Subject: Clyde River Truckfill Station Planning Study.

*Clyde River
Nunavut Est.*

This is a response to the attached concerns forwarded to our office in March.

1. Self-berming fuel storage tanks or a tank with a berm capable of retaining 110% of the fuel tank capacity would be used for fuel storage near the truckfill.
2. To our knowledge there are no erosion problems in the water lake area. The road to the lake has recently been raised to prevent snow drifting and provide for positive drainage.

If there are further concerns or enquiries please contact me at 819-979-5020.

Yours sincerely

R. Armstrong
