Subject: Optimization of Drinking Water Supply for the Municipality of Pangnirtung, Baffin Region, Nunavut.

Dear Ms. Beaulieu.

I am writing you regarding optimization of the Drinking Water Supply for the Municipality of Pangnirtung. The Duval River is the main potable water source for this community. It is frozen from October to June each year. A water storage reservoir with a capacity of 120,000 cubic meters was built 100m to the North of the River for annual storage. This reservoir is filled at the beginning of each summer.

A Water Truck Fill Station was built at the top of the Northern berm of this water Reservoir. In order to meet the demand for future population growth for the next 20 years, a design has been completed to replace the existing Truck Fill Station. The construction is expected to be completed at the end of summer 2014.

This process is independent of extracting water from the Duval River into the Water Storage Reservoir.

It is noted that the Water License # 3BM-PAN 0810 for the community expired on August 31, 2010 and the renewal application was submitted. It is under renewal stage.

If you have any question or concern, please contact me.
