Attention: Erik Skiby, Assistant Technical Advisor

Re: Shut down WWTP during Construction: Contingency Plan and Notice

Dear Ms. Beaulieu,

I am writing you to clarify the e-mail of Mr. Erik Skiby on dated May 08 as follows:

Monitoring station PAN-3: Monitoring station PAN-3 is at the end of sewage effluent discharge pipe. From the pipe, effluent falls on the gravel pad of the wetland and then follows the downslope and finally meets the sea water. The distance of surface water (receiving body) from the effluent discharge pipe end varies due to tidal action of the sea from roughly 100m to 300m.

During Construction Season: Yes, effluent will run through the pipe after initial screening without proper treatment. The final effluent quality might be different. Test results will be represented.

exp 's Design Brief: Please see attached exp's Design Brief.
