Hi Bhabesh,

The Licence's Part G provides requirements for the Modification to water supply and waste disposal facilities. The request for Modification should include for-construction design information for proposed upgrade, and any management plans that will require update as a result of that Modification (like the O&M Manuals for given facilities).. Once the Modification package is received, the NWB will make it public for interested persons comments for up to 30 days. The approval of a Modification does not require a Public Hearing formal process like an application for amendment/renewal.

As you may also see under Part G, the NWB requires the applicant to ensure that proposed modification is consistent with NPC and NIRB previous decisions regarding the project overall. So please get in touch with NPC/NIRB to get their confirmation that this is not a significant modification to the project. I don't expect an extensive process for getting this confirmation. NIRB has a self-determination form for non-significant modifications that they may ask you to complete and submit to get their confirmation.

I hope this helps.

Hi Bhabesh,

If this upgrade is changing the facility discussed within the relevant Operation and Maintenance Manual, my suggestion will be to have these changes conducted through a modification of the waste disposal facility.

Good afternoon Karen and Assol,

We are upgrading lift station one in a little different way. It means building a new one and the existing one will be kept there active as a contingency.

My question is if this will be considered expansion or modification to include design and drawings in the City' annual report.

Or we need to amend the WL prior to construction.

Please advise.

Thanks
