

Water License Application (Nunavut Marine Infrastructure Project-Pond Inlet)

-Block 9- Description of Undertaking

The object of the application at the Nunavut Water Board is to obtain the license required to cross water courses for the project's hauling road. The hauling road will make the link (6 kilometers) between the quarry and the construction site in Pond Inlet. Each time a water course will be cross, a culvert will be placed to ensure the continuous water flow. To produce the materials for the Pond Inlet Marine infrastructure project, some quarry activities will be done. Sedimentation and erosion control will be a very important issue for Tower Arctic Ltd. along the project.
