Good morning Rita,

This will be considered as municipal undertaking, what the Nunavut Water Board requires is a quarry management plan that discusses the water management aspects related to the diversion of stream, details about the stream (permanent or intermittent) and estimated average volume of water flowing during open water season, discussion on how the runoff from quarry site will be managed to make sure that freshwater will not adversely impacted.

Please submit the quarry management plan with the 2022 annual report for 3AM-PAN1828.

Regards,

Richard

Good afternoon Richard,

Yes, it is within the municipal boundary.

Thanks,

Rita

They have identified a natural deposit of gravel and sand along the beach on Crown land that they would like to extract. As the projects fall under class A permit, conformity determination has to be completed by NPC and screening done by NIRP as well as permit from NWB as the project is located on a waterfront and a stream run across portion of the area. The conformity determination was issued by NPC today (NPC File No. 149923) and I am getting ready to submit an application to NIRB.

I would like to apply for NWB approval as well and would like information regarding the application process and also how to request for a quicker processing time.

Thanks in advance for your assistance.

Kind regards,

Rita
