RE: Location of Wastewater Treatment Plant Outfall in relation to the Ordinary High Tide Mark

Dear Mr. Kharatyan:

On January 13th and 14th, 2016, representatives of the City of Iqaluit (City) attended the Technical Meeting, Public Meeting and Pre-Hearing Conference for the renewal application of Water Licence 3AM-IQA0612. During the meetings, the Environment and Climate Change Canada (ECCC) requested the City provide a map showing the location of the Wastewater Treatment Plant (WWTP) Outfall in relation to the high and low tides.

The City was unfortunately unable to determine the exact locations of the high and low tides; however, the prepared a plan that shows the location of the observed high water mark in relation to the outfall from the WWTP (See Appendix A). The high water mark is located along the red parcel line shown on the image; the location of the WWTP Outfall is located approximately 20 meters from the observed high water mark.

If you have any questions, please contact Matthew Hamp (Director of Public Works and Engineering) at 867-979-5653 or m.hamp@city.iqaluit.nu.ca.

Sincerely,

Muhamud Hassan
Chief Administrative Officer
City of Iqaluit
