Good Morning Mr. Stuckey,

Thank you for the clarification.

I acknowledge the 10 day notification for decant and I look forward to reviewing the results.

Given other incidents and on-going issues related to the municipality of Gjoa Haven and the Water License I suggest that at your first convenience it would be prudent for us to talk.

If you could provide me a couple of options for timing that would be suitable I will give you a call. I don't expect the call to take more than half an hour.

I look forward to hearing back from you.

Mr. Keim

Please note the decanting will be Sept 11th or 12th, not Aug

Thanks

Shawn Stuckey CMA, MBA

Subject: Hamlet of Gjoa Haven New Sewage Lagoon decant procedure in progress
Importance: High

Greetings Mr. Keim,

I send this message on behalf of the Hamlet of Gjoa Haven to advise that a decanting process for the new sewage lagoon site requires discharging of effluents as soon as time and permission allows from the NWB and AANDC.

It is anticipated that the decanting of the new lagoon should begin possibly after August 11th or 12th, 2014 if the effluents are deemed safe to discharge over the wetlands.

The Hamlet is required to discharge the lagoon to be prepared for the winter season where we anticipate a use of 4

million liters of raw sewage or more to be contained this winter.

Consultants and GN staff will be arriving in Gjoa Haven this week with pump equipment for decanting.

A training program is also underway to ensure hamlet staff are able to carry out any tasks in taking samples and reporting procedures etc.

If testing from the raw sewage truck offload sample site (GJO-3) allows decanting, a report of the effluent contamination levels will be provided to AANDC and the NWB for approval prior to decanting.

GJO-3	N 68° 37' 28.8 "	W 95° 50' 21.9"	Raw Sewage at Truck offload point
--------------	------------------	-----------------	-----------------------------------

A report of the effluent contamination levels from the new discharge point access of the new sewage lagoon (GJO-4) and from the dump sample site (GJO-2) will be submitted to AANDC and the NWB after decanting.

GJO-2	N 68° 37' 05 "	W 95° 50' 42"	Effluent Final discharge point from Solid Waste
GJO-4	N 68° 37' 23 "	W 95° 50' 39"	New Effluent Final discharge point of sewage facility

A pump system with flow pipes will be used to direct tested safe discharged effluents over the wetlands with careful noting to ensure no mixing of effluents from the adjacent Solid Waste Site. See attached effluent discharge site plan.

If there are any immediate questions or concerns let me know. Will forward the 1st of 3 decant reports as soon as received from Taiga labs.

Kind regards,

Troy Beaulieu
