Keep us apprised this is an interesting issue that will regardless come up again in the future, there was a pile of insulation put in the dump years ago as well which was contaminated urea formaldehyde from MOT buildings.

I would rather not even guess what is in the metal dump however royal roads used our dump as a lab and found out that arctic plants take up PCB's due to fact they are high in plant fats previously it was thought only animals could take up PCB's in concentration.

Just a quick note....some clarification has been provided to Stephanie re: Municipality applying to amend there current water licence or requiring contactor to apply for industrial water licence. Pro's and con's liabilities to both situations. The current municipal water licence deals with disposal of general domestic waste not "contaminated waste". NWB has to make sure that standards set by CCME are maintained. NWB also wants to insure that NWB standards are consistent with industry as well as municipalities. If a landfarm is being proposed for this material (and I am not saying that is the only way to go) then the facility would need to be a properly engineering facility. If anyone has any questions give me a call.

Hi Philippe

I had a discussion with Stephanie (acting as a councillor I think) last week regarding disposal of contaminated waste at the dump in Cam bay. They were concerned and didn't know if they wanted to accept the waste. I indicated that they could

- 1) direct the contractor to apply for a water licence as an industrial user within a municipality; or
- 2) apply for a modification to there water licence to deal with disposal of this type of material.

No additional information has come in.

This used to be normal practice by EPA, GNWT about 10 years ago they dumped 180 loads in the dump before building the kids school it was spread thinly and turned over for weeks to evaporate the soil, its now most of the fill used to keep the garbage from blowing all over the place at the dump. Not sure what the newer practices call for, however some past history for you.

Luke

On the same note; just discussed issue with Jim he is of the same opinion that municipal water licence deals with general domestic waste disposal for the Hamlet but not large quantities of contaminated soil through various clean-up activities. I informed Steph of some pro's/con's of Hamlet accepting waste what it would mean and alternatives available as previously email to you. If you want to discuss call me.

Hi,

This should normally be captured under a municipality's water licence. To my knowledge, the Hamlet of Cambridge Bay has a valid licence that includes waste disposal. I am forwarding this email to Jim Wall for follow up.

Regards,

Philippe di Pizzo
