Clyde River Truckfill Station Planning Study Comments

Reference: Water Board comments to Rick Armstrong, MACA dated March 24, 1995.

*Clyde River
4/27/95*

1. As a point of interest, and in order to obtain clarification, I contacted Mr. Rick Armstrong, Project Officer, MACA to ask about the two concerns raised in the above noted letter, namely fuel storage and erosion concerns.
2. Mr. Armstrong informed me that the fuel tank considered will be a self-berming type with over-capacity capability. Furthermore, the erosion problems (slumping in the access road) were corrected last fall when the road bed was raised approximately 1 meter so that snow would not drift over it.
3. I am confident that Mr. Armstrong will be replying to the Water Board's letter in the near future, but wanted to take this opportunity to advise you of these most recent developments.
