The Fish wastes management varies depending on the availability of the International market.

The O&M manual of the water supply facilities will be updated with WTP, Water Reservoir and Water extraction process from Duval River. This document will be available by December 2017 and submitted to NWB along with Hamlet's 2017 Annual Report.

I would also like to confirm that the Hamlet is using a diesel pump with the capacity of 31.67L/s to extract water from the Duval River to fill the storage Reservoir during the summer season. This pumping rate represents less than 10% of the mean flow of the River and has very minimum impact on the river flow. Therefore this operation is considered safe.

The Water Licence is requested to be renewed until 2027 (10 years) with the water extraction Permit volume of 120,000 m³ annually.

Please keep me in the loop for the entire approval process. Please contact me if you have any concerns or questions on this file.

Bhabesh Roy, M.A.Sc., P.Eng.
