

Nunavut Access Road to Checkers Lake    Chesterfield Inlet

## Project Description

The project involves the construction of 6 metre wide road approximately 4.4 metres. The construction starts near the Third Lake recreation road west of the Hamlet. The route of the new road veers south westerly to an esker ridge that rises approximately 50 metres from elevation of the land at the beginning of the road. . There are several natural deposits of gravel on this ridge that will be accessible to the community of Chesterfield Inlet. These deposits will be an excellent source of granular materials for the future gravel crushing requirements in the community . The new road will provide access to these new granular deposits . The average depth of new fill that will be placed on the road will vary from 0.5 of metre to 1.5 metres... Culverts will install in all the small water courses that intersect the road. The road construction will be completed on September 30 , 2005
