Wilfred Ntiamoah

Environmental Health Officer, GN-DOH

Subject: Manual Chlorination during draining the water reservoir, cleaning and inspecting the Liner at the bed of Water Storage Reservoir of the Municipality of Qikiqtarjuaq.

Dear Mr. Ntiamoah,

I am writing to inform you that we are planning to pump out water from the water Reservoir to make it empty in order to inspect the liner at the bed of the Reservoir and then refill the reservoir with fresh water from the Tulugak River.

We are expecting to conduct the operation from July 10 to 25. From July 12 to 20, we are planning to directly fill the tank of each water truck from the Tulugak river and manually chlorinate following the GN Public health guidelines.

The purposes of this operation are to have fresh and better-quality water and as well as to know the condition of the liner at the bed of the Reservoir.

Please send us the current protocol for manual chlorination procedure if it is updated or different from the past.

If you have any questions or concerns, please contact me.
