Tue, Mar 12, 2019 at 2:35 PM

Good afternoon Bhabesh,

Thank you for the call this morning. Below please find the summary of the discussion.

1. Dog Lake has been identified by the Hamlet of Cape Dorset as a potential secondary water source. However, this water source has never been used and is not forecast to be in use. Thus, this source is not identified in the application and is not requested to be part of the licence.
2. All groundwater wells are dry and have been so for many years.
3. The wastewater treatment plant (WWTP) is to be commissioned in July 2022. The contract has been awarded. A feasibility study on a new solid waste facility is expected in 2020-2021.
4. No liner was installed in the hazardous and metal waste storage area.
5. Spill plan updates required:
 - a) the Plan mentions Resolute Bay;
 - b) spill kit locations need to be indicated. The Plan only has a general note: "The number of spill kits available throughout the Hamlet and their storage locations should be determined during the preparation of an overall Spill Contingency Plan for the Hamlet. As indicated in Section 8.3 (above), at least one spill kit should be readily available during maintenance activities at the wastewater treatment facility."
 - c) there are two appendices titled "Appendix- A: Spill Reporting Form", but only one contains the form. The form is also not presented in its entirety (just half of a page is shown).
6. The **Feasibility Study of Possible Options** by Stantec and the **Wetland Efficiency Study** by Dalhousie University are to be provided. A response for intervenors' request of a **plan for upgrading the wastewater treatment facilities with a full analysis of alternatives and rationale for the preferred option** will be provided as well (as committed in response to intervenor comments).
7. QA/QC plan requires coordinates for monitoring stations.
8. Closure and reclamation plan for the 2007 sewage lagoon and the infrastructure that is currently in use will be provided prior to commissioning of the WWTP and within the timeframe set by the Board.
9. The Solid Waste O&M Plan's Table 1 requires updating (the table is not presented in its entirety).
10. The requirement for acute lethality testing will be removed until commissioning of the WWTP.
11. A plan for compliance with the operations and maintenance plan for the solid waste facilities will be provided (as committed in response to intervenor comments).
12. Groundwater monitoring stations will be classified as inactive.
13. The general shortcomings of the Hamlet's annual reports were discussed as well.

Regards,
Assol
