NON CLASSIFIÉ / UNCLASSIFIED

Hi Richard,

In fulfillment of City of Iqaluit commitment number TM-05, CIRNAC provides the attached list of new data to be collected and incorporated into future water balance model updates – to improve its accuracy.

CIRNAC recommends the water balance model is updated every 5 years and results evaluated against the variable meteorological and/or water consumption conditions in evaluation that the City of Iqaluit water supply is sustainable in the long term. CIRNAC recommends, as a term and condition in the water licence, that the updated water balance model results and comparative evaluation are included in the corresponding year's Annual Report.

Michelle
