The Annual Report is being submitted by the Department of National Defence at 8 Wing/Canadian Forces Base Trenton on behalf of the licensee, the Department of National Defence at RP Ops N- ADM (IE).

As see around the world, due to the COVID -19 world pandemic this past year saw reduced reporting capabilities on Station and consequently limited/reduced data collection associated with the Water Licence.

Executive Summary

The 2020 annual report to the Nunavut Water Board (NWB) is a requirement under Licence Number 8AC-ALT1929 Type "A", Part B, Paragraph 1. This annual report is for Canadian Forces Station (CFS) Alert, Nunavut. The Licence was issued on November 1st, 2019, to the Department of National Defence (DND) Real Property Operations North (RP Ops N) - Assistant Deputy Minister of Infrastructure & Environment (ADM(IE)). As 8 Wing – Canadian Forces Base (CFB) Trenton, Ontario, oversees CFS Alert, 8 Wing Trenton is filing the annual report on behalf of the new DND licensee, Real Property Operations North (RP Ops N) - Assistant Deputy Minister of Infrastructure & Environment (ADM(IE)). This is the first submission under the new Licence conditions.

For 2020, the average daily water usage at CFS Alert was 565 m^3. This usage is below the 875 cubic meters daily water usage allowed by the NWB Licence. The daily water usage amount being reported is slightly less than the daily intake amount of raw water from the source at Upper Dumbell Lake. A large portion of this usage water is directly returned (raw and untreated) to the source concurrently to the intake process, the average return amount was 563 m^3/day. This constant circulatory (return) flow of the raw water prevents freezing damages to the water pipelines. The average daily water consumption amount was 72 m^3. The total annual quantity of water used in 2020 was 201,615 m^3.

Hazardous wastes (batteries, hazardous liquids, asbestos) were backhauled from CFS Alert in 2020 for disposal outside of Nunavut in Ontario, by external contractors. Non-hazardous domestic wastes produced from CFS Alert were directed to the designated Main Station Landfill. Annual repairs to the sewage terrace system were completed in the spring of 2020. All sewage were directed to the Sewage Terrace System.

As seen around the world, due to the COVID-19 World Pandemic CFS Alert support crew were reduced with no visitor allowed on station in order to prevent unwanted spread/transmission at the Station. As such, the environmental sampling and support crew were unable to attend the station in 2020. Consequently, the sampling requirements for the 2020 CFS Alert Surveillance Network Program were severely impacted and reduced with only one sampling event taken. DND maintains a positive commitment to demonstrating compliance to the NWB Licence and is

planning to restore the CFS Alert Surveillance Network Program capabilities in Summer 2021 and/or once Territorial restrictions are lifted.

Rapport annuel 2020 à l'Office des eaux du Nunavut

Sommaire

Le rapport annuel 2020 présenté à l'Office des eaux du Nunavut (OEN) constitue une exigence aux termes du permis no 8AC-ALT1929 Type « A », partie B, paragraphe 1. Le présent rapport annuel vise la Station des Forces canadiennes (SFC) Alert, au Nunavut. Le permis a été délivré le 1er novembre 2019 au ministère de la Défense nationale (MDN) – Opérations immobilières (Nord) [Ops Imm (Nord)] du sous-ministre adjoint (Infrastructure et environnement) [SMA(IE)]. Comme la 8e Escadre/Base des Forces canadiennes (BFC) Trenton, en Ontario, supervise la SFC Alert, la 8e Escadre Trenton présente le rapport annuel au nom du nouveau détenteur de permis du MDN, les Ops Imm (Nord) du SMA(IE). Il s'agit du premier rapport présenté en vertu des nouvelles conditions de permis.

En 2020, l'utilisation quotidienne moyenne d'eau à la SFC Alert était de 565 m^3, ce qui est inférieur à la consommation quotidienne de 875 m^3 d'eau autorisée par le permis de l'OEN. La quantité d'eau utilisée quotidiennement qui est déclarée est légèrement inférieure à la quantité d'eau brute puisée quotidiennement de la source du lac Upper Dumbell. Une grande partie de l'eau utilisée est retournée directement (brute et non traitée) à la source en même temps qu'elle est puisée, et la quantité moyenne d'eau retournée s'élève à 563 m^3 par jour. Cette circulation constante de l'écoulement (restitué) de l'eau brute empêche le gel d'endommager les canalisations d'eau. La quantité moyenne d'eau consommée quotidiennement était de 72 m^3. La quantité annuelle totale d'eau utilisée en 2020 était de 201 615 m^3.

En 2020, les déchets dangereux (piles, liquides dangereux, amiante) ont été réacheminés de la SFC Alert vers l'Ontario pour être éliminés à l'extérieur du Nunavut par des entrepreneurs externes. Les déchets ménagers non dangereux produits par la SFC Alert ont été acheminés à la décharge principale désignée. Les réparations annuelles du système de traitement des eaux usées à paliers ont été effectuées au printemps 2020. Toutes les eaux usées ont été rejetées dans ce système.

Comme c'est le cas partout dans le monde en raison de la pandémie de COVID-19, l'équipe de soutien de la SFC Alert a été réduite et aucune visite n'a été autorisée sur les lieux afin d'éviter toute propagation ou transmission du virus. Par conséquent, l'équipe de soutien et d'échantillonnage environnemental n'a pas pu se rendre à la SFC Alert en 2020, ce qui a

grandement limité les exigences en matière d'échantillonnage pour le programme de réseau de surveillance de la SFC Alert de 2020, car une seule opération d'échantillonnage a pu être menée. Le MDN maintient son engagement positif à démontrer sa conformité au permis de l'OEN et prévoit rétablir les capacités du programme à l'été 2021, ou dès que les restrictions territoriales seront levées.

- Oil and Grease parameters exceed the maximum allowable concentrations at ALT-2 for Oil and Grease.
- TSS exceeded the Licence parameters of 70mg/L. DND will conduct a background sampling program of other small tributaries away from DND activities to ascertain if the 70mg/L set criteria is achievable in natural tributaries in the Alert area.
- Lead, Copper, Nickle and Zinc exceedances are likely attributable to atmospheric deposition. DND will conduct a background sampling program away from DND activities to link correlations in the summer of 2021.
- The analytical certificates detailing the 2020 performance of the Alert Sewage Terrace System is included in this Appendix (B).
- Due to limited personnel on Station during 2020 and COVID 19 constraints and frequent safety concerns associated with wildlife interactions, limited samples were collected. DND is committed to demonstrating compliance to the NWB Licence once capabilities are increased in the summer 2021 and/or once Territorial restrictions are lifted.

Appendix D

Monitoring Program Stations No. ALT-8-9-10-11
Year: 2020
Description: Discharge from Tank Farm Secondary Containments ALT-8-9-10 & Landfarm Facility ALT-10-11.

Results:

The Department of National Defence (DND) intended to discharge water from the Fuel Tank Farm Secondary Containments at ALT-8-9-10 in July 2020. At least 10 days notice was provided to the Inspector and Nunavut Water Board, the email chain is attached below.

Water samples from within the secondary containments of ALT-8-8.1-9-10 were collected on 20 July 2020 and analyzed; analytical results are attached in Appendix E.

Two samples were taken at ALT-8 (sample identifications: ALT-8 and ALT-8.1) to better represent the freshet quality due to the large size of the Secondary Containment facility.

In July 2020, analytical results (Appendix E) of the berm water results at the Lower Airfield Tank Farm (ALT-8, -8.1), Upper Tank Farm (ALT-9), and the Day Tank (ALT-10) are compliant to the Effluent Quality Limits of the Alert Water Licence, as per Part E, Item 12 and 13.

DND had no intentions to discharge any water from Land Farm Treatment Facilities at ALT-10 and ALT-11.

Hello,

Thank you for the follow up. You may proceed to decant. Please review the Operations and Maintenance Manual in regards to decanting berm water. I've reviewed the test results, and they are within acceptable effluent quality limits.

Subject: 8AC-ALT1929 - CFS Alert - Berm Secondary Containment Water Discharge Approval Request ALT 8.1 re-sample

Hello Jonathan and Joseph;

Further to the email sent on 20 July, 2020 DND has resampled the Lower Tank Farm (ALT-8.1 White Tanks) affected berm water which previously came back non-compliant to the Effluent Quality Limits of the Alert Water Licence.

Please see attached analytical results. Lower Tank Farm (ALT-8.1 White Tanks) has since been found to be compliant to the Effluent Quality Limits of the Alert Water Licence (Phenols are 15.1 ug/L (NWB limit is 20 ug/L)), as per Part E, Item 12. Note: Samples were not gathered by 8 WEnv due to the current flight restrictions from COVID-19. Samples were gathered on site by staff currently on station.

As per the condition of Part E, Item 13, I am providing DND's intent to discharge the effluents from the ALT 8.1 fuel tank farms within 10 days; however, to help expedite the process and given Alert's short outdoor summer season, may I please request your approval to discharge the effluents from these two facilities as soon as possible?

I will also issue DND direction the CFS Alert staff responsible for the water discharges to ensure that no ruts in the tundra are created and to ensure that sediment erosion protections are taken as per the Alert Water Management plan.

Thank you for your assistance.

Reference Information

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

SOLIDS-TSS-WT	Water	Suspended solids	APHA 2540 D-Gravimetric

A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 104–1□C for a minimum of four hours or until a constant weight is achieved.

TOC-WT	Water	Total Organic Carbon	APHA 5310B

Sample is injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

XYLENES-SUM-CALC-WT	Water	Sum of Xylene Isomer Concentrations	CALCULATION

Total xylenes represents the sum of o-xylene and m&p-xylene.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

F2-F4-511-WT	Water	F2-F4-O.Reg 153/04 (July 2011)	EPA 3511/CCME Tier 1

Petroleum Hydrocarbons (F2-F4 fractions) are extracted from water using a hexane micro-extraction technique. Instrumental analysis is by GC-FID, as per the "Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil - Tier 1 Method, CCME, 2001.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011), unless a subset of the Analytical Test Group (ATG) has been requested (the Protocol states that all analytes in an ATG must be reported).

HARDNESS-T-CALC-WT	Water	Hardness (as CaCO3), from total Ca/Mg	APHA 2340B

"Hardness (as CaCO3), from total Ca/Mg" is calculated from the sum of total (acid digested) Calcium and Magnesium concentrations, expressed in CaCO3 equivalents. "Total Hardness" refers to the sum of Calcium and Magnesium Hardness. Hardness is normally or preferentially calculated from dissolved Calcium and Magnesium concentrations, because it is a property of water due to dissolved divalent cations. Hardness from total Ca/Mg is normally comparable to Dissolved Hardness in non-turbid waters.

HG-T-CVAA-WT	Water	Total Mercury in Water by CVAAS	EPA 1631E (mod)

Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.

MET-T-CCMS-WT	Water	Total Metals in Water by CRC ICPMS	EPA 200.2/6020A (mod)

Water samples are digested with nitric and hydrochloric acids, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

OGG-TOT-WT	Water	Oil and Grease, Total	APHA 5520 B

The procedure involves an extraction of the entire water sample with hexane. This extract is then evaporated to dryness, and the residue weighed to determine Oil and Grease.

PAH-CCME-WT	Water	CCME PAHs	SW846 8270

Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH-WT	Water	pH	APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011). Holdtime for samples under this regulation is 28 days

PHENOLS-4AAP-WT	Water	Phenol (4AAP)	EPA 9066

An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-IC-N-WT	Water	Sulfate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

OGG-TOT-WT	Water	Oil and Grease, Total	APHA 5520 B

The procedure involves an extraction of the entire water sample with hexane. This extract is then evaporated to dryness, and the residue weighed to determine Oil and Grease.

PAH-CCME-WT	Water	CCME PAHs	SW846 8270

Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH-WT	Water	pH	APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011). Holdtime for samples under this regulation is 28 days

PHENOLS-4AAP-WT	Water	Phenol (4AAP)	EPA 9066

An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-IC-N-WT	Water	Sulfate in Water by IC	EPA 300.1 (mod)

Reference Information

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

SOLIDS-TSS-WT	Water	Suspended solids	APHA 2540 D-Gravimetric

TOC-WT	Water	Total Organic Carbon	APHA 5310B

Sample is injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

XYLENES-SUM-CALC-WT	Water	Sum of Xylene Isomer Concentrations	CALCULATION

Total xylenes represents the sum of o-xylene and m&p-xylene.

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	APHA 2320B

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint.

BOD-WT	Water	BOD	APHA 5210 B

This analysis is carried out using procedures adapted from APHA Method 5210B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

Progressive and Final Reclamation Work Undertaken
Year: 2020
Reference: 8AC-ALT1929, Part B, Item 1.

Progressive Reclamation Work Undertaken in 2020:

Due to COVID-19 world pandemic the Station was a minimal manning during the 2020 season. Limited to Emergency access only. As such no work was completed as previously scheduled.

Future works proposed for 2021:

A. Contaminated Sites In-Situ Bioremediation Work:
Continuation of the pilot scale in-situ bioremediation study for petroleum hydrocarbon biodegradation at the following sites:
1) Oxidator Building;
2) Baker's Dozen.
Soil samples will be collected for chemical and microbiological analyses including laboratory studies involving microcosm mineralization assays. Develop long term monitoring program for PHC contamination in key areas.

B. Reclaim of Soils in the Landfarm (ALT-11) Treatment Facility:
Regular monitoring of the downgrade area adjacent to the large biopile area will be performed to ensure no PHC contamination is moving from biopile area or from contaminated areas upgradient and to the west of the large biopile area.

Repairs to the north east corner of the berm will be repaired before the spring thaw. This was identified in the 2019 inspection conducted by the Territory.

C. Rotation of Soils in the Landfarm (ALT-11) Treatment Facilities:
Continuation of the microbial nutrient augmentation and aeration process to increase oxygen content in the contaminated soil to promote microbial and bacterial activity within the landfarm facilities. This will be conducted at the ALT-11 Landfarms.

ALT-12 treatment facility is currently closed awaiting liner repairs due to 2018 liner breach. All material has been removed for this location and transferred to the ALT-11 location. We are expecting that repairs will be completed this season 2021.

D. In-Situ Bio-Containment Pilot Research Study:
As indicated with the INAC Inspectors during the 2015 & 2017 Inspections, DND is taking a proactive approach, developing novel bio-containment barriers, to treat runoff and subsurface waters generated and passing through the boundaries of Federal Contaminated Sites. This activity will be conducted, and the effectiveness assessed, through a pilot research project with the National Research Council of Canada. The general purpose of these bio-containment barriers

is to develop a microbial technology solution for bioremediation of runoff and subsurface waters that pass through and/or are generated from contaminated sites prior to reaching the Arctic Ocean. This work has applicability for the entire Canadian Arctic environment.

E. Environmental Sampling for Per/Polyfluorocarbon (PFC) Delineation
Further conduct environmental sampling and screening for PFCs as well as to evaluate the potential of biodegradation of PFC as a remediation approach.

F. Phase 2 Environmental Site Assessment (ESA)/ Detailed Risk Assessment
DND has procured a firm to conduct a Phase 2 ESA/ detailed risk assessment to be conducted on the entire station for 2021 limited to contracting and COVID restrictions.

Proposed/ future Infrastructure Works
Year: 2020
Reference: 8AC-ALT1929 Schedule B item l.

Infrastructure Work Undertaken in 2020:

Due to COVID-19 world pandemic the Station was a minimal manning during the 2020 season. Limited to Emergency access only. As such no work was completed as previously scheduled.

Future works proposed for 2021:

A. Sewage Discharge Flow Monitoring:
Installation of a flow monitor on the discharge point of ALT-2 will be installed in the summer of 2021 as was previously planned for 2020 but delayed due to COVID. Results will be published in the 2021 Annual report or when requested.

A. ALT-12 Landfarm Liner Repair:
ALT-12 treatment facility is currently closed awaiting liner repairs due to 2018 liner breach. All material has been removed for this location and transferred to the ALT-11 location. We are expecting that repairs will be completed this season 2021.
