Hi Assol and Richard,

ECCC is preparing their Water Licence modification and would like to confirm a few things before submission:

In our last meeting, it was indicated by the NWB that conceptual design drawings would be required for the modifications if there are engineered structures. For some of the modifications, these drawings will not be available until February of next year. Would NWB be able to review the modifications (i.e., detailed project descriptions) without the drawings, with the condition that the drawings are submitted in February (at least 90-days prior to construction)? Or should we wait until we have the drawings to formally submit the modification/project descriptions?

Furthermore, what is the expectation for submission of updated management plans (e.g., Operations and Maintenance Manual, Abandonment and Restoration Plan). Should these be submitted with the preliminary modification package? or is it acceptable for these to be updated and submitted in February at least 90-days prior to construction?

Regards,
