Good Afternoon Richard,

We thought it may be worthwhile to summarize the City of Iqaluit's commitments discussed during the first half of the Technical Meeting for the current application to pump water from the Apex River to supplement the Lake Geraldine Reservoir.

City of Iqaluit Commitments:

- A New hydrometric station will be installed upstream of the pumping location
- Flows and withdrawal will be recorded daily
- Report will be provided in WL annual report for years when pumping occurs
- Withdrawal will be maintained below 10% instantaneous flow at conditions >30% MAD
- MSDS to be provided in final spill contingency plan
- The withdrawal season is proposed to be extended to entire open water season
- Withdrawal is proposed to exceed 150 Litres per second if needed to achieve supplementation requirements, as flow conditions allow (per DFO criteria)

Best Regards,

Matthew Hamp
