Sanitary Site Clean-up - Clyde River & Broughton Island

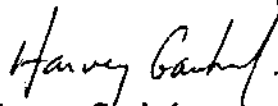

The Environmental Protection Division has had the opportunity to review the above noted reports and provide the following comments.

Due to past polychlorinated biphenyls (PCBs) disposal practices in similar communities, PCB analysis of the landfill leachate is advised prior to closure of the existing facilities.

In Section 2.3, it is mentioned that final analysis of the water samples were not completed at the time of this report; therefore, we would appreciate receiving the final test results from both sites when available.

If you have any questions, please call me at 873-7654.

Yours sincerely,

Harvey Gaukel
Hazardous Substances Technologist
Environmental Protection Division
