## Project Description Diana River Trial

This project involves the construction of a narrow trail suitable only for All Terrain Vehicles for a distance of approximately 30 Kilometres. This trail would follow a traditional route that starts at a locally known site called "Apache Pass" one kilometre south of the char river and follows the local elders traditional route in a West North West direction to the mouth of the Diana River. The new trail would end at the junction of the Diana River and Diana Lake. All stream crossings will have culverts installed to allow unrestricted water flow across the new trail. Construction of the trail will be completed by establishing small, granular quarry areas in the vicinity of the new trail. The construction will take place in the fall of 2005 and the entire construction season of 2006.
