Hi Karén,

Thank you for that detail. ECCC is aware that there is no mechanism to go back to a Type B Licence once the Type A Licence issued. Therefore, any future amendments to a Type "A" licensing process is relatively time and resource consuming.

The Part D amendment request for Site-Specific Target Levels was removed from the current application, since there is no need to reuse soils in the near future at Eureka and ECCC does not want to impact the current application process, timelines, or a positive decision for the one time fill of the new reservoir which is critical for June-September 2024.

The current NWB Water Licence 8BC-EUR2131 is for the use of Water and the deposit of Waste during camp operations and activities related to the operation and routine maintenance of the federal weather and scientific station.

ECCC requests a separate Type A Water licence for the application to increase water use for the one time filling of the reservoir. This is required to be completed prior to the operation and maintenance of the new reservoir.

Have a great day,

Jean-Philippe Cloutier-Dussault
