Re: Qikiqtarjuaq – Municipality – NWB3QIK or N4L3-0640-Renewal

The Municipality of Qikiqtarjuaq filed an application for renewal on April 18, 2000. The municipality's current licence does not expire until December 31, 2000. The application includes operation of a water reservoir filled from Tulugak River, which receives water from snow melt off; a sewage lagoon that is drained out over one mile of land into the ocean after a 1-year decant; a bulky metal dump that gets buried; a waste oil burn pit; and a burn and bury dump.

This application is exempt from NIRB Screening.

Notice of the application was posted in the Nunatsiaq News as well as in local organizations in Qikiqtarjuaq.

The public and all interested parties had until May 31, 2000 to comment on this application. Comments received from DIAND and EC indicate some inconsistencies in the application that need to be addressed. Comments received from CG&T relate mostly to the tannery, which is a separate application.

This application is now ready for technical review and for the Board's consideration.
