Clyde River - Truck Fill Planning Study

Ref: Your memo dated January 26, 1995.

*Clyde River
Yvette*

1. I have reviewed the above noted planning study on behalf of the DIAND Nunavut District Office.
2. I would agree with the recommendations of the study; those being that a truck fill station located on the east side of the present water lake is the best and most cost efficient alternative studied. These recommendations also mesh with the wishes of the community.
3. It would also appear that the study is thorough enough to provide a meaningful forecast of the water quantity requirements that this community will have in the future, and how these requirements will best be met.
