Paul, thanks for your submission.

In giving the plan a quick look over, a few items that were noticed missing include, a 24hr contact for the person in charge and also the person responsible for implementing the plan, a site map showing details on the location of the facility in relation to the surrounding environment (water bodies and drainage), under response there should be included the 24hr Spill Report Line number, Contact number for INAC, Inspector (field operations) 867-975-4295, reporting should include the requirement to submit a written report to the inspector within 30 days of the incident, a copy of the Spill Report Form (available at the NWB ftp site under administrative"), additional contact numbers including Environment Canada, GN Department of Environment, DFO, NWB, RCMP, QIA to name a few.

With respect to our discussion earlier today on the Spill Contingency Plan that the City of Iqaluit was having prepared by TROW, for the cleanup activities and bulk metals removal at the North 40 Metal Dump, this can be submitted as an addendum (attachment) to the Spill Plan already on file with the NWB, "City of Iqaluit, Spill Contingency Plan, revised November 2004". It would not require Board approval, and would be considered as additional contingency measures to be included with the current plan. As a side note, the Plan on file is dated and should be reviewed and revised in the near future to bring it up-to-date with changes in management, changes in technology, changes in contact information of other agencies.

Regards,

David Hohnstein
Director Technical Services
Nunavut Water Board

Subject: Spill Contingency Plan Pilot Project

Hi Phyllis,

Here is the Spill Contingency Plan for the pilot project that we are doing with our waste water treatment plant. If you have any questions or comments please use the contact information below and contact me.

Thank you,

Paul Clow
