Water Licence Application-Supplementary Questionnaire

I have gone through the questionnaire and completed it as best I could. There are several sections that you will need to complete and these have been tagged.

A spill Contingency plan will need to be drawn up. Guidelines are included for this purpose.

The new sanitation site has a separate area for waste oil and a container for hazardous wastes. These should be noted. The location of your hazardous waste container needs to be marked on the site plan included.

I have included mapping of the entire Pond Inlet area, site plans for the sanitation site, construction drawings for the truckfill station and reservoir, land transfer mapping, water shed maps, recent Dept. of Indian and Northern Development inspection report, operation methods for the sanitation sites, and reference information taken from design briefs prepared for both your water system and sanitation sites.

Information on the remediation of the old solid waste site and lagoon planned for this summer is also attached for forwarding to the Nunavut Water Board.

I have requested that Public Works and Services provide Municipal and Community Affairs and the Hamlet with a set of 'as-builts' of the new sanitation site. These will be forwarded to you upon completion. I am uncertain how long this will take.

All information I have included can be forwarded with the questionnaire and should be listed in your covering letter. Much of the material attached will act as reference material to the questionnaire.

If I can be of further assistance to either yourself or the Water Board please call.

Yours sincerely,

Rick Armstrong
Capital Program Officer
