Hi Nidhi and Richard,

The draft water licence framework, initially proposed for submission by Sept 4, is still in preparation. We propose to submit it along with the responses to the other commitments that are due this Friday, Sept 11.

Regarding management plans that appeared in the Application, can we assume at least as a starting point that these plans will be approved with the issuance of the new licence? Some of these plans were approved previously under the current licence. But several updated plans/manuals were provided in the Application and thus will need a new approval by the Board. If so, we will indicate as such in the draft water licence framework.
