Re: Concerns by Hamlet

Date: July 2, 2003

Mona Milton (Old Water Sewer Clerk) phoned to express concerns with the following:

- 1) Mosher Engineering discharge of sewage from the old sewage lagoon to be upgraded. Concern with lack of sampling and need to ensure if proper authorization to discharge was given.
- 2) Water Supply:
 - a. Concern with tent/camp located in close proximity to shore line of water supply. I indicated that this falls within the jurisdiction of the Hamlet and that through Council or Land Manager action could be taken.
 - b. Concern with swimmers using Salmon Lake every summer and does this impact the water source. Indicated likely a public Health issue and that follow-up should be done with them.
- 3) Sampling problems with obtaining results from Public Health recommended they use an independent lab.

Mona received a promotion and there is a new water and sewer Clerk but didn't get the name.

ACTION ITEMS:

- 1) Follow-up with GN confirm what Mosher is discharging and where; determine if sampling is being done?
- 2) Contact Public Health let them know concern was issued "anonymously" regarding impacts of added recreation activities in the area of Salmon River.
- 3) TA1 to provide assistance with the Hamlet on Water sampling requirements and assist with set up and arrangements to make it happen.
