Comments: Rick, As discussed I have enclosed the NWB application form and supplemental questionnaire. These documents should be submitted to the NWB with a \$30.00 application fee (cheque c/o Receiver General for Canada). With regards to the sewage lagoon upgrade it is not up to the NWB to approve the type of facilities to be used by the community but, rather to impose receiving environment wastewater effluent parameters for the protection of public health, and the environment. The wastewater parameters vary depending upon the receiving environment. Based on the information you provided on the phone, the wastewater discharges to the marine environment, open coastline therefore the municipality is required to meet the parameter highlighted on the enclosed sheet. Samples should be taken of the wastewater prior to entering the marine environment and tested for Biological Oxygen Demand, Suspended Solids, and Feacal Coliform (minimum). QA/QC guidelines have been enclosed on how sampling should be performed. If you require additional information or clarification please do not hesitate to contact me or David Porter, Licence Administrator at the above address. Best Regards, Dionne Filiatrault
