Re: Use of Hamlet Waste Facilities

Dear Len,

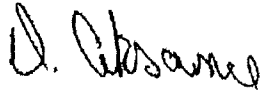

Your request for access to municipal potable water, lagoon and landfill facilities have been considered and the terms outlined below would apply:

1. Hamlet Lagoon – based on your estimated volume of 7300 litres per day – a fee of \$154.76 per day would be charged. As we would not be monitoring your activity in this regard, you would be billed on number of days in any given month x \$154.76
2. Potable Water – based on your estimated volume of 10,000 litres per day - a Fee of \$212.00 per day would be charged. As our pumphouse has no metering system, billing would be number of days in any given month x \$212.00
We would be unable to assist with delivery, as our water trucks are working at full capacity to service the community.
3. Hamlet Landfill – based on your projected volume of 13,000 kg for the project life – a fee of \$300.00 per month would be charged. The landfill site does not accept hazardous waste and / or materials. This would include, but not limited to: vehicle batteries, waste oil, antifreeze or bulk containers of hazardous waste.

Should these terms be agreeable, and a letter of acceptance forwarded to the Hamlet, please consider this letter confirmation of your request to use the above facilities.

The Hamlet is pleased of your offer of equipment and labor to mitigate any impact potentially due to increased use of the landfill and lagoon areas by your project. We will monitor and evaluate this impact and possibly request assistance if deemed needed or required.

Should you have any questions or comments, feel free to call or fax the Hamlet office.
