Re: Improvements to the Grise Fiord Sewage Lagoon

Ref: Our meeting on November 24/93 in Yellowknife.

1. Further to our conversation regarding the new sewage lagoon scheduled for construction in Grise Fiord, I would agree that a decant structure is a necessary addition in the design/construction of this facility.

2. I agree that a seepage berm, as planned, may not thaw sufficiently during the short summer to allow any significant amount of treated sewage to be discharged. If a decant structure is not installed at the time of construction, remedial work may be necessary in order to correct the situation. This could then lead to the situation where additional expenses are incurred while at the same time the lagoon is not working properly for an entire season.

Sincerely,

Paul Smith
