**RE: P Lake Sewage Lagoon Water License Application Design Report
Cape Dorset, NU.**

Dear Ms. Dionne,

This letter is in response to the letter and attachment issued by Nunavut Water Board (NWB) dated July 17, 2007. In the meeting on July 11, 2007 with our Consultant, Dillon Consulting Ltd, you had indicated a major step forward in the licensing process. There are 3 (three) major work items that precipitated from the meeting that the proponent is to address, these are:

1. The completion of the geotechnical assessment of the as-constructed conditions.
This assessment is to include, but will not be limited to;
 - a. Stability of the berms
 - b. Thermal analysis of the system over the life of the facility (20 years)
 - c. Seepage analysis
 - d. Design criteria
2. The development of and submission of the record drawings (Shop and as Built)
3. Responses to several remaining items from July 11, 2007 meeting.

Items 1 and 2 will be completed at the completion of the construction this year. Construction is still on going, and is expected to reach substantial completion in the coming weeks. We expect that the geotechnical report will be completed by September, 2007, which will be based on the as-constructed information. The record drawings will be available on the same date.

Item 3 responses are attached. We have used the spreadsheet issued by the NWB to indicate where the information is found. We have appended seven (7) sections to this letter in response to the various outstanding issues.
