EXECUTIVE SUMMARY

This 2017 Annual Report for the Nunavut Water Board (NWB) has been prepared by Raytheon Canada Limited (RCL) for the Department of National Defence in order to meet the requirements of the Nunavut Water Board licence issued 10 September 2009 3BC-CAM0919 – Type “B”, Part B “General Conditions”, paragraph 1. This report covers the period from 01 January to 31 December 2017.

RCL is the Operation and Maintenance (O&M) Contractor for the North Warning System (NWS), including CAM-M, the attended (manned) NWS radar site located at Cambridge Bay, Nunavut.

The water usage for CAM-M in 2017 was 1297.2 cubic meters. This is an average of 3.6 cubic meters per day, below the maximum of 10 cubic meters per day allowed by the licence. On occasion, more than the daily maximum was drawn due to increased site activity.

Sewage at CAM-M is processed by the tertiary wastewater treatment system. Some of the treated effluent is recycled as on site urinal/toilet flush water. The discharged treated effluent is of potable water quality. A sample of the treated effluent was sent for laboratory analysis each month in 2017.

Samples of the water contained in the berms of fuel storage facilities was sent for laboratory analysis and confirmed to be within effluent quality limits of the NWB licence 3BC-CAM0919, Part D, item 10 before the water was pumped out of the berms.

Hazardous waste was removed from CAM-M for disposal outside of Nunavut. The waste went to Safety Kleen, 2730 Boulevard Industriel, Chambly, QC, J3L 4V2. The hazardous waste consisted of 127 drums of assorted waste (oil, fuel, fuel water mixture, etc.) and 5 crates of waste batteries.

Non-hazardous domestic solid waste was disposed of at the local landfill through a contract with the Hamlet of Cambridge Bay. RCL has documented authorization from the community for receiving the waste.

Two outdoor spills occurred at CAM-M in 2017:

3. NT-NU Spill Report # 17-196. On 05-Jun-2017, a flexline failed on a pipeline during a fuel transfer, spilling 1295 L. The transfer was stopped and spill response actions were executed and remediation activities were initiated. In total 47 drums of fuel water mixture and approximately 220 m³ of impacted soil was containerized.
4. NT-NU Spill Report # 17-238. On 04-Jul-2017, 6 L of hydraulic fluid was spilled when a hose was not disconnected on a loader when separating an attachment. The loader was placed in the site's garage to complete repairs and the impacted gravel was containerized for removal from site.

The Spill Contingency Plan was successfully implemented.

1.0 INTRODUCTION

This 2017 Annual Report for the Nunavut Water Board (NWB) has been prepared by Raytheon Canada Limited (RCL) for the Department of National Defence in order to meet the requirements of the licence issued 10 September 2009 3BC-CAM0919 – Type "B", Part B "General Conditions", paragraph 1. This report covers the period from 01 January to 31 December 2017.

RCL is the Operation and Maintenance (O&M) Contractor for the North Warning System (NWS), including CAM-M. CAM-M is the attended (manned) NWS radar site located at Cambridge Bay, Nunavut.

1.1 Report Details

Licensee:	Department of National Defence, Government of Canada
Licence:	3BC-CAM0919 – Type "B"
Location:	CAM-M North Warning System Site, Cambridge Bay, Kitikmeot Region, Nunavut
Report Prepared by:	Raytheon Canada Limited, 15-Mar-2018
Time period covered:	01 January to 31 December 2017

2.0 WATER USE

The water usage from January to December averaged 3.6 cubic meters (m^3) per day which is below the maximum of 10 m^3 per day allowed by the licence. See Table 2-1 for raw water usage.

On occasion, more than the daily maximum was drawn due to increased site activity. For example, the daily maximum could be exceeded due to the maintenance activities on the waste water system and a subsequent re-filling of the raw water tank.

In 2017, the daily maximum limit was exceeded on the following dates:

- 01-Feb-2017: 11.2 m^3 of water was taken. The limit was exceeded to fill both the tanks in the site's building train by pipeline as well as fill other buildings on-site by truck;
- 08-Feb-2017: 11.4 m^3 of water was taken. The limit was exceeded to fill all of the tanks in the site's building train by pipeline. No water had been taken the previous day.
- 11-May-2017: 14.1 m^3 of water was taken. The limit was exceeded to fill both the tanks in the site's building train by pipeline as well as fill other buildings on-site by truck;
- 08-Jun-2017: 13.5 m^3 of water was taken. The limit was exceeded to fill both the tanks in the site's building train by pipeline as well as fill other buildings on-site by truck; and
- 30-Jun-2017: 13.4 m^3 of water was taken. The limit was exceeded to fill both the tanks in the site's building train by pipeline as well as fill other buildings on-site by truck.

3.0 TREATED SEWAGE DISCHARGE

At CAM-M, the sewage and grey water were both processed through a Cycle-let® advanced tertiary wastewater treatment system. Some of the treated water is recycled as urinal/toilet flush water; the remainder is discharged at the designated outfall and is potable water quality. See Table 3-1, for the volume of sewage and grey water treated by the Cycle-let® system. See Section 6.0 for details on sewage effluent monitoring.

4.0 HAZARDOUS WASTE AND WASTE OIL DISPOSAL

Hazardous waste and waste oil were sent to an approved hazardous waste disposal site outside of Nunavut as required by the licence. The hazardous waste was shipped to Safety Kleen, 2730 Boulevard Industriel, Chambly, QC, J3L 4V2.

See Table 4-1 for the list of items sent for disposal.

See Annex A for the shipping documents including the completed movement documents for waste regulated under the Transportation of Dangerous Goods Regulations (TDGR) and NWS Manifests for non-regulated waste.

6.0 MONITORING PROGRAM

In 2017, a monitoring program was implemented at CAM-M as required by the water licence, Part I. The monitoring program included the following:

1. Volume of raw water drawn from the water Supply Lake (CDL-1). The information from this monitoring is shown in **Section 2.0 Water Use**.
2. Quality of sewage discharged from the final discharge point of the sewage treatment facility (CDL-2). The location of the sewage effluent outfall is shown in **Annex B**, including coordinates. The treated sewage was sampled monthly. The results of the analyses are shown in **Annex C: Analysis of Treated Sewage Effluent**.
3. Quality of the water contained in the berms of fuel storage facilities prior to discharge (CDL-3) was analyzed and confirmed as being within the effluent quality limits listed in the water licence, Part D. The coordinates and the results of the analysis are shown in **Annex D: Location of Bermed Fuel Storage Facilities and Analysis of Berm Water**. All samples met the effluent requirements of the water licence, Part D.

7.0 SPILLS (UNAUTHORIZED DISCHARGES)

Date, NT-NU Spill #	Product	Quantity	Cause and follow-up action	On-site location
05-Jun-2017, Spill # 17-196	Jet A1	1295 L	On 05 June 2017, bulk fuel technicians walked and inspected the subject pipeline at CAM-M, Cambridge Bay, Nunavut. Having found everything to be in order, the technicians began conducting fuel transfer operations. Pressure could not be built in the system so all pumping operations ceased and the bulk fuel technicians walked the pipeline again. The technicians found that a flexline had ruptured approximately 200 metres north of the beach pump house at CAM-M. Released fuel flowed into a depression where it was recaptured during the initial response to the spill. During the initial response and the subsequent remediation, 47 drums of impacted water an approximately 200 m³ of impacted soil were recovered for disposal off-site. Soil samples collected from the impacted area have confirmed that the remediation efforts were successful.	200 m from beach pump house (69° 6'16.22"N, 105° 5'58.46"W)
04-Jul-2017, Spill # 17-238	Hydraulic fluid	6 L	On 04Jul2017, while separating the excavator attachment from the loader, the Heavy Equipment Operator did not release the quick disconnect fitting. The pipe nipple was damaged and approximately 6 L of hydraulic fluid escaped. The loader was placed in the site's garage to complete repairs and the impacted gravel was containerized for removal from site.	East Side of Garage (69˚06'59"N, 105˚07'22"W)

The Spill Contingency Plan was successfully implemented.

8.0 REVISIONS TO THE SPILL CONTINGENCY PLAN

There were no revisions to the Spill Contingency Plan in 2017.

9.0 PROGRESSIVE RECLAMATION WORK UNDERTAKEN

Fuel from 05-Jun-2017 spill (NTNU Spill Report # 17-196) flowed east and then south into a natural depression where it was contained.

A spill response was immediately initiated using resources and personnel available on-site, including:

- Absorbent booms and pads were immediately deployed on all standing water;
- Interceptor trenches were excavated around the impacted area to redirect and limit the flow of fresh water into the impacted area and prevent further migration of fuel;
- Once all visible hydrocarbon sheen was removed by absorbents a dozer was used to scrape up and consolidate soils to the south east of the release that may have been impacted by the spill. The area was then considered secure;
- A mini excavator was used in the impacted area to excavate impacted soils;
- Excavated soils were consolidated into soil bags, each with a volume of one cubic metre (1 m³ per bag);
- A total of 220 soil bags were filled with impacted soils;
- Both the heavily impacted area in the immediate vicinity of the spill and the more lightly contaminated area to the south east of the spill were sampled and analysed;
- Soil analysis confirmed that the impacted areas were below the criteria listed in the Canadian Council of Ministers of the Environment (CCME), Canada-Wide Standards for Petroleum Hydrocarbons (PHC) in Soil for agriculture; and
- The excavated area in the immediate vicinity of the release was backfilled and the pipeline reconnected.

Some material was sent for disposal in 2017:

- 47 drums of water impacted with Jet-A1 were collected and shipped off site 2017; and
- 5 drums of fuel soaked absorbents were collected and shipped off site 2017.

Some material from the spill remains on-site for disposal in 2018:

- Approximately 220 m³ of bagged impacted soil remain on site; and; and
- Approximately 60 m³ of consolidated impacted soils remain on site.

[2] This column contains the average of the Cyclet 1A, Cyclet 1B, and Cyclet 1C.

[3] This result was outside of the acceptable range. The caustic soda pump in the tertiary sewage treatment system had stopped working, so staff had been balancing the pH manually. After this result a new caustic soda pump was ordered and installed.
