

Community: Rankin Inlet  
Project: Area 1 Utilidor

Rankin Inlet municipal services are predominantly piped. Although the system is well maintained, “area 1” is aging and approaching the end of its’ anticipated lifecycle. The project would involve replacement of all underground infrastructure and upgrades to any access vaults as may be required.

A shelved design exists and requires update in 2003/04.

The estimated cost of construction is approximately \$3.0 Million.
