is defined as the ratio of maximum controllable flow to minimum controllable flow.
3. In steam applications, install the valve with the stem horizontal to the piping and wrap the valve and piping with insulation.

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls shall not be liable for damages resulting from misapplication or misuse of its products. © 2018 Johnson Controls.

Code No. LIT-1900225
Issued January 6, 2015

VG1000 Series Three-Way, Stainless Steel Trim, NPT End Connections Ball Valves with Spring-Return Electric Actuators without Switches

Description

VG1000 Series Ball Valves are designed to regulate the flow of hot or chilled water and, for some models, low-pressure steam in response to the demand of a controller in HVAC systems. Available in sizes 1/2 through 2 in. (DN15 through DN50), this family of two- and three-way forged brass valves is factory or field mounted to Johnson Controls® VA9104, M9106, M9109, and M9100 Series Non-Spring-Return and VA9203 and VA9208 Series Spring Return Electric Actuators for on/off, floating, or proportional control.

Refer to the *VG1000 Series Forged Brass Ball Valves Product Bulletin (LIT-977132)* for important product application information.

AHU-3: REHEAT COIL VALVE

Features

- Forged Brass Body — provides 580 psig static pressure rating.
- 300 Series Stainless Steel Ball and Stem Assembly — tolerates high-temperature water or 15 psi saturated steam with fluid temperatures of -22 to 284°F (-30 to 140°C) or where a higher degree of corrosion protection is desired.
- 500:1 Rangeability — provides accurate control under all load conditions.
- Maintenance-Free Design — performs without failure in excess of 200,000 full stroke cycles in iron-oxide contaminated water.

Repair Information

If the VG1000 Series Ball Valve fails to operate within its specifications, replace the valve body, actuator, or entire assembly. For replacement parts, contact the nearest Johnson Controls representative.

VG1000 Series Three-Way, Spring-Return, Stainless Steel Ball and Stem Ball Valve Assemblies without End Switches

Technical Specifications

VG1000 Series Three-Way, Stainless Steel Trim, NPT End Connections Ball Valves with Spring-Return Electric Actuators without Switches		
Service[1]		Hot Water, Chilled Water, 50/50 Glycol Solutions, and 15 psig (103 kPa) Saturated Steam for HVAC Systems
Fluid Temperature Limits	**Water**	-22 to 284°F (-30 to 140°C)
	Steam	15 psig (103 kPa) at 250°F (121°C)
Maximum Actuator Fluid Temperature Limits	**212°F (100°C)**	VA9203 Series Spring-Return Actuators VA9208 Series Spring-Return Actuators
	284°F (140°C)	VA9203 Series Spring-Return Actuators with M9000-561 Thermal Barrier Installed VA9208 Series Spring-Return Actuators with M9000-561 Thermal Barrier Installed
Valve Body Pressure Rating	**Water**	580 psig (4,000 kPa) at 203°F (95°C) (PN40) 464 psig (3,196 kPa) at 284°F (140°C) (PN40)
	Steam	15 psig (103 kPa) Saturated Steam (Applies to VA9208 Series Spring Return Actuator with M9000-561 Thermal Barrier Installed)
Maximum Closeoff Pressure		200 psid (1,378 kPa)
Maximum Recommended Operating Pressure Drop		50 psid (340 kPa)
Flow Characteristics	**Three-Way**	Equal Percentage Flow Characteristics of In-Line Port A (Coil) and Linear Flow Characteristics of Angle Port B (Bypass)
Rangeability[2]		Greater than 500:1
Minimum Ambient Operating Temperature	**-22°F (-30°C)**	VA9203 Series Spring-Return Actuators
	-40°F (-40°C)	VA9208 Series Spring-Return Actuators
Maximum Ambient Operating Temperature[3] **(Limited by the Actuator and Linkage)**	**Direct Mount**	140°F (60°C): VA9208 Series Spring-Return Actuators
Leakage		0.01% of Maximum Flow per ANSI/FCI 70-2, Class 4
		1% of Maximum Flow
End Connections		National Pipe Thread (NPT)
Materials	**Body**	Forged Brass
	Ball	300 Series Stainless Steel
	Blowout-Proof Stem	300 Series Stainless Steel
	Seats	Graphite-Reinforced PTFE with Ethylene Propylene Diene Monomer (EPDM) O-Ring Backing
	Stem Seals	EPDM Double O-Rings
	Characterizing Disk	Amodel® AS-1145HS Polyphthalamide Resin
Compliance CRN		0C16910.5C

1. Proper water treatment is recommended; refer to the VDI 2035 Guideline.
2. Rangeability is defined as the ratio of maximum controllable flow to minimum controllable flow.
3. In steam applications, install the valve with the stem horizontal to the piping and wrap the valve and piping with insulation.

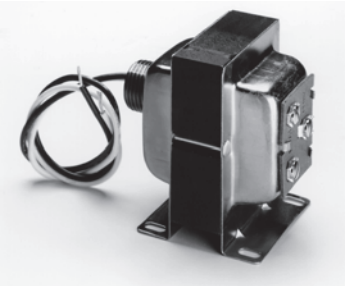
The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls, Inc. shall not be liable for damages resulting from misapplication or misuse of its products. © 2015 Johnson Controls, Inc.

Code No. LIT-1922175
Issued November 13, 2015

Y63, Y64, Y65, Y66, and Y69 Series Transformers

Description

The Y63, Y64, Y65, Y66, and Y69 Series Transformers provide 24 VAC power for loads of 40 VA through 300 VA. These transformers are designed for use on digital controllers, gas controls, ignition systems, motor actuators, staging controls, and most other 24 VAC HVAC/R control systems.



The Y6x Series meets the requirements of UL 1585, UL 506, and CSA C22.2 No. 66, providing compliance in both the United States and Canada. The Y63, Y64, Y65, and Y66 transformers are listed as Class 2 transformers (UL 1585, CSA C22.2 No. 66). The Y69 is listed as a general purpose transformer (UL 506, CSA C22.2 No. 66).

Refer to the *Series Y63, Y64, Y65, Y66, and Y69 Transformers Product Bulletin (LIT-125755)* for important product application information.

RADIATORS: E-WF-1, WF-1

Features

- split-bobbin design provides best primary/secondary isolation
- multi-tap primaries reduce stocking requirements and offer application flexibility
- choice of foot, plate, or conduit hub mounting provides mounting flexibility
- choice of primary voltages meets a wide range of power requirements from 24 VAC through 480 VAC
- color-coded lead wires provide simplicity and standardization
- cULus listed or cURus recognized meets US and Canadian requirements for Class 2 transformers (Y63, Y64, Y65, and Y66) and general purpose transformers (Y69)
- built-in, easy-reset circuit breakers eliminate replacement time and cost caused by burn-out (Y63, Y64, Y66, and Y69)
- open frame Y65 models serve as ideal models when end bells are not required

Y65 Series Transformer

Repair Information

Do not make any field repairs to transformers. For a replacement transformer, contact the nearest Johnson Controls® distributor or sales representative.

Selection Chart

Y63, Y64, Y65, Y66, and Y69 Series Transformers (Part 1 of 2)

2-Way

Direct Lift, Pilot & Remote Operated Valves
1/4"–2" NPT

FUEL OIL TANK CONTROL VALVE

General Description:

2-Way Direct Lift, Pilot & Remote Operated valves are designed for higher flow and medium to high pressure applications. Pilot operated valves require the minimum pressure differential specified for proper valve operation.

Installation
Valves should be mounted with solenoid coil vertical and upright.

Standard Materials of Construction
Please refer to page A55

Compatible Fluids
Lubricated Air, Inert Gases, Water and Light Oil (300 SSU). Additional fluids compatible with alternate materials of construction (consult factory).

Use of non-lubricated gaseous media can affect valve life.

Electrical Characteristics:

Standard Voltages:
AC –24/60
120/60–110/50
240/60–220/50
DC –12, 24 & 120
For other voltages – consult factory

Coil Classification:
Class F standard
Class H available

Agency Approvals:
Standard valves with NEMA 4X or explosion proof solenoid enclosures are UL Listed and CSA Certified. For additional details, consult factory.

Maximum Ambient Temperature
150°F
Please refer to page A55 for details.

Applications:

- Irrigation systems
- Fire suppression equipment
- Molding equipment
- Cooling of machine tools
- Sterilizers
- Car wash
- Water treatment and purification
- Air compressors and dryers
- Floor cleaning equipment
- Hospital equipment
- Automated systems
- Food processing

***External pilot pressure valves require a minimum external pilot pressure equal to the main line pressure plus 10 psi. Maximum external pilot pressure is 145 psi for vacuum applications and 160 psi for pressure applications. (Pressure ratings may be reduced, however. Consult factory for details.)**

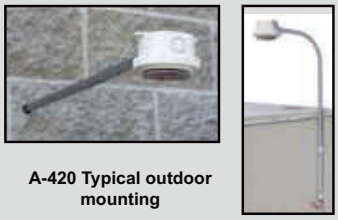
*** Pilot Orifice is 303SS. These are remotely piloted valves. No coil required.

AHU-2: BUILDING STATIC PRESS PROBE,

Static Pressure Accessories



Model A-417, Static Pressure Pickup. For use in clean rooms, 100 micron filter picks up static pressure. Stainless steel wall plate fits 2″ x 4″ electrical box. Sealed with foam gasket, screws included. Barbed brass fitting holds 1/8″ to 5/32″ I.D. tubing.

Model A-418, Static Pressure Pickup. Room mount with Delta Style plastic enclosure fits 2″ x 4″ electrical box. Fine mesh screen hides static pressure pickup port. Clean connection to 1/8″ to 5/32″ I.D. tubing and pressure sensor. Sealed with foam gasket, screws included.

Model A-419, Static Pressure Pickup Ceiling Mount. Plate rests on top of standard 3/4″ thick ceiling tile while 100 micron filter faces down through 5/8″ hole in tile. Filter is barely noticeable in room being monitored. Screws included for optional mounting to junction box. Barbed brass fitting holds 1/8″ to 5/32″ I.D. tubing.

Model A-420, Static Pressure Pickup for Roof or Outside Wall Mount. Port especially reduces effects of wind gusts to keep pressure readings stable when plate is parallel to ground. NEMA 4X (IP66) rated structure withstands harsh environmental elements. Structure is 3-5/8″ across and 2-1/2″ deep. EMT Conduit fitting is 1/2″. Pressure connection is brass barbed fitting for 1/4″ tubing.

A-420 Typical outdoor mounting

Model A-421, Static Pressure Tip measures duct static air pressure. Assembly includes 6″ probe, silicon rubber hose, and screws. Built-in surge damper ensures stable readings on pressure sensor. Pressure spike reducer can be added to end of tube to further smooth over pressure fluctuations.

Static Pressure Sensors

MODELS

These sensors are for use with manometers, Magnehelic® gages, pressure switches and other controllers to pick up or sense static pressure drop across air filters and cooling coils, blower input and discharge pressures, etc. The angled tips shown have 4″ insertion depth. Each has four radially drilled .040″ sensing holes. All except Model A-303 mount in 3/8″ hole in duct. For portable use, a magnet holds No. A-303 in place. No. A-305 is used where a very low actuation or sensing point is required on a pressure switch or gage or where response time is critical. No. A-307 and A-308 are suitable for use in low velocity systems or where the need for accuracy is less critical.

A-301, Static Pressure Tip, for 1/4″ metal tubing connection.
A-301-A, Static Pressure Tip, same as A-301 with 6″ insertion depth.
A-301-B, Static Pressure Tip, same as A-301 with 8″ insertion depth.
A-301-C, Static Pressure Tip, same as A-301 with 12″ insertion depth.
A-301-SS, same as A-301 in Stainless Steel.
A-302, Static Pressure Tip, for 3/16″ and 1/8″ I.D. plastic or rubber tubing.
A-302-A, Static Pressure Tip, same as A-302 with 6″ insertion depth.
A-303, Portable Static Pressure Tip, for 3/16″ I.D. rubber or plastic tubing with 4″ insertion.
A-305, Static Pressure Tip, low resistance application, furnished with two (2) hex jam nuts and two (2) mounting washers for duct mounting and with 1/8″ NPT pipe thread for pressure connection.
A-305-SS, same as A-305 in Stainless Steel.
A-306, Outdoor static pressure sensor. Provides average outdoor pressure signal for reference in building pressurization applications. Includes sensor, 50 ft. vinyl tubing, mounting bracket and hardware.
A-306-A, Outdoor static pressure sensor. Provides average outdoor pressure signal for reference in building pressurization applications. Includes sensor, 50 ft. vinyl tubing, mounting bracket and hardware. Gray Sensor.
A-307, Static Pressure Fitting, for 1/4″ metal tubing connection.
A-307-SS, as above in Stainless Steel.
A-308, Static Pressure Fitting, for 3/16″ and 1/8″ I.D. plastic or rubber tubing.
A-345, Flange for mounting A-301, A-302, A-307, A-308 or 1/8″ dia. Pitot Tubes with compression fitting when interior of duct is not accessible. Aluminum, with gasket and sheet metal screws.
A-414, 316 SS Clean Room Pressure Sensor.

RH Series Compact Power Relays

Key features

- SPDT through 4PDT, 10A contacts
- Compact power type relays
- Miniature power relays with a large capacity
- 10A contact capacity
- Compact size saves space

(PANEL MOUNT)
AHU-2: UNIT ENABLE
AHU-3: EF HISPEED, LOSPEED, SF HISPEED, LOSPEED, SDR

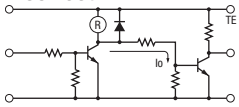
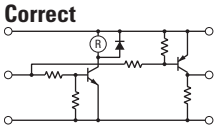
Operating Instructions

Driving Circuit for Relays

1. To ensure correct relay operation, apply rated voltage to the relay coil.
2. Input voltage for the DC coil:
   A complete DC voltage is best for the coil power to make sure of stable relay operation. When using a power supply containing a ripple voltage, suppress the ripple factor within 5%. When power is supplied through a rectification circuit, the relay operating characteristics, such as pickup voltage and dropout voltage, depend on the ripple factor. Connect a smoothing capacitor for better operating characteristics as shown below.

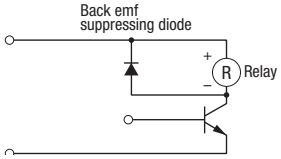


$$\text{Ripple Factor (\%)} = \frac{\text{Emax} - \text{Emin}}{\text{Emean}} \times 100\%$$



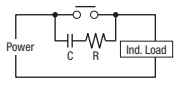
Emax = Maximum of pulsating current
Emin = Minimum of pulsating current
Emean = DC mean value

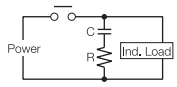
3. Leakage current while relay is off:
   When driving an element at the same time as the relay operation, special consideration is needed for the circuit design. As shown in the incorrect circuit below, leakage current (Io) flows through the relay coil while the relay is off. Leakage current causes coil release failure or adversely affects the vibration resistance and shock resistance. Design a circuit as shown in the correct example.

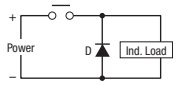


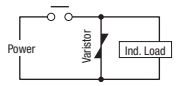
Incorrect

Correct

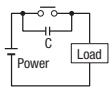


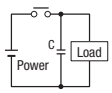






4. Surge suppression for transistor driving circuits:
   When the relay coil is turned off, a high-voltage pulse is generated, causing a transistor to deteriorate and sometimes to break. Be sure to connect a diode to suppress the back electromotive force. Then, the coil release time becomes slightly longer. To shorten the coil release time, connect a Zener diode between the collector and emitter of the transistor. Select a Zener diode with a Zener voltage slightly higher than the power voltage.





Protection for Relay Contacts

1. The contact ratings show maximum values. Make sure that these values are not exceeded. When an inrush current flows through the load, the contact may become welded. If this is the case, connect a contact protection circuit, such as a current limiting resistor.
2. Contact protection circuit:
   When switching an inductive load, arcing causes carbides to form on the contacts, resulting in increased contact resistance. In consideration of contact reliability, contact life, and noise suppression, use of a surge absorbing circuit is recommended. Note that the release time of the load becomes slightly longer. Check the operation using the actual load. Incorrect use of a contact protection circuit will adversely affect switching characteristics. Four typical examples of contact protection circuits are shown in the following table:

RC		This protection circuit can be used when the load impedance is smaller than the RC impedance in an AC load power circuit. • R: Resistor of approximately the same resistance value as the load • C:0.1 to 1 µF
		This protection circuit can be used for both AC and DC load power circuits. R: Resistor of approximately the same resistance value as the load C: 0.1 to 1 µF
Diode		This protection circuit can be used for DC load power circuits. Use a diode with the following ratings. Reverse withstand voltage: Power voltage of the load circuit x 10 Forward current: More than the load current
Varistor		This protection circuit can be used for both AC and DC load power circuits. For a best result, when using a power voltage of 24 to 48V AC/DC, connect a varistor across the load. When using a power voltage of 100 to 240V AC/DC, connect a varistor across the contacts.

3. Do not use a contact protection circuit as shown below:

	This protection circuit is very effective in arc suppression when opening the contacts. But, the capacitor is charged while the contacts are opened. When the contacts are closed, the capacitor is discharged through the contacts, increasing the possibility of contact welding.
	This protection circuit is very effective in arc suppression when opening the contacts. But, when the contacts are closed, a current flows to charge the capacitor, causing contact welding.

Generally, switching a DC inductive load is more difficult than switching a DC resistive load. Using an appropriate arc suppressor, however, will improve the switching characteristics of a DC inductive load.

Soldering

1. When soldering the relay terminals, use a soldering iron of 30 to 60W, and quickly complete soldering (within approximately 3 seconds).
2. Use a non-corrosive rosin flux.

Operating Instructions con't

Other Precautions

1. General notice:
   To maintain the initial characteristics, do not drop or shock the relay.

   The relay cover cannot be removed from the base during normal operation. To maintain the initial characteristics, do not remove the relay cover.

   Use the relay in environments free from condensation, dust, sulfur dioxide (SO_2), and hydrogen sulfide (H_2S).

   Make sure that the coil voltage does not exceed applicable coil voltage range.

2. UL and CSA ratings may differ from product rated values determined by IDEC.

3. Do not use relays in the vicinity of strong magnetic field, as this may affect relay operation.

Safety Precautions

- Turn off the power to the relay before starting installation, removal, wiring, maintenance, and inspection of the relays. Failure to turn power off may cause electrical shock or fire hazard.
- Observe specifications and rated values, otherwise electrical shock or fire hazard may be caused.
- Use wires of the proper size to meet voltage and current requirements. Tighten the terminal screws on the relay socket to the proper tightening torque.
- Surge absorbing elements on AC relays with RC or DC relays with diode are provided to absorb the back electromotive force generated by the coil. When the relay is subject to an excessive external surge voltage, the surge absorbing element may be damaged. Add another surge absorbing provision to the relay to prevent damage.

Precautions for the RU Relays

- Before operating the latching lever of the RU relay, turn off the power to the RU relay. After checking the circuit, return the latching lever to the original position.
- Do not use the latching lever as a switch. The durability of the latching lever is a minimum of 100 operations.
- When using DC loads on 4PDT relays, apply a positive voltage to terminals of neighboring poles and a negative voltage to the other terminals of neighboring poles to prevent the possibility of short circuits.
- DC relays with a diode have a polarity in the coil terminals. Apply the DC voltage to the correct terminals.

THERMOWELLS
T1 Series

HWS, WSRS, DHWS: BOILER ENTERING & LEAVING WATER TEMP, SUPPLY, RETURN WATER TEMP THEMRMOWELL

The T1 series thermowell are available in 304 series, 316 series stainless steel or high strength Delrin®. They are available in a wide range of lengths. Custom lengths and materials are also available.

SPECIFICATION:

Material	**P -** 304 Series stainless steel **R -** 316 Series stainless steel **D -** Delrin®: High strength, corrosion resistant polymer
Length	2", 4", 6", 8", 12" & 18" Standard Custom lengths available
Thread size	External - 1/2" NPT Internal - 1/2" NPSM
Construction	2"-18" - Machined Construction 12" up - S/S Welded Construction optional (for use with inert fluids only)

PART NUMBER SELECTED

AHU-2: BUILDING STATIC PRESS PROBES & SENSOR

AIR PRESSURE SENSORS, SURGE DAMPENERS

A300 SERIES, RPS, SD-01, 21121, 60681

DESCRIPTION

Static Pressure Sensors
The **A-300-K Series** sensors are used with pressure transmitters and pressure switches to sense duct pressures. Two sensors are required to monitor pressure across coils, filters, blowers, etc. **A-301-K** and **A-302-K** have four radial sensing holes and 4" (10.2 cm) insertion depth. The **A-308-K** should be used only where accuracy is not critical. All mount in a 3/8" hole in the duct. If the interior of the duct is not accessible, an optional **A-345-K** flange mounting kit may be used.

Room Static Pressure or Total Pressure Sensor Kit
The versatile **Model 60681** Pressure Sensing Kit is used for monitoring static pressure (aspiration) or total pressure (impact). The kit includes a 7" (17.8 cm) universal sensing probe, adjustable mounting flange, 1/4" adapter, and 3' (0.9 m) length of tubing (1/4" ID x 3/8" OD). For total (impact) pressure applications, install the curved tip opening facing into the air stream or away from the air stream for vacuum applications.

Total Pressure Sensor
The **Model 21122 (4")** and **21123 (8")** sensors are used primarily for proving air flow in ducts. The opening in the tip of the 4" (10.2 cm) aluminum tube faces upstream and senses impact (total) pressure. The "-112" models accept 1/8" to 1/4" ID flexible tubing.

Outdoor Static Pressure Sensor
The **A-306-K** Outdoor Static Pressure Sensor provides an outdoor pressure signal for reference in building pressurization applications. The **A-306-K** includes the sensor, 50' (15.24m) of vinyl tubing, mounting bracket, and hardware.

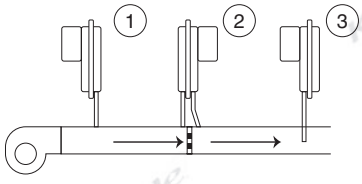
Room Static Pressure Sensor
The **Model RPS** is a stainless steel, wall-mounted room static pressure sensor. It mounts directly to the wall or to a standard electrical box. The **Model RPS-W** is a white plastic, wall-mounted room static pressure sensor, and the **Model RPS-I** is ivory. The RPS sensors have a 100 micron stainless steel breather vent.

Filter Kit
The Model **A-605** Filter Kit includes an aluminum surface mounting bracket and screws, two 5 ft lengths of 1/4" aluminum tubing, two static pressure tips, and two plastic vent valves.

Surge Dampener
Surge Dampener **Model SD-01** absorbs rapid pressure fluctuations to provide steady pressure outputs. The dampener has two independent channels - one for the low pressure tubing and one for the high pressure tubing. Surge dampeners are typically used with outdoor pressure sensors, which are subject to wind gusts, and isolation rooms, clean rooms, or operating rooms where opening or closing doors creates sudden pressure changes.

RPS-W

60681



A-300 Series

RPS & SD-01

APPLICATION

1. Positive static pressure increases as the filter gets dirty.
2. Differential across filter changes as filter gets dirty.
3. Flow is reduced as filter gets dirty.

4. Negative pressure increases as the filter gets dirty.
5. Fan operation and true air flow: varying amounts of static pressure. Probes must be perpendicular to air flow.

ORDERING INFORMATION

MODEL	DESCRIPTION
60681	Static or total pressure sensing kit
A-301-K	Duct static pressure tip, 1/4" compression
A-302-K	Duct static pressure tip, 1/4" barb
A-308-K	Duct static pressure fitting, 1/4" barb
A-345-K	Flange mounting kit (1 required for each A-301-K or A-302-K)
A-3145K	A-301-K duct static pressure tip, 1/4" compression with A-345-K mounting flange
A-3245K	A-302-K duct static pressure tip, 1/4" barb with A-345-K mounting flange
A-3845K	A-308-K duct static pressure fitting, 1/4" barb with A-345-K mounting flange
21122	4" aluminum impact tube, 1/4" OD connection
21122-112	6" aluminum impact tube for 1/8" thru 1/4" ID flexible plastic tubing
21123	8" aluminum impact tube, 1/4" OD connection
21123-112	8" aluminum impact tube for 1/8" thru 1/4" ID flexible plastic tubing
A-306-K	Outdoor air static pressure kit
A-605	Mounting kit for air filter application. Includes aluminum surface mounting brackets with screws, two 5 ft. lengths of 1/4" aluminum tubing, two static pressure tips and two plastic vent valves.
RPS	Stainless steel room pressure sensor, 1/4" barb
RPS-I	Ivory plastic room pressure sensor, 1/4" barb
RPS-W	White plastic room pressure sensor, 1/4" barb
SD-01	Surge dampener
B-137	1/4" barb adapter for #21122 and #21123 (standard pack-50)

BELIMO

ZS-260 Explosion-proof Housing

For GM…, AM…, SM…, AF…, NF…, LF… Actuators

AHU-3: HOUSING FOR HEAT REC FAVE & BYPASS DAMPER ACTUATORS, REHEAT VALVE ACTUATORS

Application

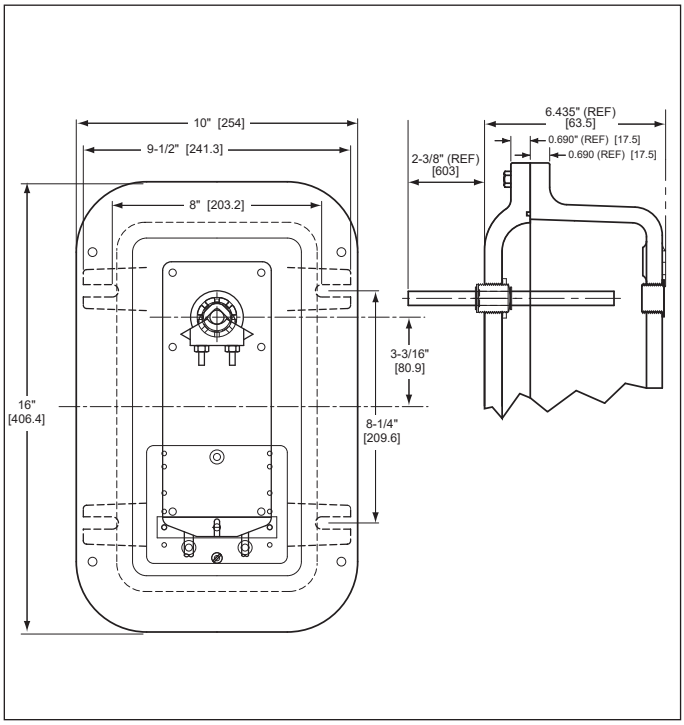
The ZS-260 explosion-proof housing may be used with the GM…, AM…, SM…, AF…, NF…, LF… series actuators. This housing is not designed for direct coupling. UL and CSA; Class I, Division 1&2, Groups B, C, D, (NEMA 7), Class II, Division 1&2, Groups E, F and G, (NEMA 9), Class III, Hazardous (classified) Locations, outdoor application NEMA 4.

Operation

The ZS-260 enclosure is designed so that the required actuator may be easily field mounted into the enclosure. The actuator is fastened on to the internal portion of the operating shaft and secured at the end with an anti-rotation strap. A crankarm, such as the KH8, is mounted to the external portion of the operating shaft for connection to connection to the damper linkage. ZG-109 right angle, and ZG-110 standoff mounting brackets may be used (see back).

The ZS-260 is designed so that the operating shaft can be mounted on either the front or rear side of the housing.

Accessories



KH8	Universal crankarm
KG8	Universal ball joint
KG10	Universal ball joint
ZG-109	Right angle mounting bracket
ZG-110	Stand-off mounting bracket

Technical Data	ZS-260
Material	Housing: cast, copper-free, aluminum, Cover bolts: stainless steel Operating shaft: stainless steel
Conduit holes	3/4"–14 NPT (2 supplied) see Note 1
Operating shaft diameter	1/2 inch [12.7]
Operating shaft location	Front or rear side of housing (Field selected)
Approved applications	UL and CSA; Class I, Division 1&2, Groups B, C, D, (NEMA 7), Class II, Division 1&2, Groups E, F and G, (NEMA 9), Class III, Hazardous (classified) Locations, outdoor application NEMA 4.
Weight	31.0 lb. (14.0 kg) without actuator

Note 1: Fittings that meet the requirements of the hazardous location must be used. All applications must comply with applicable local and/or national electric code.

Note: Since conditions of use of this product are outside the control of Belimo, the purchaser should determine suitability of the product for their intended use, and assumes all risk and liability in connection therewith.

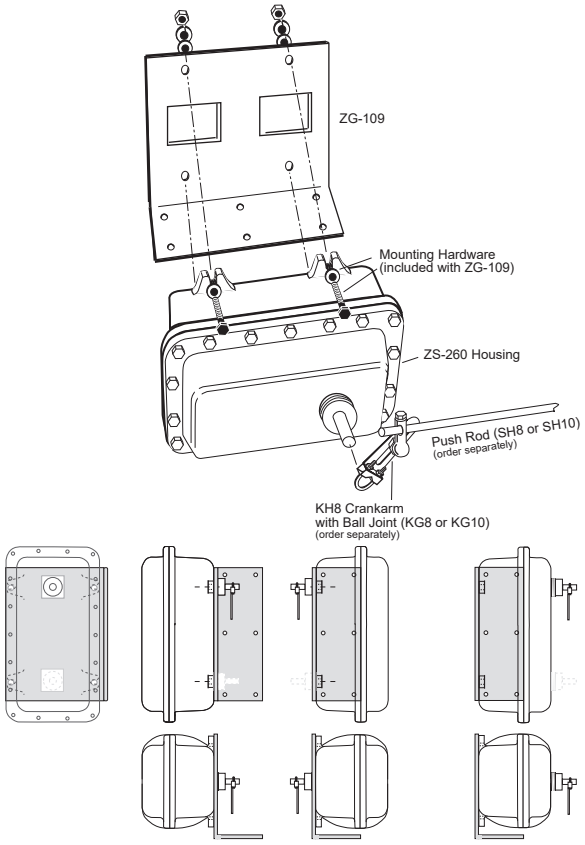
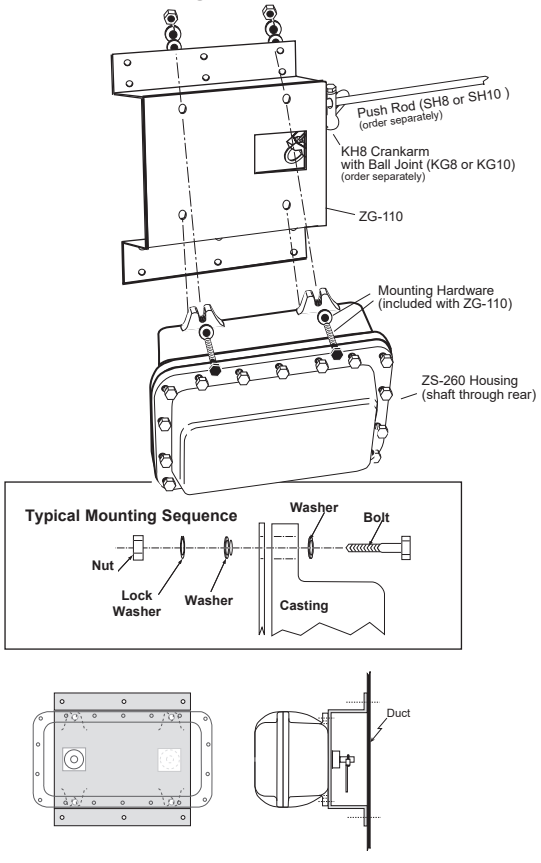
ZS-260 Explosion-proof Housing

For GM…, AM…, SM…, AF…, NF…, LF… Actuators



ZS-260 Shaft Thru Front



ZS-260 Mounting Instructions

1. Determine proper operating shaft location.
2. Remove threaded plug from the hole in which the operating shaft will be mounted.
3. Install the anti-rotation strap, mounting plate, to the side of the housing where the operating shaft will be mounted.
4. From the inside surface of the housing, insert the operating shaft, short length first, into the mounting hole.
5. Hand tighten the shaft bushing into the housing until the star nut/seal is in contact with the face of the housing.
6. Using a screw driver blade, drive the star nut/seal clockwise until the bushing is locked into place.
7. Install the anti-rotation strap into the mounting plate at the designated holes for the actuator to be used.
8. Install actuator
9. Wire actuator (per electrical code).
10. Bolt housing together

Typical ZG-109 Mounting

Typical ZG-110 Mounting

ASHCROFT INTRINSICALLY SAFE DIFFERENTIAL PRESSURE TRANSMITTER

IXLDP

AHU-3: PREFILTER, RA FILTER DP, BUILDING STATIC PRESS SENSOR

ASHCROFT

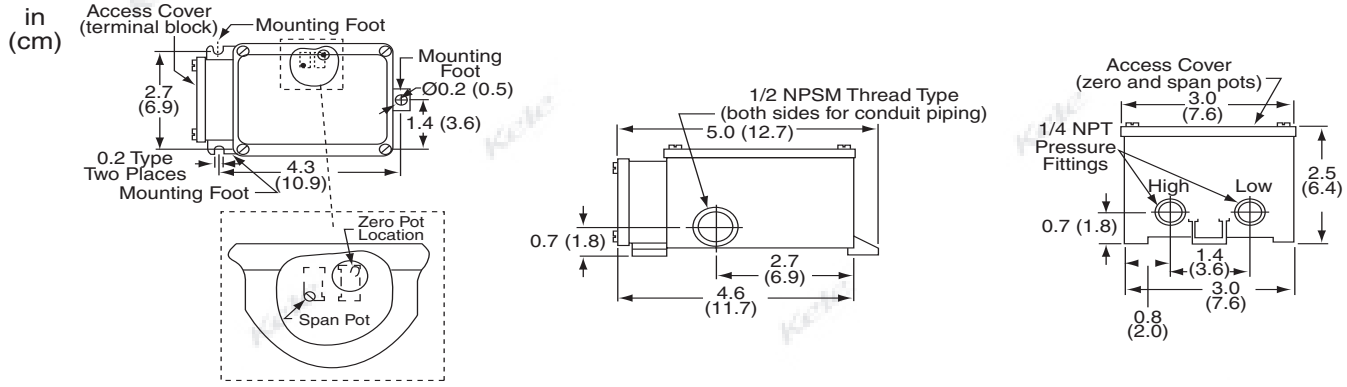
DESCRIPTION

The **Ashcroft Model IXLdp** (XFM option) is an **intrinsically safe**, **industrial-quality**, **differential pressure transmitter** for use on air and other noncorrosive gases. The **Model IXLdp** is available with accuracies of 0.25% and 0.50% in pressure ranges of 0.1 "W.C. to 200 "W.C. uni-directional or bi-directional.

IXLdp

MADE IN USA

FM APPROVED



FEATURES

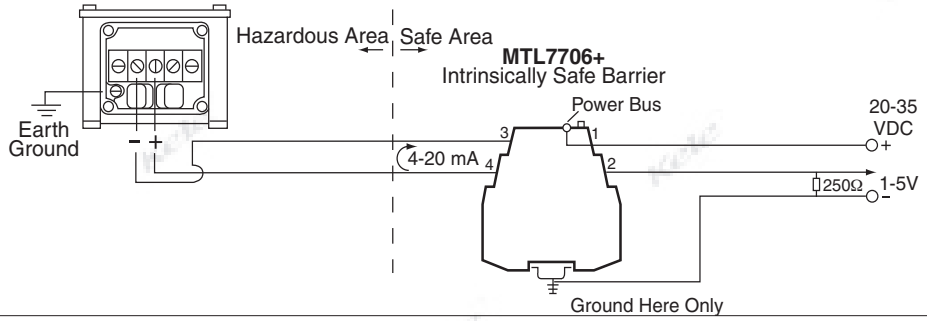
- ***100 psig static line pressure***
- ***0.25% or 0.5% accuracy down to 0.05 "W.C."***
- ***Uni-directional or bidirectional ranges***
- ***300 Series cast stainless steel body***
- ***NEMA 4X***
- ***NIST certificate included***

SPECIFICATIONS

Supply Voltage	12-36 VDC	**Operating Temperature**	-20° to 185°F (-29° to 85°C)
Accuracy	0.25% or 0.5%	**Conduit Connection**	Two 1/2" female
Signal Output	4-20 mA @ 545Ω	**Process Connection**	Two 1/4" NPT female
Area	Intrinsically Safe Class I, II, III;Div 1 and 2, Groups A through G Non-incendive Class I, Div 2, Groups A through D; Class II, Div 2, Groups F, G, Class III	**Enclosure Rating**	NEMA 4X
		Static Pressure	100 psig max.
		Media	Clean, dry, noncorrosive gas
		Proof Pressure	20 psid
		Burst pressure	50 psid
Enitiy Parameters	Vmax=30V, Imax=100mA, Po=1 W, Ci=50nf, Li=0μh	**Weight**	2 lb (0.9 Kg)
		Approvals	FM - US only
Response Time	250 ms	**Warranty**	1 year

DIMENSIONS

INSTALLATION



The transducer should be used with clean, dry air or other dry, noncorrosive gases. The unit should be mounted with #8 or #10 screws using the three mounting feet provided. The transducer can be mounted in any orientation with virtually no effect on calibration. Any minor zero pressure offsets that are encountered can be adjusted using the zero-adjust potentiometer. The high- and low-pressure connection ports are plugged to avoid debris entering the unit. The plugs should be left in place until the tubing and fittings are connected. The two 1/4" NPT pressure connections should be sealed to the transducer housing using Teflon® tape. Do not use dope-type sealant.

ASHCROFT INTRINSICALLY SAFE DIFFERENTIAL PRESSURE TRANSMITTER

IXLDP

CAUTION: Intrinsically safe devices require the use of an intrinsic safety barrier when applied in hazardous locations. Provide wiring and grounding strictly in accordance with manufacturer's instructions. When the Model IXLdp transmitter is combined with the Model MTL7706+ intrinsic safety barrier, total cable capacitance between the two must be limited to 0.12 µF, and total cable inductance must be limited to 4.0 mH (equivalent to 2700'/823m maximum Belden® #8760 18/2 shielded twisted pair cable 0.18 µH/FT, 44 pF/FT).

Series TTE Explosion-Proof RTD Temperature Transmitter

Installation and Operation Instructions

AHU-3: DA SUCT TEMP,HEAT REC EA, SA DUCT TEMP, RA DUCT TEMP

The Series TTE Explosion-Proof RTD Temperature Transmitter is the ideal product for hazardous temperature measurement applications. The TTE series has seven pre-programmed temperature ranges that are selectable via an internal dip switch. For those applications that need a custom range, the transmitter can be easily configured for any range between -30 to 250°F with a minimum span of 40°F. The span and zero can be quickly adjusted with a simple push button design. The compact housing allows for the transmitter to be mounted in virtually any application.

The Series TTE is ideally suited for refrigeration, building automation, commercial hot water heaters and boilers, and water chillers applications.

SPECIFICATIONS

Temperature Sensor: Pt1000, 0.00385 DIN.
Output Temperature Ranges: User selectable – any range between –30 to 250°F with a minimum span of 40°F.
Temperature Limits: Ambient: 0 – 158°F (-18 to 70°C). Process: -30 to 250°F (-34.4 to 121.1°C).
Accuracy: Transmitter +/0.1% F.S. Probe +/-0.3% F.S.
Thermal Drift Effects: +/-0.02%/°C max.
Response Time: 250 ms.
Wetted Materials: 316 stainless steel.
Process Connection: 1/2″ male NPT.
Conduit Connection: 1/2″ female NPT.
Probe Length: 2″ to 18″ (depending on model).
Pressure Limits: 2000 PSI.
Power Requirements: 10 to 35 VDC.
Output Signal: 4-20 mA (two wire loop powered).
Optional Display: 2 lines X 8 character LCD.
Enclosure Rating: NEMA 4X (IP66) and explosion-proof for Class I, Groups B, C, D; Class II, Groups E, F, G; Class III.
Weight: 2 lb 8 oz (1134 g).
Agency Approvals: FM, CE.

e-mail: info@dwyer-inst.com

INSTALLATION

1. **Location:** Select a location where the temperature of the transmitter will be between 0 and 158°F. Distance from the receiver is limited only by total loop resistance.
2. **Position:** The transmitter is not position sensitive. Units with the optional display should be mounted for ease of viewing the display.
3. **Electrical Connection:**
   Wire Length - The maximum length of wire connecting the transmitter and receiver is a function of wire size and receiver resistance. Wiring should not contribute more than 10% of the receiver resistance to total loop resistance. For extremely long runs (over 1000 feet), choose receivers with lower resistance to minimize the size and cost of connecting leads.

Current (4-20 mA) Output Operation

An external power supply is required. See Fig. A for diagram of the connection of the power supply, transmitter and receiver. The range of appropriate receiver load resistance (RL) for the DC power supply voltage available is expressed by the formula:

$$R_L = \frac{V_{ps} - 10}{20mADC}$$

Shielded cable is recommended for control loop wiring.

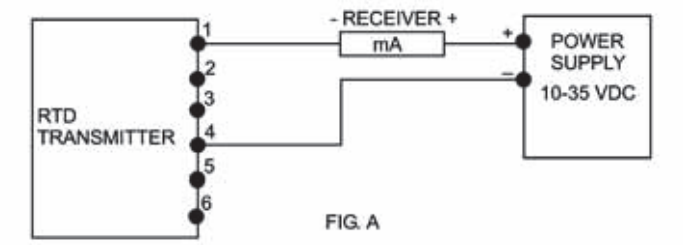

FIG. A

Explosion-Proof Installation Notes:

1. Install in accordance with any applicable national electric code.
2. Plug unused conduit openings. Plug must engage a minimum of 5 threads.
3. Use a conduit seal within 18 inches of conduit entry.
4. Disconnect power before servicing.

Electrical connections to the RTD Transmitter are made to the terminal block located inside the housing. Unscrew and remove the cover. Wire as shown in FIG. B.

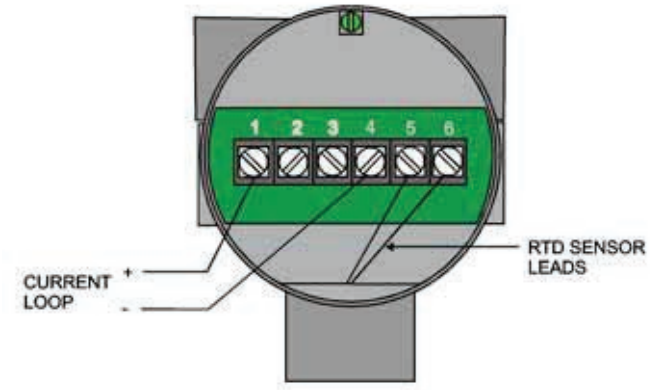

FIG. B

Temperature Range Selection

The RTD Transmitter has 7 built in temperature ranges and a user settable range that are selectable by setting the Dip Switch located inside the housing (Fig C). Switches 2, 3, and 4 are used to set the range. To set the desired range, unscrew and remove the cover and set the Dip Switch according to the following table:

	DIP SWITCH		
Selectable Ranges	**2**	**3**	**4**
40 to 90°F (4.4 to 32.2°C)	OFF	OFF	OFF
-20 to 140°F (-28.9 to 60°C)	ON	OFF	OFF
0 to 100°F (-17.8 to 37.8°C)	OFF	ON	OFF
30 to 240°F (-1.1 to 115.6°C)	ON	ON	OFF
32 to 212°F (0 to 100°C)	OFF	OFF	ON
32 to 122°F (0 to 50°C)	ON	OFF	ON
-30 to 65°C (-1.1 to 18.3°C)	OFF	ON	ON
User Settable	ON	ON	ON

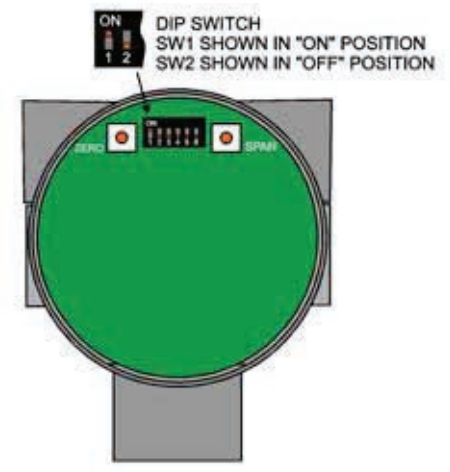

FIG. C

Setting and Calibrating the User Settable Range
By setting SWITCH 2, 3, and 4 on, the RTD Transmitter may be adjusted to a custom user specified range. The range may be any values between –30°F and +250°F (-34 to +121°C) with a MINIMUM SPAN of 40°F (22°C).

Equipment Required
In order to calibrate the unit for a custom range, a precision RTD simulator that can simulate a 1000 OHM DIN type RTD or precision decade box is required. The device must be capable of generating the correct RTD resistance to 0.1% or better.

Calibration Procedure
1. Set DIP SWITCHES 2, 3 and 4 ON.
2. Remove the RTD sensor leads from terminals 5 and 6 (Fig. B). Connect the precision RTD simulator or decade box to terminals 5 and 6.
3. Wire instrument as previously discussed. A current meter may be wired in series with the unit to verify the correct current output, but this is not necessary for calibration. Apply power to the unit.
4. If a precision RTD simulator is used, make sure it is set to simulate a 1000 OHM DIN 0.00385 RTD. Then set it to the desired minimum temperature. If a decade box is used refer to the table in Appendix A (°F) or Appendix B (°C) and set it to the resistance that represents the desired minimum temperature.
5. Press the ZERO button. If the unit has the optional LCD, the display will read ZERO OK momentarily. If a current meter is wired, it will read 4.00mA.
6. Repeat step 4 using the value for the maximum desired temperature.
7. Press the SPAN button. If the unit has the optional LCD, the display will read SPAN OK momentarily. If a current meter is wired, it will read 20.00mA.
8. Turn off power to the unit. Disconnect the RTD simulator or decade box and reconnect the RTD sensor to terminals 5 and 6. Calibration is complete.

Note: The calibration procedure does not effect the calibration of any of the built in ranges.

°F and °C Selection
If the unit has the optional LCD display, DIP SWITCH 1 sets the display to read in °F or °C. SWITCH 1 “OFF” = °F
SWITCH 1 “ON” = °C.

Output Current Display
If the unit has the optional LCD display, the lower display will show the output current if DIP SWITCH 5 is “ON”. Setting DIP SWITCH 5 “OFF” causes the lower display to be blank.

Open RTD Protection
Upon detecting an open RTD, the unit may be set to force the output to read 3.5mA or 21mA based upon the setting of DIP SWITCH 6.
SWITCH 6 “OFF”, output forced to 3.5mA
SWITCH 6 “ON”, output forced to 21mA

Calibration
The unit requires no calibration. An internal precision resistor continually self calibrates the unit. Calibration may be verified by removing the sensor leads and testing the unit against a precision RTD simulator or a precision decade box. If the unit is found to out of calibration it must be returned to the factory for service.

MAINTENANCE
Upon final installation of the Series TTE Explosion Proof RTD Temperature Transmitter, no routine maintenance is required. A periodic check of the system calibration is recommended. The Series TTE is not field serviceable and should be returned if repair is needed (field repair should not be attempted and may void warranty). Be sure to include a brief description of the problem plus any relevant application notes. Contact customer service to receive a return goods authorization number for shipping.

AHU-3:INTRNSIC SAFETY BARRIER:FILTER DP, BUILDING STATIC PRESS TRANSMITTER

MTL7700 range

DIN-rail mounting safety barriers

- **Removable terminals**
- **Bussed power feed to other modules**
- **Relay and solid state switch modules**
- **Dual channel variants – 6.3mm per channel**
- **Proximity detector inputs**
- **Electronic fusing**
- **Direct replacement for MTL700 range barriers**
- **Compatible terminal numbering and safety descriptions**

Since its introduction in 1984 the MTL700 range has established itself as the worldwide standard for safety barriers. Known for its quality and reliability, the MTL700 range is widely used in applications all over the world.

The MTL7700 range follows closely in the footsteps of the MTL700, but as a DIN rail mounting barrier, providing quick and easy installation without the need for special hardware.

Removable terminals are used for ease of installation, maintenance and for providing a loop disconnect by simply unplugging the terminals from the side of the module. Wire entry is also angled to assist wiring within limited space enclosures.

MTL7700 barriers clamp simply and securely onto standard T-section DIN rail, simultaneously making a reliable IS earth connection.

For applications where field power is required for switch inputs or 2-wire transmitters, the MTL7700 range provides a bussed power feed facility. When used in conjunction with the MTL7798 power feed module the user has a fully protected, electronically fused supply to many barriers with no additional wiring required.

MTL7700 active modules are protected with an electronic fuse for the majority of applications. The MTL7798 active fused, power feed module can protect up to 40 other modules using the bussed power facility and provides a clear indication of a trip condition via a red LED.

The MTL774X range of barriers offer a NAMUR compatible input and a choice of relay or solid state output. The solid state outputs are floating so switching to ground or from a power rail into an input is also possible. The solid state interface also provides a high frequency transfer for use in flow or rotation applications.

Dual channel relay or solid state modules offer the highest packing density with only 6.3mm per channel and when used in conjunction with the power bus, offer users the minimum of wiring with the maximum packing density and the lowest cost per channel.

* Diagrams show positive versions. All diodes reversed on negative versions. Additional diodes fitted on ac versions.

HOW THEY WORK

All MTL7700 range barriers are based on the same simple principle. Each channel contains two stages of pulse-tested Zener or forward-connected diodes and an 'infallible' terminating resistor. In the event of an electrical fault in the safe area, the diodes limit the voltage that can reach the hazardous area and the resistor limits the current. A fuse protects the diodes, and the two stages of voltage limitation ensure continued safety if either stage should fail. No active output-current limiting circuits are employed. All models are certified 'ia' for all zones and 'IIC' for all explosive atmospheres (except MTL7707P+ and MTL7729P+, 'ia' 'IIB').

TERMINOLOGY

1. Safety description
The safety description of a barrier, eg '10V 50Ω 200mA', refers to the maximum voltage of the terminating Zener or forward diode while the fuse is blowing, the minimum value of the terminating resistor, and the corresponding maximum short-circuit current. It is an indication of the fault energy that can be developed in the hazardous area, and not of the working voltage or end-to-end resistance.

2. Polarity
Barriers may be polarised + or –, or non-polarised ('ac'). Polarised barriers accept and/or deliver safe-area voltages of the specified polarity only. Non-polarised barriers support voltages of either polarity applied at either end.

3. End-to-end resistance
The resistance between the two ends of a barrier channel at 20°C, i.e. of the resistors and the fuse. If diodes or transistors are present, their voltage drop (transistors ON) is quoted in addition.

4. Working voltage (Vwkg)
The greatest steady voltage, of appropriate polarity, that can be applied between the safe-area terminal of a 'basic' barrier channel and earth at 20°C for the specified leakage current, with the hazardous-area terminal open circuit.

5. Maximum voltage (Vmax)
The greatest steady voltage, of appropriate polarity, that can be applied continuously between the safe-area terminal of any barrier channel and earth at 20°C without blowing the fuse. For 'basic' barriers, it is specified with the hazardous-area terminal open circuit; if current is drawn in the hazardous area, the maximum voltage for these barriers is reduced. The 'ac' channels of 'basic' barriers and most channels of overvolt-protected barriers withstand voltages of the opposite polarity also – see circuit diagrams.

6. Fuse rating
The greatest current that can be passed continuously (for 1000 hours at 35°C) through the fuse.

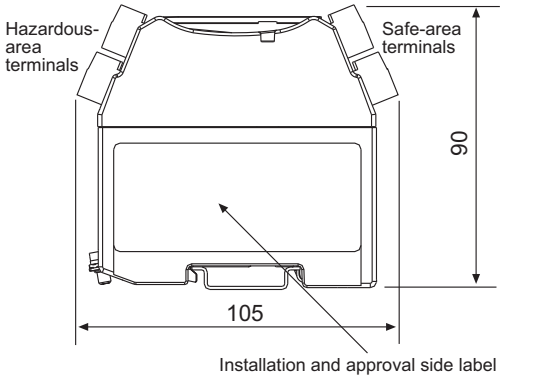
7. Star connection
In star-connected barriers, the two channels are interlocked such that the voltage between them cannot exceed the working voltage, Vwkg: this allows for higher cable capacitance or inductance.

8. Maximum safe-area voltage (U_m)
The maximum permissible safe-area voltage (U_m) for MTL7700 range barriers is 250V ac/dc.

GENERAL SPECIFICATION

Ambient temperature and humidity limits
–20 to +60°C continuous working
–40 to +80°C storage
5–95% RH

Leakage current
For 'basic' barriers with a working voltage of 5V or more, the leakage current decreases by at least one decade per volt reduction in applied voltage below the working voltage, over two decades. For the MTL7755ac/7756ac it decreases by at least one decade for a 0.4V reduction in applied voltage.



Terminations
Removable terminals accommodate conductors up to 2.5mm^2 (13AWG). Hazardous-area terminals are identified by blue labels. Removal force >15N

Colour coding of barrier label
Grey: non-polarised
Red: positive polarity (MTL7706 negative to transmitter)
Black: negative polarity
White: dummy barrier, MTL7799

Weight
140g approx

Mounting and earthing
By 35mm Top Hat DIN rail

DIMENSIONS (mm)

MTL7700 RANGE KEY BARRIERS SUMMARISED

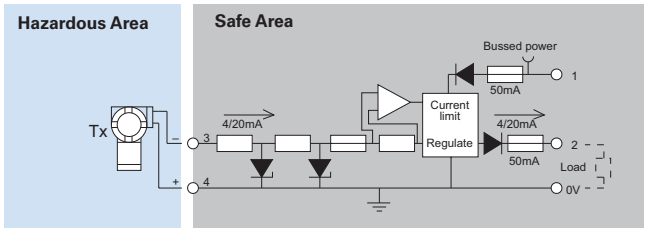
Digital (on/off) output	Solenoids, alarms, LEDs	7728

ACTIVE / ELECTRONICALLY PROTECTED BARRIERS

ACTIVE / ELECTRONICALLY PROTECTED BARRIERS

The following barriers have built-in overvolt protection, allowing their use with unregulated power supplies. In many applications, eg, sensor inputs or controller outputs, there is insufficient power available to blow the barrier fuse and this additional protection is not necessary. However, where the barrier is connected to a power supply, eg, for energising transmitters, switches, solenoids or local alarms, overvolt protection allows the barriers to be used with unregulated supplies and also gives protection against faulty wiring during commissioning.

MTL7706+ for 'smart' 2-wire 4/20mA transmitters



The MTL7706+ is a 1-channel shunt-diode safety barrier, with built-in electronic overvolt protection, for energising a 2-wire, 4/20mA transmitter in a hazardous area. It is powered from a positive supply of 20–35V dc and delivers a 4/20mA signal into an earthed load in the safe area. It is proof against short circuits in the field and in the safe area and is extremely accurate. The MTL7706+ will pass incoming communication signals up to 10kHz from a 'smart' transmitter, while in the outgoing direction it will pass signals of any frequency likely to be encountered.

Since the MTL7706+ has no return channel for energising the load, the entire output of the single '28V' channel is available to power the transmitter, providing high output capability. This channel is negatively polarised, and the safe-area signal is in fact the very current that returns through it from the hazardous area, the novel circuit being energised by a built-in floating dc supply derived from the external dc source of power.

To prevent any leakage through the zener diodes and maximise the output voltage available at 20mA, the floating supply is given a rising voltage/current characteristic. A separate circuit limits the current to protect the fuse in the event of a short circuit in the hazardous area.

With a 20V supply, the barrier will deliver 16.2V minimum at 20mA for the transmitter and lines and consumes typically 45mA at 24V operation.

BASIC CIRCUIT

ADDITIONAL SPECIFICATION

Safety description
28V 300Ω 93mA

Supply voltage
20 to 35V dc w.r.t earth

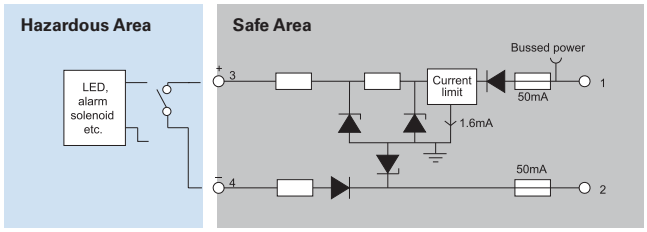
Output current
4 to 20 mA

Voltage available to transmitter and lines
16.2V @ 20mA with 250Ω load (negative w.r.t. earth)
11.0V @ 20mA with 500Ω load (negative w.r.t. earth)

Accuracy
±2μA under all conditions

Safe-area load resistance
0 to 500Ω

Supply current
45mA typical at 20mA and 24V supply
60mA maximum at 20mA and 20V supply



MTL7707+ for switch inputs and switched outputs

The MTL7707+ is a 2-channel shunt-diode safety barrier similar to the MTL7787+ but with built-in electronic overvolt protection. It is intended primarily for safeguarding a hazardous-area switch controlling a relay, opto-coupler or other safe-area load from an unregulated dc supply in the safe area.

The outgoing channel accepts supply voltages up to +35V and is protected against reverse voltages: the return channel is unaffected by voltages up to +250V.

In normal operation the protection circuit introduces only a small voltage drop and shunts less than 1mA to earth, so its overall effect is minimal. If the supply voltage exceeds about 27V, however, causing the Zener diodes to conduct – or if the safe-area load has a very low resistance – the supply current is limited automatically to 50mA, protecting the fuse and power supply and enabling the loop to continue working.

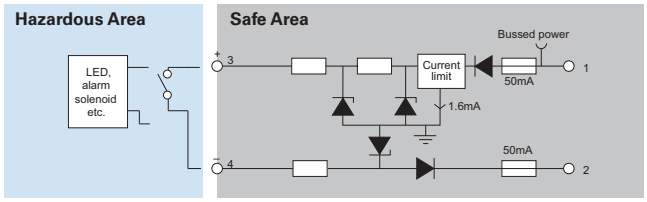
BASIC CIRCUIT

ADDITIONAL SPECIFICATION

Safety description
28V 300Ω 93mA, terminals 1 to 3
28V Diode, terminals 2 -4

Supply voltage
10 to 35V dc with respect to earth

Output current
Up to 35mA available



Maximum voltage drop
(at 20°C, current not limited)
Iout x 345Ω + 0.3V, terminals 1 to 3
Iout x 25Ω + 0.9V, terminals 4 to 2

Supply current
Iout + 1.6mA, supply <26V
Limited to 50mA, supply >28V or low load resistance

MTL7707P+ for switch inputs and switched outputs, 2W Transmitters (IIB gases)

The MTL7707P+ is a two-channel shunt-diode safety barrier similar to the MTL7787P+, but is designed for use with group IIB gases and features built-in electronic overvolt protection allowing use with unregulated power supplies up to 35V dc. It is intended primarily as a low cost solution for driving IIB certified 2-wire 4/20mA transmitters, but can also be used with controller outputs with current monitoring, solenoid valves and switches. To protect the fuse and enable the loop to continue working, the supply current is limited automatically at 50mA should the output be short-circuited or excess voltage applied.

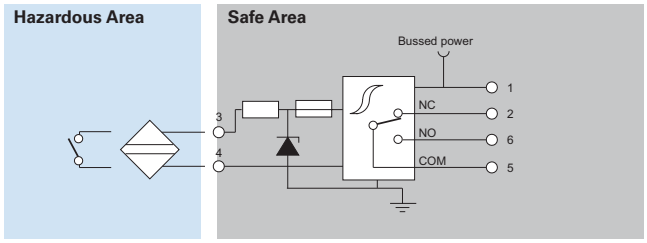
BASIC CIRCUIT

ADDITIONAL SPECIFICATION

Safety description
28V 164Ω 171mA, terminals 1 to 3
28V Diode, terminals 4 to 2

Supply voltage
10 to 35V dc with respect to earth

Output current
Up to 35mA available



Maximum voltage drop
(at 20ºC, current not limited)
Iout x 218Ω + 0.3V, terminals 1 to 3
Iout x 20.1Ω + 0.9V, terminals 4 to 2

Supply current
Iout + 1.6mA, supply <26V
Limited to 50mA, supply >28V or low load resistance

MTL7741 proximity sensor or switch input and relay output

The MTL7741 is a single channel switch/prox input barrier with changeover relay contacts acting as the safe area interface. Relay contacts provide a universal interface capable of switching a wide range of signals including ac, low level and high level voltages. Phase reversal is achieved by connecting the normally open or normally closed contacts as required. The power bus terminal may be used to connect the module to a power source.

BASIC CIRCUIT

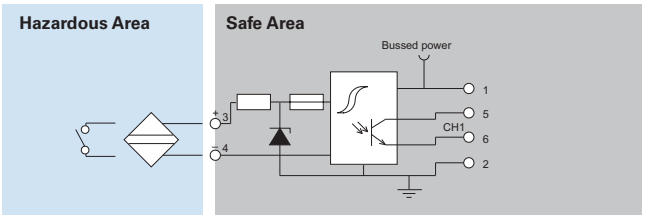
ADDITIONAL SPECIFICATION

Safety description
10V 19mA

Supply voltage
22.9 to 30V dc with respect to earth

Input characteristics
Relay energised if input >2.1mA(<2kΩ)
Relay de-energised if input <1.2mA(>10kΩ)

Relay Contacts
33V ac 0.5A. Resistive
30V dc, 1A. Resistive



Supply current
26mA maximum @ 24V

Response time
<10ms

MTL7742 proximity sensor or switch input with solid state output

The MTL7742 is a single channel switch/prox input barrier with an open collector solid state interface to the safe area equipment. The solid state switch is especially useful for high frequency switching apparatus including pulse and rotational sensors. The power bus terminal can be used to connect power to the module and the input power supply range makes the module suitable for use with unregulated supplies.

BASIC CIRCUIT

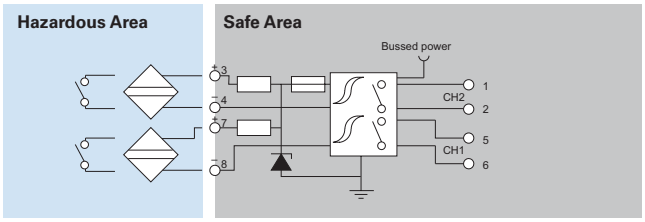
ADDITIONAL SPECIFICATION

Safety description
10V 19mA

Supply voltage
20 to 35V dc with respect to earth

Input characteristics
Output energised if input >2.1mA(<2kΩ)
Output de-energised if input <1.2mA(>10kΩ)

Output characteristics



Operating frequency	dc to 2.5kHz
Max off-state voltage	35V
Max off-state leakage	10µA
Max on-state voltage drop	<1.41V @ 50mA, <1.22V @ 2mA typically <1V
Max on-state current	50mA

Supply current
20mA maximum @ 24V

MTL7743 2 channel proximity sensor or switch input and relay outputs

The MTL7743 is a dual channel switch/prox sensor input barrier with a relay interface. This module is ideal for applications where high channel packing densities are required for digital inputs. Power is connected using the power bus terminal.

BASIC CIRCUIT

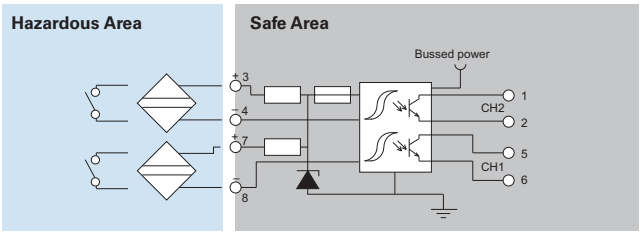
ADDITIONAL SPECIFICATION

Safety description
10V 19mA

Supply voltage
22.9 to 30V dc with respect to earth

Input characteristics
Relay energised if input >2.1mA(<2kΩ)
Relay de-energised if input <1.2mA(>10kΩ)

Relay Contacts
AC 33V, 0.5A. resistive; DC 30V, 1A. resistive



Supply current
45mA maximum @ 24V

Response time
<10ms

MTL7744 2 channel proximity sensor or switch inputs with solid state outputs

A dual channel version of the MTL7742. This module provides two solid state interfaces for prox/switch inputs. Power is connected via the power bus.

BASIC CIRCUIT

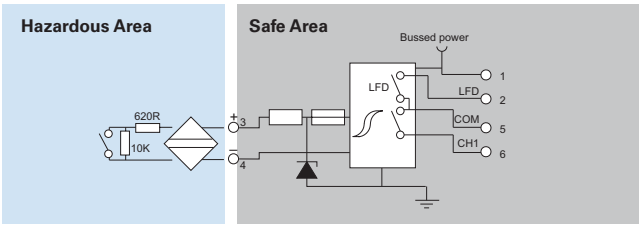
ADDITIONAL SPECIFICATION

Safety description
10V 19mA
10V 19mA

Supply voltage
20 to 35V dc with respect to earth

Input characteristics
Output energised if input >2.1mA(<2kΩ)
Output de-energised if input <1.2mA(>10k)

Output characteristics



Operating frequency	dc to 2.5kHz
Max off-state voltage	35V
Max off-state leakage	10µA
Max on-state voltage drop	1.41V @ 50mA, 1.22V @ 2mA typically <1V
Max on-state current	50mA

Supply current
29mA maximum @ 24V

MTL7745 proximity sensor or switch input with relay output and line fault detect

The MTL7745 is a single channel switch/prox input barrier providing line fault detection. Proximity detectors or switches fitted with end-of-line resistors may be connected. Short circuit or open ciruit conditions in the field wiring will generate an alarm condition. The LFD relay contacts close when a fault is detected allowing the contacts to be connected in parallel to provide a common alarm. The power bus terminal can be used to connect power to this module.

BASIC CIRCUIT

ADDITIONAL SPECIFICATION

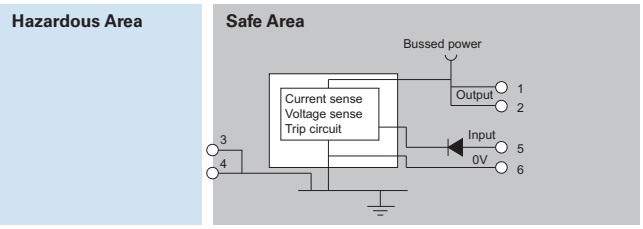
Safety description
10V 19mA

Supply voltage
22.9 to 30V dc with respect to earth

Input characteristics
Output energised if input >2.1mA(<2kΩ)
Output de-energised if input <1.2mA(>10kΩ)

LFD relay + Red LED
Energised if input <50µA or <100Ω

Relay contacts
33V ac 0.5A. Resistive
30V dc, 1A. Resistive



Supply current
38mA maximum @ 24V

Response time
<10ms

MTL7798 Power feed and protection module

The MTL7798 power feed module incorporates both voltage and current sense mechanisms to protect barrier circuits by activating a solid state trip mechanism when fault or overload conditions occur in the power source circuit. Resetting the module after tripping is achieved by interupting the supply to the unit. A red LED indicates a circuit trip condition and a green LED the availability of power at the outputs. Bussed power for other modules is sourced from the top of the unit using the Bus Power Link BPL7700 or via terminals 1 and 2.

BASIC CIRCUIT

ADDITIONAL SPECIFICATION

Input voltage range (terminals 5&6)
20 to 26.8V

Maximum input voltage capability
45V

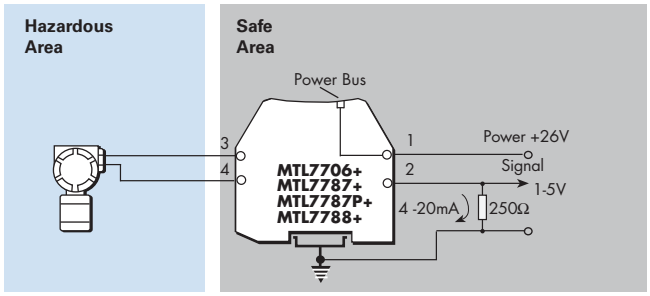
Power source requirements
>1.8A

Trip mechanism
Minimum trip 26.8V @ 20°C (+18mV/°C)

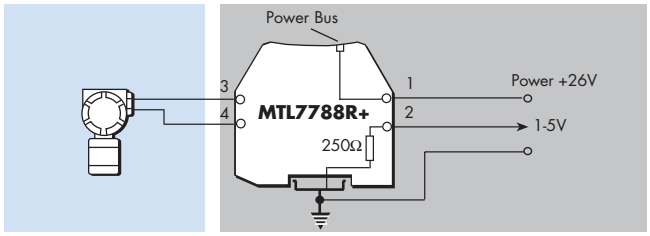
Output current range
0 to 800mA

Maximum voltage drop
20mV @ 0mA, 1.0V @ 800mA load

MTL7700 RANGE BARRIER APPLICATIONS



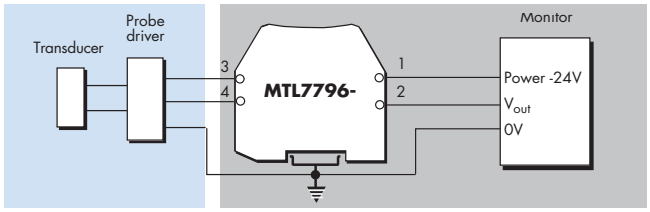
MTL7700 range barriers protect devices located in all normally occurring explosive atmospheres, including air/flammable gas mixtures, dusts and fibres. Applications covered include the protection of installations incorporating uncertified devices ('simple apparatus') such as thermocouples, switches and resistive sensors, or separately certified 'energy storing' (or 'voltage producing') apparatus including ac sensors, transmitters and current-to-pneumatic (I/P) converters. Recommended choices for specific applications are discussed briefly in the following pages.



ANALOGUE INPUTS (HIGH LEVEL)

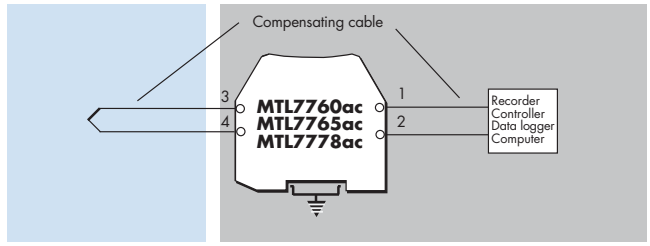
2-wire transmitters, 4/20mA, conventional and smart

The recommended barrier for use with 'conventional' and 'smart' 4/20mA transmitters (fed by a 26V regulated supply) is the MTL7787+. This provides up to 12.9V (14.6V for MTL7787P+) at Vwkg and 20mA for a transmitter and its lines as well as 5V for the typical 250Ω load. This application and this barrier is suitable for use with the optional power bus facility.



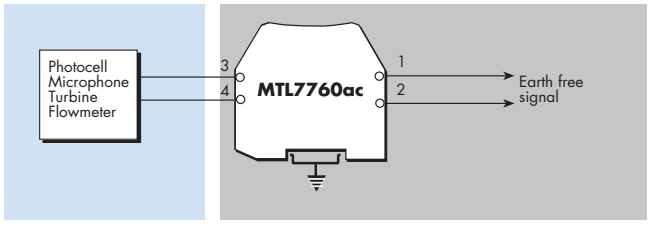
The MTL7706+ is recommended for applications where an unregulated supply of up to 35V is used. It provides 16.0V for conventional and Smart transmitters at 20mA, as well as 5V for a typical 250Ω load. With the MTL7706+ terminal 3 is negative with respect to earth, so the connections to terminals 3 and 4 should be reversed.

Vibration probes



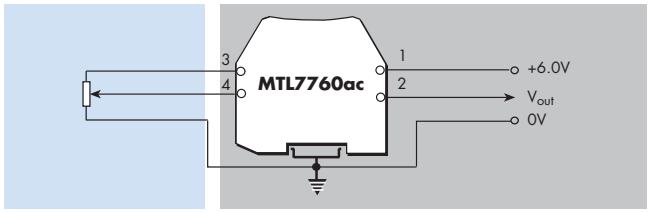
The 3-wire transmitters used with vibration monitoring equipment are invariably supplied by a –24V dc power supply – hence the recommended barrier choice is the negatively-polarised MTL7796–.

ANALOGUE INPUTS (LOW-LEVEL)



Thermocouples and mV sources

The recommended barrier for thermocouples and mV sources is the MTL7760ac. This 2-channel non-polarised barrier retains the 'earth-free' nature of the signal and, providing the receiver's input 'floats', rejects common-mode ac and dc interference up to at least 7V and is unaffected by earth faults on the primary element.

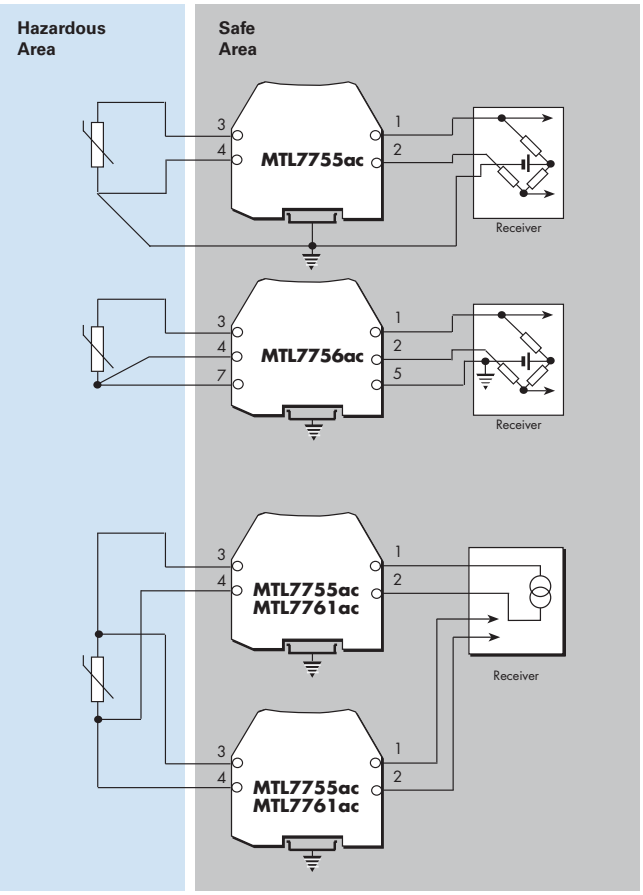


AC sensors, photocells, microphones and turbine flowmeters

The MTL7760ac is the recommended choice for these devices. While many of these are designated 'simple apparatus' and thus do not need certification, note that some ac sensors may be subject to a significant level of inductance and will therefore need to be designed and certified for hazardous-area locations.

Slidewire displacement transducers

The simplest choice is the MTL7760ac. This barrier supplies power and brings back a unipolar signal.



RTDs

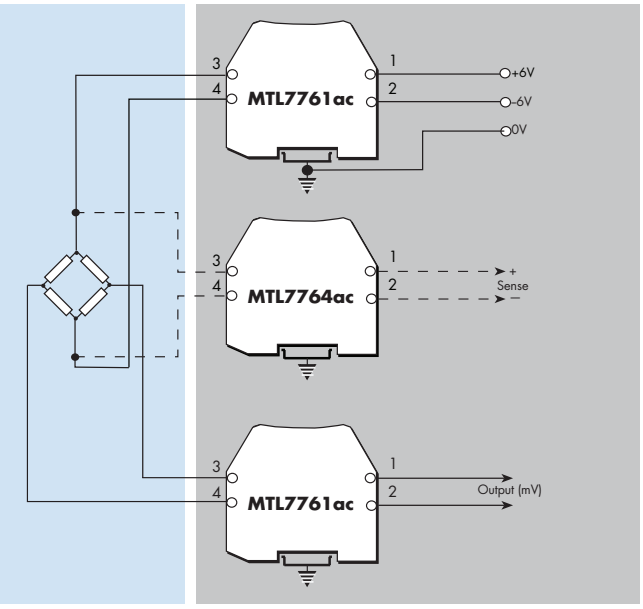
For 3-wire RTDs, a single MTL7755ac barrier is the most economical choice. This is suitable for use with a floating bridge – the two leads from the bridge arms are protected by the barrier with the third (supply) lead being earthed through the barrier. The barrier has a low end-to-end resistance of only 19Ω/channel to minimise span changes and its channels track within 0.15Ω (between –20°C and +60°C) to minimise zero shift with temperature.

If the bridge circuit is already earthed, the third barrier channel provided by an MTL7756ac is needed. For extreme accuracy, 3 channels and an earth-free bridge can be used, a configuration that cancels out the small errors due to barrier leakage.

Channels 1 and 2 (those between terminals 1 & 2 and 3 & 4 respectively) track to within 0.15Ω (between –20°C and 60°C).

4-wire constant-current circuits do not need matched barrier resistances and can be protected by two MTL7761ac barriers. If the increase in loop resistance is too great, use two MTL7755ac barriers instead.

STRAIN-GAUGE BRIDGES



Single strain-gauge bridges

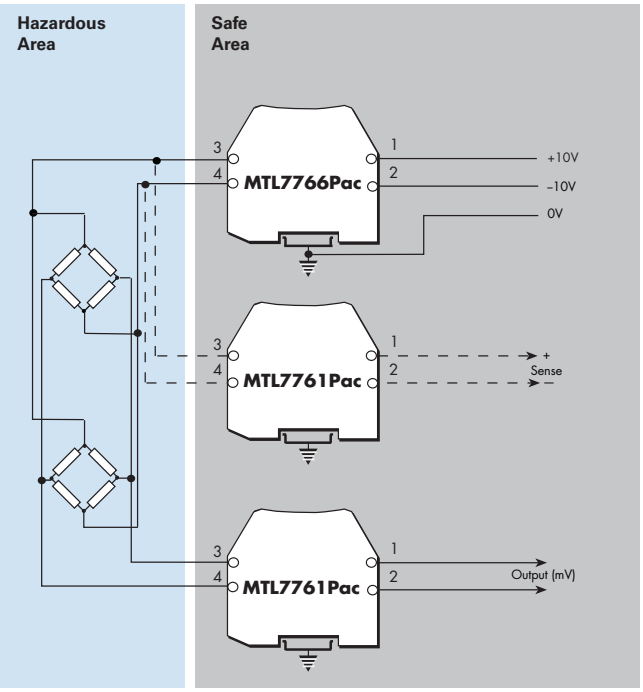
This shows an arrangement using two or three barriers, which is safe in IIC gases.

With the MTL7761ac, the circuit is powered from a 12V (±6V), 214Ω (107Ω + 107Ω) source. If the resistive bridge elements are 230Ω, then the voltage applied to the bridge will be 6.2V, and if the bridge resistances are 350Ω, then the bridge's applied voltage will be 7.4V.

An MTL7764ac can be used to sense the bridge supply voltage.

An MTL7761ac is used here for the mV output.

STRAIN-GAUGE BRIDGES (cont)



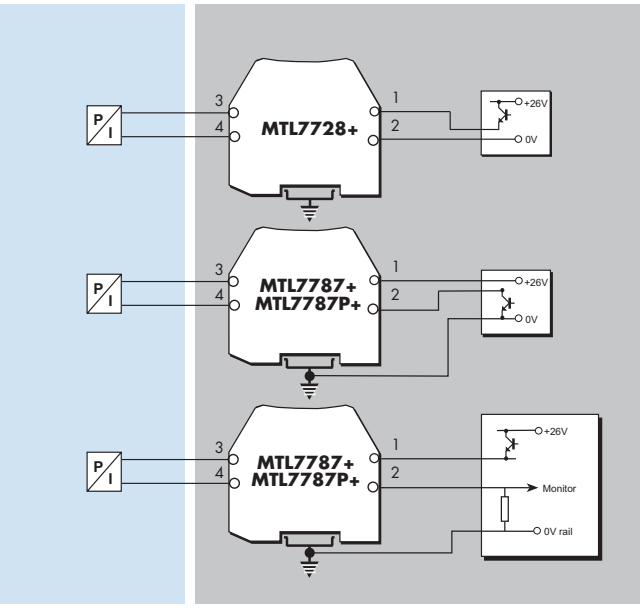
Double strain-gauge bridges
Quite frequently there is a demand to monitor two load cells, and a possible circuit, safe in IIC, is shown.

Here, the lower voltage drop of the MTL7766Pac is an advantage.

The MTL7766Pac supplies power to the bridge(s) while two MTL7761Pac barriers interface with the sense and pick-off circuits.

Using 350Ω bridge systems, the following voltages are available from an MTL7766Pac with a ±10V supply:

1 bridge:	13.11V
2 bridges:	9.75V



ANALOGUE OUTPUTS

Controller outputs (I/P converters)
The single-channel MTL7728+ with a voltage drop of 6.66V at 20mA is the recommended choice for most controller outputs. Higher-power versions are available: the MTL7728P+ (5.1V drop) is suitable for IIC applications; the MTL7729P+ (3.68V drop) for IIB applications.

For controllers with an output circuit separated from the 0V rail by the control transistor, the 2-channel MTL7787+ is the preferred choice as the return channel can handle up to 26.6V allowing the control signal to be turned off completely. The voltage drop is 8.1V at 20mA. A higher-power version of the latter, the MTL7787P+, is also available. The return channel of these barriers handle up to 26.4V and the maximum voltage drop is only 6.38V.

The MTL7787+ and MTL7787P+ are also suitable for controllers containing a resistor which enables the return current to be monitored for high-integrity operation.

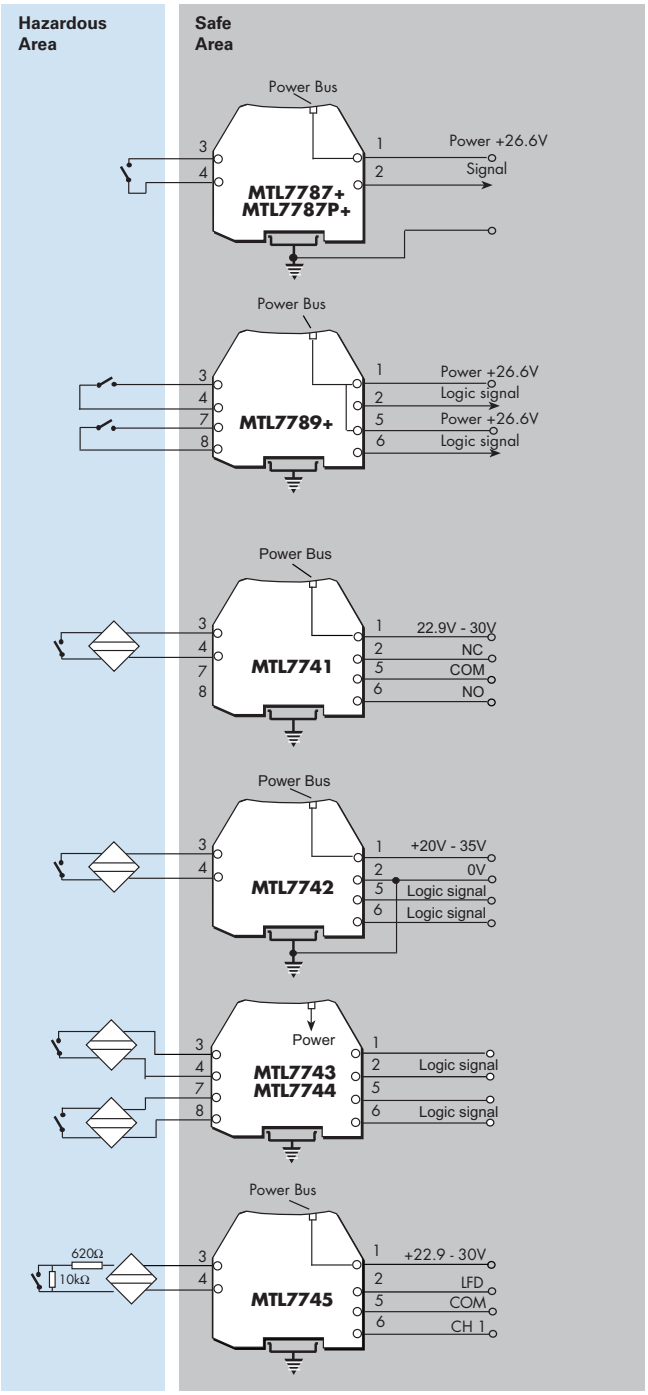
DIGITAL (ON/OFF) INPUTS

Switches

The normal choice is the MTL7787+/7787P+ with a regulated supply. The MTL774X modules are recommended for applications where an unregulated supply of up to 30V for relay output modules, or 35V for solid state output modules, is used.

The MTL7789+ offers a dual channel passive barrier for switch inputs where the input current for each channel is <10mA.

Switches / Proximity detectors



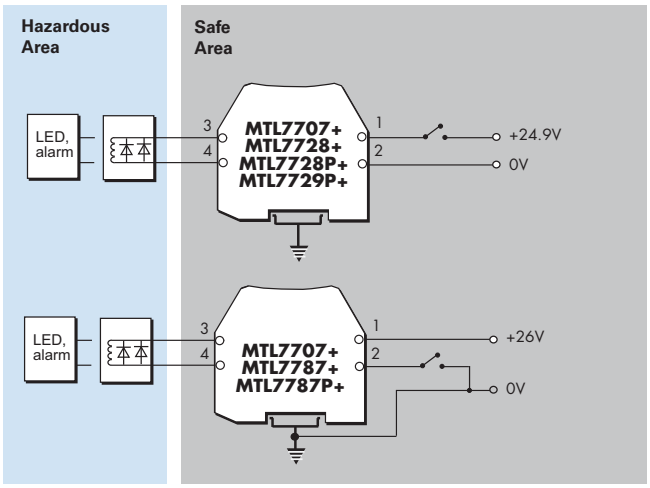
Eaton's MTL range of new switch/prox input barriers provide the user with a choice of relay and solid state outputs in single and dual channel versions.

The MTL7741 is single channel with a changeover relay output.

The MTL7742 has a single channel solid state switch that can be configured to switch from a power rail or down to ground. This is also ideal for high switching frequency applications.

The MTL7743 and MTL7744 are dual channel versions affording very high packing densities. Power must be provided to these modules using the power bus facility.

The MTL7745 is a single channel proximity input (or switch input if 'end of lines' resistors are fitted) with relay contacts providing switch and line fault status. The LFD relay contacts close when a fault is detected.

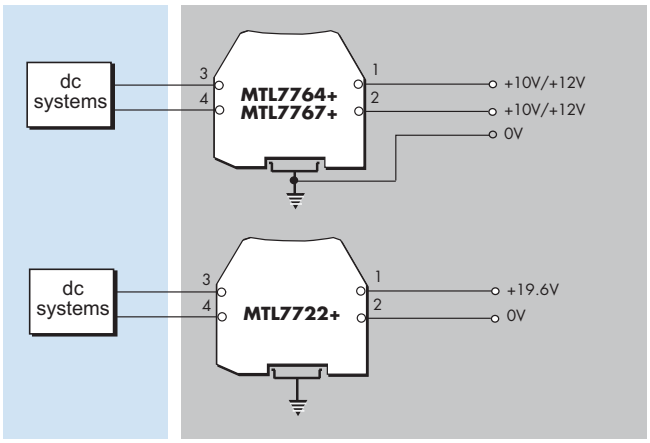


DIGITAL (ON/OFF) OUTPUTS

Alarms, LEDs, solenoids valves, etc
For these applications, the MTL7728+ is recommended. Higher-powered versions are available: the MTL7728P+ is suitable for IIC applications; the MTL7729P+ for IIB applications.

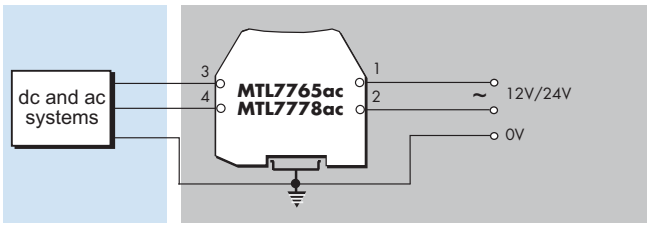
If the control switch is to earth, then the 2-channel MTL7787+ barrier should be used, or, alternatively, the MTL7787P+ higher-power version. If the supply is poorly regulated use the MTL7707+.

The MTL7707+ is recommended for applications where an unregulated supply of up to 35V is used.



POSITIVE DC SYSTEMS

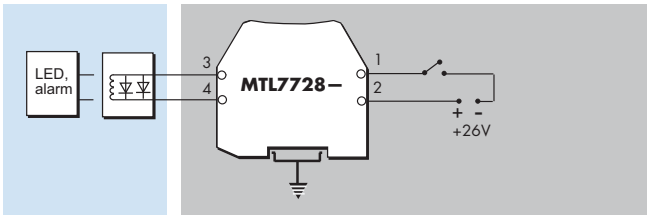
Low-level to 12V dc systems
The two channels of the MTL7764+ and MTL7767+ can be combined safely in IIC.



The MTL7764+ can be used for low-level logic return signals whilst the MTL7767+ is used for 6V dc and 12V dc systems.

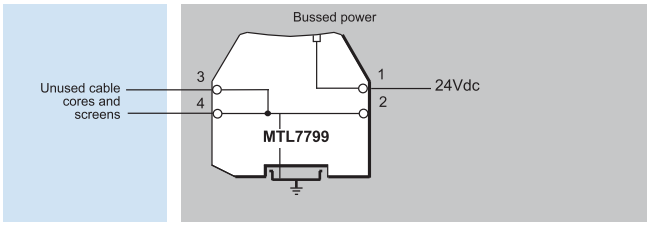
18V dc systems
The single-channel MTL7722+ is recommended for 18V dc systems.

AC AND DC SYSTEMS



High-level ac and dc systems
The versatile star-connected MTL7765ac and MTL7778ac allow Vwkg to be developed from each channel to ground but only allow Vwkg to be developed between channels. This provides some common-mode voltage capability and can allow higher cable parameters to be used.

NEGATIVE AND FLOATING POWER SUPPLIES



Digital (on/off) outputs
The MTL7728– is used with a negative power supply and positive earth. Typically used for digital inputs or outputs, as shown.

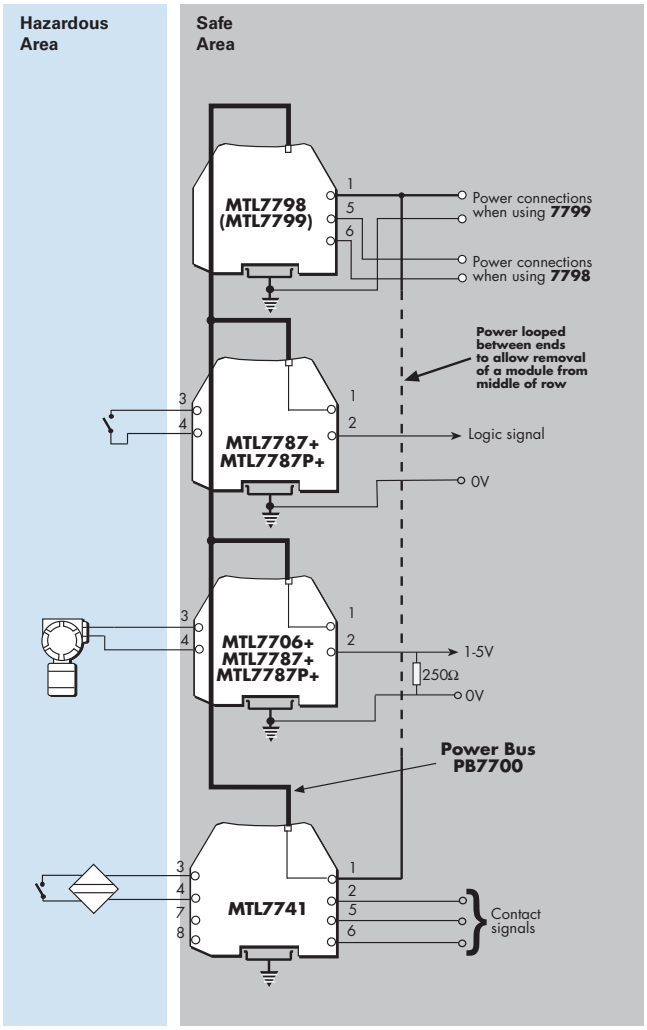
The MTL7728-- can also be used with floating power supplies, for transmitters.

SPARE CABLE CORES AND SCREENS

The MTL7799 dummy barrier is used primarily for securing and earthing unused cables and screen connections. Hazardous area terminals 3 and 4 are internally connected to the DIN-rail mounting/earth connection. It also provides a power bus connection for direct connection of power for modules such as the MTL7743 and MTL7744 where no power supply screw terminal is provided.

POWER BUS APPLICATIONS

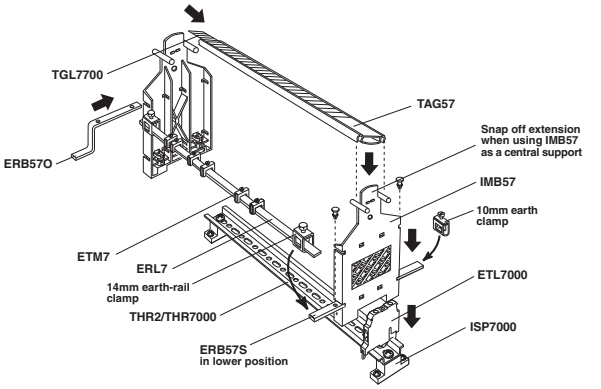
The PB7700 power bus is invaluable for saving installation time and wiring when connecting a 24V dc power source to a number of barriers.



Typical applications include hazardous-area switches, 4/20mA transmitters and proximity detectors. The diagram illustrates the configuration for 4 barriers but up to 40 barriers can be served by this method.

The MTL7798 power feed module would normally be used with standard barriers such as MTL7787+ and MTL7787P+ because the current/voltage trip protection mechanism of the MTL7798 protects the fuses in the barriers.

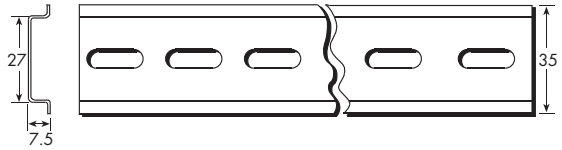
The MTL7799 dummy barrier can be used instead of the MTL7798 for direct 'feed-through' connection of a 24V dc supply onto the power bus. Looping the power feed to each end of the bussed power allows the removal of individual barriers without loss of power to others in the chain.



Other units that can use the power bus facility:

- MTL7706
- MTL7707+
- MTL7707P+
- MTL7741
- MTL7742
- MTL7743
- MTL7744
- MTL7745
- MTL7787+
- MTL7787P+
- MTL7788+
- MTL7788R+
- MTL7789+

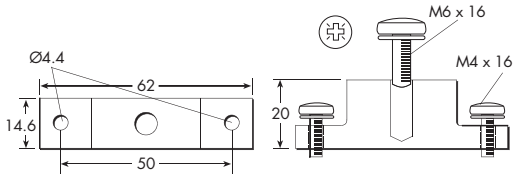
MTL7700 RANGE ACCESSORIES



MOUNTING/EARTHING ACCESSORIES

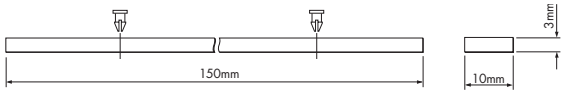
MTL7700 range barriers mount easily and quickly onto standard DIN rail which also acts as the intrinsically safe earth.

THR2 standard DIN rail



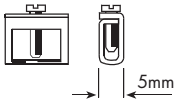
THR7000 plated rail

Specially nickel-plated T-section (35mm x 7.5mm) DIN rail for use in potentially corrosive atmospheres. Supplied in 1meter lengths.



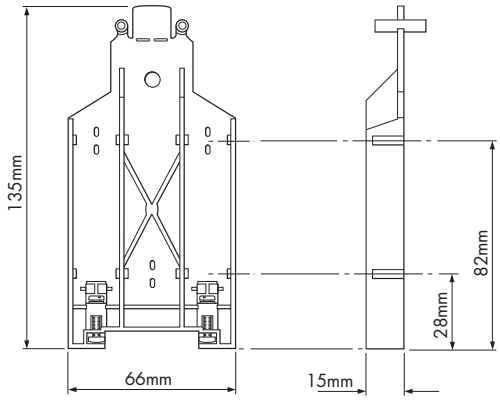
ISP7000 insulating spacers

Attached to the base of a DIN rail at either end or at intervals (depending upon DIN rail length) to isolate the IS earth from a structural earth.



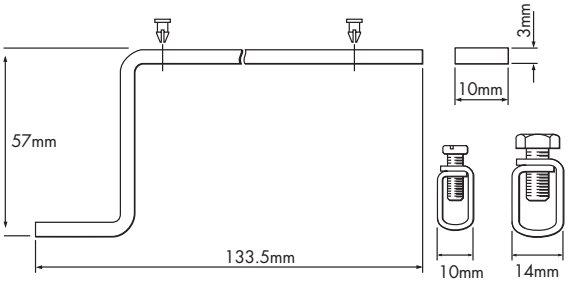
ERB57S Earth-rail bracket, straight

Nickel-plated; supplied with two push fasteners, one 14mm earth-rail clamp and one 10mm earth clamp for cables ≤16mm^2 (See ERB570).



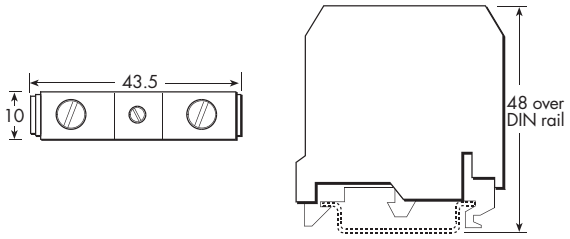
ETM7 earth terminal

For terminating cable screens and 0V earth returns and securing spare cores to the earth rail. A maximum of two ETM7s per barrier can be accommodated.



IMB57 Insulating mounting block

One required at each end of a tagging strip/earth rail. Suitable for low-profile (7.5mm) and high-profile (15mm) symmetrical DIN rail.

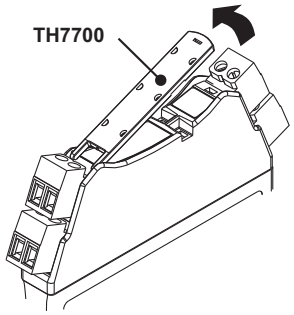


ERB57O Earth-rail bracket, offset

Nickel-plated; supplied with two push fasteners, one 14mm earth-rail clamp and one 10mm earth clamp for cables ≤16mm^2.

ETL7000 earth terminal

Provides connection for routing the IS earth from the DIN rail to an appropriate plant earth. Maximum cable cross-section is 10mm^2. Two recommended per discrete length of DIN rail. See instruction manual INM7700 for more details.



BPL7700 Power Bus link

When a number of barriers use a common power supply, the optional power link (BPL7700) can be used. Typical applications include hazardous area switches, solenoids and 4–20mA transmitters. The barriers it can be used with are the MTL7706, MTL7707+, MTL7787+, MTL7787P+, MTL7789P+ and MTL774X. See next page for further details.

TAGGING ACCESSORIES

Two methods of tagging are available which can be used separately or together:

1) **Individual barrier identification**
TH7700 barrier identifiers
TH7700 barrier identifiers are supplied clipped on to the tops of individual barriers to provide transparent holders for identification labels.

2) **Tagging strip method**
TAG57 Tagging strip, 1m length
Cut to size. Supplied with reversible tagging strip label suitable for either MTL5000 or MTL7000 range module spacing.

TGL7700 Tagging strip labels, set of 10 x 0.5m
For use with TAG57 tagging strip. Tags are reversible - one side for MTL7700, the other for MTL700.

MTL700 BUSBAR ACCESSORY

ADB700 Adaptor bracket, MTL7700
Tin-plated; supplied with two M4 screws and washers. For mounting an MTL7700 range barrier to an MTL700 busbar (EBB7).

Note: This is only to be used when the EBB7 is supported by IMB7 insulating mounting blocks, it should not be used with the smaller SMB7 mounting blocks.

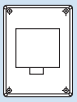
HOW TO ORDER

MTL7700 barriers
Select by barrier number and polarity,
e.g. MTL7728+

Mounting accessories

THR2	Standard DIN-rail, 35 x 7.5mm
THR7000	T-section DIN-rail, specially-plated, 35 x 7.5mm, 1m length
ISP7000	Insulating spacer
ADB700	Adaptor bracket to convert MTL700

Standard earthing/earth-rail accessories



ETL7000	Earth terminal, DIN-rail mounted
IMB57	Insulating mounting block
ERB57S	Earth-rail bracket, straight
ERB57O	Earth-rail bracket, offset
ERL7	Earth rail, 1m length
ETM7	Earth terminal, pack of 50

Standard tagging accessories

TAG57	Tagging strip, 1m length
TGL7700	Tagging strip labels, set of 10 x 0.5m

Bussed power links

BPL7700	Pack of 100

Enclosures

DX070	Enclosure, for MTL7700 x 5
DX170	Enclosure, for MTL7700 x 13

Spares (all in packs of 10)

SAF7712	Safe-area terminals 1 & 2
HAZ7734	Hazardous area terminals 3 & 4
SAF7756	Safe-area terminals 5 & 6
HAZ7778	Hazardous area terminals 7 & 8
TH7700	Tag holder

INM7700	Instruction manual, MTL7700 range
INA7700	ATEX information, MTL7700 range
INM57ENC	Instruction manual, MTL5000/7000 range Enclosures
CD7700...	Customer drawings

AHU-3:FILTER DP,BUILDING STATIC PRESS TRANSMITTER POWER SUPPLY

KELE DC POWER SUPPLY
DCP-1.5-W

DESCRIPTION

The **Kele DCP-1.5-W** is a regulated 1.5A power supply that accepts 24 VAC at the input and provides 24 VDC at the output. The **DCP-1.5-W** can be ordered with any output voltage from 1.5V to 27 VDC. Field voltage adjustments may also be made using only a screwdriver. The power supply is provided with a mounting track for easy field application. This low cost power supply features good regulation and has full overcurrent protection.

FEATURES

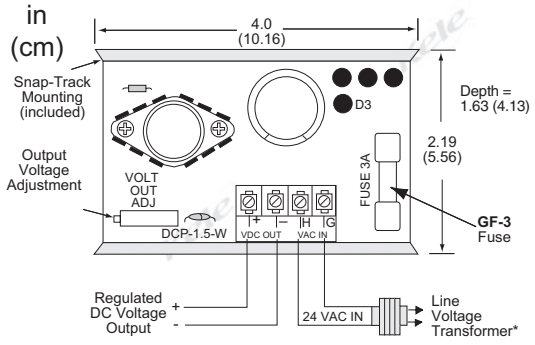
- ***Low cost***
- ***Regulated DC output***
- ***Snap-track mounted***
- ***Screw terminals with pressure plates***
- ***Adjustable DC output***
- ***Full-wave rectified***

DCP-1.5-W

APPLICATION

In general, the output current rating will be reduced by the ratio of the output voltage divided by the input voltage. For example, a 6 VDC supply powered by a 24 VAC transformer will have a reduced-rated output current of 375 mA. (6/24) x 1.5 = 0.375

To obtain the full-rated output current at reduced output voltages, the standard power supply input voltage must be reduced. It is a good practice to maintain the same AC input voltage as the desired DC output voltage.



A grounded DC minus terminal and a grounded secondary 24 VAC input transformer will blow the unit's fuse. If this is a problem, there are three possible solutions:

Option 1: Remove the ground on the transformer secondary to float the voltage output, or use a separate ungrounded transformer.

Option 2: Add a Model Y65G13-0 40 VA isolation transformer. This option reduces the power supply capacity to 920 mA.

Option 3: Remove diode D3 (marked on board). Jumper the VDC OUT (-) terminal to the VAC IN (G) terminal. The grounded side of the AC supply should be wired to the VAC IN (G) terminal. This option reduces the power supply capacity to 400 mA. (Sometimes call "1/2 wave" option)

DIMENSIONS / WIRING

* Input Transformer Required VA Rating @ 24 VAC = 43.2 x Desired DC Output Current
For full 1.5A capacity, use a 75 VA transformer.

SPECIFICATIONS

Supply Voltage	24 VAC
Output Voltage	24 VDC (full wave rectified and regulated), Adjustable 1.5 - 27 VDC (full wave rectified and regulated)
Supply Frequency	50/60 Hz
Regulation	1.5% at full rated current
Output Current	1.5A (with 75 VA transformer)
Over Current Protection	3A fuse (GF-3)
Mounting	Snap track (included)
Temperature Stability	1%
Operating Temperature	32° to 130°F (0° to 55°C)
Operating Humidity	95% RH non-condensing
Dimensions	1.63"H x 2.19"W x 4.0"D (4.13 x 5.56 x 10.16 cm)
Weight	0.4 lb (0.18 Kg)
Warranty	1 year

ORDERING INFORMATION

MODEL	DESCRIPTION
DCP-1.5-W	Power supply, 24 VAC IN to 24 VDC OUT
DCP-1.5-W-C	Power supply, 24 VAC In to special DC output (Specify output voltage when ordering, 1.5-27 VDC)

AHU3: LOW TEMP SWITCH IN DOWNSTREAM OF HOT WATER COIL

EXPLOSION PROOF HIGH AND LOW LIMIT CONTROLS

HZLIM SERIES

DESCRIPTION

The **Kele HZLIM Series explosion proof high and low limit controls** are field-assembled combinations of industry standard controls, heavy duty explosion proof enclosures, and seals for use in atmospheres that may contain hazardous gases or dusts (Groups B, C, D, E, F).

The **HZLIM-LO-A** includes the ultra reliable A11A-1 manual reset low limit control, a **XJA7514C2M2M** explosion proof enclosure, two EYM-75 conduit seals, and an ACK6F fiber/cement kit.

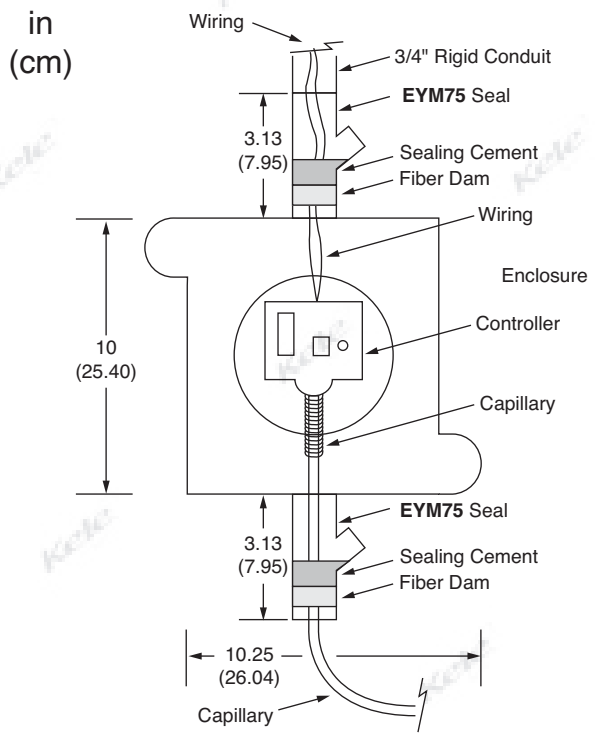
The **HZLIM-LO-B** is identical to the **HZLIM-LO-A** but includes the equally reliable A11B-1 automatic reset low limit control instead of the A11A-1.

The **HZLIM-HI** is also identical to the **HZLIM-LO-A** but includes the time proven A70KA-1 manual reset high limit control in place of the A11A-1.

HZLIM Series

FEATURES

- ***Class I Division 1 Groups B, C, D***
- ***Class II Division 1 Groups E, F,G***
- ***NEMA 7BCD, 9EFG***
- ***Long life, snap acting contacts***
- ***Easy set point adjust***
- ***Freeze protection for hazardous locations***
- ***Code required AHU high limit protection for hazardous locations***



SPECIFICATIONS

Refer to the A70 and A11 Series in the Thermostats and Controllers section for specifications, capillary, installation and wiring information.

CAUTION: Conduit seal MUST be installed within code-required distance from junction box to maintain explosion proof rating. For Group B and C atmospheres, conduit seals must be installed within 2" (5.08 cm) of the enclosure regardless of less stringent code requirements.

WARNING: All circuits MUST be de-energized before opening the cover of this device for any purpose, including resetting a manual reset controller or adjusting a set point. If work must be performed with an energized circuit, the atmosphere inside and outside the enclosure must be proven safe with a listed intrinsically safe combustible gas detector.

DIMENSIONS

HAZARDOUS LOCATIONS

EXPLOSION PROOF HIGH AND LOW LIMIT CONTROLS

HZLIM SERIES

INSTALLATION / MOUNTING

OPERATION

Install the XJATS14C2M2N1 enclosure, included with each kit, in its intended location. Install the two EYM75 conduit seals in the two tapped holes of the XJATS14C2M2N1 enclosure, making sure to engage a minimum of five full threads. Also be sure that the plugs on the conduit seals are both facing up and to the front (cement will be poured into them later). The male nipple, supplied with fittings, can be easily removed and replaced in the opposite side for proper orientation.

Unpack the A11 or A70 controller, and fully uncoil the capillary tubing. Place plastic bushings in both openings inside the enclosure and also in the bottom of the lower conduit seal. Gently feed the end of the capillary (or capillary and bulb) through the bottom opening and conduit seal from inside the XJATS14C2M2N1 enclosure, taking care not to nick or kink the capillary. Once the end is out, slowly feed the rest of the capillary fully through to the outside of the conduit seal. Use an assistant, if needed, to make sure that the inner and outer plastic bushings stay in place to protect the capillary from damage. Once this is accomplished, mount the A11 or A70 controller to the panel inside the enclosure. Install the capillary (or capillary and bulb) on the equipment according to the included instructions. Install rigid conduit and wiring as required by code from the upper conduit seal, engaging a minimum of five full threads at each joint. Only individual insulated conductors may pass through the conduit seal. If jacketed cable is used, the jacket must be stripped back beyond the seal or else a listed cable seal must be applied within the enclosure. Remove the plugs from the two conduit seals. Make sure that the wires and capillary are centered in the seals. Then install fiber dams and sealing compound in each according to the included instructions (minimum 0.75"/2 cm cement depth), and replace the plugs. Adjust the setpoint on the controller, install the cover for the XJATS14C2M2N1 enclosure, and tighten securely.

ORDERING INFORMATION

MODEL	DESCRIPTION
HZLIM-HI	Kit with one A70KA-1 manual reset high limit control, one XJATS14C2M2N1 enclosure, two EYM75 conduit seals, three plastic conduit bushings, and one ACK6F sealing kit Weight: 26.9 lb (12.2 kg)
HZLIM-LO-A	Kit with one A11A-1 manual reset low limit control, one XJATS14C2M2N1 enclosure, two EYM75 conduit seals, three plastic conduit bushings, and one ACK6F sealing kit Weight: 25.7 lb (11.7 kg)
HZLIM-LO-B	Kit with one A11B-1 automatic reset low limit control, one XJATS14C2M2N1 enclosure, two EYM75 conduit seals, three plastic conduit bushings, and one ACK6F sealing kit Weight: 25.7 lb (11.7 kg)

RELATED PRODUCTS

ACK6F	Cement: 1.9 lb * (0.85kg) Fiber: 0.3 lb (0.19 kg), 25 cu in (410 cu cm) volume when set * Consists of five 0.4 lb (0.19 kkg) cement pouches
EYM-75	3/4" size, 1.19" turning radius, 2 oz Kwiko cement required, Malleable Iron construction

MANUAL TIME SWITCH
93000 SERIES

HRV-1: TIMER SWITCH FOR LOCAL OVERRIDE

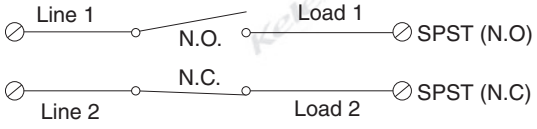
DESCRIPTION

The **Marktime 93000 Series wall box time switch** is a spring wound, manually set time switch for the control of electrical current. Interchangeable with standard toggle switches to turn circuits either off or on at the end of a preset time period, the **93000 Series** is ideally suited for new installations or retrofit projects.

93504C

MH RHODES CRAMER COMPANY

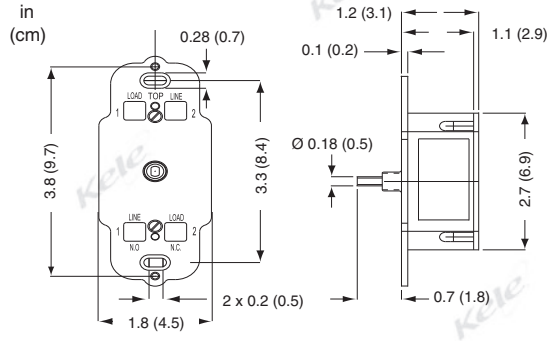
c UL us



FEATURES

- ***White and ivory plates and knobs included***
- ***Time range from minutes to 12 hours***
- ***Wwo-wire design to fit standard single-gang box***
- ***20 Amp Resistive & 1 hp Capability***
- ***Optional "Hold" models available***

SPECIFICATIONS



Supply Voltage	125/277VAC, 50/60Hz Not Required to operate Spring return count down timer
Operation	Manually Twist past mark to desired time, On activation both contacts transfer from normal
Relay Output Configuration	2-SPST, 1-N.O. and 1-N.C
Contact Current	
Resistive	20A @125 VAC, 10A @277VAC
Ballast	Do not use with Ballasts
Tungsten	7A Tungsten @125 VAC
FAN	1 Hp @125 VAC
Manual Override	Hold on some models
Clock Accuracy	± 5% of set time
Special Functions	
93351XC	HOLD closed in the "ON" position Full Metal faceplate
Indicators	None
Timers	0-(15, 30, 60, 120) minutes or 0-(4, 6, 12) hours
Operating Temperature	-40 to 120 (-40 to 49)
Operating Humidity	5% to 95% Non-condensing
Wiring Terminations	Terminals, 12 AWG
Mounting	Vertical, Single gang switch box (not included)
Color	Plastic plate in Ivory and White included
Enclosure Rating	NEMA 1
Dimensions	1.8"W x 3.8"H x 1.2"D (4.5 x 9.7 x 3.1 cm) Knob 0.75" from faceplate
Weight	0.4 lb (0.18 Kg)
Approvals	UL Listed, File E13151
Warranty	1 year

WIRING

Note: For SPDT operation, install jumper wire from Line 1 terminal to the Line 2 terminal

Advanced Application Field Equipment Controller (FAC) Catalog Page

GENERATOR CONTROLLER: AS REAL TIME CONTROL

Code No. LIT-1900759
Issued June 2018

Refer to the QuickLIT website for the most up-to-date version of this document.

The Advanced Application Field Equipment Controller (FAC) Series Controllers are programmable controllers that can communicate using BACnet/IP, MS/TP, or N2 communications protocols, depending on the model. The FAC4911 is a BACnet® Advanced Application Controller (B-AAC) that communicates using BACnet/IP communications protocol. The FAC2513 and the FAC3613 communicate using the BACnet MS/TP protocol. The other FAC Series controllers can be switched between MS/TP and N2 communication protocols. FAC controllers used as MS/TP devices are B-AACs with integral RS-485 MS/TP communications.

FAC Series Controllers feature an integral real-time clock. FACs support time-based tasks and maintain time-based control, which enables these field controllers to monitor and control schedules, calendars, alarms, and trends. FACs can continue time-based control and monitoring when offline for extended periods of time from a *Metasys*® system network.

FAC Series Controllers can also operate as stand-alone controllers in applications that do not require a networked supervisory device or for network applications where it is preferred to have the scheduling, alarming, and/or trending performed locally in the field controllers.

The FAC4911 controllers operate on BACnet/IP networks and integrate into Johnson Controls® and third-party systems.

The FAC3611 and FAC3613 models include a fast persistence feature that allows data values to be held at a configurable value, up to once per second. Persistence refers to how often samples of data are stored locally. In the event of a problem, such as a loss of power, data can be retrieved up to the rate that the data is persisted, minimizing the potential loss of data. When power is restored, previously persisted data, up to the rate of persistence, remains available and accessible. For example, if persistence is configured for once per second, you only risk losing one second of data. Persisting data may be essential for situations that require greater data accuracy, including certain methods of utility data collection and billing.

The FAC2612 controller features line-voltage relay outputs, which makes this controller well-suited for use in terminal units. The FAC2612-2 model uses a line-voltage power supply, which eliminates the need for a 24 VAC transformer in line-voltage applications.

The FAC2611, FAC2612, and FAC3611 controllers using the MS/TP protocol support wireless communications using the ZFR or ZFR Pro Series accessories and the WRZ-7860 One-to-One Receiver.

Important:	You cannot purchase a similar third-party device and install it in a UL/cUL Listed smoke control system. Doing so voids the UL/cUL Smoke Control Listing. Third-party devices must be provided and labeled by the factory as described in the UL/cUL Smoke Control Listing.

Important:	Only those Johnson Controls products identified for use in smoke control applications have been tested and listed by UL for use in a *Metasys* system UL/cUL 864 10th Edition UUKL/ORD-C100-13 UUKLC Smoke Control System. Installation of a product that is not UL/cUL Listed and labeled for this application prevents the entire system from being UL/cUL Listed for smoke control.

Refer to the *Metasys® System Field Equipment Controllers and Related Products Product Bulletin (LIT-12011042)* for product application details.

If the product fails to operate within its specifications, replace the product. For a replacement product, contact the nearest Johnson Controls® representative.

Figure 1: Advanced Application Field Equipment Controllers (FACs)

Features

- **Switchable Communications Protocols**—Provides flexibility with a choice between BACnet MS/TP and N2 communication.
- **Standard BACnet® Protocol**—Provides interoperability with other Building Automation System (BAS) products that use the widely accepted BACnet standard.
- **Standard Hardware and Software Platform**—Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows. Also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.
- **ZFR Wireless Field Controller (FC) or Sensor/Actuator (SA) Bus Interface**—Provides a wireless alternative to hard-wired *Metasys*® system counterparts with either the ZFR1800 Series Wireless Bus or the WNC1800/ZFR182x Pro Series Wireless Field Bus (ZFR Pro), offering application flexibility and mobility with minimal disruption to building occupants.
- **Bluetooth® Wireless Commissioning**—Provides an easy-to-use connection to the configuration and commissioning tool.
- **Auto-Tuned Control Loops**—Reduce commissioning time, eliminate change-of-season re-commissioning, and reduce wear and tear on mechanical devices.
- **Universal Inputs, Configurable Outputs, and Point Expansion Modules**—Allows multiple signal options to provide input/output flexibility.
- **BACnet® Testing Laboratories (BTL) Listed**—Ensures interoperability with other BTL-listed devices. BTL is a third-party agency, which validates that BAS vendor products meet the BACnet industry-standard protocol.
- **32-bit Microprocessor**—Ensures optimum performance and meets industry specifications.

- **BACnet Automatic Discovery**—Supports easy controller integration into a *Metasys* BAS.
- **End-of-Line (EOL) Switch in MS/TP Field Controllers** — Enables field controllers to be terminating devices on the communications bus.
- **Pluggable Communications Bus and Supply Power Terminal Blocks**—Expedites installation and troubleshooting.
- **Writable Flash Memory**—Allows standard or customized applications to be downloaded from the Controller Configuration Tool (CCT) and enables persistent application data.
- **DIS17 Remote Display and the MAP Gateway Support** — Enable monitoring and commanding of I/O and configuration parameters

Relay Output (RO)	RO: Single-Pole, Double-Throw (SPDT) RO: Single-Pole, Single-Throw (SPST)			2 - SPDT and 3 - SPST line-voltage relays, 1/4 hp 120 VAC, 1/2 hp 240 VAC			

1 This model is currently only available in Asia. Contact your local Johnson Controls representative for more information.
2 FAC4911 supports R9.0 or later versions of these engines.

Table 2: FAC Series Ordering Information

Product Code Number	Description
MS-FAC2513-0[1]	16-Point Advanced Application Field Equipment Controller with 4 UI, 6 BI, 2 CO, 2 BO, and 2 AO; 24 VAC; SA Bus; FC Bus; Integral Real-time Clock
MS-FAC2611-0	17-Point Advanced Application Field Equipment Controller with 6 UI, 2 BI, 4 CO, 3 BO, and 2 AO; 24 VAC; SA Bus; FC Bus; Integral Real-time Clock
MS-FAC2612-1	18-Point Advanced Application Field Equipment Controller with 5 UI, 4 BI, 4 CO, 2 SPDT and 3 SPST Line-Voltage ROs 1/4 hp 120 VAC, 1/2 hp 240 VAC; 24 VAC; SA Bus; FC Bus; Integral Real-time Clock;
MS-FAC2612-2	18-Point Advanced Application Field Equipment Controller with 5 UI, 4 BI, 4 CO, 2 SPDT and 3 SPST Line-Voltage ROs, 1/4 hp 120 VAC, 1/2 hp 240 VAC; 100–240 VAC; SA Bus; FC Bus; Integral Real-time Clock
MS-FAC3611-0	26-Point Advanced Application Field Equipment Controller with 8 UI, 6 BI, 6 BO, and 6 AO; 24 VAC; SA Bus; FC Bus; Integral Real-time Clock; Improved Fast Persistence

Table 2: FAC Series Ordering Information

Product Code Number	Description
MS-FAC3613-0[1]	26-Point Advanced Application Field Equipment Controller with 8 UI, 6 BI, 6 BO, and 6 AO; 24 VAC; SA Bus; FC Bus; Integral Real-time Clock; Improved Fast Persistence
MS-FAC4911-0	28-Point Advanced Application Field Equipment Controller with 10 UI, 6 BI, 4 BO, 4 AO, and 4 CO; 24 VAC; SA Sensor Port; Integral Real-time Clock; 2 Ethernet Ports for BACnet/IP Communications

1 This model is currently only available in Asia. Contact your local Johnson Controls representative for more information.

Table 3: FAC Series for Smoke Control Ordering Information

Product Code Number[1,2]	Description
MS-FAC2611-0U	17-Point Advanced Application Field Equipment Controller with 6 UI, 2 BI, 3 BO, 2 AO, and 4 CO; 24 VAC, MS/TP (FC) Bus, SA Bus, integral real-time clock
MS-FAC2612-1U	18-Point Advanced Application Field Equipment Controller with 5 UI, 4 BI, 4 CO, 2 SPDR RO, and 3 SPST RO; 24 VAC, MS/TP (FC) Bus, SA Bus, integral real-time clock

1 These devices are UL/ULC 864 Listed, File S4977, 10th Edition UUKL/ORD-C100-13 UUKLC Smoke Control System. These devices must be ordered in a Smoke Control UUKL listing.
2 You cannot purchase a similar third-party device and install it in a UL/cUL Listed smoke control system. Doing so voids the UL/cUL Smoke Control Listing. Third-party devices must be provided and labeled by the factory as described in the UL/cUL Smoke Control Listing.

Accessories

Table 4: FAC Accessories

Product Code Number	Description
Mobile Access Portal (MAP) Gateway[1]	Refer to the *Mobile Access Portal Gateway Catalog Page (LIT-1900869)* to identify the appropriate product for your region.
MS-BTCVT-1[1]	Wireless Commissioning Converter with Bluetooth Technology
MS-BTCVTCBL-700[1]	Cable Replacement Set for the MS-BTCVT-1 or the NS-ATV7003-0; Includes One 5 ft (1.5 m) Retractable Cable
MS-DIS1710-0	Local Controller Display: Refer to *Local Controller Display Product Bulletin (LIT-12011273)* for more information.
NS Series Network Sensors	Refer to the *NS Series Network Sensors Product Bulletin (LIT-12011574)* for specific sensor model descriptions.
WRZ Series Wireless Room Sensors[1]	Refer to the *WRZ Series Wireless Room Sensors Product Bulletin (LIT-12011653)* for specific sensor model descriptions.
WRZ-7860-0[1]	Receiver for One-to-One Wireless Room Sensing Systems - functions with WRZ Series Sensors room sensors
WRZ-SST-120[1]	Wireless System Survey Tool
ZFR1800 Series Wireless Field Bus System[1]	This system is used for installations that only support BACnet MSTP. Refer to the *WNC1800/ZFR182x Pro Series Wireless Field Bus System Product Bulletin (LIT-12012320)* for a list of available products.
ZFR-USBHA-0[1]	USB Dongle with ZFR Driver provides a wireless connection through CCT to allow wireless commissioning of the wirelessly enabled FEC, FAC, IOM, and VMA16 controllers. Also allows use of the ZFR Checkout Tool (ZCT) in CCT. **Note:** The ZFR-USBHA-0 replaces the IA OEM DAUBI_2400 ZFR USB dongle. For additional information on the ZFR-USBHA-0 ZFR dongle, refer to the *ZFR1800 Series Wireless Field Bus System Technical Bulletin (LIT-12011295)* or *ZFR1800 Series Wireless Field Bus System Quick Reference Guide (LIT-12011630)*.
Y64T15-0[1]	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 92 VA, Foot Mount, 30 in. Primary Leads and 30 in. Secondary Leads, Class 2
Y65A13-0[1]	Transformer, 120 VAC Primary to 24 VAC Secondary, 40 VA, Foot Mount (Y65AS), 8 in. Primary Leads and 30 in. Secondary Leads, Class 2
Y65T42-0[1]	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 40 VA, Hub Mount (Y65SP+), 8 in. Primary Leads and Secondary Screw Terminals, Class 2
Y65T31-0[1]	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 40 VA, Foot Mount (Y65AR+), 8 in. Primary Leads and Secondary Screw Terminals, Class 2
AP-TBK4SA-0	Replacement MSTP SA Bus Terminal, 4-Position Connector, Brown (Bulk Pack of 10)
AP-TBK4FC-0	Replacement MSTP FC Bus Terminal, 4-Position Connector (Bulk Pack of 10)
AP-TBK3PW-0	Replacement Power Terminal, 3-Position Connector, Gray (Bulk Pack of 10)
AS-CBLTSTAT-0	Cable adapter for connection to 8-pin TE-6700 Series sensors
MS-TBKLV03-0	Terminal Block Kit - FAC Line Voltage AC Power - 3 Pieces
MS-TBKRO02-0	Terminal Block Kit - FAC 2-Position Relay Output - 9 Pieces
MS-TBKRO03-0	Terminal Block Kit - FAC 3-Position Relay Output - 6 Pieces
MS-TBKCO04-0	Terminal Block Kit - FAC 4-Position Configurable Output - 6 Pieces
MS-TBKUI04-0	Terminal Block Kit - FAC 4-Position Universal Input - 3 Pieces

TRI-PLEAT ULTRA

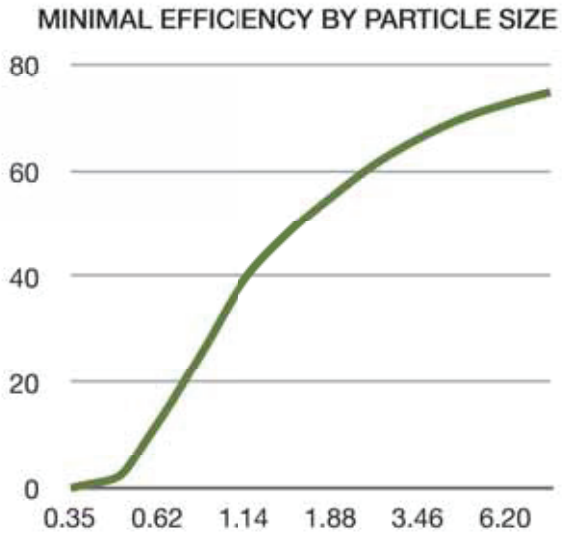
TRI DIM
FILTER CORPORATION

REACHING NEW HEIGHTS

- Mechanical MERV 8
- Low Pressure Drop

LOW RESISTANCE

TRI-PLEAT ultra



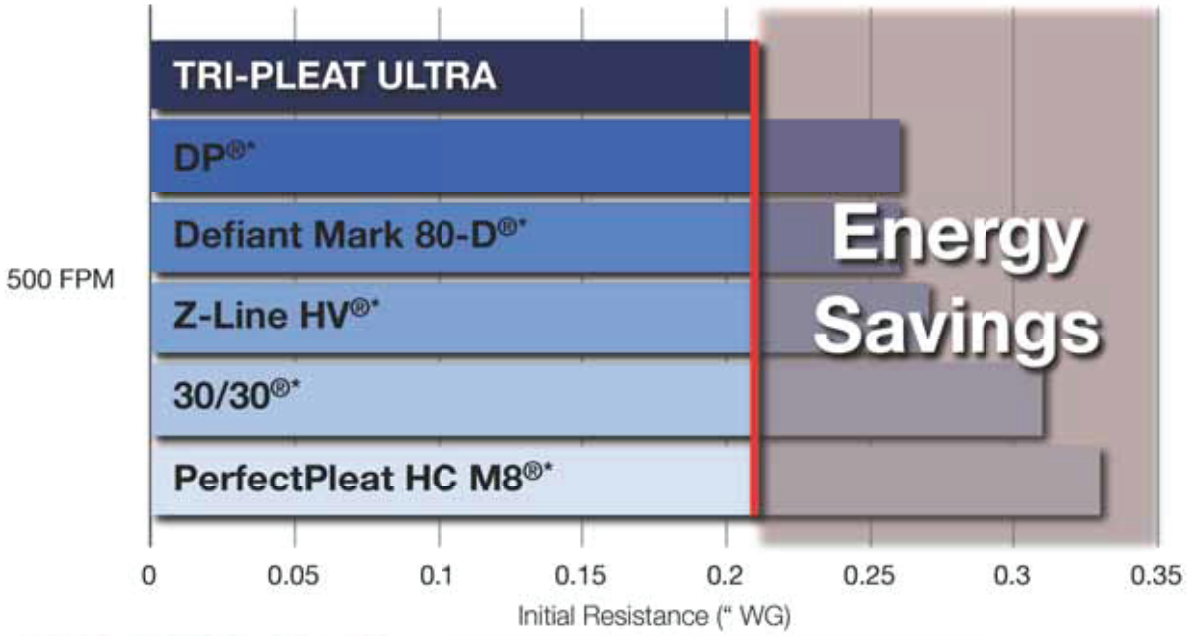
Mechanical MERV 8
Low Pressure Drop

TRI-PLEAT ULTRA OFFERS A NEW LEVEL OF PERFORMANCE

... a new benchmark for pleated air filters - featuring mechanical MERV 8 performance at a very low, energy saving pressure drop - setting the standard for performance.

MECHANICAL MEDIA

- most synthetic medias rely on an electrostatic enhancement to achieve their rated efficiency levels - this enhancement only provides high efficiency for a short period of time before it dissipates. So the performance that you paid for was not delivered.



In order to ensure the promised performance is delivered the TRI-PLEAT ULTRA was tested via ASHRAE 52.2 Appendix J. The graph (upper right) shows the results of an ASHRAE 52.2 Appendix J test that dissipates the electrostatic charge - results document a MERV 8 after the electrostatic charge is dissipated.

Why is important to you? Because you deserve the efficiency that you are paying from day 1 till the filter is changed out.

MECHANICAL

LOW PRESSURE DROP - TRI-PLEAT ULTRA offers ultra low resistance 0.21"WG at 2000 CFM (for a 24x24x2) - this is up to 50% lower than comparable products (see chart below). This equals a significant reduction in operating resistance which equals energy savings.

CONSTRUCTION - TRI-PLEAT ULTRA utilizes a moisture resistance 28-point die-cut frame with diagonal supports bonded to the media pack for extra strength and to maintain proper pleat spacing. The pleat pack is bonded to a two piece frame. The media is also bonded to a metal grid that maintains pleat shape and adds stability to the media through changes in airflow.

In addition the four-inch deep filters also use additional cardboard 'fingers' for additional strength and stability. All Tri-Pleat die cut frames are treated with an Aqua Coat treatment for added moisture resistance.

CAPACITY LEVELS - The TRI-PLEAT ULTRA is offered in two different capacities, the ULTRA ME filters are the High Capacity series manufactured with the maximum amount of media, 15 pleats per foot. The high capacity series offers the lowest resistance, highest dust holding capacity and the longest service life. The ULTRA LE filters are the Standard Capacity series and offer 11 pleats per foot. The standard capacity series offers extended surface area, long service life and high dust holding capacity.

INSTALLATION AND MAINTENANCE INSTRUCTIONS

FOR

ENGINEERED AIR HYDRONIC HEATING AND COOLING EQUIPMENT

FINNED TUBE RADIATION (All Styles)

No maintenance is required other than to vacuum out dust from the heating element annually.

Note: Care must be taken not to deform the fins during cleaning.

CABINET UNIT HEATERS (All Models)

Mount cabinet unit heaters securely in the required orientation. Pipe the supply and return and/or steam and condensate connections using good piping practice. Isolation valves and unions can facilitate maintenance and replacement. Provide for expansion and contraction of piping. Refer to project installation details and requirements if any. Connect power wire to motor using factory mounted junction box. All power supply and control wiring to this unit must be installed in accordance with the latest edition of the Canadian Electrical Code, Part 1 – C.S.A. Standard C22.1, Provincial and Local Codes and in accordance with the local authorities having jurisdiction or the National Electrical Code (ANSI/NFPA 70), state and local codes and in accordance with the local authorities having jurisdiction. Consult project requirements for controls.

No maintenance is required other than to clean the coil fins annually and occasional motor lubrication. Motors are permanently lubricated and should require not maintenance for 5,000 hours. Should a motor require lubrication, only S.A.E. 20 oil should be used. Filters will be supplied with these units. If so, these should be cleaned or replace each heating season.

Note: During any work on these units, care should be taken not to damage the aluminum fins.

UNIT HEATERS
(Vertical and Horizontal Models)

Suspend unit heaters securely with allowance for maintenance and removal. Pipe the supply and return or steam and condensate connections using good piping practice. Isolation valves and unions can facilitate maintenance and replacement. Provide for expansion and contraction of piping. Refer to project installation details and requirements if any. Connect power wire to motor using factory mounted junction box. All power supply and control wiring to this unit must be installed in accordance with the latest edition of the Canadian Electrical Code, Part 1 – C.S.A. Standard C22.1, Provincial and Local Codes and in accordance with the local authorities having jurisdiction or the National Electrical Code (ANSI/NFPA 70), state and local codes and in accordance with the local authorities having jurisdiction. Consult project requirements for controls.

No maintenance is required other than to clean the coil fins annually and occasional motor lubrication. Motors are permanently lubricated and should require no maintenance for 5,000 hours. Should a motor require lubrication, only S.A.E. 20 oil should be used. In dirty areas, such as welding shops, periodic inspections and cleaning of heating coils and fan blades should be made.

Note: During any work on these units, care must be taken not to damage the aluminum fins.

ALWAYS DISCONNECT ELECTRICAL SERVICES WHEN WORKING ON ANY EQUIPMENT.

Carbothane® 133 HB

PRODUCT DATA SHEET

SELECTION & SPECIFICATION DATA

Generic Type	Aliphatic Acrylic-Polyester Polyurethane
Description	High build, low sheen finish that has excellent resistance to corrosion, chemicals and abrasion. Suitable for application over a number of Carboline primers and intermediates, this material provides very good weathering performance in a broad range of colors.
Features	• Outstanding performance properties in both mild and aggressive environments • High build; suitable for many two-coat systems • Suitable for application direct to inorganic zincs • Application by spray, brush or roller • Indefinite recoatability • VOC compliant to current AIM regulations
Color	Refer to Carboline Color Guide. Certain colors may require multiple coats to hide.
Finish	Satin
Primer	Refer to Substrates & Surface Preparation. Topcoat with Carbothane® Clear Coat when required.
Dry Film Thickness	3 - 5 mils (76 - 127 microns) per coat Dry film thickness in excess of 7 mils (175 microns) per coat is not recommended.
Solids Content	By Volume 57% +/- 2%
Theoretical Coverage Rate	914 ft²/gal at 1.0 mils (22.4 m²/l at 25 microns) 305 ft²/gal at 3.0 mils (7.5 m²/l at 75 microns) 183 ft²/gal at 5.0 mils (4.5 m²/l at 125 microns) Allow for loss in mixing and application.
VOC Values	**As Supplied** : 3.2 lbs./gal (383 g/l) Thinner 214 : 3.3 lbs/gal (403 g/l) Thinner 241 : 3.5 lbs/gal (423 g/l) Thinner 25 : 11 oz/gal: 3.5 lbs./gal (420 g/l) Thinner 25 : 18 oz/gal: 3.7 lbs./gal (449 g/l) 1.5 oz/gal of Additive 101 adds 0.08 lbs/gal (10 g/l). These are nominal values and may vary slightly with color.
Dry Temp. Resistance	Continuous: 200°F (93°C) Non-Continuous: 250°F (121°C) Discoloration and loss of gloss is observed above 200°F (93°C)
Limitations	*The alignment of aluminum flakes in aluminum-filled finishes is very dependent on application conditions and techniques. Care must be taken to keep conditions as constant as possible to reduce variations in final appearance. It is also advisable to work from a single batch of material since variations can occur from batch to batch.

SUBSTRATES & SURFACE PREPARATION

General	Surfaces must be clean and dry. Employ adequate methods to remove dirt, dust, oil and all other contaminants that could interfere with adhesion of the coating. Refer to the specific primer's Product Data Sheet for detailed requirements of the specified primer.
Steel	SSPC-SP6 with a 1.5-2.5 mil (37.5-62.5 micron) surface profile for maximum protection. SSPCSP2 or SP3 as minimum requirement. Prime with specific Carboline primers as recommended by your Carboline sales representative.
Galvanized Steel	Prime with specific Carboline primers as recommended by your Carboline Sales Representative. Refer to the specific primer's Product Data Sheet for substrate preparation requirements.
Aluminum	SSPC-SP1 and prime with appropriate Carboline primer as recommended by your Carboline sales representative.
Previously Painted Surfaces	Lightly sand or abrade to roughen and degloss the surface. Existing paint must attain a minimum 3A rating in accordance with ASTM D3359 "XScribe" adhesion test. Prime with specific Carboline primers as recommended by your Carboline sales representative.

PERFORMANCE DATA

Test Method	System	Results
ASTM B117 Salt Fog	Blasted Steel 1 ct. IOZ 1 ct. 133 HB	No rusting, or blistering on plane or scribe 2,000 hours
ASTM B117 Salt Fog	Blasted Steel 1 ct. OZ 1 ct. 133 HB	No rusting, or blistering on plane or scribe 4,000 hours
ASTM D1735 Water Fog	Blasted Steel 1 ct. Epoxy 1 ct. 133 HB	No rusting or blistering after 8600 hours.
ASTM D4213 Scrub Resistance	1 ct. 133 HB	.0027 microliters erosion rate after 100 cycles with abrasive scrub medium.
ASTM D4585 Humidity	Blasted Steel 1 ct. IOZ 1 ct. 133 HB	No rusting or blistering after 3000 hours.
ASTM D5894 QUV A Prohesion	1 ct. 133 HB	No effect on plane area and 78% gloss retention after 1008 hours of wet/dry salt fog cycle
ASTM G26 Weatherometer	Blasted Steel 1 ct IOZ 1 ct. 133 HB	No blistering, rusting or cracking after 3500 hours
ASTM G53 QUV (2500 hours w/ UVA 340 bulb)	Blasted Steel 1 ct. Epoxy 1 ct. 133 HB	Color change less than 2 McAdam units; no blistering, rusting, cracking or chalking.
Graffiti Resistance	Blasted Steel 1 ct. Epoxy 1 ct. 133 HB	All markings and stains removed by solvent after exposure to: shoe polish,Sharpie marker, crayon, l

Test reports and additional data available upon request.

MIXING & THINNING

Mixing	Power mix Part A separately, then combine with Part B and power mix. DO NOT MIX PARTIAL KITS.
Thinning	Spray: Up to 11 oz/gal (9%) w/ Thinner 25. Roller: Up to 18 oz/gal (14%) w/ Thinner 25. Use of thinners other than those supplied or recommended by Carboline may adversely affect product performance and void product warranty, whether expressed or implied. Thinner 214 may also be used, up to 6 oz/gal, for either spray or brush/roller application. Carboline Thinner 236E may also be used to minimize HAP and VOC emissions.

MIXING & THINNING

Ratio	6:1 Ratio (A to B) **.88 Gal. Kit** Part A: 1 gal. can (partial filled) UC 133: 1 pint **5.0 Gal. Kit** Part A: 5 gal. can (partial filled) UC 133: 1 gallon can (partial filled)
Pot Life	4 Hours at 75°F (24°C) and less at higher temperatures. Pot life ends when coating becomes too viscous to use. MOISTURE CONTAMINATION WILL SHORTEN POT LIFE AND CAUSE GELLATION.

APPLICATION EQUIPMENT GUIDELINES

Listed below are general equipment guidelines for the application of this product. Job site conditions may require modifications to these guidelines to achieve the desired results.

Spray Application (General)	This is a high solids coating and may require adjustments in spray techniques. Wet film thickness is easily and quickly achieved. The following spray equipment has been found suitable and is available from manufacturers such as Binks, DeVilbiss and Graco.
Conventional Spray	Pressure pot equipped with dual regulators 3/8" I.D. minimum material hose .070" I.D. fluid tip and appropriate air cap
Airless Spray	Pump Ratio: 30:1 (min.)* GPM Output: 3.0 (min.) Material Hose: 3/8" I.D. (min.) Tip Size: .013-.015" Output PSI: 2100-2300 Filter Size: 60 mesh *Teflon packings are recommended and available from the pump manufacturer.
Brush & Roller (General)	Multiple coats may be required to obtain desired appearance, recommended dry film thickness and adequate hiding. Avoid excessive re-brushing or rerolling. For best results, tie-in within 10 minutes at 75°F (24°C).
Brush	Recommended for touch-up only. Use a medium, natural bristle brush.
Roller	Use a medium-nap synthetic roller cover with phenolic core.

APPLICATION CONDITIONS

Condition	Material	Surface	Ambient	Humidity
Minimum	40°F (4°C)	40°F (4°C)	40°F (4°C)	0%
Maximum	100°F (38°C)	110°F (43°C)	110°F (43°C)	90%

Industry standards are for substrate temperatures to be 5°F (3°C) above the dew point. This product simply requires the substrate temperature to be above the dew point.
Caution: This Product is moisture sensitive in the liquid stage and until cured. Protect from high humidity, dew and direct moisture contact until cured. Application and/or curing in humidities above maximum, or exposure to moisture from rain or dew may result in a loss of gloss and/or microbubbling of the product.

CURING SCHEDULE

Surface Temp.	Dry to Handle	Dry to Recoat	Final Cure General
40°F (4°C)	20 Hours	20 Hours	28 Days
50°F (10°C)	12 Hours	12 Hours	14 Days
75°F (24°C)	5 Hours	5 Hours	7 Days
90°F (32°C)	1 Hour	1 Hour	4 Days

These times are based on a 3.0-5.0 mil (75-125 micron) dry film thickness. Higher film thickness, insufficient ventilation or cooler temperatures will require longer cure times and could result in solvent entrapment and premature failure.
***Maximum recoat times are indefinite.** Surface must be clean and dry. As part of good painting practice it is recommended to test for adhesion by wiping the surface with Thinner 25. If the film shows a slight "tack" the surface is suitable for recoating without extensive surface preparation such as abrading.
Carboline Additive 101 can be used to accelerate the film forming process in this product for conditions outside of the parameters of this data sheet. Carboline Additive 101 is added at a rate of 1.0-2.0 oz per mixed gallon or a maximum of 6 oz per mixed five gallons. At this addition rate, Additive 101 will accelerate the cure rate of the urethane product between 25-40% depending on the substrate temperature range and reduce the pot life of the product by approximately 40-50% of that stated on the product data sheet. With the use of Additive 101, this product will continue to cure at temperatures as low as 20°F (-7°C).

CLEANUP & SAFETY

Cleanup	Use Thinner 2 or Acetone. In case of spillage, dispose of in accordance with local applicable regulations.
Safety	Read and follow all caution statements on this product data sheet and on the SDS for this product and use personal protective equipment as directed.
Ventilation	When used in enclosed areas, thorough air circulation must be used during and after application until the coating is cured. The ventilation system should be capable of preventing the solvent vapor concentration from reaching the lower explosion limit for the solvents used. User should test and monitor exposure levels to insure all personnel are below guidelines. If not able to monitor levels, use MSHA/NIOSH approved supplied air respirator.

PACKAGING, HANDLING & STORAGE

Shelf Life	Part A: Min. 36 months at 75°F (24°C) Part B: Min. 24 months at 75°F (24°C) *Shelf Life: when kept at recommended storage conditions and in original unopened containers.
Storage Temperature & Humidity	40° -110°F (4°-43°C) 0-90% Relative Humidity
Storage	Store Indoors. This product is solvent based and not affected by excursions below these published storage temperatures, down to 10°F, for a duration of no more than 14 days. Always inspect the product prior to use to make sure it is smooth and homogeneous when properly mixed.
Shipping Weight (Approximate)	.875 Gallon Kit - 11 lbs. (5 kg) 5 Gallon Kit - 64 lbs. (29 kg)
Flash Point (Setaflash)	Part A: 95°F (35°C) Part B: 91°F (33°C)

WARRANTY

To the best of our knowledge the technical data contained herein is true and accurate on the date of publication and is subject to change without prior notice. User must contact Carboline Company to verify correctness before specifying or ordering. No guarantee of accuracy is given or implied. We guarantee our products to conform to Carboline quality control. We assume no responsibility for coverage, performance, injuries or damages resulting from use. Carbolines sole obligation, if any, is to replace or refund the purchase price of the Carboline product(s) proven to be defective, at Carbolines option. Carboline shall not be liable for any loss or damage. NO OTHER WARRANTY OR GUARANTEE OF ANY KIND IS MADE BY CARBOLINE, EXPRESS OR IMPLIED, STATUTORY, BY OPERATION OF LAW, OR OTHERWISE, INCLUDING MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. product data carboline®

Carboguard® 690

Selection & Specification Data

Generic Type	Phenalkamine epoxy
Description	High performance, surface tolerant epoxy that has excellent resistance to water and wastewater exposures. This coating exhibits outstanding moisture tolerance during application, low temperature cure capability, and very fast cure response for quick return to service. Can be used on structural steel, piping, tankage, and equipment exposed to industrial or marine environments. It can also be used in immersion service for salt water, process water (non-potable) and waste water treatment projects; and is ideal for coatings under insulation on pipes up to 300°F(150°C).
Features	• High solids, low VOC • High build (16 mils) • Low temperature cure (20°F) • Excellent moisture tolerance during application • Fast cure response
Color	Refer to Carboline Color Chart
Finish	Semi-Gloss
Primers	Self-Priming, Zinc-rich, or epoxies
Topcoats	May be coated with Acrylics, Epoxies, Alkyds, or Polyurethanes depending on exposure and need.
Dry Film Thickness	5.0 - 8.0 mils (127 - 203 microns) per coat
Solids Content	By Volume 80% +/- 2%
Theoretical Coverage Rate	1283 ft^2 at 1 mil (31 m^2/l at 25 microns) 257 ft^2 at 5 mils (6 m^2/l at 125 microns) 160 ft^2 at 8 mils (4 m^2/l at 200 microns) Allow for loss in mixing and application.
Severe Exposures	Under insulation temperature resistance: Continuous: 300°F (149°C) Non-Continuous: 350°F (176°C) Discoloration occurs above 200 F (93 C) but does not affect performance. Discoloration occurs above 200°F(93°C) but does not affect performance.
VOC Values	Thinner 2 16* oz/gal 2.06 lbs/gal 248 g/l As Supplied 1.42 lbs/gal 170 g/l mixed These are nominal values and may vary with color.
Limitations	• Epoxies lose gloss, discolor and eventually chalk in sunlight exposure. Discoloration is more pronounced with this product. • For immersion projects use only factory made material in special colors. • This product has the ability to be applied over damp or even wet substrates. Remove excess water by blowing down the surface and apply in multiple coats to achieve desired film thickness. • Brush or roller, and multiple coats are preferred over wet substrates.

Selection & Specification Data

Temperature Resistance (Immersion)	Immersion temperature resistance depends upon exposure (120°F maximum). Consult Carboline Technical Service for specific information. Linings exposed to cargos warmer than the outside steel temperature are subject to a "cold-wall' effect. The smaller the temperature differential, the less negative influence on performance.

Substrates & Surface Preparation

General	Remove any oil or grease from surface to be coated with clean rags soaked in Carboline Thinner #2, or toluol.
Steel	**Immersion:** SSPC-SP10; Surface Profile: 1.5-3.0 mils (38-75 microns) (See Limitations) **Non-Immersion:** SSPC-SP6; Surface Profile: 1.5-3.0 mils (38-75 microns) In certain situations hand tool or power tool cleaning (SSPC-SP2 or 3) is acceptable for thicknesses up to 8 mils (150 microns)
Concrete or CMU	Clean and dry. Remove all loose, unsound concrete. Do not apply coating unless concrete has cured at least 28 days @ 70°F (21°C) and 50% Relative Humidity or equivalent. Consult Carboline Technical Service for more specific recommendations.

Mixing & Thinning

Mixing	Mix separately, then combine and mix in the following proportions (4:1 ratio): **1 Gal. Kit** Part A: .8 gallon Part B: .2 gallon **5 Gal. Kit** Part A: 4 gallon Part B: 1 gallon Thin up to 12.5% by volume with Carboline Thinner #2 for non-immersion applications and Thinner #10 for immersion projects.
Pot Life	1.5 hours at 75°F (24°C) and less at higher temperatures. Pot life ends when coating becomes too viscous to use.

Application Equipment Guidelines

Listed below are general equipment guidelines for the application of this product. Job site conditions may require modifications to these guidelines to achieve the desired results.

Spray Application (General)	Hold gun 12-14 inches from the surface and at a right angle to the surface
Conventional Spray	Pressure pot equipped with dual regulators, 3/8" I.D. minimum material hose, .070" I.D. fluid tip and appropriate air cap.

Carboguard® 690

Application Equipment Guidelines

Listed below are general equipment guidelines for the application of this product. Job site conditions may require modifications to these guidelines to achieve the desired results.

Airless Spray

Pump Ratio: 45:1 (min.)
Volume Output: 11.5 l/min min. (2.5gpm min.)
Material Hose: 12.5mm min. (½" I.D. recommended)
Tip Size: 0.43-0.53mm (0.017-0.021")
Output: 140-175kg/cm²
Pressure: (2000-2500 psi)
*PTFE packings are recommended and available from pump manufacturer.

Brush & Roller (General)

Not recommended for tank lining applications except when striping welds. For non-immersion applications over damp surfaces, brush and roller is the preferred method. Multiple coats may be required to obtain desired appearance, recommended dry film thickness and adequate hiding. Avoid excessive re-brushing or re-rolling. For best results, tie-in within 10 minutes at 75°F (24°C). Thin up to 12.5% by volume per gallon with Carboline #2. Use a short-nap synthetic roller cover with phenolic core.

Application Conditions

Condition	Material	Surface	Ambient	Humidity
Minimum	45 °F (7 °C)	20 °F (-7 °C)	20 °F (-7 °C)	0%
Maximum	90 °F (32 °C)	120 °F (49 °C)	100 °F (38 °C)	85%

Industry standards are for substrate temperatures to be above the dew point. For immersion conditions it is recommended to follow this procedure. For non-immersion conditions this product can tolerate damp substrates. See Brush or Roller above. Special thinning and application techniques may be required above or below normal conditions.

Curing Schedule

Surface Temp. & 50% Relative Humidity	Dry to Touch	Maximum Recoat Time	Minimum Recoat Time	Minimum cure for immersion service
20 °F (-7 °C)	10 Hours	60 Days	72 Hours	45 Days
35 °F (2 °C)	6 Hours	45 Days	17 Hours	30 Days
60 °F (16 °C)	5 Hours	30 Days	6 Hours	14 Days
75 °F (24 °C)	4 Hours	15 Days	2 Hours	7 Days
90 °F (32 °C)	2 Hours	7 Days	2 Hours	6 Days

These times are based on a 5.0-8.0 mil (125-200 micron) dry film thickness per coat. Higher film thickness, insufficient ventilation or cooler temperatures will require longer cure times and could result in solvent entrapment and premature failure. Excessive humidity or condensation on the surface during curing can interfere with the cure, can cause discoloration and may result in a surface haze. Any haze or blush must be removed by water washing before recoating. If the maximum recoat times have been exceeded, the surface must be abraded by sweep blasting or sanding prior to the application of additional coats. For force curing, contact Carboline Technical Service for specific requirements. For application and cure conditions below 35°F, dehumidify before, during, and after application to prevent ice formation on the surface.

Surface Temp. & 50% Relative Humidity	Dry to Handle	Dry to Recoat
35 °F (2 °C)	48 Hours	2 Days
60 °F (16 °C)	24 Hours	40 Hours
75 °F (24 °C)	8 Hours	24 Hours
90 °F (32 °C)	6 Hours	24 Hours

The above times are based on 16 mils (400 microns) DFT of Carboguard 690 applied in a single coat. Honor the other precautions outlined above.

Cleanup & Safety

Cleanup

Use Thinner #2 or Acetone. In case of spillage, absorb and dispose of in accordance with local applicable regulations.

Safety

Read and follow all caution statements on this product data sheet and on the MSDS for this product. Employ normal workmanlike safety precautions. Hypersensitive persons should wear protective clothing, gloves and use protective cream on face, hands and all exposed areas.

Ventilation

When used as a tank lining or in enclosed areas, thorough air circulation must be used during and after application until the coating is cured. The ventilation system should be capable of preventing the solvent vapor concentration from reaching the lower explosion limit for the solvents used. User should test and monitor exposure levels to insure all personnel are below guidelines. If not sure or if not able to monitor levels, use MSHA/NIOSH approved supplied air respirator.

Caution

This product contains flammable solvents. Keep away from sparks and open flames. All electrical equipment and installations should be made and grounded in accordance with the National Electric Code. In areas where explosion hazards exist, workers should be required to use non-ferrous tools and wear conductive and non-sparking shoes.

Packaging, Handling & Storage

Shelf Life

Part A: 24 months at 76°F (24°C)
Part B: 12 months at 76°F (24°C)

*Shelf Life: (actual stated shelf life) when kept at recommended storage conditions and in original unopened containers.

Shipping Weight (Approximate)

1 Gal. Kit
15 lbs.
5 Gal. Kit
75 lbs.

	NOTES:																						
	1. Existing: Belimo G350, CV 40																						

This review applies to hydronic valves only (items 1 through 14 inclusive). Fuel oil valves (items 15, 16, 17) reviewed separately.

STANTEC PROJECT #: 110126045

SUBMITTAL # AD-040 Control valves (Hydronic only)

This review by Stantec is for general conformance with the design concept of Stantec's design of the:

- ☐ Architectural
- ☐ Structural
- ☑ Mechanical
- ☐ Electrical
- ☐ Other

Stantec

component(s) only and does not mean that Stantec has verified or approves the shop drawing(s). The Contractor remains solely responsible for the shop drawing(s) and this review by Stantec does not relieve the Contractor of the Contractor's responsibility for errors or omissions in the shop drawing(s) or for meeting all requirements of the contract documents. This review does not mean that Stantec approves the detailed design inherent in the shop drawing, responsibility for which shall remain with the Contractor submitting same, nor does this review mean that Stantec accepts any deviation of the shop drawing(s) from the contract documents. The Contractor is responsible for confirming all dimensions and correlating them at the job site, for all construction means, methods and techniques, and for coordination of construction work of all trades, including coordination of all shop drawings.

Code No. LIT-1900225
Issued January 6, 2015

VG1000 Series Three-Way, Stainless Steel Trim, NPT End Connections Ball Valves with Spring-Return Electric Actuators without Switches

Description

VG1000 Series Ball Valves are designed to regulate the flow of hot or chilled water and, for some models, low-pressure steam in response to the demand of a controller in HVAC systems. Available in sizes 1/2 through 2 in. (DN15 through DN50), this family of two- and three-way forged brass valves is factory or field mounted to Johnson Controls® VA9104, M9106, M9109, and M9100 Series Non-Spring-Return and VA9203 and VA9208 Series Spring Return Electric Actuators for on/off, floating, or proportional control.

Refer to the *VG1000 Series Forged Brass Ball Valves Product Bulletin (LIT-977132)* for important product application information.

Features

- Forged Brass Body — provides 580 psig static pressure rating.
- 300 Series Stainless Steel Ball and Stem Assembly — tolerates high-temperature water or 15 psi saturated steam with fluid temperatures of -22 to 284°F (-30 to 140°C) or where a higher degree of corrosion protection is desired.
- 500:1 Rangeability — provides accurate control under all load conditions.
- Maintenance-Free Design — performs without failure in excess of 200,000 full stroke cycles in iron-oxide contaminated water.

Repair Information

If the VG1000 Series Ball Valve fails to operate within its specifications, replace the valve body, actuator, or entire assembly. For replacement parts, contact the nearest Johnson Controls representative.

VG1000 Series Three-Way, Spring-Return, Stainless Steel Ball and Stem Ball Valve Assemblies without End Switches

	Steam	15 psig (103 kPa) Saturated Steam (Applies to VA9208 Series Spring Return Actuator with M9000-561 Thermal Barrier Installed)
Maximum Closeoff Pressure		200 psid (1,378 kPa)
Maximum Recommended Operating Pressure Drop		50 psid (340 kPa)
Flow Characteristics	**Three-Way**	Equal Percentage Flow Characteristics of In-Line Port A (Coil) and Linear Flow Characteristics of Angle Port B (Bypass)
Rangeability[2]		Greater than 500:1
Minimum Ambient Operating Temperature	**-22°F (-30°C)**	VA9203 Series Spring-Return Actuators
	-40°F (-40°C)	VA9208 Series Spring-Return Actuators
Maximum Ambient Operating Temperature[3] **(Limited by the Actuator and Linkage)**	**Direct Mount**	140°F (60°C): VA9208 Series Spring-Return Actuators
Leakage		0.01% of Maximum Flow per ANSI/FCI 70-2, Class 4
		1% of Maximum Flow
End Connections		National Pipe Thread (NPT)
Materials	**Body**	Forged Brass
	Ball	300 Series Stainless Steel
	Blowout-Proof Stem	300 Series Stainless Steel
	Seats	Graphite-Reinforced PTFE with Ethylene Propylene Diene Monomer (EPDM) O-Ring Backing
	Stem Seals	EPDM Double O-Rings
	Characterizing Disk	Amodel® AS-1145HS Polyphthalamide Resin
Compliance CRN		0C16910.5C

1. Proper water treatment is recommended; refer to the VDI 2035 Guideline.
2. Rangeability is defined as the ratio of maximum controllable flow to minimum controllable flow.
3. In steam applications, install the valve with the stem horizontal to the piping and wrap the valve and piping with insulation.

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. ExMax- ... - VAS	Types as above with stainless steel housing for aggressive ambient (cable glands brass nickel-plated)						

Product views and applications

Safety damper

Ball valve

Throttle valve

Description

The ExMax actuators are a revolution for safety, control and shut-off dampers, VAV systems, ball valves, throttle valves and other motorized applications for HVAC systems in chemical, pharmaceutical, industrial and offshore/onshore plants, for use in Ex-areas zone 1, 2 (gas) and zone 21, 22 (dust).

Highest protection class (ATEX) and IP66 protection, small dimensions, only 3,5 kg weight, universal functions and technical data, an integrated heater and an optional stainless steel housing guarantee safe operation even under difficult environmental conditions. High quality brushless motors guarantee long life.

All actuators are programmable and adjustable on site. Special tools or equipment are not required. Motor running times and torques as well as spring return times, according to the actuator type, are selectable or adjustable on site. The integrated universal power supply is self adaptable to input voltages in the range of 24...240 V AC/DC. Furthermore it is possible to perform control signal inverting and compulsion control by certain connections. The actuators are 100 % overload protected and self locking.

...Max-...-YF actuators are equipped with spring return fail safe function. Standard shaft connection is a double square direct coupling with 12 × 12 mm.

Different accessories are available to adapt auxiliary switches, terminal boxes or adaptions for ball valves and throttle valves and other armatures.

Highlights

- ▶ For all type of gas, mists, vapours and dust for use in zone 1, 2, 21 and 22
- ▶ Universal supply unit from 24…240 V AC/DC
- ▶ 5 different motor running times 7,5–15–30–60–120 s/90°, adjustable on site
- ▶ 2 different spring return running times ~ 3–10 s/90°, selectable on site
- ▶ 3-pos. and 0...10 V DC, 4...20 mA control mode with or without spring return function
- ▶ Feedback signals 0...10 V DC and 4...20 mA
- ▶ Reverse function
- ▶ 5–10–15–30 Nm actuators in the same housing size
- ▶ 100 % overload protected and self locking
- ▶ Compact design and small dimension (L × W × H = 210 × 95 × 80 mm)
- ▶ Direct coupling to the damper shaft with double square connection 12 × 12 mm
- ▶ 95° angle of rotation inclusive 5° pretension
- ▶ Robust aluminium housing (optional with seawater resistant coating) or in stainless steel
- ▶ IP66 protection
- ▶ Simple manual override included + preparation for comfortable manual override
- ▶ Gear made of stainless steel and sinter metal
- ▶ Weight only ~ 3,5 kg
- ▶ Integrated heater for ambient temperatures down to −40 °C
- ▶ Integrated safety temperature sensor
- ▶ Integrated equipment for manual adjustment (push button, lamp, switch)
- ▶ Preparation for adaptable and adjustable auxiliary switches type ...Switch

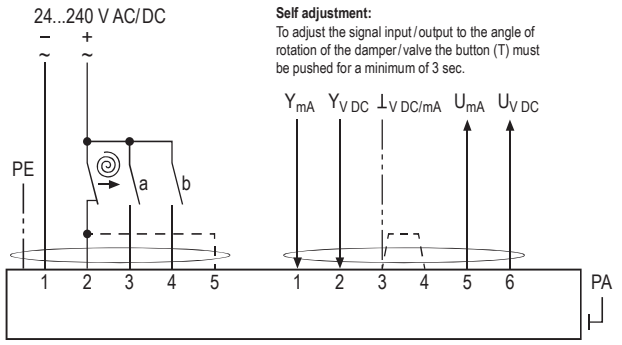
Schischek GmbH Germany, Muehlsteig 45, Gewerbegebiet Sued 5, 90579 Langenzenn, Tel. +49 9101 9081-0, Fax +49 9101 9081-77, E-Mail info-de@schischek.com

Technical data	ExMax- 5.10 -Y	ExMax- 15.30 -Y	ExMax- 5.10 -YF	ExMax- 15 -YF
Torque motor (min.)	5 / 10 Nm selectable on site	15 / 30 Nm selectable on site	5 / 10 Nm selectable on site	15 Nm
Torque spring (F)	–	–	min. 10 Nm	min. 15 Nm
Torque blockade	In blockade and end positions torques are higher than above specified torques for motor and spring.			
Dimensioning of external load	Upon spring return the external load should be max. 80 % of torque spring (F).			
Supply voltage / frequency	24...240 V AC/DC, ± 10 %, self adaptable, frequency 50...60 Hz ± 20 %			
Power consumption	max. starting currents see ⓘExtra information (in acc. with voltage, $I_{start} >> I_{rated}$), approx. 5 W holding power, approx. 16 W for heater			
Protection class	Class I (grounded)			
Angle of rotation and indication	95° incl. ~ 5° pretension, mechanical value indication			
Working direction	Selectable by left/right mounting to the damper/valve shaft			
Motor running times	7,5 / 15 / 30 / 60 / 120 s/90° selectable on site			
Motor	Brushless DC motor			
Control mode Y	3-pos., 0…10 V DC, 4…20 mA in acc. with wiring, selectable on site. Galvanic separation between supply and Y-signal			
Feedback signal U	0…10 V DC, 4…20 mA in acc. with wiring, selectable on site, both signals are available at the same time			
Resistance of Y and U signals	**Input signal:** Y_U 0...10 V DC at 10 kΩ, Y_I 4...20 mA at 100 Ω. **Feedback signal:** U_U 0...10 V DC at 2.000...∞ Ω, U_I 4...20 mA at 0...800 Ω			
Reverse function	Bridge between terminals 3–4 (signal line) effects a reverse function of input and output signals (Y and U)			
Compulsion control	In modulation mode an On-off compulsion control can be performed by external connection/wiring independently from the modulating signal			
Adjustment of Y and U	In case of external mechanical limitation of the angle of rotation, it is possible to perform an adjustment drive started by pushing the button (T)			
Spring return (F)	–	–	spring return upon voltage interruption	
Spring return response time	–	–	up to 1 sec. after voltage interruption	
Spring return running time (F)	–	–	~ 3 or 10 s/90° selectable on site	
3 sec. mode – spring return	–	–	~ 3 to 4 s/90° angle of rotation acc. to external load	
Safety operations at 10 sec. (F)	–	–	min. 10,000 acc. to construction of damper and ambient	
at 3 sec. (F)	–	–	min. 1,000 acc. to construction of damper and ambient	
Axle of the actuator	Double square 12 × 12 mm, direct coupling, 100 % overload protected and self locking up to 15 Nm			
Electrical connection	2 cable glands ~ 1 m each, wire cross section 0.5 mm², equipotential bonding 4 mm².			
Connections in hazardous areas require an Ex-e terminal box!				
Diameter of cable	~ Ø 7.1 + 7.4 mm	~ Ø 7.1 + 7.4 mm	~ Ø 7.4 mm each	~ Ø 7.4 mm each
Cable gland	M16 × 1.5 mm			
Manual override	Use delivered socket wrench, max. 4 Nm			
Heater	Integrated, controlled heater for ambient temperature down to −40 °C			
Housing material	Aluminium die-cast housing, coated. Optional with seawater resistant coating (...-CTS) or stainless steel housing,			
№ 1.4581 / UNS-J92900 / similar AISI 316Nb (...-VAS)				
Dimensions (L × W × H)	210 × 95 × 80 mm, for diagrams see ⓘExtra information			
Weight	~ 3,5 kg aluminium housing, stainless steel ~ 7 kg			
Ambients	Storage temperature −40…+70 °C, working temperature −40…+40 °C at T6 and −40…+50 °C at T5			
Humidity	0...90 % rH, non condensing			
Operating 7,5 sec. motor run time	at 24 V: S3 – 50 % ED intermittent mode (ED = duty cycle)			
≥ 15 sec. motor run time	at 15 / 30 / 60 / 120 s 100 % of ED is permitted			
Accuracy electrically	~ 100 steps			
Self adjustment	Before initial operation you need to start the self adjustment mode for “gentle” blockade and adjustment of rotation angle			
Wiring diagrams	SB 5.0 / 5.1 / 5.2 / 5.3			
Scope of delivery	Actuator with 2 × 1 m cable, 4 screws M4 × 100 mm, 4 nuts M4, Allen key for simple manual override			
Parameter at delivery	5 Nm, 30 s/90°	15 Nm, 30 s/90°	5 Nm, 30 s/90°	15 Nm, 30 s/90°

Approbations

ATEX directive	2014/34/EU
EC type-approved	PTB 04 ATEX 1028 X
IECEx certified	IECEx PTB 07.0057X
Approval for gas	II 2 (1) G Ex d [ia] IIC T6, T5
Types ...-CTS	II 2 (1) G Ex d [ia] IIB T6, T5
Approval for dust	II 2 (1) D Ex tD [iaD] A21 IP66 T80, T95°C
CE identification	CE № 0158
EMC directive	2014/30/EU
Low voltage directive	2014/35/EU
Enclosure protection	IP66 in acc. with EN 60529
EAC	№ TC RU C-DE.ГБ08.B.01510

Special solutions and accessories



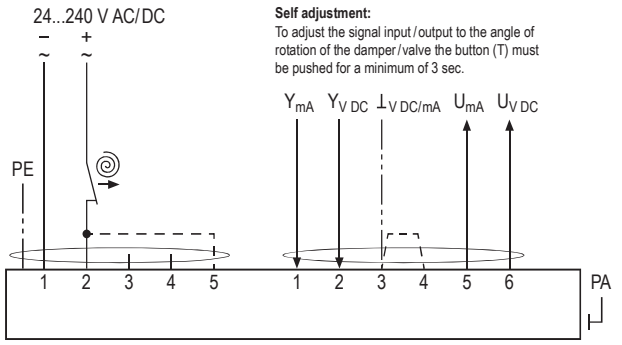
...-CTS	Types in aluminium housing with seawater resistant coating, parts nickel-plated
...-VAS	Types in stainless steel housing, parts nickel-plated
ExBox-Y/S...	Ex-e terminal boxes for zone 1, 2, 21, 22
MKK-S	Mounting bracket for boxes type ...Box-... directly on actuator
ExSwitch	2 external aux. switches, adjustable for zone 1, 2, 21, 22
HV-S...	Comfortable manual override for...Max actuators size S
KB-S	Clamp for damper shafts Ø 10...20 mm and □ 10...16 mm
AR-12-xx	Reduction part for 12 mm square connection to 11, 10, 9 or 8 mm shafts
Kit-S8	Cable glands nickel-plated
Adaptions	for dampers and valves on request

Schischek GmbH Germany, Muehlsteig 45, Gewerbegebiet Sued 5, 90579 Langenzenn, Tel. +49 9101 9081-0, Fax +49 9101 9081-77, E-Mail info-de@schischek.com

Electrical connection

All actuators are equipped with a universal supply unit working at a voltage range from 24...240 V AC/DC. The supply unit is self adjusting to the connected voltage!
The safety operation of the spring return function works if the supply voltage is cut.
For electrical connection inside hazardous areas an Ex-e terminal box, certificated in acc. with ATEX is required (e.g. ExBox).
An over-current protection fuse < 10 A has to be provided by installer.
Note: the initial current is appr. 2 A for 1 second.

Modulating / 3-pos. – with / without spring return SB 5.0



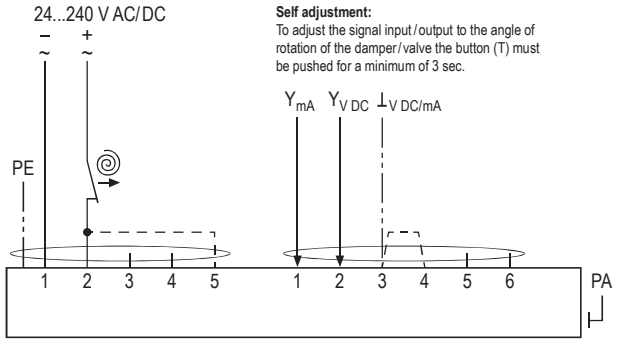
Self adjustment:
To adjust the signal input / output to the angle of rotation of the damper / valve the button (T) must be pushed for a minimum of 3 sec.

Selection of running time for spring return:
Spring return in ~ 10 s = Standard wiring
Spring return in ~ 3 s = Additional wiring on terminal 5

Reverse function:
Bridge 3–4 reverses the input and output signals

Function and enforcement control of switch a and b in modulating mode:
- **a** closed – **Forced-ON** (OFF) in acc. to left / right mounting of actuator
- **b** closed – **Forced-OFF** (ON) in acc. to left / right mounting of actuator

Modulating – with / without spring return (no enforcement) SB 5.1

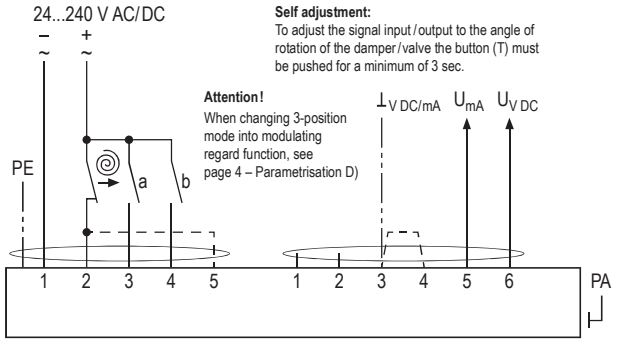


Self adjustment:
To adjust the signal input / output to the angle of rotation of the damper / valve the button (T) must be pushed for a minimum of 3 sec.

Selection of running time for spring return:
Spring return in ~ 10 s = Standard wiring
Spring return in ~ 3 s = Additional wiring on terminal 5

Reverse function:
Bridge 3–4 reverses the input and output signals

Modulating – with / without spring return (no feedback) SB 5.2



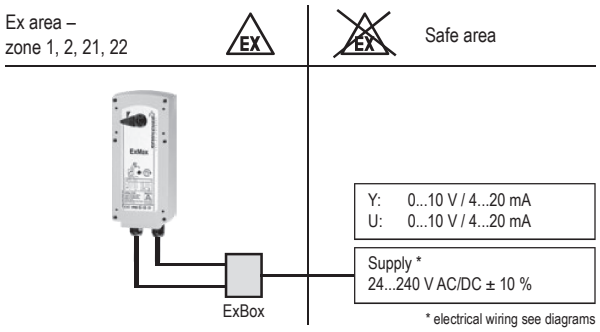
Self adjustment:
To adjust the signal input / output to the angle of rotation of the damper / valve the button (T) must be pushed for a minimum of 3 sec.

Selection of running time for spring return:
Spring return in ~ 10 s = Standard wiring
Spring return in ~ 3 s = Additional wiring on terminal 5

Reverse function:
Bridge 3–4 reverses the input signals

3-pos. – with / without spring return + feedback SB 5.3

Self adjustment:
To adjust the signal input / output to the angle of rotation of the damper / valve the button (T) must be pushed for a minimum of 3 sec.



Attention!
When changing 3-position mode into modulating regard function, see page 4 – Parametrisation D)

Selection of running time for spring return:
Spring return in ~ 10 s = Standard wiring
Spring return in ~ 3 s = Additional wiring on terminal 5

Reverse function:
Bridge 3–4 reverses the output signals

3-pos. control mode:
- **a** closed, **b** open – **ON** (OFF) in acc. to left / right mounting of actuator
- **b** closed, **a** open – **OFF** (ON) in acc. to left / right mounting of actuator

Installation

Important information for installation and operation

A. Installation, commissioning, maintenance

All national and international standards, rules and regulations for hazardous Ex-areas must be complied. Certified apparatus must be installed in accordance with manufacturer instructions. If the equipment is used in a manner not specified by the manufacturer, the safety protection provided by the equipment may be impaired. For electrical installations design, selection and erection, EN / IEC 60079-14 can be used.
For electrical connection an Ex-e terminal box is required (e.g. ExBox-...).
Attention: If the actuator is put out of operation all Ex rules and regulations must be applied. You have to cut the supply voltage before opening the terminal box!
The cables of the actuator must be installed in a fixed position and protected against mechanical and thermical damage. Connect potential earth. Avoid temperature transfer from armature to actuator! Close all openings with min. IP66.
For outdoor installation a protective weather shield against sun, rain and snow should be applied to the actuator as well as a constant supply at terminal 1 and 2 for the integrated heater. During commissioning apply a self adjustment drive.

continue next page

Schischek GmbH Germany, Muehlsteig 45, Gewerbegebiet Sued 5, 90579 Langenzenn, Tel. +49 9101 9081-0, Fax +49 9101 9081-77, E-Mail info-de@schischek.com

Important information for installation and operation

Actuators are maintenance free. An annual inspection is recommended. For electrical installations inspection and maintenance, EN/IEC 60079-17 can be used. Ex-actuators must not be opened by the customer.

B. Manual override

Manual override only if supply voltage is cut. Use delivered socket wrench with slow motions, usage can be tight. **Attention:** Releasing or letting go the Allen key too fast at manual operating actuators with spring return causes risk of injury!

C. Shaft connection, selection of running time

Actuators are equipped with a direct coupling double square shaft connection of 12 × 12 mm. For round shafts adaptors/clamping connection (accessories, e.g. KB-S) are available. The housing of the actuator is axially symmetrically built to select Open-close direction of the spring return function by left-right mounting. Using the 10-position switch different motor running times and spring return running times can be selected on site in acc. to the actuator type.

D. 3-position control mode

...Max actuators are in the best way suitable for the 3-pos. operation. To protect such elements as gears and mounting elements against harmful influences like minimum pulse time, ...Max actuators are protected via internal electronics. It ignores impulses < 0.5 s, the cyclic duration must be min. 0.5 s. At changing direction the pause is 1 s.

E. Spring return

Spring return function works only if the supply voltage for terminal 1 or 2 is cut. In the event of an electrical interruption, the spring returns to its end position even if supply voltage is available again during return function. Thereafter operation will continue.

F. Operation at ambient temperatures below −20 °C

All actuators are equipped with a regulated integrated heating device designed for employments down to −40 °C ambient temperature. The heater will be supplied automatically by connecting the constant voltage supply on the clamps 1 and 2.

1. After mounting the actuator must bei immediately electrically connected.
2. The heater switches on automatically when actuator reaches internally −20 °C. It heats up the actuator to a proper working temperature, then heater switches off automatically. Actuator will not run during heating process.
3. The adjustment options are only ensured after this heating up period.

G. Excess temperatures

In acc. to the ATEX rules and regulations Ex actuators must be protected against excess temperature. The internal thermostat works as a maximum limiter and, in the event of failure at incorrect temperatures, shuts off the actuator irreversible. An upstream connected temperature sensor stops the actuator before reaching its max. temperature. This safety feature is reversible, after cooling down the actuator is completely functional again. In this case the failure must be eliminated immediately on site!

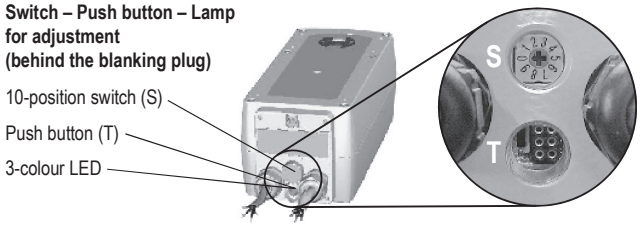
H. Synchron mode

Do not connect several actuators to one shaft or link mechanically together.

I. Mechanical protection

Actuators must be operated with a minimum external load.
After installing the actuator to the damper/armature a self adjustment drive has to be performed in order to protect the damper/armature against mechanical overload.
During operation the actuator reduces briefly its speed (motor power) before reaching the end position for a "gentle" blockade/stop.

J. Intrinsically safe circuits



The actuator has a flameproof enclosure acc. to EN 60079. The supply of the push button (adjustment drive), the 10-position switch (adjustment of torque and running time) and the LED indicator is performed intrinsically safe!

Parameter selection

Example:
ExMax-15.30-Y

Requested parameter:
Torque 30 Nm
Motor running time 30 s/90°

Result:
Switch position 07

Type		Torques	
ExMax- 5.10-Y ▶		5 Nm	10 Nm
ExMax- 15.30-Y ▶		15 Nm	**30 Nm**
ExMax- 5.10-YF ▶		5 Nm	10 Nm
ExMax- 15-YF ▶		15 Nm	
		▼	▼
Running times		**Position of switch (S)**	
7,5 s/90°	▶	00	05
15 s/90°	▶	01	06
30 s/90°	▶	02	07
60 s/90°	▶	03	08
120 s/90°	▶	04	09

Functions, adjustments and parameters

A) Self adjustment of angle of rotation
Turn switch (S) to position 02 (low torque) or 07 (high torque). Press button (T) for a minimum of 3 seconds. The actuator drives to both end positions and detects the blocking positions. The LED flashes GREEN during adjustment.
The adjustment takes about 60 seconds (30 sec. "On", 30 sec. "Off").

B) Selecting motor running time and torque
Adjust parameters only if actuator is in idle state or without applied potential.
Turn switch (S) to the position required for the intended operation acc. to table above. The selected parameters will be carried out at the actuator's next operation.

C) Selecting spring return time
Spring return time is selected by wiring.

D) Changing modulating operation to 3-pos. operation with feedback
Modulating mode: The LED lights GREEN, potential applied.
Press button (T) briefly 3 times:
- each for at least 0.2 seconds
- altogether within max. 5 seconds

The LED changes from steady GREEN to steady YELLOW*.

E) Changing 3-pos. operation with feedback to modulating operation
3-pos. mode: The LED lights YELLOW*, potential applied.
Press button (T) briefly 3 times.
The LED changes from steady YELLOW* to steady GREEN.

F) Additional information for control in 3-pos. operation with feedback

a closed, b open	= direction I	a and b closed	= motor doesn't work
b closed, a open	= direction II	a and b open	= motor doesn't work

The rotation direction (I and II) depends on left/right mounting of the actuator to the damper. To reverse the rotation direction (by motor) exchange the electrical wiring of terminal 3 and 4.
In 3-pos. operation with feedback the Y-inputs are without function.

G) Inverting <=> Reverting
Bridging signal wires 3–4 (cable B) inverts the function of input signals Y and feedback signals U.

* Note: "YELLOW" may vary from yellowish to orange.

⚠ Attention ⚠

During commissioning apply a self adjustment drive.
Regard duty cycle at motor running times!
Never use spring return actuators without external load.

Code No. LIT-1900222
Issued January 6, 2015

VG1000 Series Two-Way, Stainless Steel Trim, NPT End Connections Ball Valves with Spring-Return Electric Actuators without Switches

Description

VG1000 Series Ball Valves are designed to regulate the flow of hot or chilled water and, for some models, low pressure steam in response to the demand of a controller in HVAC systems. Available in sizes 1/2 through 2 in. (DN15 through DN50), this family of two- and three-way forged brass valves is factory or field mounted to Johnson Controls® VA9104, M9106, M9109, and M9100 Series Non-Spring-Return and VA9203 and VA9208 Series Spring-Return Electric Actuators for on/off, floating, or proportional control.

Refer to the *VG1000 Series Forged Brass Ball Valves Product Bulletin (LIT-977132)* for important product application information.

Features

- Forged Brass Body — provides 580 psig static pressure rating.
- 200 psi Closeoff Pressure Rating — provides tight shutoff.
- Graphite-Reinforced Polytetrafluoroethylene (PTFE) Seats — include 15% graphite-reinforced ball seals, providing better wear resistance.
- 300 Series Stainless Steel Ball and Stem Assembly — tolerates high-temperature water or 15 psi saturated steam with fluid temperatures of -22 to 284°F (-30 to 140°C) or where a higher degree of corrosion protection is desired.
- 500:1 Rangeability — provides accurate control under all load conditions.

Repair Information

If the VG1000 Series Ball Valve fails to operate within its specifications, replace the valve body, actuator, or entire assembly. For replacement parts, contact the nearest Johnson Controls representative.

VG1000 Series Two-Way, Spring-Return, Stainless Steel Ball and Stem Ball Valve Assemblies without End Switches

Selection Charts

Technical Specifications

VG1000 Series Two-Way, Stainless Steel Trim, NPT End Connections Ball Valves with Spring-Return Electric Actuators without Switches		
Service[1]		Hot Water, Chilled Water, 50/50 Glycol Solutions, and 15 psig (103 kPa) Saturated Steam for HVAC Systems
Fluid Temperature Limits	**Water**	-22 to 284°F (-30 to 140°C)
	Steam	15 psig (103 kPa) at 250°F (121°C)
Maximum Actuator Fluid Temperature Limit	**212°F (100°C)**	VA9203 Series VA9208 Series
	284°F (140°C)	VA9203 Series with M9000-561 Thermal Barrier VA9208 Series with M9000-561 Thermal Barrier
Valve Body Pressure Rating	**Water**	580 psig (4,000 kPa) at 203°F (95°C) (PN40) 464 psig (3,196 kPa) at 284°F (140°C) (PN40)
	Steam	15 psig (103 kPa) Saturated Steam (Applies to VA9203 Series or VA9208 Series Actuators with M9000-561 Thermal Barrier Installed)
Maximum Closeoff Pressure		200 psid (1,378 kPa)
Maximum Recommended Operating Pressure Drop		50 psid (340 kPa)
Flow Characteristics	**Two-Way**	Equal Percentage
Rangeability[2]		Greater than 500:1
Minimum Ambient Operating Temperature	**-22°F (-30°C)**	VA9203 Series Spring-Return Actuators
	-40°F (-40°C)	VA9208 Series Spring-Return Actuators
Maximum Ambient Operating Temperature[3] **(Limited by the Actuator and Linkage)**	**Direct Mount**	140°F (60°C): VA9203 or VA9208 Series Spring-Return Actuators
Leakage		0.01% of Maximum Flow per ANSI/FCI 70-2, Class 4
		1% of Maximum Flow for Three-Way Bypass Port
End Connections		National Pipe Thread (NPT)
Materials	**Body**	Forged Brass

	Characterizing Disk	Amodel® AS-1145HS Polyphthalamide Resin
Compliance CRN		0C16910.5C

1. Proper water treatment is recommended; refer to the VDI 2035 Guideline.
2. Rangeability is defined as the ratio of maximum controllable flow to minimum controllable flow.
3. In steam applications, install the valve with the stem horizontal to the piping and wrap the valve and piping with insulation.

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls, Inc. shall not be liable for damages resulting from misapplication or misuse of its products. © 2015 Johnson Controls, Inc.

General Purpose Solenoid Valves

Skinner™ and Gold Ring™ Valves

Effective September 2011

Parker

ENGINEERING YOUR SUCCESS.

2-Way

Direct Lift, Pilot & Remote Operated Valves
1/4"–2" NPT

General Description:

2-Way Direct Lift, Pilot & Remote Operated valves are designed for higher flow and medium to high pressure applications. Pilot operated valves require the minimum pressure differential specified for proper valve operation.

Installation
Valves should be mounted with solenoid coil vertical and upright.

Standard Materials of Construction
Please refer to page A55

Compatible Fluids
Lubricated Air, Inert Gases, Water and Light Oil (300 SSU). Additional fluids compatible with alternate materials of construction (consult factory).

Use of non-lubricated gaseous media can affect valve life.

Electrical Characteristics:

Standard Voltages:
AC –24/60
120/60–110/50
240/60–220/50
DC –12, 24 & 120
For other voltages – consult factory

Coil Classification:
Class F standard
Class H available

Agency Approvals:
Standard valves with NEMA 4X or explosion proof solenoid enclosures are UL Listed and CSA Certified. For additional details, consult factory.

Maximum Ambient Temperature
150°F
Please refer to page A55 for details.

Applications:

- Irrigation systems
- Fire suppression equipment
- Molding equipment
- Cooling of machine tools
- Sterilizers
- Car wash
- Water treatment and purification
- Air compressors and dryers
- Floor cleaning equipment
- Hospital equipment
- Automated systems
- Food processing

Technical Information

Introduction

Solenoid valves are highly engineered products that can be utilized in many diverse and unique applications. In addition to operational functionality, it is important to consider safety, reliability, media compatibility and suitability for the operating environment when selecting the best product for a given application. This section provides a brief overview of the components and functional varieties of solenoid valves available from Parker.

General Information

Operation

Solenoid valves are electrically operated devices used to control flow. They are used for the remote on/off or directional control of liquids, gases and steam. They do not regulate flow.

Solenoid valves consist of two main elements: ***1.)*** An electrical coil in the solenoid, and ***2.)*** A valve body or pressure vessel. The solenoid is the electromagnetic unit that powers (acts to open or close) the valve. The valve is the pressure containing unit that acts to shut off or open media flow.

When the solenoid is energized by an electrical signal, current flow results in the build up of a magnetic field. The field attracts a moveable plunger in the valve. Physical movement of the plunger opens or closes a valve orifice which gives the valve on/off or directional control of media.

In general, solenoid valves are constructed to be: ***1.)*** Normally-Open, or ***2.)*** Normally-Closed. Both designations refer to action of the valve on flow when the solenoid is not energized. There would be, for example, no media flow through a normally closed valve until the solenoid is energized.

The most common types of solenoid actuated valves are: ***1.)*** Direct-Acting, and ***2.)*** Pilot-Operated. In a direct-acting valve, the plunger is in direct contact with the body main orifice, and opens or closes the orifice. In a pilot-operated valve, the main orifice is not directly controlled by the plunger, but by a diaphragm, piston or spool. Pilot operated valves contain both a pilot and a bleed orifice.

Operational Specifications

All solenoid valves are individually rated. Pilot-operated solenoid valves may also have an additional specification, ***Minimum Operating Pressure Differential (MOP***). This is the minimum system pressure differential required to operate the valve and maintain it in the open position. MOP applies only to pilot-operated solenoid valves where system pressure is used to lift the diaphragm off the seat (normally-closed) when the solenoid is energized. Direct-acting or hung-diaphragm valves do not require a minimum operating pressure.

There will be a pressure differential ΔP before the solenoid of a normally-closed valve is energized. Just after flow begins moving through the valve, the pressure differential may decrease. When sizing any normally-closed, normally-open, or universal solenoid valve, pressure differential before and after flow begins must be considered.

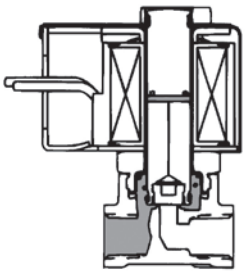
Solenoid valves are also rated for ***Maximum Fluid (media) Temperature*** due to temperature limitations of the various disc or diaphragm materials used in their construction.

Response Time, the time necessary for a fully open valve to fully close, or the time necessary for a fully closed valve to fully open, is affected by several factors including: electrical service, media, valve size, system pressure, pressure drop, and operating mode.

The following general response times (nominal) apply for air service using alternating current (AC).

- **Large direct-acting valves (3/8 to 3/4-inch) 20 to 40 milliseconds**
- **Small Direct Acting Valves (1/8 to 1/4-inch) 0.5 to 10 milliseconds**
- **Small pilot (diaphragm) valves (3/8 to 3/4-inch) 15 to 50 milliseconds**
- **Large pilot (diaphragm) valves (1 to 3-inch) 50 to 75 milliseconds**

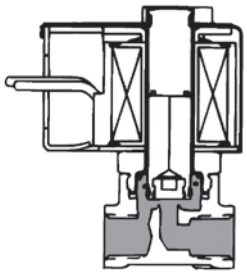
Viscous liquids have very little effect on response time on small direct-acting valves. However, on all other valves, viscous liquids may increase response time by 50 to 100 percent. DC operated solenoid valves will generally increase response time (relative to AC operated solenoids) by as much as 50 percent. Where response time is critical, consult your authorized local Fluid Control Division distributor.



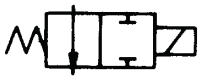
Two-Way Solenoid Valve Operation

Two-way solenoid valves have one inlet and one outlet connection with one main orifice and flow path. A normally closed valve is closed when the solenoid is de-energized, open when the solenoid is energized. A normally open valve is open when the solenoid is de-energized, closed when the solenoid is energized. Consideration should be given to the desired fail-safe condition of the valve when selecting the type of operation.

Operational Sequence: Direct-Acting Normally Closed

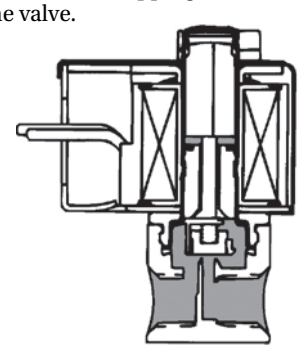


To Open: When the solenoid receives an electrical signal, a magnetic field is formed which attracts the plunger. The plunger lifts off the main orifice allowing flow through the valve.



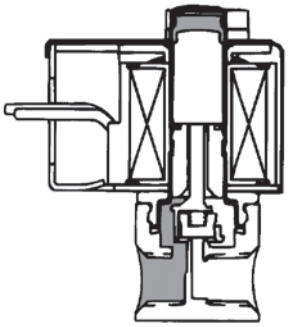
Normally Closed, De-Energized

To Close: When the solenoid is de-energized, it releases its hold on the plunger. The plunger drops and covers the main orifice.



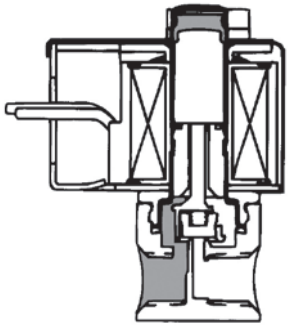
Normally Closed, Energized

Operational Sequence:
Direct-Acting Normally Open



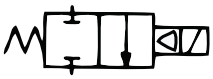
In a normally open valve, the sequence of operation is reversed from that of a normally closed valve. The main orifice is open when the solenoid is de-energized.

To Close: When the solenoid is energized, it attracts the plunger. The plunger covers the main orifice stopping media flow through the valve.



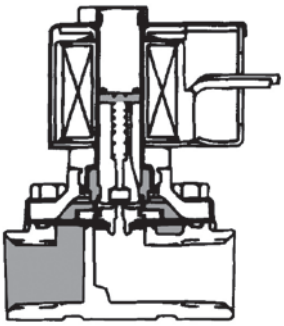
Normally Open, De-energized

To Open: When the solenoid is de-energized, it releases its hold on the plunger. The plunger uncovers the main orifice allowing flow through the valve.



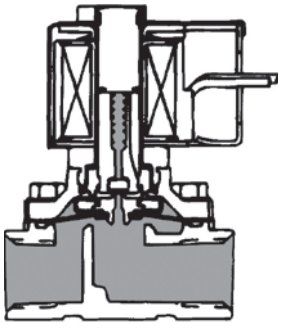
Normally Open, Energized

Normally Closed, Bi-Directional



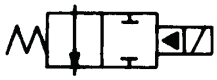
Allows for flow in either direction when energized. (De-energized shown)

Operational Sequence:
Pilot-Operated Normally Closed



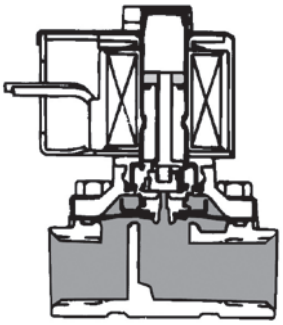
To Open: When the solenoid receives an electrical signal, a magnetic field is formed which attracts the plunger. The plunger covering the pilot orifice lifts off, causing system pressure (holding the diaphragm closed) to drop.

As system pressure on top of the diaphragm is reduced, full system pressure on the opposite side of the diaphragm acts to lift the diaphragm away from the main orifice, thus allowing full media flow through the valve. Since the bleed orifice is dimensionally smaller than the pilot orifice, system pressure cannot rebuild on top of the diaphragm as long as the pilot orifice remains open.



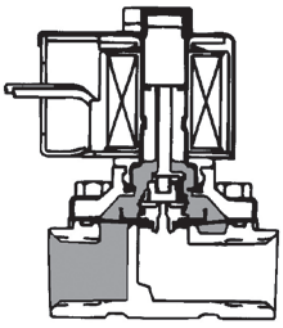
Normally Closed, De-Energized

To Close: When the solenoid is de-energized, it releases its hold on the plunger. The plunger drops and covers the main orifice. System pressure then builds up on top of the diaphragm through the bleed orifice, forcing the diaphragm down until it covers the main orifice and stops media flow through the valve.



Normally Closed, Energized

Operational Sequence:
Pilot-Operated Normally Open

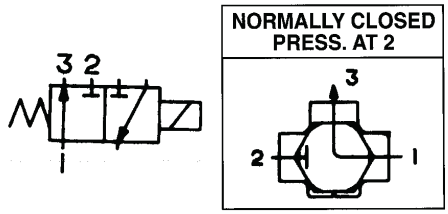


In a normally open valve, the sequence of operation is reversed from that of a normally closed valve. The main orifice is open when the solenoid is de-energized. All other relationships (e.g., the size relationship between the pilot and bleed orifice) still apply.

To Close: When the solenoid is energized, it attracts the plunger. The plunger covers the pilot orifice. System pressure then builds up on top of the diaphragm through the bleed orifice, forcing the diaphragm down until it covers the main orifice and stops media flow through the valve.

Normally Open, De-Energized

To Open: When the solenoid is de-energized, it releases its hold on the plunger. The plunger uncovers the pilot orifice causing system pressure holding the diaphragm closed to drop. As system pressure on top of the diaphragm is reduced, full system pressure on the opposite side of the diaphragm acts to lift the diaphragm away from the main orifice, thus allowing full media flow through the valve.



Normally Open, Energized

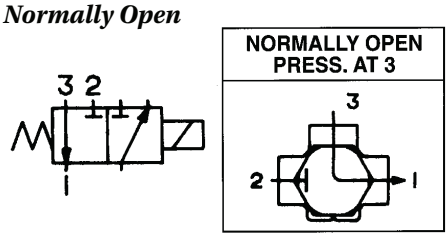
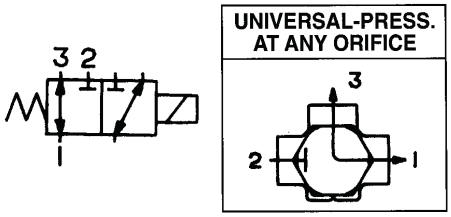
www.parker.com/fcd

Three-Way Solenoid Valve Operation



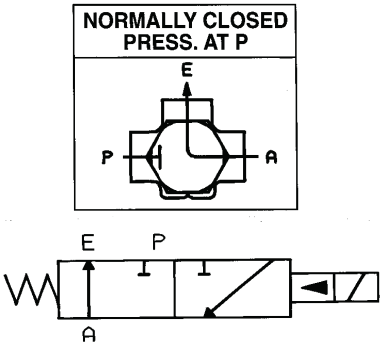
The difference between two-, three- and four-way solenoid valves lies in the construction of the valve body. Three-way valves have three connections and two main orifices. One orifice is always closed, the other always open. Which orifice is open, and which is closed, determines whether the valve is operationally normally open or normally closed.

Operational Sequence: Direct-Acting Normally Closed



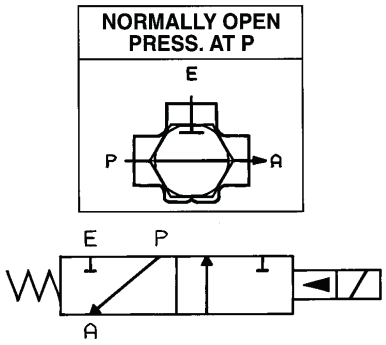
As with a normally closed, two-way valve, the system pressure orifice is closed when the solenoid is de-energized. The second orifice is open to whatever device it is connected to. When energized, the system pressure orifice is opened and the second orifice is closed. This allows system pressure to be applied to the device that was previously being exhausted through the second orifice (now closed).

Normally Open



As with a normally open, two-way valve, the system pressure orifice is open when de-energized. The second orifice is closed to whatever device it is connected to. With the solenoid energized, the system pressure orifice is closed, the second orifice opened and the device exhausted.

Universal Construction

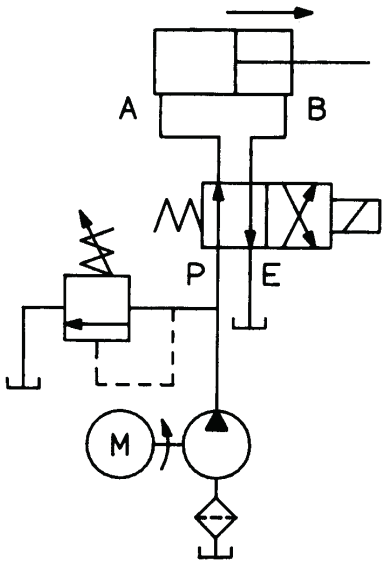


This type of three-way valve may be used in either the normally closed or normally open mode. It can be piped either way. The valve can be used to divert media flow from one outlet connection to the other, or to select one of two inlet flows.

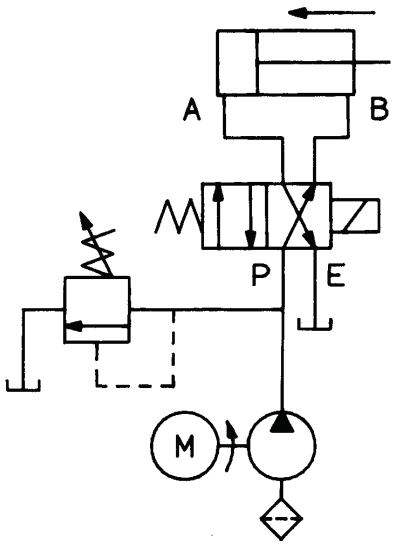
Operational Sequence: Pilot-Operated Normally Closed

As with pilot-operated two-way valves, the plunger movement controls the pilot orifice which controls the pressure holding one of the diaphragms closed against the main orifice. As with direct-acting three-way valves, one orifice is closed when the other is open. When de-energized, flow is from the pressurized device to exhaust and the system pressure port is closed. When energized, flow is from the pressure port to the controlled device and the exhaust port is closed.

Normally Open



Four-Way Solenoid Valve Operation



A four-way valve is generally used to operate double-acting cylinders vs. a three-way for single acting cylinders.

A double-acting cylinder has a port at either end of the cylinder body by which fluid can enter and exit. This allows the piston to be moved (propelled) in either direction (double-acting). To distinguish the ports on a double-acting cylinder, one is usually marked "A" and the other "B". A four-way solenoid valve acts to change the direction of fluid flow from the "A" port to the "B" port and, therefore, change direction of the cylinder.

In addition to the "A" and "B" cylinder ports, the four-way valve has a pressure and exhaust port. When de-energized, the pressure port is internally connected to the "A" cylinder port, and the "B" cylinder port is internally connected to the valve's exhaust port. Energizing the four-way valve reverses the system, routing the "A" port to exhaust and the "B" port to pressure. A minimum pressure drop is required for proper operation. Care should be taken not to restrict the exhaust port. Speed controls should be installed in cylinder lines.

De-Energized

Energized

General Data-Solenoid Coils

Power and Voltage

All coils used in Parker FCD solenoid valves are designed for continuous duty except where noted. On AC, inrush current occurs at the moment the solenoid is energized. The continuous current after inrush is holding current.

Typical AC current values are shown in the Coil Section of the catalog. DC solenoids have no inrush. Typical amp ratings for DC are determined by dividing DC watts by DC voltage. All Parker FCD solenoid valves are tested to operate at 15% under-voltage and full pressure ratings. AC and DC voltage ratings (nominal) and normal operating ranges, as shown in the following table, are standard. For special voltages, consult the factory.

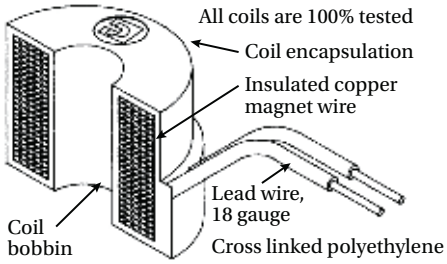
AC/DC Voltage Range

All coils used in Parker FCD valves are designed for continuous duty except where noted. They can remain energized continuously without damage from overheating or mechanical failure.

All coils used in Parker FCD solenoid valves are either Class "F" or Class "H" molded epoxy, and are constructed in accordance with UL, IEEE, NEMA and other accepted standards. unless otherwise noted

Testing

All Parker FCD solenoid valves are 100% tested. Coil insulation systems must satisfy performance standards set by the National Electrical Manufacturers Association (NEMA) and tested by Under-writer's Laboratories.



Electrical components of AC and DC coils are tested in accordance with ASTM D2307-78 and become a recognized component under U.L.1446.

The procedure produces data for an evaluation which concludes, a coil with 20,000 hours continuous operation will perform within the same specifications of a zero time coil (new coil).

Coil Construction

Parker FCD coils are epoxy encapsulated. This compound is waterproof and impervious to oil, dust, moisture and most corrosive fumes and vapors.

Coils used in Parker FCD valves are molded and constructed in accordance with UL, IEEE, NEMA and other accepted standards, and are 100% tested.

Temperature

Just as fluid (media) temperatures affect valve body trim; ambient, fluid and power input temperatures affect solenoid coils.

Temperature rise due to power input varies with coil design. Temperature rise due to power input and ambient temperature is directly additive and helps determine the class of coil required for specific valve applications.

When ambient temperature is greater than 25°C (77°F), add the difference of ambient and 25°C (77°F) to the energized coil temperature shown in the table.

The effect of higher fluid temperatures needs to be considered only when fluid temperature is greater than 180°F. Do not exceed the catalog maximum temperature limitation for the valve. Add the difference of your fluid temperature and 180°F to the energized coil temperature shown in the table.

Use the "Saturated Steam Temperature Table" when working with saturated steam. Do not exceed the catalog maximum temperature limitation for the valve. Add the difference of steam temperature and 180°F to the energized coil temperature shown in the table.

Total of additional ambient and fluid or steam temperature to the energized coil temperature shown must not exceed the industrial limit of the coil class selected. Class "H" coil is required if total temperature exceeds "F" Class coil limits. Consult your Fluid Control Division authorized distributor if total temperature exceeds the "H" Class coil limit.

Maximum allowable fluid temperatures are listed for all valves in each section of the catalog.

Minimum allowable fluid temperature is 32º F if moisture is present. Otherwise, -40º F for direct acting valves with NBR seals, -10º F with FKM seals and -10º F for 71214.

Consult factory for confirmation of low fluid temperature limit for specific complete, part number.

Industrial Limits	Total Coil Temperatures													
	AC								DC				AC/DC	
NEMA Limits	155°C (311°F)		180°C (356°F)		155°C (311°F)		180°C (356°F)		155°C (311°F)	180°C (356°F)	155°C (311°F)	180°C (356°F)	155°C (311°F)	180°C (356°F)

Firestop Collar (CP 643N)

Product description

- A ready-to-use firestop collar, made of a galvanized steel housing and intumescent inserts for firestopping combustible pipes

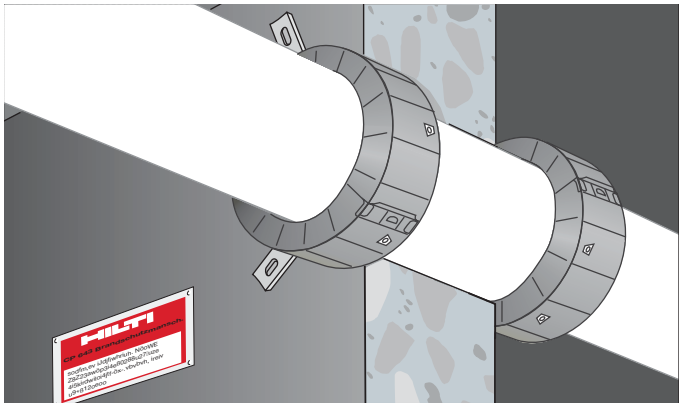
Product features

- Ready-to-use collar
- No construction required
- Fast installation time
- Adjustable mounting tabs
- Low profile for tight installations

Areas of application

- Firestopping combustible pipes up to 6" diameter in penetrations through fire walls and floors
- Suitable for the following pipe materials:
- PVC, CPVC, ABS, PVDF, PP and FRPP

For use with



- Concrete, masonry, wood floor and gypsum wall assemblies
- Wall and floor assemblies rated up to 4 hours

Types of installation

- Wall: two collars, one on each side
- Floor: one collar on underside (bottom)

Example

- Waste water pipes
- Fresh water pipes

Technical Data	CP 643N			
Description	Pipe outside dia (in.)	Collar outside dia. (in.)	Collar Height (in.)	No. of hooks and fasteners
CP 643-50/1.5"N	1.4–2.0	2.8	0.9	2
CP 643-63/2"N	2.0–2.5	3.4	1.3	2
CP 643-90/3"N	2.6–3.6	4.9	1.7	3
CP 643-110/4"N	3.6–4.5	6.0	1.9	3
CP 643-160/6"N	6.6	9.8	1.9	4
Temperature resistance		-40°F to 140°F (–40°C to 60°C)		
Intumescent activation		Approx. 392°F (200°C)		
Expansion ratio (unrestricted)		Up to 1:10		
Tested in accordance with • UL 1479 • ASTM E 814 • ASTM G21 • CAN/ULC-S115				

CLASSIFIED c UL us

Installation instructions for CP 643N

Notice

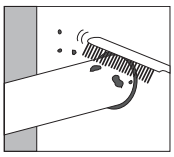
- Before handling, read Material Safety Data Sheet and product label for safe usage and health information.
- Instructions below are general guidelines — always refer to the applicable drawing in the UL Fire Resistance Directory or Hilti Firestop Systems Guide for complete installation information

Opening

1. Clean the plastic pipes. Expansion of the intumescent material during a fire acts to close the plastic pipe. Very dirty pipes (ie: with remains of mortar) may lead to a delay in this closing action. Soiled plastic pipes should, therefore, be cleaned in the area where the CP 643N Firestop Collar is to be installed.

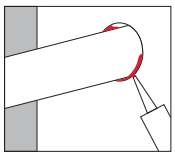
Application of firestop system

2. Seal the opening if required. Gaps may be closed with FS-ONE. The approved methods vary and are given in the specific UL system.
3. Close the CP 643N Firestop Collar. Place the CP 643N Firestop Collar around the plastic pipe and lock the closure by applying firm pressure until it latches.
4. Attach fastening hooks. The fastening hooks can be attached to various points on the metal housing. This allows the fastening points to be made to suit the space available in each case. The hooks must be positioned as symmetrically as possible. The required number of fastening hooks is indicated on the packaging.
5. Fastening the CP 643N Firestop Collar. Only when fastened properly can CP 643N offer protection against fire.



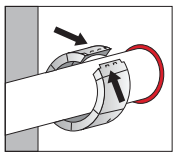
a. Mark the fastening points.
b. Drill holes with a Hilti rotary hammer drill (i.e. TE 4-A18) or, depending on base material, fasten using Hilti powder-actuated tool.
c. To secure the CP 643N Firestop Collar, use Hilti anchors/fasteners.
d. For maintenance reasons, a penetration can be permanently marked with an identification plate and fastened in a visible position next to the seal.

Not for use

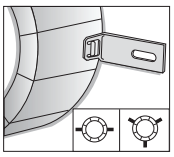


- With metal pipes
- In highly corrosive surroundings
- With unapproved anchors/fasteners

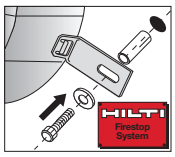
Storage



- Store only in the original packaging in a location protected from moisture



1. Clean plastic pipe.



2. Close remaining gap to provide smoke and gas resistant seal.

3. Close collar.

4. Attach fastening hooks.

5. Fasten collar and identification plate (if required).

Hilti Firestop
Saving lives through innovation and education

Hilti. Outperform. Outlast.

High-performance intumescent firestop sealant FS-ONE MAX

Applications

- For effectively sealing most common through penetrations in a variety of base materials
- For use on concrete, masonry and drywall
- Mixed and multiple penetrations
- Metal pipe penetrations: copper, steel and EMT
- Insulated metal pipe penetrations: steel and copper
- Plastic pipe penetrations: closed or vented

Advantages

- US-produced: “Buy American” compliant
- One product for a variety of common through penetrations
- Cost-effective, easy-to-use solution
- Water-based and paintable
- Industry-leading VOC results
- Ethylene glycol-free

Streamline®
Tube • Fittings • Valves

COPPER TUBE FOR PLUMBING AND MECHANICAL APPLICATIONS

Job Name _____ **Contractor** _____

Job Location _____ **Wholesaler** _____

Engineer _____ **Streamline® Rep** _____

Product Description:

Streamline® Copper Tube for use in plumbing and mechanical applications. Available sizes (Type K, L, M, & DWV) ranging from ¼" to 8" in diameter. All tube shall be manufactured in the United States.

Material:

Streamline® Copper Tube is manufactured from UNS C12200 grade of copper.

Key Specifications:

Streamline® Copper Tube (Type K, L, M) shall conform to the NSF/ANSI 61 Annex G requirements and is manufactured to meet ASTM B88. Copper drainage tube (DWV) is made to meet ASTM B306. Copper refrigeration coils, ACR/Nitrogenized straight lengths and line sets are made to meet the chemical, mechanical, cleanness and eddy current testing requirements of the applicable specifications of ASTM B280.

Installation:

Installations shall comply with the latest applicable building codes for the local jurisdiction. For detailed installation instructions, consult the Copper Developement Association at copper.org.

References:

ASTM B75	Seamless Copper Tube
C12200	99.9% Pure Copper (can be used for potable water)
NSF/ANSI 61 Annex G	Safe Drinking Water Act (third party certification)
ASTM B88	Seamless Copper Water and Gas Tube (Type K, L, M)
ASTM B280	Seamless Copper Tube for Air Conditioning and Refrigerants
ASTM B306	Seamless Drainage Tube Code (DWV)

Copper [tube or fitting] UNS C122000 has been evaluated by NSF International to NSF/ANSI 61 for use in drinking water supplies of pH 6.5 and above. Drinking water supplies that are less than pH 6.5 may require corrosion control to limit leaching of copper into the drinking water.

MADE IN USA

A BRAND OF MUELLER INDUSTRIES

COPPER TUBE DATA

Streamline® Copper Tube sets the standard for quality, consistency and service in the plumbing industries. With a full line of copper tube products to support most all plumbing supply and DWV applications, Streamline® Copper Tube is available in all common types including Type K, Type L, Type M and DWV. Each piece of tube is incised marked and color coded for easy, long lasting identity. Manufactured in accordance with applicable standards, our ongoing commitment to quality continues to make Streamline® Copper Tube the preferred and specified brand of industry professionals.

8	10.6	-	124	119	114	73

Table give computed allowable stress for annealed copper tube at indicated temperature.

TECHNICAL DATA

Values of allowable internal working pressure for copper tube in service are based on the formula from ANSI B31, Standard Code for Pressure Piping:

$$P = \frac{2\,S\,tm}{D\,max - 0.8\,tm}$$

P = Allowable Pressure
S = Allowable stress
T = Wall thickness
D Max = Outside Diameter

D max - 0.8 tm

@150°F S = 5100 PSIG annealed
@ 200°F S= 4800PSIG annealed
@ 300°F S= 4700 PSIG annealed
@ 400°F S= 3000 PSIG annealed

All ratings listed for types K, L, M, DWV and refrigeration service tube in the preceding charts are calculated for tube in the annealed condition. These values should be used when soldering, brazing or welding is employed for joining components in a system. While the ratings for hard drawn tube are substantially higher, they should only be used for systems using properly designed flare or compression mechanical joints, since joining by any heating process might anneal (soften) the tube.

In designing a system, careful consideration should also be given to joint ratings as well as those of the components.

.7 National Research Council (NRC)/Institute for Research in Construction

.1 NRCC 38728, National Plumbing Code of Canada (NPC).

.8 Transport Canada (TC)

.1 Transportation of Dangerous Goods Act, 1992, c. 34 (TDGA).

1.3 ACTION AND INFORMATIONAL SUBMITTALS

.1 Provide submittals in accordance with Section 01 33 00 - Submittal Procedures.

.2 Product Data:

.1 Provide manufacturer's printed product literature and datasheets for insulation and adhesives, and include product characteristics, performance criteria, physical size, finish and limitations.

.2 Submit product data for the following:

.1 Mechanical Joints

.2 Valves

.3 Closeout Submittals:

.1 Provide maintenance data for incorporation into manual specified in Section 01 78 00 - Closeout Submittals.

Part 2 Product

2.1 PIPING

.1 Domestic hot, cold, recirculation, and non-potable systems within building.

.1 Above ground:

.1 Copper tube, hard drawn, type K: to ASTM B88.

.2 Stainless Steel tube. to ASTM A312

.2 Buried or embedded: copper tube, soft annealed, type L: to ASTM B88M, in long lengths and with no buried joints.

.2 Domestic water service and recirculation line below grade:

.1 Conform to standards specified by Civil package.

2.2 FITTINGS

.1 Domestic hot, cold, and non-potable systems within the building:

.1 NPS 2 (50mm) and Smaller

.1 Bronze pipe flanges and flanged fittings, Class 150: to ANSI/ASME B16.24.

.2 Cast bronze threaded fittings, Class 125: to ANSI/ASME B16.15.

.3 Cast copper, solder type: to ANSI/ASME B16.18.

.4 Wrought copper and copper alloy, solder type: to ANSI/ASME B16.22.

.2 NPS 2-1/2 (63mm) and larger:

.1 Wrought copper, roll grooved fittings to CSA B242, ASTM B 75-02 and ANSI B16.22

.2 Bronze pipe flanges and flanged fittings, Class 150: to ANSI/ ASME B16.24.

2.3 JOINTS

.1 General:

.1 Rubber gaskets, latex-free mm thick: to AWWA C111.

.2 Bolts, nuts, hex head and washers: to ASTM A307, heavy series.

.3 Solder: Lead Free .

.4 Teflon tape: for threaded joints.

.5 Grooved couplings: designed with angle bolt pads to provide rigid joint, complete with EPDM gasket.

.6 Dielectric connections between dissimilar metals: dielectric fitting, complete with thermoplastic liner.

Part 3 Execution

3.1 APPLICATION

.1 Manufacturer's Instructions: comply with manufacturer's written recommendations, including product technical bulletins, handling, storage and installation instructions, and datasheets.

3.2 INSTALLATION

.1 Install in accordance with National Plumbing Code of Canada - latest edition.

.2 Install pipe work in accordance with Section 23 05 05 - Installation of Pipework, supplemented as specified herein.

.3 Cut square, ream and clean tubing and tube ends, clean recesses of fittings and assemble without binding.

.4 Assemble piping using fittings manufactured to ANSI standards.

.5 Install tubing close to building structure to conserve headroom and space. Group exposed piping and run parallel to walls.

.6 Where pipe sizes differ from connection sizes of equipment, install reducing fittings close to equipment. Reducing bushings are not permitted.

.7 Lay copper tubing so that it is not in contact with dissimilar metal and will not be kinked or collapsed.

.8 Copper fixture supply pipes shall be secured to proper backing in the walls with wing back 90 degree elbows screwed to back with #8 x 50 mm long

Genset Manufacturer:	Caterpillar
Genset Model:	G3306TA - 220bhp
Engine Manufacturer:	Caterpillar
Engine Model:	G3306TA

Engine Information

Exhaust Flow:	967.00 ACFM	**Max BP:**	27.00 in wg	**Temp:**	1000.00 Fahrenheit	**KW:**	165
Number of Outlets:	1	**Outlet Diameter:**	5.00	**Flex Length:**	18.00	**Fuel Type:**	Other

Engine Octave Band

Engine Exhaust: Sound Pressure Level (LP) measured @ 1.00 m in dB

60 Hz	125 Hz	250 Hz	500 Hz	1 KHz	2 KHz	4 KHz	8 KHz	dB	dBA
106.00	108.00	99.00	98.00	97.00	96.00	95.00	95.00	111.22	103.51

Catalytic Converter IL.

No Catalytic Converter sound data is given.

Exhaust Back Pressure Detail

No User Selection for Exhaust data is made.

Silencer(s) Sizing Result

Silencer(s) Results below is based on user Selection of One Silencer using SMS Default dBA correction & Near Field Distance attenuation:

Recommended Minimum Outlet Size 4"

Silencer Part #	Description	Outlet Size	Back Pressure
SM2-5-SIEO	5" Critical Grade Cylindrical Silencer (25-30 dBA)	5 in	5.13 in wg
Silencer(s)			**5.13 in wg**
Qty : 1 Flex Dia : 5.00 Flex Length 18.00"		Flex Connector :	0.20 in wg

Exhaust Velocity = 7,095.00 ft/min OR 36 m/s

Octave Band

Octave Band	63 Hz	125 Hz	250 Hz	500 Hz	1 kHz	2 kHz	4 kHz	8 kHz	dB	dBA
Engine SPL @ 1 m	106.00	108.00	99.00	98.00	97.00	96.00	95.00	95.00	111.22	103.51
Silencer #1 : SM2 dB @ 1 m	16.00	27.00	30.00	29.00	25.00	21.00	20.00	20.00	34.74	30.85
Catalytic Converter IL.	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00
dBA reduction correction	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00		
Resulting SPL @ 1 m	90.00	81.00	69.00	69.00	72.00	75.00	75.00	75.00	90.98	81.21
Distance Attenuation dB	10.14	10.14	10.14	10.14	10.14	10.14	10.14	10.14		
Resulting SPL @7.00 m	79.86	70.86	58.86	58.86	61.86	64.86	64.86	64.86	80.84	71.07

Calculated noise level is based on free field conditions.
No site conditions and no calculation safety factors are taken into consideration.
Typical resulting noise tolerance is +/- 5dBA. No noise result guarantees are implied.

APPENDIX C

MAINTENANCE SCHEDULE

IQALUIT WWTP UPGRADE
MECHANICAL EQUIPMENT MAINTENANCE SCHEDULE

TAGS	EQUIPMENT	MAINTENANCE TASK	RECOMMENDED MAINTENANCE SCHEDULE
EW-1 (Plumbing Fixtures)	**Gravity Fed Emergency Eyewash Station**		
		General condition and cleanliness of eyewash	Monthly, or as required by use
		Solution replacement or addition of stabilizer chemicals	As per manufacturer's recommendations.
DEC-1 & DCE-2 (Fire Protection)	**Dry Chemical Fire Extinguishers**		
		Check general condition of extinguisher, review pressure gauge (in acceptable range), on hanger	Monthly
		Annual check and service of extinguisher per NFPA 10 requirements	Annually, by certified personnel (typically a fire protection agency)
Valves & Fittings, General/Common (Domestic Water Systems, Heating Water Systems, Fuel Oil Systems)	**Valves & Fittings common to all piping systems**		
	Isolation (ball, gate, butterfly, globe)	Check for proper operation, cycle valve from normal to other position (ensure globe valves are set to same position)	Annually
	Check valves	Check valve operation	Annually
	Strainers	Remove screen and clean	Every 6 months to Annually, adjusted as required
	Temperature gauges / thermometers	Check general condition, clean gauges faces to ensure visible, replace any defective or broken units	Every 6 months
	Pressure gauges	Check general condition, clean gauges faces to ensure visible, replace any defective or broken units	Every 6 months
Valves & Fittings (Heating Water Systems)	**Valves & Fittings specific to Heating Water Systems**		
	Pressure / temperature relief	Test operation and functionality of valve	Annually
	Manual & automatic air vents	Test operation and functionality of valve	Annually
	Solenoid valves	Test operation and functionality of valve	Annually
	Control valves (2-way and 3-way)	Test operation and functionality of valve	Annually
Valves & Fittings (Domestic Water Systems)	**Valves & Fittings specific to Domestic Water Systems**		
	Reduced Pressure Backflow Preventers	Test operation to requirements of CSA-B64.10 and AHJ.	Annually, by certified personnel (typically a professional plumber)
	Pressure / temperature relief	Test operation and functionality of valve	Annually
	Pressure reducing	Test operation and confirm pressure settings	Annually
Valves & Fittings (Fuel Oil Systems)	**Valves & Fittings specific to Fuel Oil Systems**		
	Fusible link valve	Test operation and functionality of valve	Annually
	Anti-siphon valve	Test operation and functionality of valve	Annually
	Solenoid valves	Test operation and functionality of valve	Annually
	Pressure relief valve	Test operation and functionality of valve	Annually
Piping (Heating Water Systems)	**Piping & Insulation**		
	Exposed / non-insulated piping	Review for obvious signs of leaks	Bi-monthly or one week after system operation mode (off / on) has changed after extended period in opposite operation mode
	Insulated piping	Review for water staining (indicating possible leak) and general condition of insulation and covering	Bi-monthly or one week after system operation mode (off / on) has changed after extended period in opposite operation mode
Piping (Domestic Water System)	**Piping & Insulation**		
	Exposed / non-insulated piping	Review for obvious signs of leaks	Bi-monthly
	Insulated piping	Review for water staining (indicating possible leak) and general condition of insulation and covering	Bi-monthly
Piping (Fuel Oil System)	**Piping**		
		Review for obvious signs of leaks	Monthly
TK-1.3 / P-1.5 (Heating Water System)	**Glycol Fill Tank**		
		Check tank fill level and log any added glycol solution for tracking / future info and planning	Weekly when heating system operational
		Check tank fill level and log any added glycol solution for tracking / future info and planning	Monthly when heating system not operational
TK-1.5 (Heating Water System)	**Boiler PRV Discharge Tank**		
		Check tank for fluid signifying heating system over pressure/temperature	Weekly
TK-1.1 & TK-1.2 (Heating Water System)	**Expansion Tanks, Hydronic and Thermal**		
		Check tank air pressure	Annually when heating system not operational and tank can be isolated/drained.

IQALUIT WWTP UPGRADE
MECHANICAL EQUIPMENT MAINTENANCE SCHEDULE

TAGS	EQUIPMENT	MAINTENANCE TASK	RECOMMENDED MAINTENANCE SCHEDULE
		Check for visible signs of leaks or damage	Monthly
TK-3.1 & TK-3.2 (Domestic Hot Water Systems)	**Expansion Tanks, Thermal**		
		Check tank air pressure	Annually when heating system not operational and tank can be isolated/drained.
		Check for visible signs of leaks or damage	Monthly
TK-4.1 (Fuel Oil System)	**Exterior Fuel Oil Storage Tank**		
	Tank & fittings	Check for visible signs of leaks and damage	Bi-weekly
	Tank secondary containment leak monitoring	Check vacuum gauge for signs of failure/leaks	Monthly
	Tank fill point spill box	Check for spilled fuel oil in spill box	Monthly
	Low level sensor	Check for proper operation	Annually
	2-way Siphon protection solenoid valve	Check for proper operation	Annually, at the start of heating season
	Tank mounted levelometer	Check for proper operation and confirm volume against remote mounted levelometer	Annually
	Remote mounted levelometer	Check for proper operation and confirm volume against tank mounted levelometer	Annually
TK-4.2 & TK-4.3 (Fuel Oil System)	**Interior Fuel Oil Day Tanks**		
	Tank & fittings	Check for visible signs of leaks and damage	Bi-weekly
	Tank secondary containment	Check tank leak monitor / visual inspect secondary containment for leaks	Monthly
	Level sensors	Check for proper operation	Annually
P-1.1, P-1.2, P-1.3, P-1.4, P-1.5, P-1.6 (Heating Water System)	**Heating Water System Pumps**		
	Pump operation	Check pump is operating smoothly and quietly	Bi-weekly
	Leaks	Check for leaks at pump flanges and at shaft seals	Bi-weekly
	Preventative & general maintenance	Refer to individual pump manuals for additional preventative and general maintenance requirements	As recommend by manufacturer
P-2.1, P-2.2, P-2.3, P-2.4, P-2.5, P-2.6 (Sump pump System)	**Duplex Sump Pumps & Controls**		
	Pump operation	Check pump is operating smoothly and quietly	Bi-weekly
	Leaks	Check for leaks at pump flanges and at shaft seals	Bi-weekly
	Controls	Verify controls operate correctly and lead/lag operation functions correctly	Annually
	Pump intake and sump	Verify pump intake is free of debris and sump does not contain debris or materials that cannot be processed by the pumps	Every 6 months
	Preventative & general maintenance	Refer to individual pump manuals for additional preventative and general maintenance requirements	As recommend by manufacturer
P-3.1, P-3.2, P-3.3, P-3.4, P-3.5 (Domestic Water System)	**Domestic Water System Pumps**		
	Pump operation	Check pump is operating smoothly and quietly	Bi-weekly
	Leaks	Check for leaks at pump flanges and at shaft seals	Bi-weekly
	Preventative & general maintenance	Refer to individual pump manuals for additional preventative and general maintenance requirements	As recommend by manufacturer
P-4.1 & P-4.2 (Fuel Oil System)	**Fuel Oil Transfer Pumps**		
	Pump package and fittings	Check for obvious signs of leaks or damage	Bi-weekly
	Controls	Verify controls operate as per pump manual and lead/lag operation functions correctly.	Annually
	Preventative & general maintenance	Refer to Viking Pump Duplex Fuel Oil Packages Field Start-Up Guide for additional preventative and general maintenance requirements	As recommend by manufacturer
Heating Water System Fluid	**Propylene Glycol Solution, 50%**		
		Test system fluid properties and log valves for tracking / future info and planning	Weekly until system stabilizes then bi-weekly
Fluid Filters (Heating Water System)	**Sidestream Filter Assembly**		
	Sight glass	Check sight glass for fluid flow and for visual observation of heating fluid	Monthly
	Filters	Check filters for condition and replace as required	Monthly
Fluid Filters (Fuel Oil System)	**Fuel Oil Filters**		
	Fuel oil transfer pump pre-filter	Check filters for condition and replace as required	Bi-monthly
	Boiler burner filter	Check filters for condition and replace as required	Bi-monthly

IQALUIT WWTP UPGRADE
MECHANICAL EQUIPMENT MAINTENANCE SCHEDULE

TAGS	EQUIPMENT	MAINTENANCE TASK	RECOMMENDED MAINTENANCE SCHEDULE
(Fuel Oil System)	Generator filter	Check filters for condition and replace as required	Annually or sooner as recommended by generator manufacturer based on generator run time and age
De-Aerators (Fuel Oil System)	**Tigerloop Fuel Oil Deaerators**		
		Check for excess air in de-aerator and bleed out if required	Bi-weekly
B-1 and B-2 (Heating Water System)	**Heating Water Boilers, Oil-Fired**		
	Boilers	Check general condition and for obvious signs of leaks	Bi-weekly
	Burners	Check general condition and for obvious signs of leaks	Bi-weekly
	Boiler controls	Check for proper operation	Annually
	Boiler safety devices & limits	Check operation for proper functionality and shut down of boiler	Annually
	Preventative & general maintenance	Refer to boiler installation and service manual for additional preventative and general maintenance requirements	As recommend by manufacturer
DHWT-1 (Domestic Water System)	**Domestic Hot Water Tank, Oil-Fired**		
	Tank	Check general condition and for obvious signs of leaks	Bi-weekly
	Burners	Check general condition and for obvious signs of leaks	Bi-weekly
	Safety devices & limits	Check operation for proper functionality and shut down of boiler	Annually
	Preventative & general maintenance	Refer to tank installation and service manual for additional preventative and general maintenance requirements	As recommend by manufacturer
Chimneys (Heating & Domestic Water Systems)	**Chimneys**		
	Exterior surfaces	Check for visible signs of leaks or corrosion	Bi-weekly
	Base tee drain	Check for accumulation of fluid and drain as required	Monthly
	Interior surfaces	Check for visible signs of corrosion and general condition, clean as required	Annually
UH-1.1 to UH-1.7, UH-2.1 to UH-2.8 (Heating Water System)	**Unit Heaters**		
	Fan	Check for proper operation, unusual noises	Every 6 months
	Coil	Check condition of coil surfaces and vacuum dust build-up	Annually
CUH-1.1 (Heating Water System)	**Cabinet Unit Heater**		
	Fan	Check for proper operation, unusual noises	Every 6 months
	Coil	Check condition of coil surfaces and vacuum dust build-up	Annually
E-WF-1, WF-1, Elec BB (Heating Water System)	**Baseboard Radiation**		
	Coil	Check condition of coil surfaces and vacuum dust build-up	Annually
HEX-3.1 and HEX-3.2 (Heating Water System and Domestic Water / Non-Potable Hot Water Systems)	**Heat Exchangers**		
	Exterior surfaces	Check for visible signs of leaks	Monthly
	Operation	Confirm temperatures in/out of heat exchanger meet specified values	Annually
AHU-2 & AHU-3 (Ventilation System)	**Air Handling Units**		
	Heat recovery core	Check condition of core surfaces and vacuum dust build-up	Annually
	Heating coils	Check condition of coil surfaces and vacuum dust build-up	Annually
	Filters	Check condition and replace as required	Every 3 months or as required
	Bypass dampers	Check general condition and operation	Annually
	Fan wheel	Check general condition	Annually
	Fan belt	Check belt tension	Monthly
	Fan motor	Lubrication - lubricate if required	Every 6 months
	Preventative & general maintenance	Refer to unit installation and service manual for additional preventative and general maintenance requirements	As recommend by manufacturer
HRV-1 (Ventilation System)	**Heat Recovery Ventilator**		
	Filters	Check condition and replace as required	Every 3 months or as required
	Heat recovery core	Check condition of core and vacuum / clean core	Annually
	Blowers	Check condition and vacuum clean	Annually
	Preventative & general maintenance	Refer to unit installation and service manual for additional preventative and general maintenance requirements	As recommend by manufacturer
CF-1 & CF-2 (Ventilation System)	**Cooling Fans**		
	Housing	Check condition and clean	Annually
	Fan wheel	Check condition and clean	Annually
CD-1, CD-2, CD-3, CD-4, CD-5, CD-6, CD-7,	**Motorized (Control) Dampers**

Direct Drive Centrifugal Inline Fan

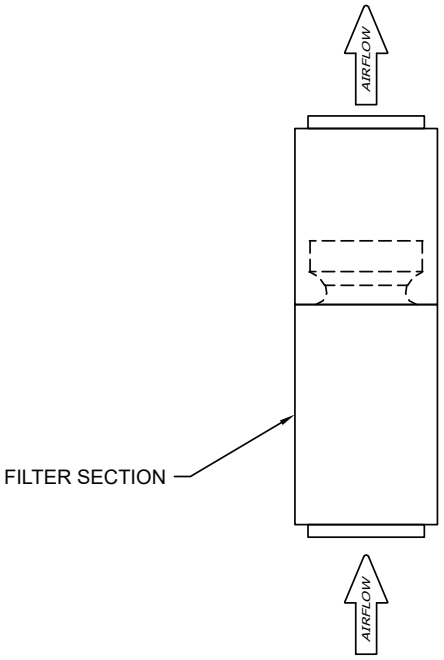
Standard Construction Features:

- Galvanized steel housing - Backward inclined aluminum wheel - Two bolted access panels - Integral duct connection flanges - Ball bearing motors (sizes 100-160 and all vari-green motors), sleeve bearing motors (sizes 60-95) - Corrosion resistant fasteners



Selected Options & Accessories:

Motor - Vari-Green EC motor with Dial or 0-10VDC Input
Control - Vari-Green Dial on Exterior of Fan Housing, Mounted and Wired
Switch, NEMA-1, Toggle, Shipped with Unit
Junction Box Mounted & Wired
Sloped Filter Box, 1 in. Aluminum Filters
Unit Warranty: 1 Yr (Standard)

Vari-Green
Motor & Control Options

An EC motor that uses AC input power and internally converts it to DC power. Motor accepts a 0-10VDC control signal along with a 24V source to power controls in the motor. Motor is operable in the 2-10VDC range and off while in the 0-1.9VDC range. Vari-Green motors feature a soft-start and inherent thermal and current protection built into each unit. Inrush current at start up is eliminated and the motor will automatically reduce speed or turn off if overloaded or it becomes too hot.

An EC motor that uses AC input power and internally converts it to DC power. Potentiometer (dial) mounted on the fan housing adjusts the speed (RPM) down 80%. Vari-Green motors feature a soft-start and inherent thermal and current protection built into each unit. Inrush current at start up is eliminated and the motor will automatically reduce speed or turn off if overloaded or it becomes too hot.

Models SQ and BSQ
Centrifugal Inline Fans

Installation, Operation and Maintenance Manual

Please read and save these instructions for future reference. Read carefully before attempting to assemble, install, operate or maintain the product described. Protect yourself and others by observing all safety information. Failure to comply with instructions could result in personal injury and/or property damage!

Model SQ Direct Drive

Model SQ is a direct drive centrifugal inline exhaust fan. These fans are specifically designed for inline applications. Performance capabilities range up to 5,000 cfm *(8,500 m^3/hr)* and up to 2.0 in. wg *(498 Pa)* of static pressure. SQ fans are available in thirteen sizes with nominal wheel diameter ranging from 6 to 16 inches *(152 to 406 mm)* (060 to 160 unit sizes). Each fan shall bear a permanently affixed manufacturers engraved metal nameplate containing the model number and individual serial number.

Model BSQ Belt Drive

Model BSQ is a belt drive centrifugal inline exhaust fan. These fans are specifically designed for inline applications. Performance capabilities range up to 27,200 cfm *(46,200 m^3/hr)* and up to 4.0 in. wg *(996 Pa)* of static pressure. BSQ fans are available in fourteen sizes with nominal wheel diameter ranging from 7 to 42 inches *(178 to 1067 mm)* (070 to 420 unit sizes). Each fan shall bear a permanently affixed manufacturers engraved metal nameplate containing the model number and individual serial number.

General Safety Information

Only qualified personnel should install this fan. Personnel should have a clear understanding of these instructions and should be aware of general safety precautions. Improper installation can result in electric shock, possible injury due to coming in contact with moving parts, as well as other potential hazards. Other considerations may be required if seismic activity is present. If more information is needed, contact a licensed professional engineer before moving forward.

1. Follow all local electrical and safety codes, as well as the National Electrical Code (NEC) and the National Fire Protection Agency (NFPA), where applicable. Follow the Canadian Electric Code (CEC) in Canada.
2. The rotation of the wheel is critical. It must be free to rotate without striking or rubbing any stationary objects.
3. Motor must be securely and adequately grounded.
4. Do not spin fan wheel faster than max cataloged fan RPM. Adjustments to fan speed significantly affects motor load. If the fan RPM is changed, the motor current should be checked to make sure it is not exceeding the motor nameplate amps.
5. Do not allow the power cable to kink or come in contact with oil, grease, hot surfaces or chemicals. Replace cord immediately if damaged.
6. Verify that the power source is compatible with the equipment.
7. Never open access doors to a duct while the fan is running.

DANGER
Always disconnect, lock and tag power source before installing or servicing. Failure to disconnect power source can result in fire, shock or serious injury.
CAUTION
When servicing the fan, motor may be hot enough to cause pain or injury. Allow motor to cool before servicing.
CAUTION
Precaution should be taken in explosive atmospheres.

DANGER
Pour écarter les risques d'incendie, de choc électrique ou de blessure grave, veiller à toujours débrancher, verrouiller et étiqueter la source de courant avant l'installation ou l'entretien.
ATTENTION
Lors de toute intervention sur la soufflante, le moteur peut être suffisamment chaud pour provoquer une douleur voire une blessure. Laisser le moteur refroidir avant toute maintenance.
ATTENTION
Faire preuve de précaution dans les atmosphères explosives.

Receiving

Upon receiving the product check to ensure all items are accounted for by referencing the delivery receipt or packing list. Inspect each crate or carton for shipping damage before accepting delivery. Alert the carrier of any damage detected. The customer will make a notation of damage (or shortage of items) on the delivery receipt and all copies of the bill of lading which is countersigned by the delivering carrier. If damaged, immediately contact your Greenheck Representative. Any physical damage to the unit after acceptance is not the responsibility of Greenheck Fan Corporation.

Unpacking

Verify that all required parts and the correct quantity of each item have been received. If any items are missing, report shortages to your local representative to arrange for obtaining missing parts. Sometimes it is not possible that all items for the unit be shipped together due to availability of transportation and truck space. Confirmation of shipment(s) must be limited to only items on the bill of lading.

Handling

Move fan to desired location and determine position of access panels, discharge and motor. Make sure the inlet and outlet have at least 2½ times the wheel diameter (duct diameter) before any obstructions like an elbow or transition. Attach the fan to a suitable framework as specified; hanging or base vibration isolators are recommended. See the SQ & BSQ Fan Dimensions table on pages 4 and 5 for physical dimensions, utilizing Figures 1 and 2. Mounting dimensions and vibration isolator centerline information is provided on pages 6 thru 9. The motor's amperage and voltage ratings must be checked for compatibility to supply voltage prior to final electrical connection. Electrical lead-in wires are then connected to the factory supplied safety disconnect switch. All wiring must conform to local and national codes.

Fan Storage

Fans are protected against damage during shipment. If the unit cannot be installed and operated immediately, precautions need to be taken to prevent deterioration of the unit during storage. The user assumes responsibility of the fan and accessories while in storage. The manufacturer will not be responsible for damage during storage. These suggestions are provided solely as a convenience to the user.

Indoor Storage: The ideal environment for the storage of fans and accessories is indoors, above grade, in a low humidity atmosphere which is sealed to prevent the entry of blowing dust, rain or snow. Temperatures should be evenly maintained between 30° to 110°F *(-1° to 43°C)* (wide temperature swings may cause condensation and "sweating" of metal parts). All accessories must be stored indoors in a clean, dry atmosphere.

Remove any accumulations of dirt, water, ice or snow and wipe dry before moving to indoor storage. To avoid "sweating" of metal parts allow cold parts to reach room temperature. To dry parts and packages, use a portable electric heater to get rid of any moisture buildup. Leave coverings loose to permit air circulation and to allow for periodic inspection.

The unit should be stored at least 3½ inches *(89 mm)* off the floor on wooden blocks covered with moisture proof paper or polyethylene sheathing. Aisles between parts and along all walls should be provided to permit air circulation and space for inspection.

Outdoor Storage: Fans designed for outdoor applications may be stored outdoors, if absolutely necessary. Roads or aisles for portable cranes and hauling equipment are needed.
The fan should be placed on a level surface to prevent water from leaking into the fan. The fan should be elevated on an adequate number of wooden blocks so that it is above water and snow levels and has enough blocking to prevent it from settling into soft ground. Locate parts far enough apart to permit air circulation, sunlight and space for periodic inspection. To minimize water accumulation, place all fan parts on blocking supports so that rain water will run off.

Do not cover parts with plastic film or tarps as these cause condensation of moisture from the air passing through heating and cooling cycles.

Fan wheels should be blocked to prevent spinning caused by strong winds.

Inspection and Maintenance During Storage

While in storage, inspect fans once per month. Keep a record of inspection and maintenance performed.

If moisture or dirt accumulations are found on parts, the source should be located and eliminated. At each inspection, rotate the wheel by hand ten to fifteen revolutions to distribute lubricant on motor. If paint deterioration begins, consideration should be given to touch-up or repainting. Fans with special coatings may require special techniques for touch-up or repair.

Machined parts coated with rust preventive should be restored to good condition promptly if signs of rust occur. Immediately remove the original rust preventive coating with petroleum solvent and clean with lint-free cloths. Polish any remaining rust from surface with crocus cloth or fine emery paper and oil. Do not destroy the continuity of the surfaces. Thoroughly wipe clean with Tectyl® 506 (Ashland Inc.) or the equivalent. For hard to reach internal surfaces or for occasional use, consider using Tectyl® 511M Rust Preventive, WD-40® or the equivalent.

Removing From Storage

As fans are removed from storage to be installed in their final location, they should be protected and maintained in a similar fashion until the fan equipment goes into operation.

Redesigned BSQ Dimensions

In early 2015, the BSQ was redesigned. The redesign changes some mounting dimensions of the fan for sizes 70 through 240. All BSQ fans ordered after July 20th, 2015 will be moving over to this new design, with two exceptions that will still utilize the old design:

1. Any orders prior to July 20th, 2015.
2. Any orders for OSHPD seismic rated units.

Both versions of the fan have their dimensions listed, so it is recommended dimensions be confirmed on these models before the unit is installed. Contact your local sales representative for clarification on ordering information.

Redesigned BSQ Dimensions

Mounting: BSQ

All BSQ fan models can be mounted horizontally, vertically or at an angle. For ease of installation, knockouts are provided at each location where mounting brackets are shown in Figures 5, 6 and 7. Optional brackets are universally adjustable to mount in any of these locations.

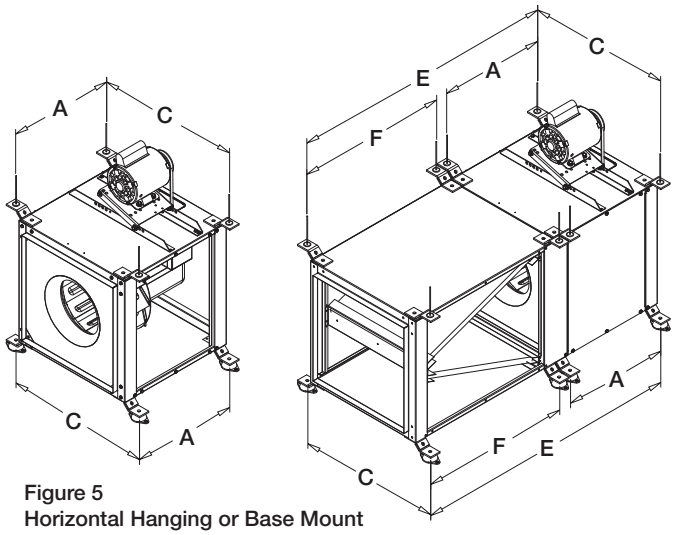

Figure 5
Horizontal Hanging or Base Mount

With either a hanging or base mount the motor may be located on either side. The base mount allows top access panels only.

NOTE

Flex duct is recommended for mounting to the inlet of the fan to allow for fitting adjustments.

If the inlet venturi requires adjustment, it can be detached from the unit via the fasteners located on the inlet panel.

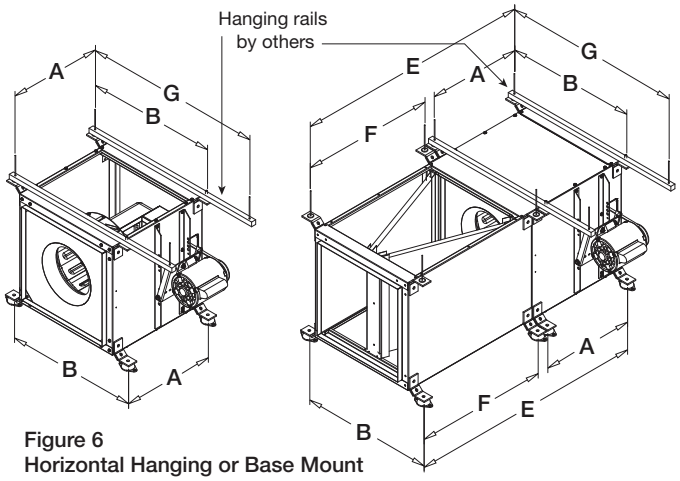

Figure 6
Horizontal Hanging or Base Mount

With a hanging mount, the motor may be located on either top or bottom. The base mount allows top motor location only. Both options provide access panels on two sides.

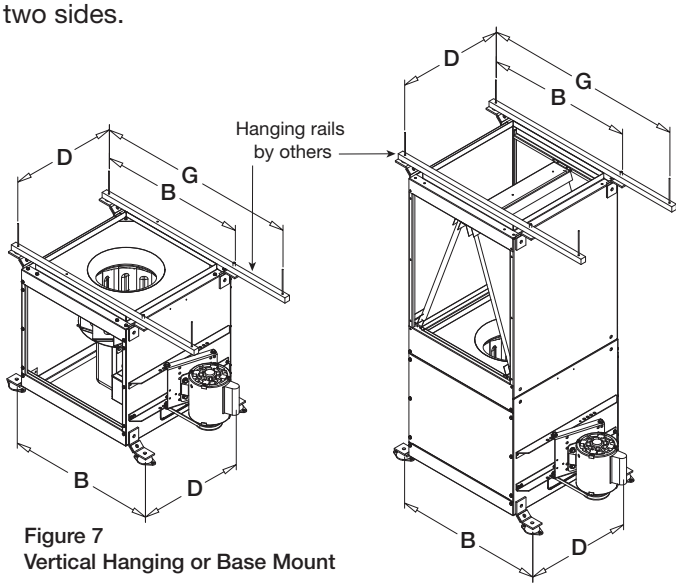

Figure 7
Vertical Hanging or Base Mount

Mounting brackets are turned 90° for vertical mounting. Access panels are located on the two sides adjacent to the motor.

BSQ 240 (HP)	25½ *(647)*	34⅞ *(886)*

All dimensions in inches *(millimeters)*.

Pre Start-Up Checks

1. **Check all fasteners for tightness.** The wheel should rotate freely and be aligned as shown in Figure 9. Wheel position is preset and the unit is tested at the factory. Movement may occur during shipment, and realignment may be necessary. Centering can be accomplished by loosening the bolts holding the inlet (venturi) panel and repositioning. Wheel and inlet cone overlap can be adjusted by loosening the setscrews in the wheel and moving the wheel to the desired position.

Wheel Overlap Dimensions

Model	G - Overlap in. *(mm)*	H - Gap in. *(mm)*
SQ 60-95	-	1/8 *(3)*
SQ 100-160	1/4 *(6)*	-
BSQ 70-160	1/4 *(6)*	-
BSQ 180-240	3/8 *(10)*	-
BSQ 300-420	1/2 *(13)*	-
SQ 97-98-99	1/4 *(6)*	-

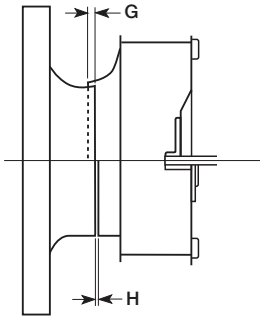

Figure 9

2. **Wheel Rotation:** Direction of wheel rotation is critical. Reversed rotation will result in poor air performance, motor overloading and possible burnout. Check wheel rotation by momentarily energizing the unit (all SQ and BSQ fans have clockwise wheel rotation when viewed from top of fan). Rotation should be clockwise as shown in Figure 10 and correspond to the rotation decal on the unit.

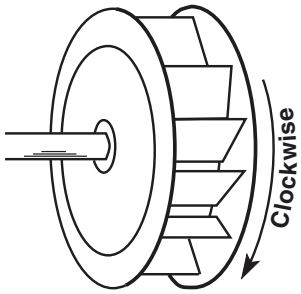

Figure 10

WARNING

Correct direction of wheel rotation is critical. Reversed rotation will result in poor air performance, motor overloading and possible burnout.

AVERTISSEMENT

La turbine doit impérativement tourner dans le bon sens. Une rotation en sens inverse entraînerait de mauvaises performances de soufflage, une surcharge du moteur voire un grillage du moteur.

3. **Vibration Isolators:** After fan is moved to desired location, punch out the four knockout holes which are located on the unit top and bottom panels. Assemble the brackets to the unit according to the appropriate drawings on pages 8 and 9 and refer to respective parts list on page 15. Make certain all connectors are tight and that all washers are in.
4. **For BSQ Fans:** If adjustments are made, it is very important to check the pulleys for proper alignment. Misaligned pulleys lead to excessive belt wear, vibration, noise, and power loss. (see Figure 11 on next page).

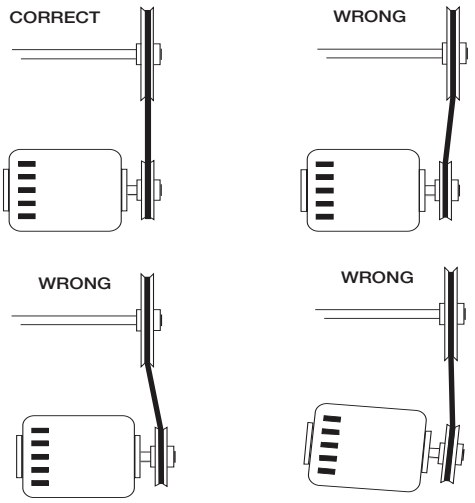

Figure 11

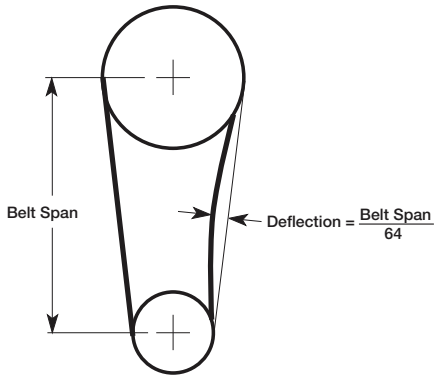
5. **For BSQ Fans:** Belt tension can be adjusted by loosening four fasteners marked “R” on the drive frame. (refer to Figure 13). The motor plate slides on the slotted adjusting arms. Belt tension should be adjusted to allow 1/64 inch of deflection per inch of belt span. For example, a 15 inch belt span should have 15/64 inch (or about 1/4 inch) of deflection with moderate thumb pressure at mid-point between pulleys (see Figure 12). Over-tightening will cause excessive bearing wear and noise. Too little tension will cause slippage at start-up and uneven wear.



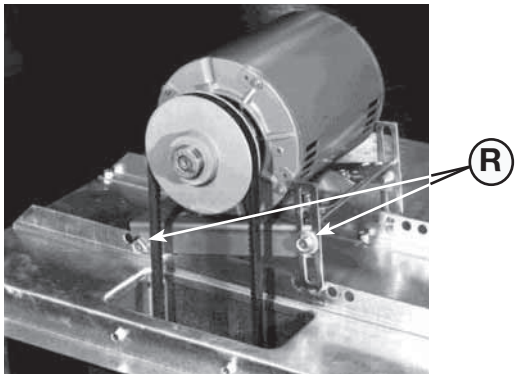


Figure 12

NOTE: Identical fasteners on opposing side must also be loosened.

Figure 13

6. The adjustable motor pulley is factory set for the RPM specified. Speed can be increased by closing or decreased by opening the adjustable motor sheave. Two groove variable pitch pulleys must be adjusted an equal number of turns open or closed. Any increase in speed represents a substantial increase in the horsepower required by a unit. Motor amperage should always be checked to avoid serious damage to the motor when speed is varied.

IMPORTANT

The fan has been checked for mechanical noises at the factory prior to shipment. If mechanical noise should develop, suggested corrective actions are offered in the Troubleshooting section.

IMPORTANT

Over-tightening will cause excessive bearing wear and noise. Too little tension will cause slippage at start-up and uneven wear.

IMPORTANT

Adjust (tighten) belt tension after the first 24-48 hours of operation.

Operation: SQ / BSQ

1. Before starting up or operating fan, check all fasteners for tightness. In particular, check the setscrews in wheel hub (and pulleys, if applicable).
2. While in the OFF position or before connecting the fan to power, turn the fan wheel by hand to be sure it is not striking the venturi or any obstacle.
3. Start the fan and shut it off immediately to check rotation of the wheel with directional arrow in the motor compartment, see Figure 10.
4. When the fan is started, observe the operation and check for any unusual noises.
5. With the system in full operation and all ductwork attached, measure current input to the motor and compare with the nameplate rating to determine if the motor is operating under safe load conditions.
6. Keep inlets and approaches to fan clean and free from obstruction.

Inspection: SQ / BSQ

Inspection of the fan should be conducted at the first 30 minute and 24 hour intervals of satisfactory operation.

30 Minute Interval

Inspect bolts, setscrews and motor mounting bolts. Adjust and tighten as necessary.

24 Hour Interval

Check all internal components. On BSQ unit only, inspect belt alignment and tension. Adjust and tighten as necessary.

Maintenance: SQ / BSQ

Installation and maintenance are to be performed only by qualified personnel who are familiar with local codes and regulations and who are experienced with this type of equipment.

Motor maintenance is generally limited to cleaning and lubrication (where applicable). Cleaning should be limited to exterior surfaces only. Removing dust buildup on motor housing ensures proper motor cooling.

Greasing of motors is only intended when fittings are provided. Many fractional horsepower motors are permanently lubricated and should not be lubricated after installation. Motors supplied with grease fittings should be greased in accordance with manufacturers' recommendations. Where motor temperatures do not exceed 104ºF *(40ºC)*, the grease should be replaced after 2,000 hours of running time as a general rule.

Wheels require very little attention when moving clean air. Occasionally, oil and dust may accumulate causing imbalance. When this occurs the wheel and housing should be cleaned to ensure smooth and safe operation.

All fasteners should be checked for tightness each time maintenance checks are performed prior to restarting unit.

A proper maintenance program will help these units deliver years of dependable service.

DANGER

Always disconnect, lock and tag power source before servicing. Failure to disconnect power source can result in fire, shock or serious injury.

DANGER

Pour écarter les risques d'incendie, de choc électrique ou de blessure grave, veiller à toujours débrancher, verrouiller et étiqueter la source de courant avant l'installation ou l'entretien.

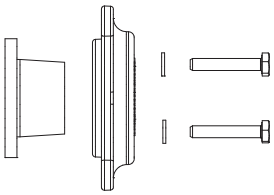
IMPORTANT

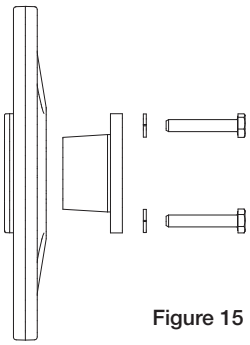
Uneven cleaning of the wheel will produce an out of balance condition that will cause vibration in the fan.

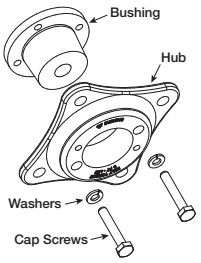
WARNING

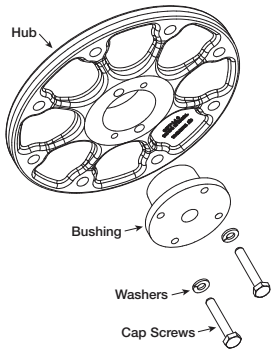
This unit should be made non-functional when cleaning the wheel or housing (fuses removed, disconnect locked off).

WARNING









L'appareil doit être rendu non opérationnel lors du nettoyage de la turbine ou du caisson (fusibles retirés, sectionneur verrouillé).

Tapered Bushing Hub Installation and Removal

For wheel hubs and shaft pulleys utilizing a tapered bushing interface, follow this procedure for installation and removal. There are two possible set ups for the tapered bushing, both have the same procedure, but orientation of the hub varies.

Tapered Bushing Removal:

1. If present, loosen the setscrew holding the bushing and shaft key in place.
2. Loosen and remove the socket head cap screws which fasten the bushing to the hub as shown in the section views and examples of Figures 14-17.

Standard Mounting	Reverse Mounting
 Figure 14	 Figure 15
	
 Figure 16 Standard Bushing Orientation	 Figure 17 Reverse Bushing Orientation

3. **Standard Mounting** - Take the two socket head cap screws that were removed and install them into the visibly threaded holes on the wheel hub.
   Reverse Mounting - Install the two socket head cap screws into the visibly threaded holes of the bushing flange.
4. Once both socket head cap screws are installed, tighten them an eighth of a turn at a time, alternating between the two until the hub comes loose from the bushing.

Bushing Installation:

1. Clean all surfaces of hub and bushing to remove any oil or residue present and do not use any lubricant to install bushing into the hub. For both standard and reverse mounting styles, the socket head cap screws are adjustable from the inlet of the fan.
2. **Standard Mounting:** Slide the bushing and shaft key onto the fan shaft followed by the wheel and hub assembly. If present, use the keyway setscrew to hold the shaft key and bushing in place but DO NOT overtighten as this can damage the bushing. Align the unthreaded holes of the hub with the threaded holes of the tapered bushing.
   Reverse Mounting: Slide the wheel and hub assembly onto the fans shaft followed by the bushing and shaft key. If present, use the keyway setscrew to hold the shaft key and bushing in place but DO NOT overtighten as this can damage the bushing. Align the unthreaded holes of the tapered bushing with the threaded holes of the hub.
3. Install the two bushing socket head cap screws into the aligned holes by hand (or without excessive torque) until the heads of the socket head cap screws are seated against the mating surface.
4. Adjust the height of the wheel in the fan relative to the inlet venturi then tighten the two socket head cap screws an eighth turn at a time in an alternating fashion and to a torque of 10 ft-lbs.

Belt/Bearing Maintenance BSQ Unit

1. Belts tend to stretch after a period of time. They should be checked periodically for wear and tightness. When replacing belts, use the same type as supplied with the unit.
2. Matched belts should always be used on units with multi-groove pulleys.
3. For belt replacement, loosen the tensioning device enough to allow removal of the belt by hand. Do not force belts on or off. This may cause cords to break, leading to premature belt failure.
4. Once installed, adjust belts as shown in "Pre-Start-Up Checks."
5. Shaft bearings can be classified in two groups: relubricating and non-relubricating. All bearings on standard model BSQ fans are factory lubricated and require no further lubrication under normal use (between -20ºF and 180ºF *(-29ºC and 82ºC)* in a relatively clean environment).
6. Units installed in hot, humid or dirty locations should be equipped with special bearings. These bearings will require frequent lubrication. Caution should be employed to prevent overpacking or contamination.
7. Grease fittings should be wiped clean. The unit should be in operation while lubricating. Extreme care should be used around moving parts.
8. Grease should be pumped in very slowly until a slight bead forms around the seal. A high grade lithium base grease should be used.

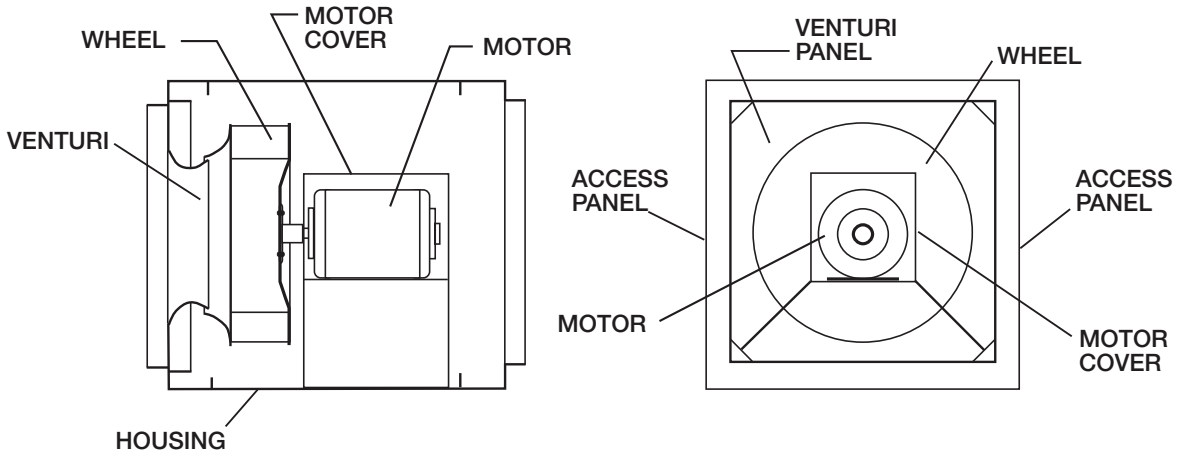
Recommended Relubrication Frequency in Months

NOTE: If unusual environment conditions exist (extreme temperature, moisture or contaminants) more frequent lubrication is required.

A good quality lithium base grease, conforming to NLGI Grade 2 consistency, such as those listed here may be used.

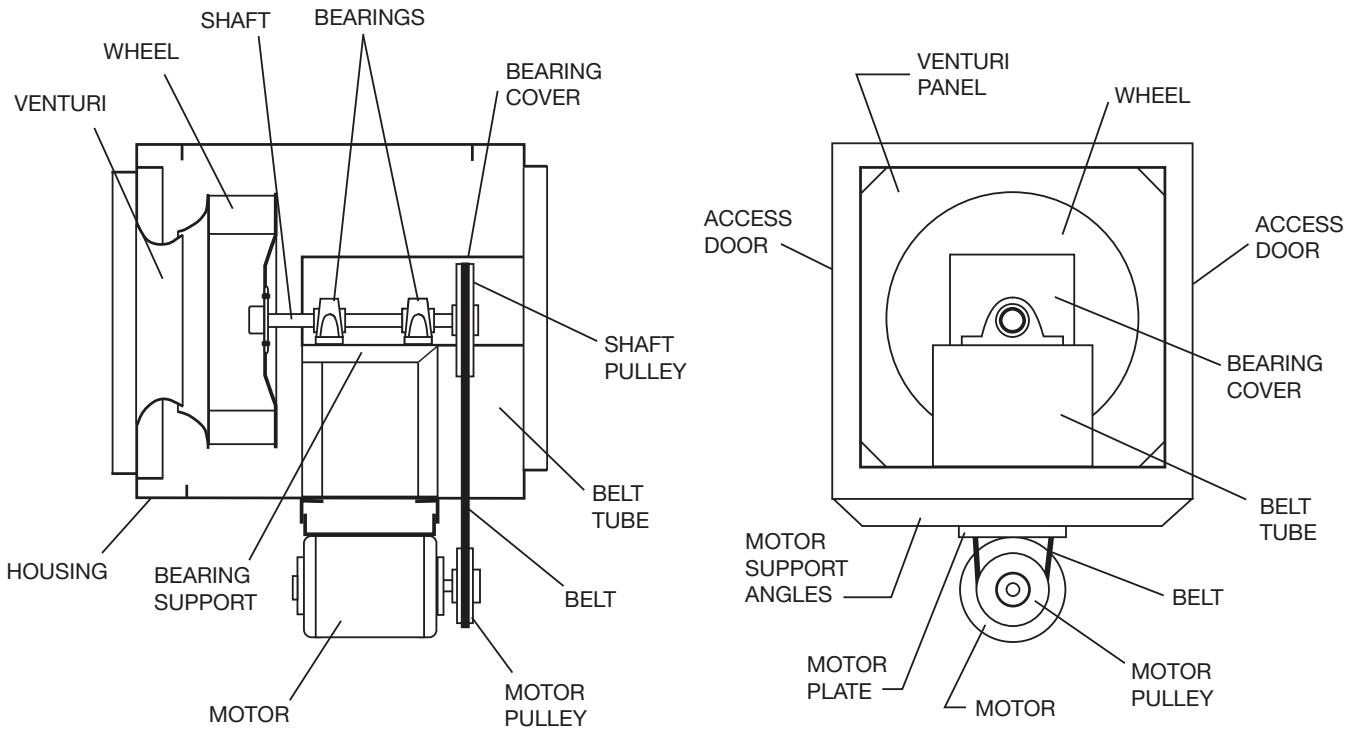
Suggested Fan Bearing Greasing Intervals	
Interval (months)	**Type of Service**
1 to 3	Heavy duty in dirty, dusty locations; high ambient temperatures; moisture laden atmosphere; vibration.
3 to 6	12 to 24 hours per day, heavy duty, or if moisture is present
6 to 12	8 to 16 hours per day in clean, relatively dry atmosphere
12 to 18	Infrequent operation or light duty in clean atmosphere

Grease Manufacturers	
Manufacturer	**Grease (NLGI #2)**
U.S. Electric Motors	Grease No. 83343
Chevron U.S.A. Inc	Chevron SRI Grease #2
Mobil Oil Corporation	Mobilith
	Mobil 532
Texaco, Inc.	Premium BRB #2
	Texaco Multifak #2
Amoco Oil Co.	Rykon Premium #2
Exxon	Unirex N2
Shell	B Shell Alvania #2



Parts List

Each fan bears a manufacturer's nameplate with model number and serial number embossed. This information will assist the local Greenheck representative and the factory in providing service and replacement parts. Before taking any corrective action, make certain unit is not capable of operation during repairs.



CAUTION
A fan manufactured with an explosion resistant motor does not certify the entire unit to be explosion proof. Refer to UL Listing Mark for the fans approved usage.

CAUTION
La présence d'un moteur antidéflagrant sur un ventilateur ne garantit pas que tout l'appareil est antidéflagrant. Pour connaître les emplois autorisés de l'appareil, voir son marquage de conformité UL.

Troubleshooting

WARNING
Before taking any corrective action, make certain unit is not capable of operation during repairs.

AVERTISSEMENT
Avant d'entreprendre toute action corrective, s'assurer que l'appareil ne pourra pas fonctionner durant les réparations.

PROBLEM	CAUSE	CORRECTIVE ACTION
Excessive noise or vibration	Wheel unbalance	Clean all dirt off wheel. Check wheel balance, rebalance in place if necessary.
	Bad bearings	Replace.
	Belts too tight or too loose	Adjust tension, see Figure 12.
	Wheel improperly aligned and rubbing	Center wheel on inlet, see Figure 9.
	Loose drive or motor pulleys	Align and tighten. See "Pre Start-Up Checks", see pages 10-11.
	Foreign objects in wheel or housing	Remove objects, check for damage or unbalance.
Reduced airflow	System resistance too high	Check system: Proper operation of backdraft or control dampers, obstruction in ductwork, clean dirty filters.
	Unit running backwards	Correct as shown in Figure 10.
	Excessive dirt buildup on wheels	Clean wheel.
	Improper wheel alignment	Center wheel on inlets, see Pre Start-Up Checks and Figure 9.

Our Commitment

As a result of our commitment to continuous improvement, Greenheck reserves the right to change specifications without notice.

Specific Greenheck product warranties are located on greenheck.com within the product area tabs and in the Library under Warranty.

Greenheck's Centrifugal Inline Fans catalog, Models SQ and BSQ provides additional information describing the equipment, fan performance, available accessories, and specification data.

AMCA Publication 410-96, Safety Practices for Users and Installers of Industrial and Commercial Fans, provides additional safety information. This publication can be obtained from AMCA International, Inc. at www.amca.org.

HEAT RECOVERY VENTILATOR

HRV CONSTRUCTO 2.0ES
Part no. 47110
82 to 192 CFM (0.4 in. w.g.)

VB0167

CONSTRUCTO® SERIES: PERFECT FOR NEW RESIDENTIAL CONSTRUCTION

Contractors and builders need cost-effective, reliable and code-compliant mechanical ventilation systems for new home construction. The Venmar AVS Constructo Series offers superior value at an entry-level price. The Constructo 2.0ES represents over 15 years of continuous improvement to deliver contractors the durability and reliability they have come to expect from Venmar.

Key features:

- Maintenance free, totally enclosed, sealed bearings motor
- Pressure taps, balancing dampers and straps for insulated ducts for quick, effective installation
- Integrated "snap-in" drain system installs in seconds with no additional parts
- ENERGY STAR® qualified
- Compatible with the Deco-Touch™ digital wall control

REPAIRS AND MAINTENANCE

All parts of the HRV Constructo 2.0ES that could need maintenance can be removed in less than 5 minutes, allowing direct access for easy repairs. The motor is permanently lubricated.

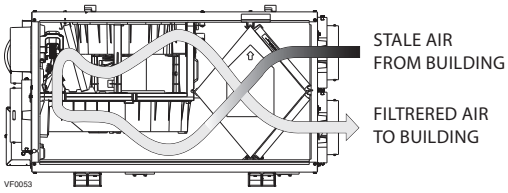
WARRANTY

The HRV Constructo 2.0ES is protected by a 5-year warranty on parts. The heat recovery core is covered by a limited lifetime warranty, with the original proof of purchase.

Available at:

Controls

- This unit is very simple to operate. Once it is installed, press on its push button, located on the bottom of the unit, to activate it. Press once for low speed, once again for high speed, and once more to stop it.
- For more convenience, this unit can also be controlled by an optional main control. For a complete list of optional main and auxiliary controls available, refer to the ***Wall Control Compatibility Chart*** on last pages of wall controls specification sheet, available at www.venmar.ca.
- For more details about controls, refer to the ***Main and auxiliary wall controls*** user guide, also available at www.venmar.ca.



Options

- Complete line of registers and diffusers

Defrosting System

The HRV Constructo 2.0ES uses an efficient defrosting method. No negative pressure is created by air exhausted to the outdoors, as the air is recirculated into the house, helping to prevent any backdraft.

Outdoor temperature		Defrost Cycle (minutes)
°C	°F	Defrost / Operation
Warmer than -5	Warmer than 23	No defrost
-5 to -15	23 to 5	6 / 50
-15 to -27	5 to -17	6 / 25
-27 and less	-17 and less	10 / 20

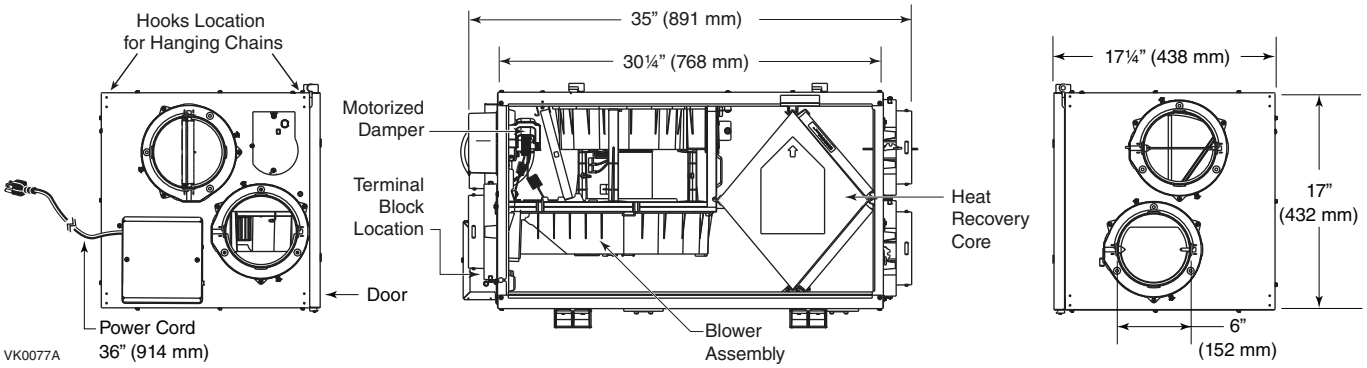
Heat Recovery Core

Dimensions: 12" x 14" x 15.5" (30.5 cm x 35.5 cm x 39.4 cm)

Exchange surface: 102 ft^2 (9.54 m^2)

Weight: 6.2 lb. (2.8 kg)

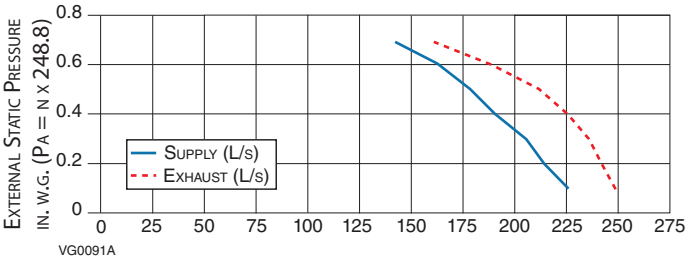
Material: Polypropylene



Type: Crossflow core

Warranty: Limited Lifetime

Requirements and Standards



- Complies with the UL 1812 requirements regulating the installation of Heat Recovery Ventilators
- Complies with the CSA C22.2 no. 113 Standard applicable to ventilators
- Complies with CSA F326 requirements regulating the installation of Heat Recovery Ventilators
- Technical data was obtained from published results of tests relating to CSA C439 Standards
- HVI certified and ENERGY STAR® qualified

Dimensions: HRV Constructo 2.0ES

Specifications and Ratings

- Model: HRV Constructo 2.0ES
- Part Number: 47110
- Total Assembled Weight (including polypropylene core): 65 lb. (29.5 kg)
- Drains: 1/2" (1.2 cm) fittings with 10 ft. (3 m) PVC drain hose
- Filters: 15 ppi washable reticulated foam 15.375" x 7.125" x 0.75" (39 cm x 18 cm x 1.9 cm)
- 6" Round Ports
- Housing: Pre-painted steel
- Insulation: Expanded polystyrene
- Mounting: Suspension by chains and springs
- Supply & Exhaust Blower Motor: 1 PSC Motor
  - Protection type: Thermally protected
  - Insulation class: B
- Speed Control on unit: Low and High speeds. Other modes available with optional mainl wall controls.
- Heat Recovery Core:
  - Heat Exchange Surface Area: 102 ft.² (9.54 m²)
  - Type: Crossflow
  - Material: Polypropylene
- Unit Electrical Characteristics: 120 volts, 60 Hz, 2.1 amps, 195 watts

THESE PRODUCTS EARNED THE ENERGY STAR® BY MEETING STRICT ENERGY EFFICIENCY GUIDELINES SET BY NATURAL RESOURCES CANADA AND THE US EPA. THEY MEET ENERGY STAR REQUIREMENTS ONLY WHEN USED IN CANADA.

20503 REV. 09

Please take note that this manual uses the following symbols to emphasize particular information:

⚠WARNING
Identifies an instruction which, if not followed, might cause serious personal injuries including possibility of death.

CAUTION
Denotes an instruction which, if not followed, may severely damage the unit and/or its components.

NOTE: Indicates supplementary information needed to fully complete an instruction.

LIMITATION

For residential (domestic) installation only. Installation work and electrical wiring must be done by a qualified person in accordance with all applicable codes and standards, including fire-rated construction codes and standards.

⚠WARNING

TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSON(S) OBSERVE THE FOLLOWING:

1. Use this unit only in the manner intended by the manufacturer.
2. Before servicing or cleaning this unit, disconnect power cord from electrical outlet.
3. This unit is not designed to provide combustion and/or dilution air for fuel-burning appliances.
4. When cutting or drilling into a wall or ceiling, do not damage electrical wiring and other hidden utilities.
5. Do not use this unit with any solid-state speed control device other than those specified in section 7.2.
6. This unit must be grounded. The power supply cord has a 3-prong grounding plug for your personal safety. It must be plugged into a mating 3-prong grounding receptacle, grounded in accordance with the national electrical code and local codes and ordinances. Do not remove the ground prong. Do not use an extension cord.
7. Do not install in a cooking area or connect directly to any appliances.
8. Do not use to exhaust hazardous or explosive materials and vapors.
9. When performing installation, servicing or cleaning this unit, it is recommended to wear safety glasses and gloves.
10. When applicable local regulation comprises more restrictive installation and/or certification requirements, the aforementioned requirements prevail on those of this document and the installer agrees to conform to these at his own expenses
11. Due to the weight of the unit, two installers are recommended to perform installation

CAUTION

1. To avoid prematurely clogged filters, turn the unit OFF during construction or renovation.
2. Please read specification label on product for further information and requirements.
3. Be sure to duct air outside – Do not intake/exhaust air into spaces within walls or ceiling or into attics, crawl spaces, or garage. Do not attempt to recover the exhaust air from a dryer or a range hood.
4. Intended for residential installation only in accordance with the requirements of NFPA 90B (for a unit installed in U.S.A.) or Part 9 of the National Building Code of Canada (for a unit installed in Canada).
5. Do not run any air ducts directly above or within 2 ft (0.61 m) of a furnace or its supply plenum, boiler, or other heat producing appliance. If a duct has to be connected to the furnace return plenum, it must be connected 10' (3.1 m) away from plenum's connection to the furnace.
6. The ductwork is intended to be installed in compliance with all applicable local and national codes.
7. When leaving the house for a long period of time (more than two weeks), a responsible person should regularly check if the unit operates adequately.
8. If the ductwork passes through an unconditioned space (e.g.: attic), the unit must operate continuously except when performing maintenance and/or repair. Also, the ambient temperature of the house should never drop below 18°C (65°F).
9. At least once a year, the unit mechanical and electronic parts should be inspected by qualified service personnel.
10. Do not use your unit during construction or renovation of your house or when sanding drywall. Certain types of dust and vapors may damage your system.
11. Make sure at all times that the outside intake and exhaust hoods are free from any snow during the winter season. It is important to check your unit during a big snow storm, so it doesn't draw in any snow. If this is the case, please turn the unit OFF for a few hours.
12. Since the electronic control system of the unit uses a microprocessor, it may not operate correctly because of external noise or very short power failure. If this happens, unplug the unit and wait approximately 10 seconds. Then, plug the unit in again.

BACK / VERSO ➤

1. USING THIS UNIT

CAUTION

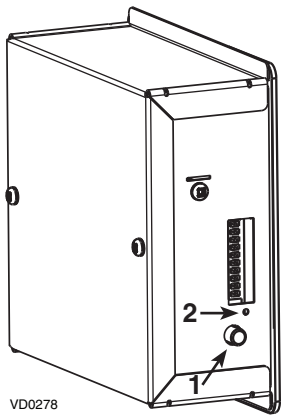
Before using this unit for the first time, please take the time to carefully read page 2 of this guide to ensure it is used safely and and properly.

1.1 Your ventilation system

This unit is designed to provide fresh air to your home while exhausting stale, humid air. By eliminating accumulated pollutants and humidity, it maintains an optimum air quality and an ideal relative humidity. It is equipped with a recovery core that is designed specifically to control excess humidity and reduce ventilation costs by recovering the heat or energy from the exhausted air, and using that same heat or energy to warm the fresh air being supplied. This recovery process is accomplished in such a way that the stale air is never mixed with the fresh air.

When the outdoor temperature is below -5°C (23°F), recovery creates frost in the module. To maintain proper operation, the unit is programed to defrost the recovery module. The defrost duration and frequency vary according to the outdoor temperature. After defrosting, the unit returns to the operating mode selected by the user.

1.2 Integrated Control



Unit Booting Sequence

The unit's booting sequence is similar to a personal computer's booting sequence. Each time the unit is plugged in after being unplugged, or after a power failure, it will perform a 30-second booting sequence before starting to operate. **No command will be taken until the unit is fully booted.**

This unit is equipped with an **integrated control**, located on its electrical compartment.

- Use the integrated push-button to go from OFF to Low Speed, to High Speed, and back to OFF.
- The color of the LED indicator shows what speed the unit is running in:

LED color	Results
AMBER	Unit is in Low speed
GREEN	Unit is in High speed
NO LIGHT	Unit is OFF or controlled by a main control

VD0278

For more convenience, this unit can also be controlled using an optional wall control. **When using an optional main control, unit must be set to OFF using the integrated control.**

For more information about their operation modes refer to the *Main and auxiliary wall control User Guide*, included with the ventilation unit and also available at www.vanee.ca or www.venmar.ca.

Would you like to receive occasional informational e-mail offers including product updates and special promotions from us? **Yes/No**

What problem were you trying to solve with your purchase? (Check each one that applies to you.)

- ☐ Bad odors
- ☐ Respiratory problems
- ☐ Excess of humidity
- ☐ Temperature standardization
- ☐ Lack of fresh air
- ☐ Dust
- ☐ Mildew
- ☐ Allergies
- ☐ No specific problems
- ☐ Others

Who installed your unit?

- ☐ Home builder
- ☐ Recommended installer
- ☐ Friend / family
- ☐ Contractor
- ☐ Yourself

Please read the following list of criteria carefully. Indicate the importance of your purchase decision on a scale of 1 (less important) to 5 (most important).

- ___ Price
- ___ Warranty
- ___ Product design
- ___ Ventilation capacity
- ___ Filter maintenance indicator
- ___ Filtration quality
- ___ Recirculation
- ___ Heat recovery
- ___ Controls
- ___ Ease of cleaning
- ___ Manufacturer's reputation
- ___ Ease of use
- ___ Noise level
- ___ Other

Aimeriez-vous recevoir plus de détails sur nos promotions, offres de rabais et mises à jour de nos produits? **Oui/Non**

Quels problèmes essayez-vous de résoudre par cet achat? (Cochez toutes les cases pertinentes)

- ☐ Mauvaises odeurs
- ☐ Problèmes respiratoires
- ☐ Excès d'humidité
- ☐ Uniformisation de la température
- ☐ Manque d'air frais
- ☐ Poussières
- ☐ Moisissures
- ☐ Allergies
- ☐ Pas de problèmes spécifiques
- ☐ Autres (Précisez SVP)

Qui a installé l'appareil?

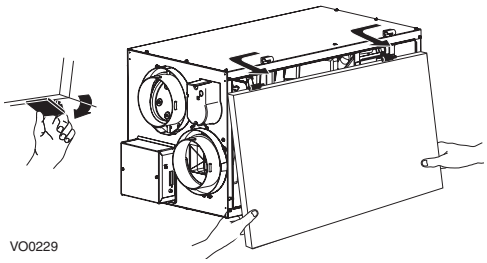
- ☐ Constructeur de la maison
- ☐ Installateur recommandé
- ☐ Ami/membre de la famille
- ☐ Entrepreneur
- ☐ Vous-même

Veuillez lire la liste des critères de sélection ci-dessous. Sur une échelle de 1 (étant le moins important) à 5 (étant le plus important), veuillez indiquer l'importance de chacun d'entre eux dans votre décision d'achat.

- ___ Prix
- ___ Garantie
- ___ Design du produit
- ___ Débit de ventilation
- ___ Indicateur d'entretien du filtre
- ___ Qualité de filtration
- ___ Recirculation
- ___ Récupération de chaleur
- ___ Récupération d'énergie
- ___ Fonctions
- ___ Facilité de nettoyage
- ___ Réputation du fabricant
- ___ Simplicité d'utilisation
- ___ Niveau de bruit
- ___ Autres (Précisez SVP)

Are you connected? Please do not hesitate to complete the product registration card via our Web site at **www.bnv.ca**

Enregistrez-vous en ligne! N'hésitez pas à remplir la fiche d'enregistrement du produit sur notre site Internet au **www.bnv.ca**



2. USER SERVICING INSTRUCTIONS

2.1 Quarterly Maintenance

⚠WARNING

- **Risk of electric shock. Before performing any maintenance or servicing, always disconnect the unit from its power source.**
- **When cleaning the unit, it is recommended to wear safety glasses and gloves.**

1. Unplug unit.
2. Unlatch the door. Lift the panel towards you. Hold it firmly and hit on the right side of the panel. The door will slide to the left.
3. Clean the inside of the door with a damp cloth.
4. Clean filters:
   - Remove filters.
   - Vacuum to remove most of the dust.
   - Wash with a mixture of warm water and mild soap. You may add bleach if you wish to disinfect (one tablespoon per gallon). Rinse thoroughly. Shake filters to remove excess water and let dry.
5. Clean the condensation tray with a damp cloth.
6. Check the exterior air intake hood:
   - Make sure there are no leaves, twigs, ice or snow that could be drawn into the vent.
   - Clean if necessary.

VO0229

CAUTION

Even a partial blocking of this air vent could cause the unit to malfunction.

7. Reassemble the components.
8. Reconnect power supply.

2.2 Annual Maintenance

1. Perform Quarterly Maintenance up to step 6.
2. Blean the core as follows:
   - Remove the core.
   - Let it soak in a mixture of cold or lukewarm water and mild soap (dishwashing liquid).
   - Rinse thoroughly.
   - Shake the core to remove excess water and let it dry.
3. Clean blower assembly using a vacuum cleaner with a soft brush attachment to remove the dust.
4. Reassemble the components.
5. Reconnect power supply.

3. USER'S TROUBLESHOOTING

Problem	You should try this	
Nothing works.	• See if the unit is plugged in and receiving power from the house circuit breaker or fuse.	
Noisy unit.	• Clean the unit (see Section 2). If the problem is not solved, contact your installer.	
Condensation on windows (air too humid).	• Operate the unit at maximum speed (MAX.) during activities generating excess humidity (family gatherings, extra cooking, etc.). • Leave curtains half-open to allow air circulation. • Store all firewood in a closed room with a dehumidifier or in a well ventilated room, or store the wood outdors. • Keep the temperature in your house above 18°C (64°F).	
Air too dry.	• Operate the unit at low speed (MIN.). • Temporarily switch to the intermittent mode (if available).	• Temporarily use a humidifier.
Air too cold at the air supply grille.	• Make sure the outdoor hoods are not blocked. • Operate the unit at low speed (MIN.). • Have the system's balancing checked.	• Have the unit's defrost system checked. • Install a duct heater.

Contact customer service at 1-800-567-3855 for any unresolved issue.

4. WARRANTY

This ventilation unit is a high-quality product, built and packaged with care. The manufacturer warrants to the original purchaser of its product, that such products will be free from defects for the period stated below, from the date of original purchase. For all units, the warranty covers parts only against any operational defect. This 5-year warranty is subject to performance of the core maintenance according to the recommendations in this manual. The heat recovery core (HRV) has a limited lifetime warranty. If any defect should occur, we urge you to read the user guide carefully. If the problem persists, observe the following rules:

RULES TO FOLLOW

If the unit is defective, contact your ventilation contractor (see address on your manual's cover page). The contractor will determine with you the reason for the defect, and if needed, do the replacement or repair. If ever it is impossible to reach your ventilation contractor, call 1-800-567-3855 (North America); the personnel will be pleased to give you the phone number of a distributor or service center near you.

REPLACEMENT PARTS AND REPAIR

In order to ensure your ventilation unit remains in good working condition, you must use the manufacturer's genuine replacement parts only. The manufacturer's genuine replacement parts are specially designed for each unit and are manufactured to comply with all the applicable certification standards and maintain a high standard of safety. Any third party replacement part used may cause serious damage and drastically reduce the performance level of your unit, which will result in premature failing. The manufacturer also recommends that you contact a service depot certified by the manufacturer for all replacement parts and repair.

BILL OF PURCHASE

No replacement or repair covered by the warranty will be carried out unless the unit is accompanied by a copy of the original bill of purchase. Please retain your original.

MISCELLANEOUS COSTS

In each case, the labor costs for the removal of a defective part and/or installation of a compliant part will not be covered by the manufacturer.

CONDITIONS AND LIMITATIONS

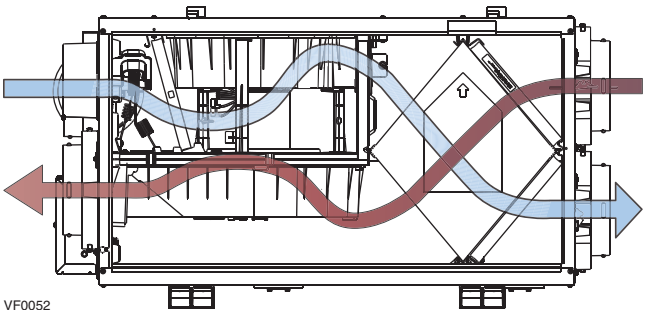
These units are created for **residential use only** and must be used in a building as defined below:

Building: All structures zoned and/or erected for the act, process or art of human or animal habitation and/or the storage or warehousing of goods.

Residential use: Dwelling, lodging, suite: Building, or part of a building, intended to act as either the domicile to one or several people which can include general sanitary, food consumption and rest facilities. Buildings of only one room or a group of rooms including those occupied by a tenant or owner; comprise the lodgings, the individual rooms of the motels, hotels, rooming/lodging houses, boarding/half-way/foster homes, dormitories, and suites, as well as the stores and the business establishments constituted by only one room in a dwelling.

Commercial use: Agricultural establishment, commercial establishment for assembly, care, or detention: Building or part of a building that does not contain a dwelling, situated on land dedicated to agriculture or farming and used primarily to shelter animals, or for the production, the storage or the treatment of agricultural or horticultural products or animal food. Building or part of a building, used for the display or retail of goods, professional or personal services, or commodities. Building, or part of a building used by persons gathering for civic activities, religious or political assembly, tourism, educational/ vocational training, recreation or the consumption of food or drink. Building, or part of a building used to shelter persons of impaired physical or psychological states, persons requiring palliative care or medical treatments, or persons for reasons out of their control, cannot escape harm or threat of danger autonomously.

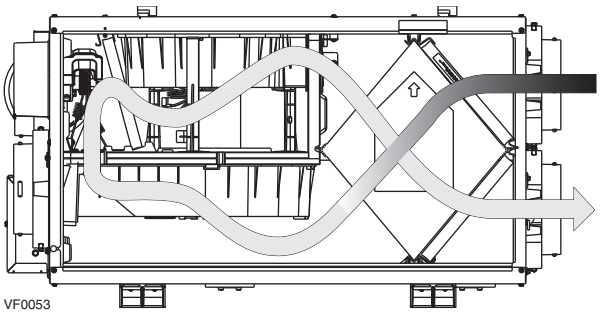
Industrial use: Building, or part of a building, used for the assembly, the manufacture, the creation, the treatment, the repair or the storage of products and combustible materials and that contain fuels that when ignited or exploded in sufficient quantity may constitute a risk of fire.



The above warranty applies to all cases where the damage is not a result of poor installation, improper use, mistreatment or negligence, acts of God, or any other circumstances beyond the control of the manufacturer. Furthermore, the manufacturer will not be held responsible for any bodily injury or damage to personal property or real estate, whether caused directly or indirectly by the unit. This warranty supersedes all prior warranties.

CAUTION

- **Before installing this unit, please take the time to carefully read page 2 of this guide to ensure it is installed safely and and properly.**
- **For Novoclimat compliant installation requirements, please refer to the current Novoclimat Program criterias.**



5. AIR DISTRIBUTION

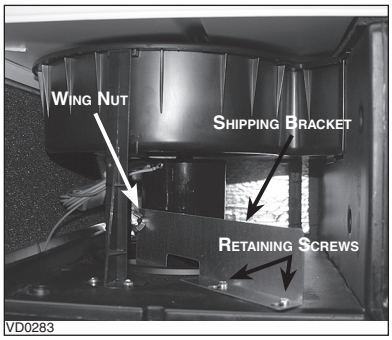
Normal Operation

VF0052

Defrost Mode

VF0053

6. INSTALLATION



6.1 Preparing the unit

⚠WARNING

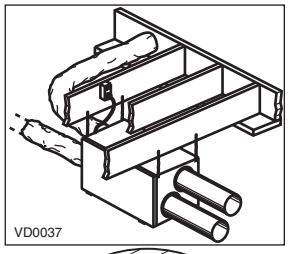
When performing installation, servicing or cleaning the unit, it is recommended to wear safety glasses and gloves.

Inspect the exterior of the unit for shipping damage. Make sure that there is no damage to the door, ports, power cord, etc.

Before installing the unit, remove the shipping bracket by unscrewing its wing nut and loosening both retaining screws.

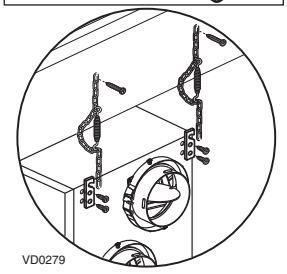
VD0283

6.2 Locating the Unit



CAUTION

HRV Solo 1.5ES and HRV Solo 2.0ES units can be installed in normal or reverse postion (upside down). When installed in reverse position in a cold region where outdoor temperature could drop below -20ºC (-4ºF) for more than 5 days in a row, these units must always be set in extended defrost. See Section 7.1 Setting Extended Defrost.



Choose an **appropriate location** for the unit:

- Within an area of the house where the **ambient temperature is kept between 10°C (50°F) and 40°C (104°F)**
- Away from living areas (dining room, living room, bedroom), if possible
- So as to provide easy access to the interior cabinet for quarterly and annual maintenance, and to the control panel on the side of the unit
- Close to an exterior wall, so as to limit the length of the insulated flexible duct to and from the unit
- Close to a drain. If no drain is close by, use a pail to collect run-off
- Away from hot chimneys, electrical panel and other fire hazards
- Allow for a power source (standard outlet)

Hang the unit with the 4 chains and springs provided (see illustrations at right).

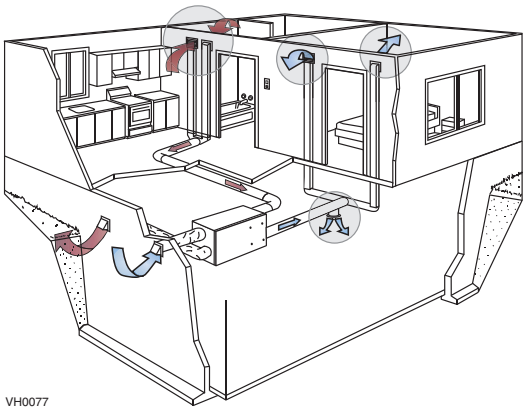
VD0037

VD0279

6.3 Installing the Ductwork and the registers

⚠WARNING

- **Never install a stale air exhaust register in a closed room where a combustion device operates, such as a gas furnace, a gas water heater or a fireplace.**
- **When performing duct connections, always use approved tools and materials. Respect all corresponding laws and safety regulations. Please refer to your local building code.**



6.3.1 Fully Ducted System

Stale air exhaust ductwork:

- Install registers in areas where contaminants are produced: Kitchen, bathrooms, laundry room, etc.
- Install registers on an interior wall, 6 to 12 inches (152 to 305 mm) away from the ceiling OR install them in the ceiling.
- Install the kitchen register at least 4 feet (1.2 m) away from the range.

Fresh air distribution ductwork:

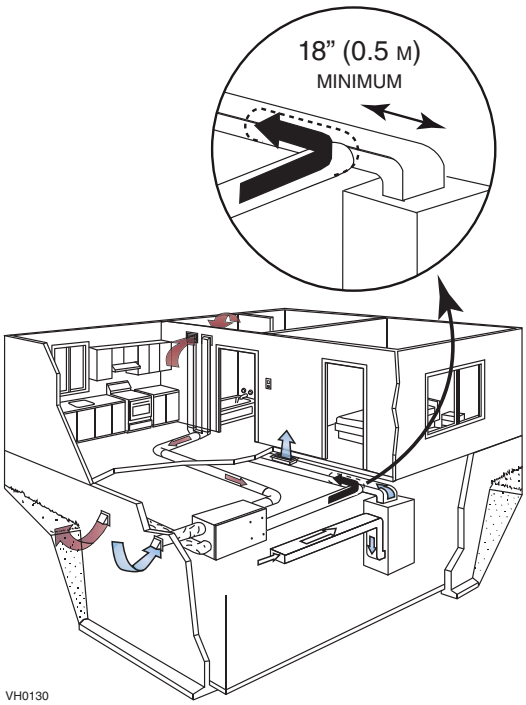
- Install registers in bedrooms, dining room, living room and basement.
- Install registers either in the ceiling or high on the walls with the airflow directed towards the ceiling.
- If a register must be installed in the floor, direct the air flow up the wall.

VH0077

6.3.2 Exhaust Ducted System - Supply Side

CAUTION

When performing duct connections to the furnace supply duct, use metal ducts appropriately sized to support the additional airflow produced by the unit.



Stale air exhaust ductwork:

- Install registers in areas where contaminants are produced: Kitchen, bathrooms, laundry room, etc.
- Install registers on an interior wall, 6 to 12 inches (152 to 305 mm) away from the ceiling OR install them in the ceiling.
- Install the kitchen register at least 4 feet (1.2 m) away from the range.

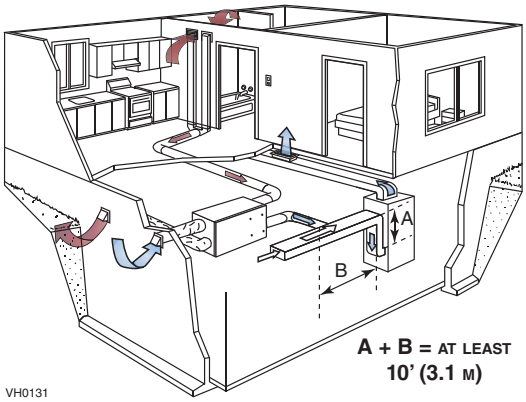
Fresh air distribution ductwork:

- Cut an opening into the furnace supply duct at least 18 inches (0.5 m) away from the furnace.
- Connect this opening to the fresh air distribution port of the unit (use metal ducts, see illustration at right).
- Make sure that the duct forms an elbow inside the furnace ductwork.

NOTE : For this type of installation, it is recommended, however, not essential, that the furnace blower be synchronized with the unit.

VH0130

6.3.3 Exhaust Ducted System - Return Side



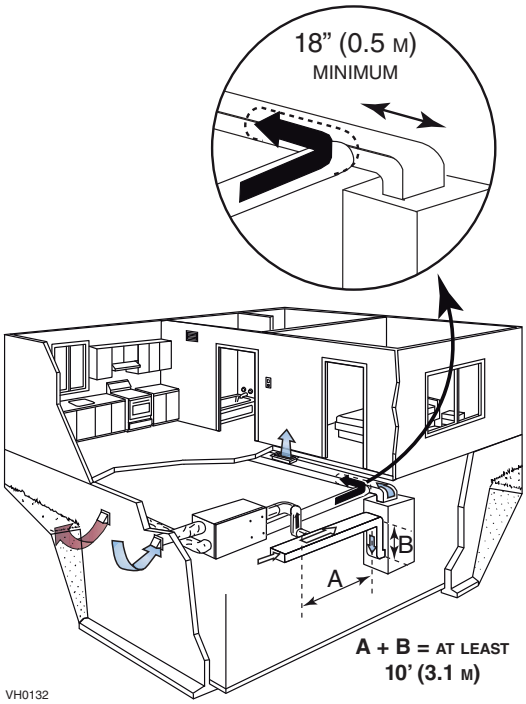
Stale air exhaust ductwork:

- Install registers in areas where contaminants are produced: Kitchen, bathrooms, laundry room, etc.
- Install registers on an interior wall, 6 to 12 inches (152 to 305 mm) away from the ceiling OR install them in the ceiling.
- Install the kitchen register at least 4 feet (1.2 m) away from the range.

Fresh air distribution ductwork:

- Cut an opening into the furnace return duct not less than 10 feet (3.1 m) away from the furnace (**A**+**B**).
- Connect this opening to the fresh air distribution port of the unit (see illustration at right).

NOTE : For this type of installation, it is recommended, however, not essential, that the furnace blower be synchronized with the unit.



VH0131

6.3.4 Simplified Installation - Return/Supply

CAUTION

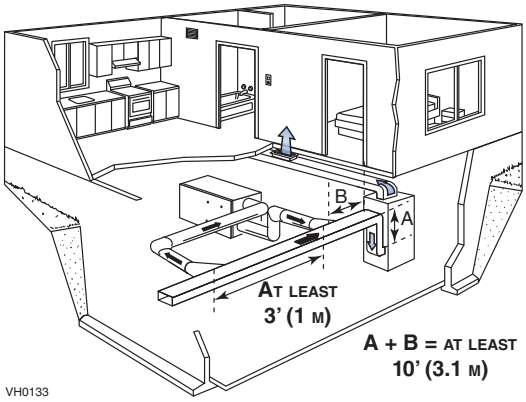
When performing duct connections to the furnace supply duct, use metal ducts appropriately sized to support the additional airflow produced by the unit.

Stale air exhaust ductwork:

- Cut an opening into the furnace return duct not less than 10 feet (3.1 m) (A + B) away from the furnace.
- Connect this opening to the stale air intake port of the unit (as shown above).

Fresh air distribution ductwork:

- Cut an opening into the furnace supply duct at least 18 inches (0.5 m) away from the furnace.
- Connect this opening to the fresh air distribution port of the unit (use metal ducts, see illustration at right).
- Make sure that the duct forms an elbow inside the furnace ductwork.



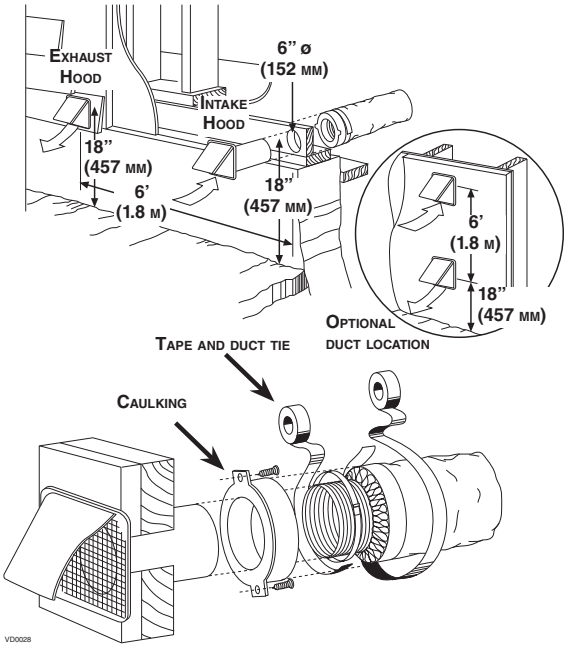
NOTE : For this type of installation, it is recommended, however, not essential, that the furnace blower be synchronized with the unit.

6.3.5 Simplified Installation - Return/Return

Stale air exhaust ductwork:

CAUTION

For this type of installation, the furnace must always be synchronized with the unit. See section 7.



- Cut an opening into the furnace return duct not less than 10 feet (3.1 m) (A + B) away from the furnace.
- Connect this opening to the stale air intake port of the unit.

Fresh air distribution ductwork:

- Cut an opening into the furnace supply duct at least 18 inches (0.5 m) away from the furnace.
- Connect this opening to the fresh air distribution port of the unit (use metal ducts, see illustration at right).
- Make sure that the duct forms an elbow inside the furnace ductwork.
- Make sure that both connections to the furnace return duct are at least 3 feet (1 m) apart (C).

6.4 Installing the Exterior Hoods

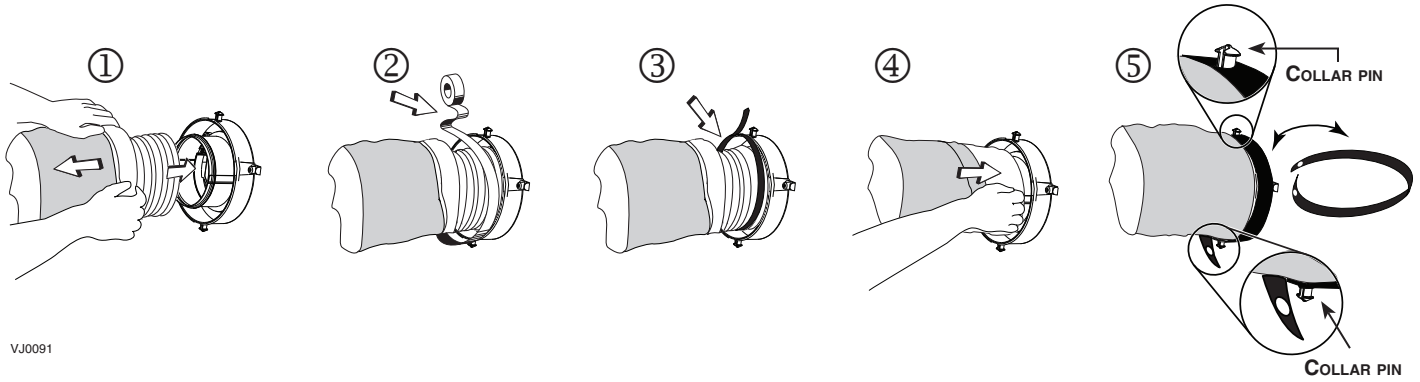
Refer to illustration at right to connect the insulated duct to the hoods. An "Anti-Gust Intake Hood" should be installed in regions where a lot of snow is expected to fall.

⚠WARNING

Make sure that both hoods are at least 18 inches above the ground and that the intake hood is at least 6 feet (1.8 m) away from any of the following:

- **Exhaust hood**
- **Dryer exhaust, high efficiency furnace vent, central vacuum vent**
- **Gas meter exhaust, gas barbecue-grill**
- **Any exhaust from a combustion source**
- **Garbage bin and any other source of contamination**

6.5 Connecting the ducts to the Unit



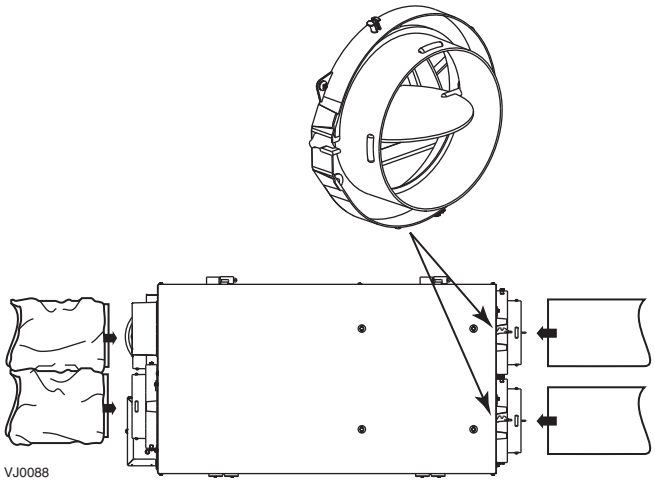
CAUTION

- **If ducts have to go through an unconditioned space (e.g.: attic), always use insulated ducts.**
- **Make sure the vapor barrier on the insulated ducts does not tear during installation to avoid condensation within the ducts.**
- **Do not use screws to connect rigid ducts to the ports.**

Insulated flexible ducts

Use the following procedure to connect the insulated flexible ducts to the cold side ports (stale air to outdoors and fresh air from outdoors).

1. Pull back the insulation to expose the flexible duct and place the flexible duct **over inner port ring**.
2. Install good quality **aluminum duct tape** on the flexible duct to prevent water leakage.
3. Attach the flexible duct to the port using a tie wrap.
4. Pull the insulation over the joint and tuck it **between the inner and outer rings** of the double collar.
5. Pull down the vapor barrier (shaded part in illustrations below) **over the outer ring** to cover it completely. Fasten the vapor barrier in place using the port strap (included in parts bag). To do so, insert one collar pin through the vapor barrier and first strap hole, then insert the other collar pin through the vapor barrier and center strap hole and close the loop by inserting the first collar pin in the last strap hole.

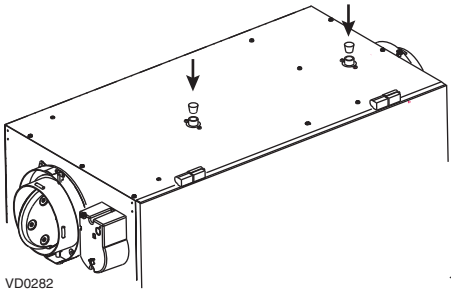


VJ0091

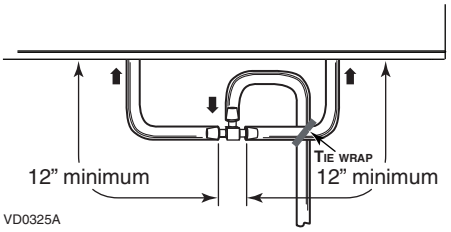
Rigid ducts

To prevent water leakage from ducts, use good quality aluminum duct tape to connect the rigid ducts to the ports. Do not use screws.

Make sure that both balancing dampers are left in a fully open position before connecting the **Fresh air to building port** and **Stale air from building port** (as shown in illustration at right).

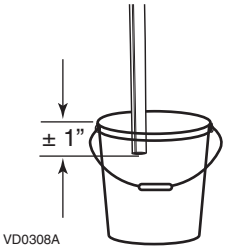


VJ0088



6.6 Connecting the Drain

1. Cut 2 sections of plastic tubing of at least 12” each.
2. Connect each one of them to the inner drain fittings located under the unit.
3. Join their other ends to the "T" junction and remaining tubing as illustrated. This will prevent the unit from drawing unpleasant odors from the drain source.



FOR **HRV SOLO 1.5ES** AND **HRV SOLO 2.0ES** UNITS ONLY:

4. Insert both drain plugs (included in parts bag) in the alternate drain fittings located on top of the unit.

VD0282

VD0325A

VD0308A

7. CONTROLS

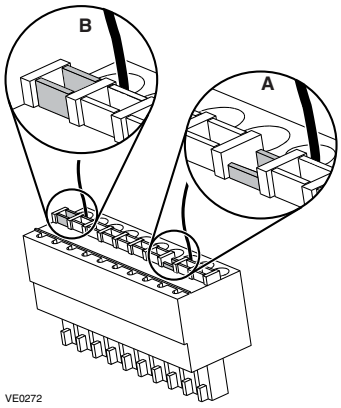
7.1 Setting Extended Defrost

CAUTION

For HRV Solo 1.5ES and HRV SOLO2.0ES units only: when installed in reverse postion (upside down) in a cold area where outside temperature could drop below -20°C (-4°F) for more than 5 days in a row, the unit must always be set in extended defrost.

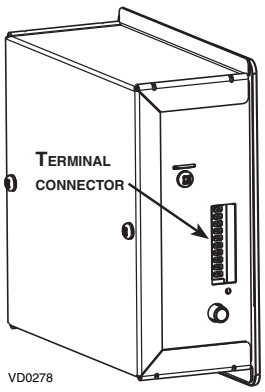
These units are factory set to normal defrost. In cold areas, it may be necessary to setup extended defrost. To do so, during the first 5 seconds of the booting sequence, while the integrated control LED is GREEN, press on the integrated push button (about 3 seconds) until the LED turns AMBER.

7.2 Electrical Connection to Optional Wall Control



⚠WARNING

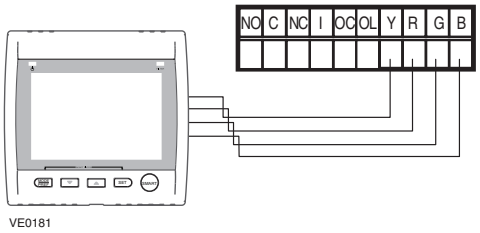
Always disconnect the unit before making any connections. Failure in disconnecting power could result in electrical shock or damage of the wall control or electronic module inside the unit.



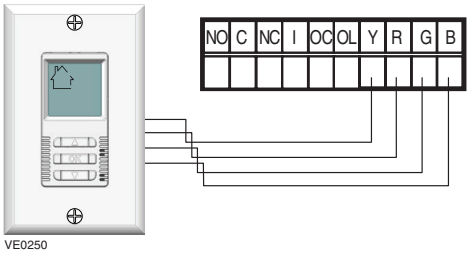
CAUTION

Never install more than one optional main wall control per unit. Make sure that the wires do not short-circuit between themselves or by touching any other components on the wall control. Avoid poor wiring connections. To reduce electrical interference (noise) potential, do not run wall control wiring next to control contactors or near light dimming circuits, electrical motors, dwelling/building power or lighting wiring, or power distribution panel.

- Use the terminal connector included in the installation kit to perform the electrical connection for main and optional wall controls.
- Make sure all wires are correctly inserted in their corresponding holes in the terminal block. A wire is correctly inserted when its orange receptacle is lower than another one without wire. On picture below, wire **A** is correctly inserted, but wire **B** is not.

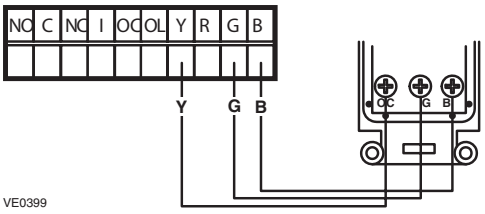


- Once the wall control(s) connections have been made, insert the terminal connector in the electrical compartment.
- If an optional main control is being installed, make sure that the unit is set to OFF using the integrated push-button.

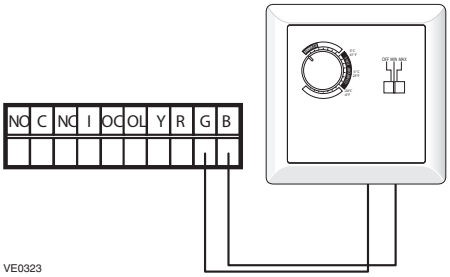


Use the chart below to verify compatibility with the optional controls before making any connection.

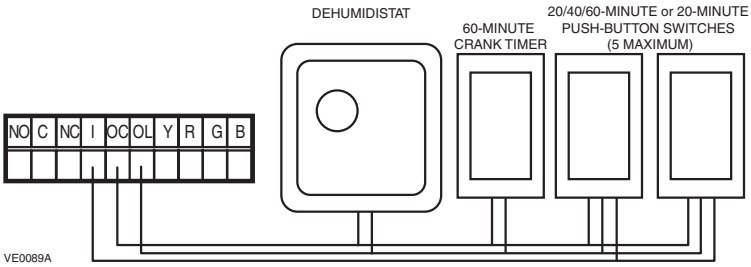
	Main Controls	Auxiliary Controls
HRV CONSTRUCTO 1.5ES HRV CONSTRUCTO 2.0ES	• Deco-Touch • Lite-Touch Constructo • Constructo	• Dehumidistat • 20-minute lighted push button • 60-minute crank timer
HRV SOLO 1.5ES HRV SOLO 2.0ES	• Altitude • Deco-Touch • Lite-Touch Constructo • Simple Touch Constructo • Constructo	• Dehumidistat • 20/40/60-minute push-button timer • 60-minute crank timer
HRV NOVOFIT 1.5ES HRV NOVOFIT 2.0ES	• Altitude • Deco-Touch	• 20/40/60-minute push-button timer • 60-minute crank timer
100H 200H	• Deco-Touch • Lite-Touch Bronze • Bronze	• Dehumidistat • 20-minute lighted push button • 60-minute crank timer
NOVO+ 100H NOVO+ 200H	• Platinum • Deco-Touch	• 20/40/60-minute push-button timer • 60-minute crank timer



7.2.1 Altitude or Platinum



7.2.2 Deco-Touch

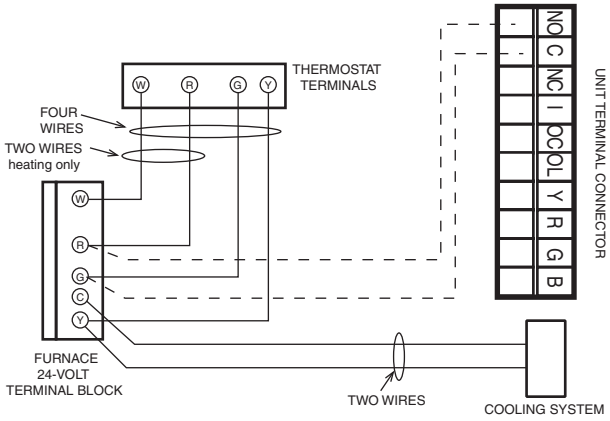


7.2.3 Lite-Touch Constructo, Simple-Touch Constructo or Lite-Touch Bronze

7.2.4 Constructo or Bronze

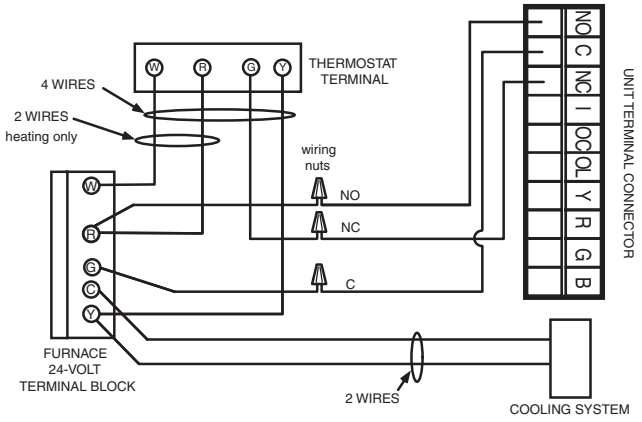
7.2.5 Optional Auxiliary Controls

8. CONNECTION TO THE FURNACE



⚠WARNING

Never connect a 120-volt AC circuit to the terminals of the furnace interlock (standard wiring). Only use the low voltage class 2 circuit of the furnace blower control.



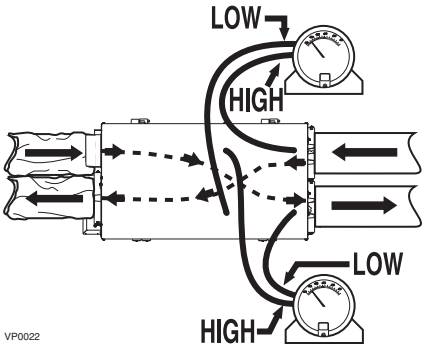
For a furnace connected to a cooling system:

On some older thermostats, energizing the "R" and "G" terminals at the furnace has the effect of energizing "Y" at the thermostat and thereby turning on the cooling system. If you identify this type of thermostat, you must use the ALTERNATE FURNACE INTERLOCK WIRING.

STANDARD FURNACE INTERLOCK WIRING

ALTERNATE FURNACE INTERLOCK WIRING

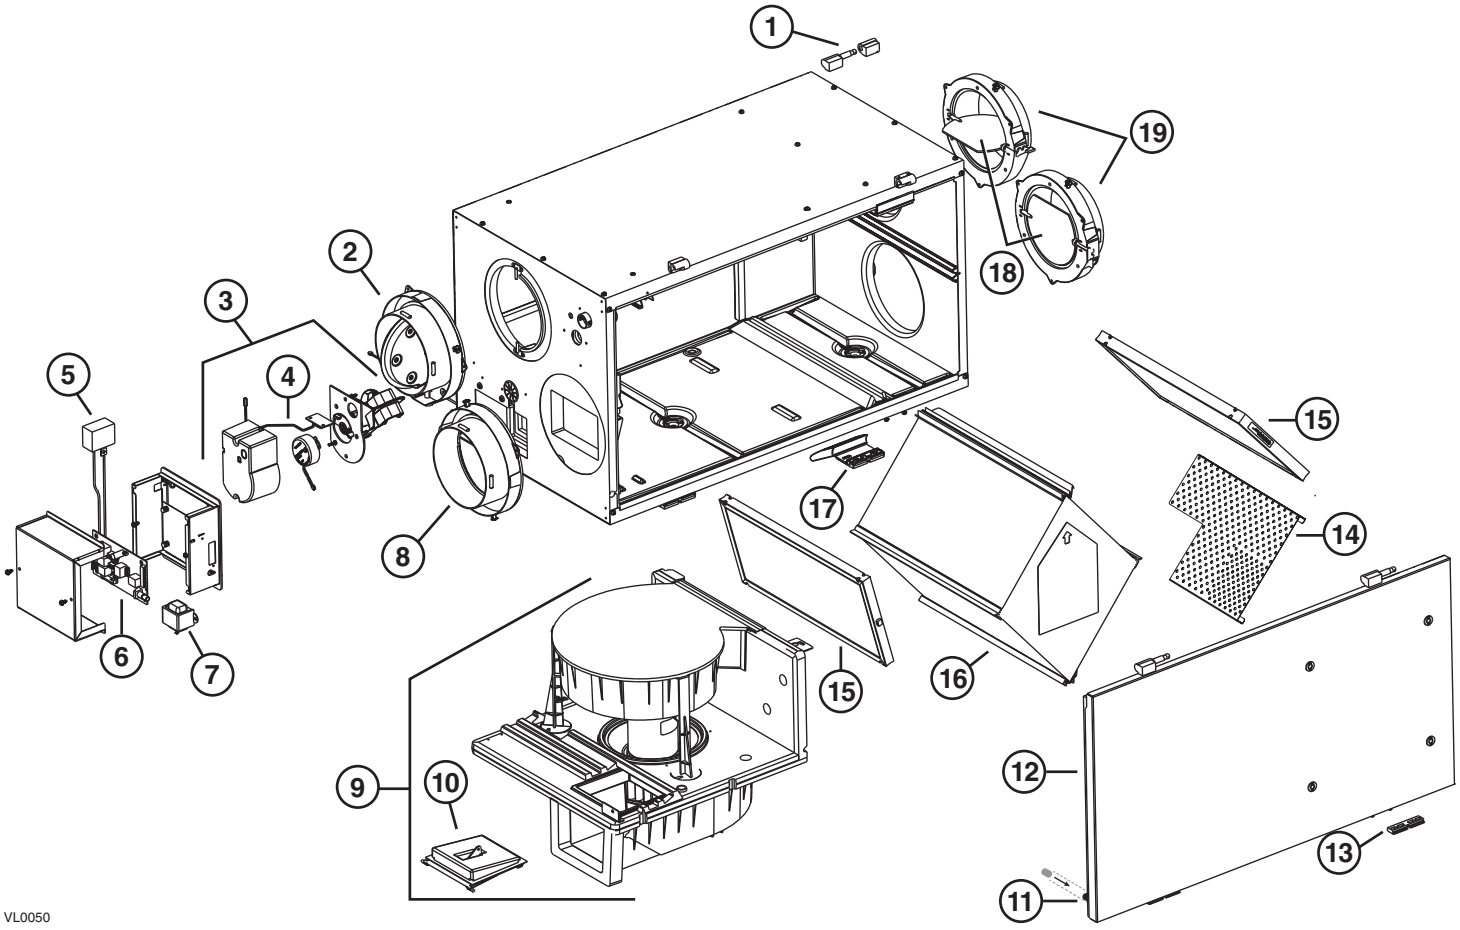
VE0108A



9. BALANCING THE UNIT

Preparation

Follow these steps to ensure accurate measurements:



- Seal all the ductwork with tape. Close all windows and doors.
- Turn off all exhaust devices such as range hood, dryer and bathroom fans.
- Make sure the balancing dampers are fully open.
- If the installation is in any way connected to the ductwork of the cold air return of a furnace/air handler, make sure that the furnace/air handler blower is ON. If not, leave furnace/air handler blower OFF.
- If the outside temperature is below 0°C/32°F, make sure the unit is not running in defrost while balancing by waiting 10 minutes after plugging the unit in.
- Set the unit to high speed.

Balancing Procedure

1. Place the magnehelic gauge on a level surface and adjust it to zero.
2. Connect tubing from gauge to EXHAUST airflow pressure taps (see diagram on unit door).
3. Be sure to connect the tubes to their appropriate high/low fittings. If the gauge drops below zero, reverse the tubing connections.
4. Note the CFM value from balancing chart on the unit.
5. Repeat steps 3 and 4, but to FRESH airflow pressure taps.
6. Using the appropriate adjustable balancing damper, lower the highest value so it matches the lowest value. A difference up to ±10 cfm is acceptable.
7. Secure both dampers in place with a fastening screw (included in the hardware kit).
8. Write the required airflow information on a label and stick it near the unit for future reference (date, maximum speed air flows, your name, phone number and business address).

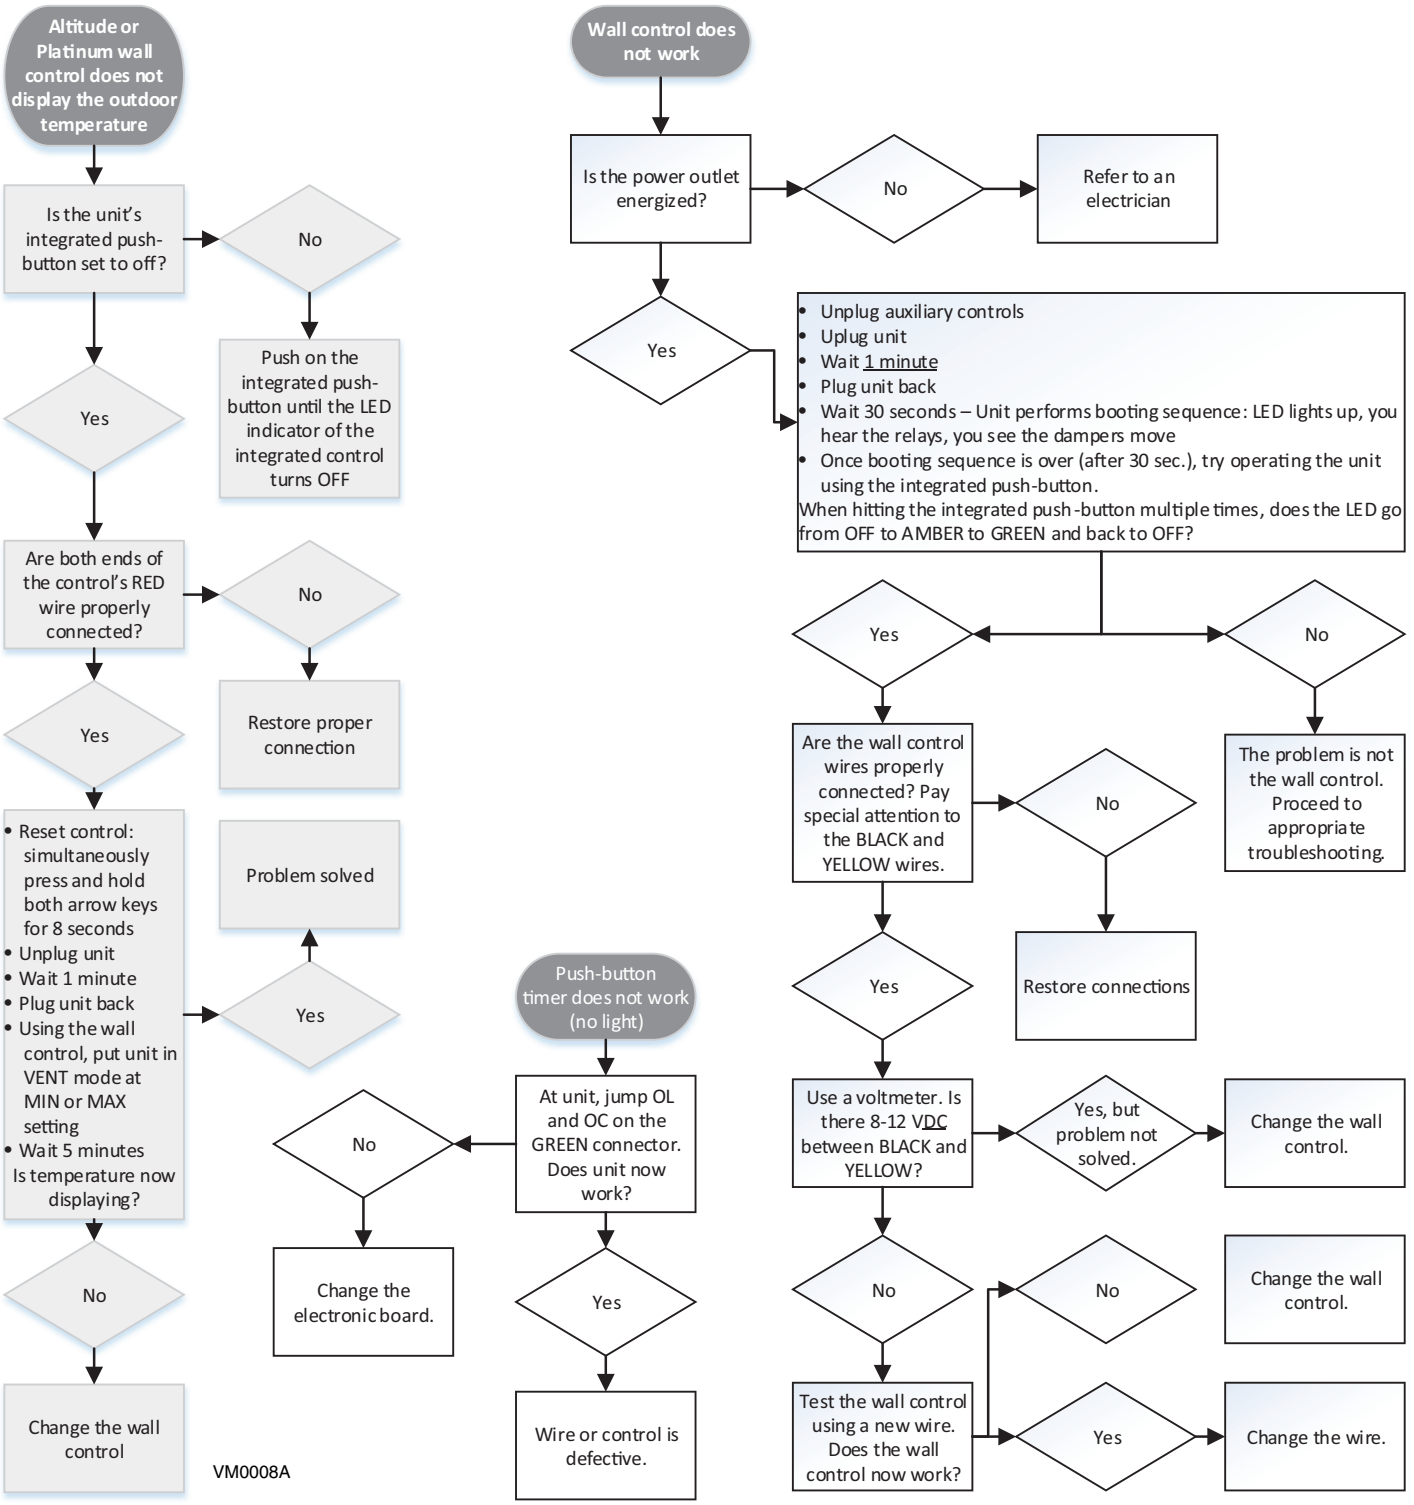
Replacement parts and repairs

In order to ensure your ventilation unit remains in good working condition, you must use the manufacturer's genuine replacement parts only. The manufacturer's genuine replacement parts are specially designed for each unit and are manufactured to comply with all the applicable certification standards and maintain a high standard of safety. Any third party replacement part used may cause serious damage and drastically reduce the performance level of your unit, which will result in premature failing. The manufacturer also recommends contacting a certified service depot for all replacement parts and repairs.

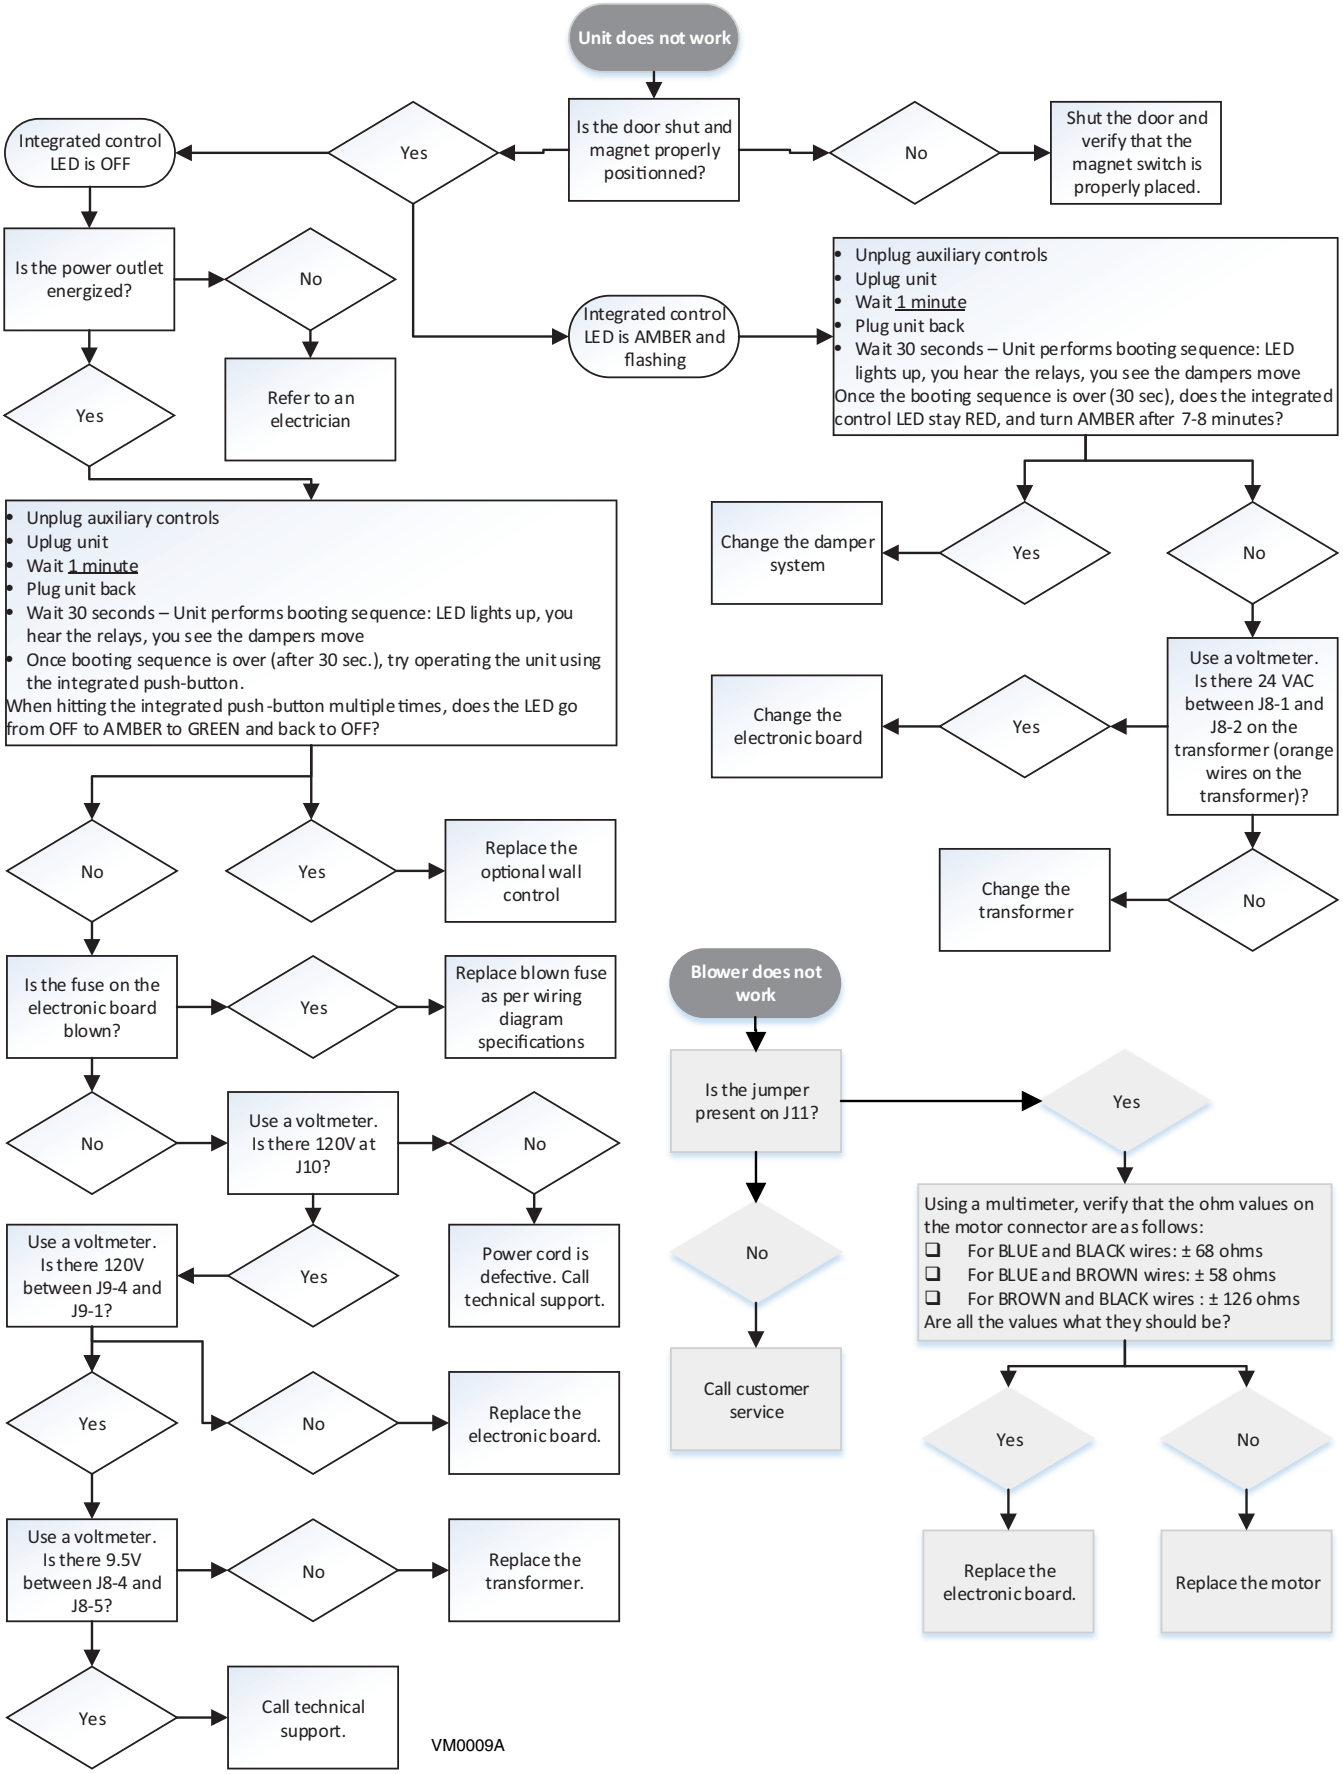
11. WIRING DIAGRAM

⚠WARNING

- **Risk of electric shocks. Before performing any maintenance or servicing, always disconnect the unit from its power source.**
- **This product is equipped with an overload protection (fuse). A blown fuse indicates an overload or a short-circuit situation. If the fuse blows, unplug the product and check the polarity and voltage output from the outlet. Replace the fuse as per the servicing instructions (refer to wiring diagram for proper fuse rating) and verify the product. If the replaced fuse blows, it may be a short-circuit and the product must be discarded or returned to an authorized service center for examination and/or repair.**



12. TROUBLESHOOTING



If the integrated LED of the unit is flashing, the unit sensors detected a problem. See the table below to know more about the nature of the problem.

LED Signal	Error Type	Action
LED flashes GREEN (double blink)	Thermistor error	Replace the thermistor kit.
LED flashes AMBER	Damper error	Go to page 18 "Unit does dot work".

⚠WARNING

A few diagnosis procedures may require the unit to be in operation while proceeding. Open the unit door and bypass its magnetic switch by putting the door white magnet on it. Be careful with moving and/or live parts.

Service technicians only: If you require assistance or have questions after performing the following troubleshooting, call :

This review by Stantec Architecture Ltd. is for the sole purpose of ascertaining conformance with the general design concept. This review shall not mean that Stantec Architecture Ltd. approves the detail design inherent in the shop drawings, responsibility for which shall remain with the Contractor submitting same, and such review shall not relieve the Contractor of his responsibility for errors or omissions in the shop drawings or of his responsibility for meeting all requirements of the Contract Documents. The Contractor is responsible for dimensions to be confirmed and correlated at the job site, for information that pertains solely to fabrication processes or to techniques of construction and installation and for co-ordination of the work of all subtrades.

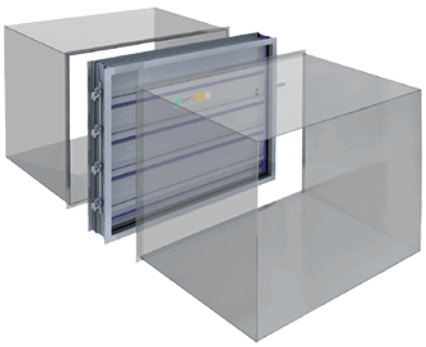
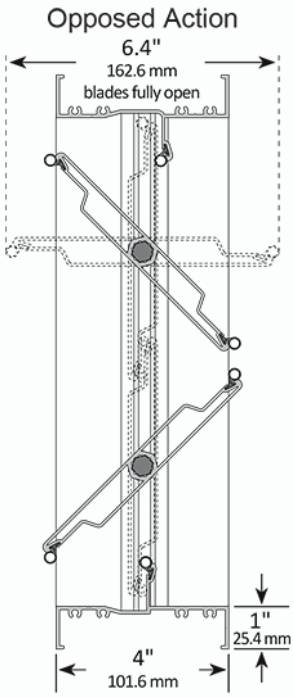
Structural supports for multiple-section damper assemblies are to be supplied and installed by the installing contractor.

Contact: DAVE FOURNIER
Tel: 819-472-3838
Fax: 819-472-0390





- Extruded aluminum (6063-T5) damper frame is not less than 0.080" (2.03 mm) in thickness. Damper frame is 4" (101.6 mm) deep x 1" (25.4 mm), with mounting flanges on both sides of frame.
- Entire frame is thermally broken by means of polyurethane resin pockets complete with thermal cuts.
- Blades are maximum 6" (152.4 mm) deep extruded aluminum (6063-T5) air-foil profiles, internally insulated with expanded polyurethane foam and thermally broken. Complete blade has an insulating factor of R-2.29 and a temperature index of 55 (tested to AAMA 1502.7 Test Method). All blades are symmetrically pivoted.
- Blade and frame seals are extruded, specially formulated silicone, for reduced air leakage at extreme cold temperatures. Silicone formula is the same as that used by NASA for its Aerospace program and retains flexibility to -100°F (-73°C). Blade and frame seals are secured in an integral slot within the aluminum extrusions and are mechanically fastened to prevent shrinkage and movement over the life of the damper.
- Bearings are composed of a Celcon inner bearing - fixed around a 7/16" (11.11 mm) aluminum hexagon blade pivot pin - rotating within a polycarbonate outer bearing inserted in the frame. This eliminates action between metal-to-metal or metal-to-plastic riding surfaces.
- Adjustable 7/16" (11.11 mm) hexagonal drive rod, U-bolt fastener, and hexagonal retaining nuts are zinc-plated steel. These provide a positive connection to blades and linkage.
- Aluminum and corrosion-resistant zinc-plated steel linkage hardware is installed in the frame side, complete with cup-point trunnion screws for a slip-proof grip.
- Dampers are designed for operation in temperatures ranging from -100°F (-73°C) to 212°F (100°C).
- Leakage Class 1A at 1 in w.g. (0.25 kPa) static pressure differential. Standard air leakage data is certified under the AMCA Certified Ratings Program.
- Dampers are custom made to required size, without blanking off free area. The blade stop is set at a fixed height and is a continuous and integral part of the top and bottom frames.
- Dampers selected with blade action as shown to the left.
- Dampers selected with install type as shown below.
- Installation of dampers must be in accordance with TAMCO's current on-line installation guidelines. (Printed installation guidelines are provided with each damper shipment, however all technical information available on TAMCO's web site at www.tamcodampers.com supersedes information contained within printed versions.)
- Intermediate structural support is required to resist applied pressure loads for dampers that consist of two or more sections in both height and width. (See TAMCO Aluminum Damper Installation Guidelines.)

FLANGED TO DUCT TYPE ▾

› Finished damper O.D. is 2" *(50.8 mm)* greater than opening width and height dimensions.

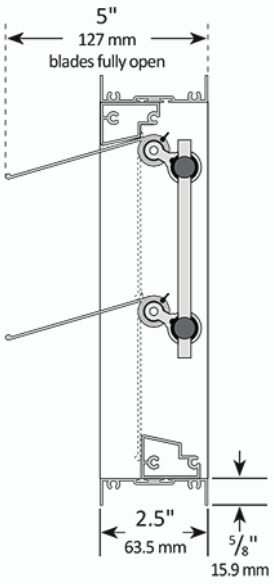
- Intermediate structural support is required to resist applied pressure loads for dampers that consist of two or more sections in both height and width. (See TAMCO Aluminum Damper Installation Guidelines.)

FLANGED TO DUCT TYPE ▼

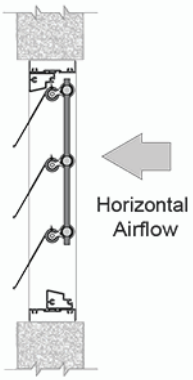


› For SP and NP Profiles, finished damper O.D. is 2" *(50.8 mm)* greater than opening width and height dimensions.

› For WP Profile, finished damper O.D. is 3.25" *(82.6 mm)* greater than opening width and height dimensions.

MINIMUM SECTION SIZE:	
4½"w x 4¼"h	*(115 mm x 108 mm)*
MAXIMUM SECTION SIZE:	
25 ft²	*(2.3 m²)*
60"w x 60"h or	*(1524 mm x 1524 mm) or*
48"w x 75"h	*(1220 mm x 1905 mm)*

Leakage:	TAMCO Series 7000 comply with the International Energy Conservation Code (IECC) and ASHRAE 90.1 leakage requirements for non-motorized dampers.



- Extruded aluminum (6063-T5) medium-duty backdraft damper frame is not less than 0.060" (1.52 mm) in thickness. Frame is 2.5" (63.5 mm) deep x 5/8" (15.9 mm), with mounting flanges on both sides of frame.
- Blades are extruded aluminum (6063-T5) profiles not less than 0.060" (1.52 mm) in thickness.
- Blade and frame seals are extruded silicone, secured in an integral slot within the aluminum extrusions. Seals are mechanically fastened to prevent shrinkage and movement over the life of the damper.
- Bearings are composed of 1/2" (12.7 mm) aluminum pivot points, rotating on Celcon bearings.
- Linkage system consists of hard aluminum alloy (6005-T6) crank arms fastened to aluminum pivot rods and doubly secured within a channel at the top of the blade. Large diameter 11/32" (8.73 mm) hard aluminum alloy (6005-T6) linkage rod connects the crank arms by means of a trunnion.
- Trunnions are zinc-plated steel. These provide a hard, smooth, and long-lasting rotating surface.
- Cup-point trunnion screw allows for a penetrating grip of the linkage rod. (Cup-point trunnion set screw creates a compression hard spot where it secures to the linkage rod.)
- Backdraft dampers are designed for operation in temperatures ranging from -40°F (-40°C) to 212°F (100°C).
- Air leakage for backdraft dampers with a width and height of 24" (610 mm) or greater does not exceed 6.93 cfm/ft² (35.20 l/s/m²) against 1 in. w.g. (0.25 kPa) differential static pressure. Air leakage for backdraft dampers with a width or height of less than 24" (610 mm) does not exceed 11.38 cfm/ft² (57.81 l/s/m²) against 1 in. w.g. (0.25 kPa) differential static pressure. Standard air leakage data is certified under the AMCA Certified Ratings Program.
- Medium-duty backdraft dampers are custom manufactured to required size, without blanking off free area.
- Medium-duty backdraft dampers selected with airflow direction as shown below.
- Medium-duty backdraft dampers selected with install type as shown below.
- Installation of medium-duty backdraft dampers must be in accordance with TAMCO's current on-line installation guidelines.
- Intermediate structural support is required to resist applied pressure loads for medium-duty backdraft dampers that consist of two or more sections in both height and width. (See TAMCO Medium-Duty Backdraft Damper Installation Guidelines.)
- Medium-duty backdraft dampers with dimensions greater than maximum section size will be manufactured in multiple sections. (See below for maximum section dimensions.) Multiple sections are not interlinked or connected. To install, each section must be individually fastened to a structural frame prepared on site. Jumpers and jackshafts are not available for multiple-section backdraft dampers.

INSTALLED IN DUCT TYPE ▾

› Finished damper O.D. is ¼" *(6.4 mm)* less than opening width and height dimensions.

MINIMUM SECTION SIZE:	
6"w x 6"h	*(153 mm x 153 mm)*
MAXIMUM SECTION SIZE:	
12.15 ft²	*(1.1 m²)*
36"w x 48.625"h	*(915 mm x 1235 mm)*
