Subject: FW: Arctic Bay Lagoon

Hi:

As you are no doubt aware, there are some serious concerns about the integrity and capacity of the Arctic bay Sewage lagoon in the short and long term. As a result, I have visited Arctic Bay, produced the following sketches and have requested a quote from the local contractor to undertake the works as soon as possible.

In the summer of 2004, we intend to undertake a technical evaluation of the lagoon and determine a long term solution. It should be noted that this is an interim measure only.

Doug Sitland

Subject: Arctic Bay Lagoon

Please find attached some sketches that describe the immediate measures we are trying to implement.

As requested by Sid, I will advise you when construction is set to begin...

The sketches are not engineered drawings, so if you have questions or concerns, please call.

Please note that this is urgent work and it would not be possible to undertake an engineering investigation given weather, conditions and time frame.

I trust this meets with your approval as a short term fix.
