Good Afternoon,

The review of the design of the New Naujaat lagoon has been complete. The findings in general found that some further investigations should take prior to tendering for construction, including:

- Further investigation into the wetland treatment capabilities
- Review the placement of the decant location, service accessibility around the lagoon for Dam Safety and other inspections.
- Further geotechnical investigation, and review of the lagoon berm location.
- Further geothermal analysis.

We will be continuing with refining the design, by completing the recommended investigations. Construction is planned to take place in 2021-2022. Refined design drawings, along with the O&M Plan for the new facility will be submitted when they are finalized.

Please let me know if you have any questions.
