Hello Karlette,

Apologies for not explicitly stating the following earlier:

1. The "POL Spill Kit" is used to respond to bulk fuel spills at FOX-3. The kit is stored in the Warehouse B13A (as per the site description s.25.36.11), the location of the warehouse is shown on the site map in the description on page 14 of the site description); and
2. As per table 25.36-6 of the site description most of the fuel tanks and the majority of the fuel volume is stored at the summit site. Most of the site activity takes place at the summit site. This is where the majority of the equipment is, so this is where the HAZMAT and Waste HAZMAT is stored.

The response time for spill response is minimized because the spill kit is stored at the site summit, the same as the majority of the fuel on-site as well as HAZMAT and Waste HAZMAT.

Please let me know if require this information in a different format, or if you require any additional information.

Regards,

Will
